3 Theology and science.—The aim of science in any of its departments is to apply reason, with its powers of analysis and generalization and its laws of inference, induction, and deduction, to the data of experience in that department in such a way as to discover the laws or principles underlying and relating the given facts and phenomena and to unify the entire content of experience in that department into a coherent systematic whole or body of truth such as may be described as knowledge of reality. Inasmuch as theology seeks to do this as regards the data of human experience in the realm or department of religion, it is rightly described as a branch of science. The instrument which the scientist makes use of in ascertaining, analysing, and systematizing the facts or data of experience in the department selected for scientific investigation is the reason with its powers and laws of perception, conception, evidence, inference, etc. And reason is the instrument made use of by the scientific theologian in investigating the facts and phenomena of religious experience and building up a science of theology not less than is the case in other departments of science. Lack of clearness as to the place and function of reason in theology is apt to lead to confusion and disagreement as to what theology is and what are its aim and scope. Thus in some quarters it is maintained that theology differs from other sciences inasmuch as the matter with which religion is concerned is given to us by revelation and not by reason as in the other sciences. But this contrast between reason and revelation as sources of knowledge is unsound. Reason is not the source from which, in any case, we get the matter which we build up into science, but merely the instrument by means of which we grasp, analyse, classify, co-ordinate, and systematize that matter which is given to us by revelation from without in experience. This is as true of other sciences as it is of theology. As a matter of fact, the material which we build up by use of reason into the natural sciences, as they are called, such as mechanics, chemistry, biology, etc., is given to us by revelation from without in experience not less than the matter which we seek to build up by use of reason into a systematic scientific theology. The latter is just as much matter of experience, which the reason must seek to apprehend and co-ordinate into a coherent whole of knowledge of the truth, as is the former. The knowledge got by using reason to grasp, co-ordinate, and systematize the given matter of experience is of the same kind in both cases. In both cases it rests ultimately on a foundation of faith—faith in the reliability of our faculties of knowledge (perception, cognition, inference, etc.) and on the ultimate reasonableness or cognizability of all that is given to us in experience. We go on using our powers of perception, cognition, inference, etc., in reference to what is given to us from without in experience, never doubting that the knowledge thus reached is real knowledge or knowledge of truth and reality, even though we may know and realize that our knowledge in any department of experience is incomplete and leaves room for progress. Thus the physicist may realize that he does not know the ultimate nature of matter, the mathematician may be puzzled to explain what space and time are, and the biologist may feel that he does not know what, at bottom, life and consciousness are.

But the fact that there remain unsolved questions of an ultimate kind, in regard to the data of experience in various departments, does not nullify or render valueless the results of scientific investigation and systematization in those departments. It merely shows that our knowledge of what is revealed to us in experience is as yet incomplete, and that an adequate synthesis of knowledge or metaphysic of being has not yet been reached by us, not that such a metaphysic is unattainable. So too with the data of religious experience. It is the function of theology as a branch of science to collect, examine, analyse, compare, classify, co-ordinate, and systematize all that is revealed to us in this department of experience, so as to reach a whole of scientific knowledge in this sphere, as in other departments of experience and knowledge. We must use our reason as far as it will go in synthesizing or giving us rational knowledge of what is given in experience. And, if there are problems of an ultimate kind in this science, as in other sciences, which still remain obscure or inadequately solved, this does not invalidate the knowledge reached by the application of sound scientific method to the data of experience, nor deprive it of the right to be regarded as

science or knowledge of truth. It merely shows that our science in this sphere is incomplete and spurs us on to reach out towards a more comprehensive synthesis of all our knowledge in an adequate metaphysic or philosophy of being.

4. Theology and philosophy.—It is here that the science of religion passes over into the philosophy of religion, that highest form of knowledge which is the consummation aimed at by theology. Science in all its departments is limited and incomplete as knowledge of reality. It leaves unsolved ultimate questions as to the nature and relations of matter and mind or spirit, space and time, life and consciousness. It is the function of philosophy, as the ultimate form of knowledge, to grapple with these ultimate problems and seek a satisfactory solution of them. And it is along the lines of moral and religious experience, and the data furnished thereby, that light on such ultimate problems may most hopefully be looked for.

Kant, in his *Critique of Pure Reason*, began a movement in philosophy which has had far-reaching influence on modern theology as well as on philosophy. His contention is that in unifying the given matter of perceptive experience into an ordered and coherent world-knowledge the mind or reason of the percipient subject makes use of forms of perception and cognition which are subjective (*i.e.* belonging to the nature or constitution of the knowing mind), not objective (*i.e.* belonging to the object or reality as it is in itself apart from its being known or cognized). Kant thus concluded that the world of which we have definite knowledge, through grasping and unifying the given matter of experience by means of the subjective forms of perception and cognition, is but a phenomenal world or a world as it appears to a conscious subject endowed with powers of perception or cognition like man, not a noumenal world or thing-in-itself existing exactly thus apart from being perceived or known. Thus exact scientific knowledge, according to Kant, is limited to knowledge of the phenomenal world and cannot reach to ultimate reality. The use of those very forms of perception and cognition which give definiteness to our knowledge makes it knowledge of the phenomenal as contrasted with the ultimately real or thing-in-itself. All scientific or theoretic knowledge is thus knowledge of the phenomenal only. If there be a noumenal world of reality, and if it be in any way accessible to us, this must be in some other way than that of rational knowledge. Kant maintains that access to a noumenal world of reality is gained by us, not through the pure reason but through the practical reason or moral consciousness, by means of which we may and do reach a kind of faith-knowledge of God, freedom, and immortality, which, though not rational theoretic knowledge, such as we have in science, is yet of value for the moral and religious life. This demarcation of the limits of valid, rational, scientific or theoretic knowledge, and differentiation from it of the kind of knowledge got through moral and religious experience or through supernatural historic revelation is characteristic of many theological writers since Kant. The argument of the *Critique of Pure Reason* is supposed to be conclusive against the possibility of our ever reaching any rational metaphysic or valid theoretic knowledge of ultimate reality. Huxley and Spencer pressed Kant's conclusion into the service of their doctrine that God or ultimate reality is and must remain unknown and unknowable by man, and that therefore a science of theology is impossible. Hamilton and Mansel endeavoured to reconcile the agnostic conclusions of Kant in regard to a rational metaphysic with the acceptance of traditional Christian doctrine as grounded on revelation, not on reason. The Ritschlian school accept Kant's conclusions as to the impossibility of a rational, theoretically valid, knowledge of God or ultimate reality, and so rule out all natural or rational theology as incompetent; but, while eliminating all metaphysic from Christian theology as untenable, they seek to retain in large measure the traditional Christian theology as grounded on a divine historic revelation culminating in Christ, of which Scripture is the record. As with Kant, they seek to find a grounding for this in the immediate deliverances of the moral and religious consciousness, which furnishes them with a basis for 'value-judgments' where valid theoretic knowledge fails. This sharp differentiation between the kind of knowledge got by making use of reason, our cognitive faculty, in grasping, analysing, and systematizing the data of perceptive experience in the sphere, say, of physics or chemistry and the kind of knowledge got by using reason in the same way—call it practical reason or what you will—in grasping, co-ordinating, and systematizing the data of moral and religious experience is arbitrary and unconvincing. The world of reality revealed to us in experience—whether the ordinary perceptive experience which grounds our common knowledge or the moral and religious experience which grounds our religious knowledge—is one whole, and our knowledge of it, however acquired, should be capable of being synthesized as one coherent whole. The attempt of the Kantians and Ritschlians to rule out all metaphysic and natural theology as going beyond the proper limits of the reason, and yet to build up a theology of value-judgments founded on the needs of the moral consciousness or practical reason or on the data of a historic divine revelation, is not satisfying to the inquiring mind that seeks for unity and coherence and consistency in its knowledge. Theology, as the philosophy of religion, is to be looked upon, not as the rival or opponent of rational science, but rather as its copestone and completion.

True theology can never come into conflict with true science. For it includes all the data and verified results of true science among its material or postulates. It seeks to co-ordinate or synthesize all our knowledge into a comprehensive and coherent whole of truth or knowledge of reality, based upon the data of human experience regarded as a whole, tested, analysed, co-ordinated, and systematized by sound scientific methods.

5. Reason and intuition.—Akin to the distinction which Kantians draw between the theoretic reason, which gives us definite knowledge of a phenomenal world, and the practical reason, which gives us vague knowledge of noumenal reality, is the distinction which more recent philosophers such as Henri Bergson draw between reason, or intellect, and instinct, or intuition, as sources of knowledge. Intuition, it is alleged, brings us more immediately into touch with the living flowing stream of reality, of which as individual persons we form a part, and enables us to adapt ourselves thereto more surely and satisfactorily than reason or intellect, whose forms of thought and processes of inference are adapted to matter that is fixed or static rather than to the ever-changing creative flux of actual reality or real time. But this contrast or antithesis between intuition and intellect, like that between faith and reason, is unsound. The intuitions of a rational being are just an implicit form of reason. And it is better in every way for a rational being such as man that what is implicit in consciousness should be made explicit and fitted into the comprehensive synthesis of rational cognition, which alone deserves the name of knowledge. The only supreme

authority and court of appeal for rational conscious beings is reason based on an ultimate ineradicable faith in the reasonableness of our experience, which is the underlying assumption of all science, including theology. To subject reason to intuition or instinct as instrument of knowledge is to incur moral and intellectual bankruptcy which is unworthy of a rational being such as man. It is to take a step downwards towards the brutal condition, not upwards towards the goal of true personality.

For conscious rational beings the only reality which has or can have any meaning is reality which is or may be apprehended by rational consciousness. In the case of reality of which we are, or suppose ourselves to be, dimly aware in subconscious apprehension or intuition, it is assumed that to a more perfect or adequate consciousness this would evidence itself as real. Reality for us means reality apprehended or apprehensible by a conscious being. To affirm an unknown reality may mean simply that we are dimly aware of the existence of some power or force which we have not yet been able to adjust to our incomplete synthesis or scheme of knowledge. But to affirm a reality which is, and which must ever remain, inaccessible to every conscious apprehension is to affirm a contradiction in terms or to use words without meaning.

Practical reason, faith, intuition or instinct, to which some would point as the proper guides in theology rather than what they call the pure or theoretic reason, are all forms of conscious apprehension which enable us to build up the data of experience into some more or less coherent whole of knowledge. The data to be unified and synthesized in a science of systematic theology are not indeed given to us by reason from within, but by revelation from without. Reason, however, is our only proper instrument for the apprehending, co-ordinating, and systematizing of these data.

6. Theology and the Bible.—Some theologians conceive of the task of theology as that of setting forth in coherent systematic form the content of that revelation concerning God, the world, and man of which the Bible is the inspired record. But, while this points to a very important department of theology, it is too narrow a view to take of the scope and function of theology as a whole. There are other materials or data for theological construction besides those furnished by the Bible, which cannot be overlooked or ignored by the scientific theologian who takes a wide and comprehensive view of his subject. The revelation of ultimate reality given in the natural world around us with its varied facts and phenomena, which it is the function of natural science to investigate, furnishes material which the theologian must interpret and construe. So too the course of general human history, which it is the function of historical science to present and elucidate in the light of general principles or laws, affords data of experience which are of value for theological construction. And the moral consciousness of mankind generally, the investigation of which is the special task of the science of ethics, furnishes important material to the scientific theologian to help in the upbuilding of a system of theology. But the revelation given in the history and religious experience of Israel as a nation and of the outstanding personalities among that people, culminating in the fact of Christ and the foundation of the Christian Church, is of such supreme importance and unique significance in the religious sphere that it is customary and convenient to distinguish between the general revelation to mankind as a whole in nature and history and conscience, which is treated of under the heading of natural theology, and the special historic revelation culminating in Christ, which is treated of under the heading of specifically Christian theology, and which may be regarded not as something entirely different from natural theology, but rather as its crown and completion.

7. Classification of theological sciences or disciplines; theological encyclopædia.—Having such a vast and varied material to deal with, theological science has many branches or disciplines with aims and methods differing according to the material dealt with and the purpose kept in view. To elucidate and classify these various disciplines is the function of what is known as theological encyclopædia, which itself constitutes a branch of theological study.

Religion as an object of investigation has two aspects: (*a*) a historical aspect, under which it is to be regarded as a historical phenomenon appearing under various forms among various peoples with characteristics which furnish ample material for historical inquiry and investigation; and (*b*) a normative aspect, under which it appears as a present inner power of life making claim to truth and to the right to regulate individual and social life. This twofold aspect of religion furnishes us with guidance for classifying the branches of theology, which is the science of religion, into two main divisions: (*a*) the *historical or phenomenological* branches, including all those sciences which deal with religion on its phenomenological side as an actual appearance in history; and (*b*) the *normative or constructive* branches, including those sciences which deal with religion as a present-day reality and power, claiming to be truth by which the practical life of man should be moulded and regulated. The distinction already referred to between natural theology and specifically Christian theology furnishes ground for suitable further subdivision of the material falling to be dealt with under these two main divisions, thus affording a basis for a convenient classification of theological disciplines or branches of study.

(*a*) The investigation of religion in its phenomenological aspect may be conveniently subdivided into (i.) a general branch dealing with the phenomenology of the ethnic religions other than Christian that have appeared in history, which will include (1) history of religions, with a descriptive account of the distinctive features and characteristics of religious beliefs as they have appeared in history, (2) comparative study of religion, and (3) psychology of religion in so far as historical investigation can throw light on that; and (ii.) a special branch dealing with the phenomenology of the Christian religion. This will embrace, under the general heading of Biblical science, (4) linguistics, or a study of the Bible languages and the principles of interpretation and exegesis; (5) Biblical introduction, or investigation into text, date, authorship, and historical setting of the various books of the Bible; (6) Biblical history and antiquities, and (7) Biblical theology, which aims at setting forth by means of impartial exegesis the ideas as to God, man, and the world and their relations set forth in the different Biblical writings; and, under the general heading of ecclesiastical history, (8) Church history, or the history of the spread of the Church, (9) history of doctrine, and (10) symbolic, or the history of the different creeds and confessions in which Christian doctrine has been embodied.

(*b*) The investigation of religion in its normative and constructive aspect may be subdivided into (iii.) a general branch dealing with the presentation, defence, and application of the truths of natural religion, including (11) the apologetic of religion generally, (12) natural theology, (13) philosophic ethic; (iv.) a special branch dealing with the presentation, defence, and application of the

truth of Christianity as the highest and final form of religion; this embraces (14) the apologetic of the Christian religion; systematic theology, which includes (15) Christian dogmatic, and (16) Christian ethic; and practical theology, which includes (17) homiletic, (18) liturgic, (19) catechetic, or paideutic, (20) pastoral theology, (21) ecclesiastical polity, and (22) evangelistic theology, or the theory of missions; (v.) the final synthesis of the truths reached in the various theological disciplines, historic and theoretic or normative, which is the aim of (23) the philosophy of religion, in which theology reaches its consummation.

8. Method in theology.—The method to be made use of in dealing with the data of theological science in its various branches will vary with the matter dealt with and the purpose or end in view.

In the historical or phenomenological branches of theology the end in view is simply the ascertainment and accurate presentation of historic fact, and the methods to be made use of are those which are appropriate to historical inquiry in general.

(1) Thus in setting forth the *history of religions* the investigator must make himself acquainted as widely as possible, by observation and inquiry, with the features and characteristics of extant religions as they now appear and are practised among men. He must further acquaint himself with the historic origin and development of these religions by the study of such books, monuments, and other records of the past as are available. Careful observation and industrious inquiry and research are thus the methods most needful for success in this department of theological science.

(2) In the *comparative study of religion* the investigator must use the material furnished by the history of religions, and seek by analysis, comparison, and spiritual insight to show the relations of the various religions to one another and their grading as manifestations of the common spirit of religion. This calls for more of speculative thought and philosophic reflexion, as regards method, than the previous discipline.

(3) In *psychology of religion* the investigator must discuss the origin and form of religion generally from the psychological point of view, and seek to show what part the various mental faculties and capacities—intelligence, feeling, desire, will, imagination, etc.—have in religious experience, and how they enter into and manifest themselves in religions. The methods appropriate to scientific psychology—observation, reflexion, induction, and deduction—have proper application in this discipline.

(4) *Biblical linguistics*, which is the study of the languages in which the Bible was originally written, is just a branch of philology, and the methods of philological study and inquiry have here their proper application. Hermeneutics and exegetics, which deal with the interpretation of the text of Scripture, may be brought in under linguistics.

(5) In *Biblical introduction* the methods of the lower or textual criticism and of the higher or historical criticism have a proper place. Textual criticism investigates the various manuscripts of the Bible that have come down to us and the various readings in the texts of these manuscripts, and seeks by rational principles to get as nearly as possible at the true original text. Historical criticism investigates the evidences of compositeness in different books of the Bible and seeks with the help of tradition and of a knowledge of contemporary history to gain reliable knowledge as to the composition, date, authorship, and historical setting or circumstances of the various books of the Bible, and to estimate their place and function as elements in a progressive revelation.

(6) *Biblical history* deals with the history of the Jewish people and the rise of the Christian Church as recorded in the Bible, while Biblical antiquities has to do with the archæology, chronology, and geography of the Bible.

(7) *Biblical theology* (including Biblical psychology) aims at unfolding and presenting in a clear and orderly form the doctrinal conceptions or ideas presented by the various writers of the OT and NT. It is the crown and completion of Biblical science, and, for those who accept the Bible as the inspired record of a divine revelation, it is of supreme importance for furnishing material towards the upbuilding of a comprehensive, normative, systematic theology. But of itself it is a purely historic discipline, aiming at the accurate presentation of historic fact and recorded thought in an impartial objective way, without meantime taking into account the bearing of that on permanent normative religious truth. The methods to be used in Biblical theology are those of sound philology and impartial scientific exegesis or interpretation, so as to make sure that the ideas or doctrines set forth are those of the various Bible writers themselves, unmodified by any subjective theological bias of the interpreter. The work of adjusting the scheme of thought faithfully gathered from the Scriptures by sound impartial exegesis to a comprehensive scheme of normative systematic theology is the important task of the Christian systematic theologian.

(8) *Church history*, or the history of the spread of Christianity, aims at recounting accurately the gradual enlargement of the area known as Christendom, the conflict of Christianity with anti-Christian forces, and the growth of the Church's constitution and cultus, showing how the polity and worship of the Christian Church developed as time went on, and how divisions over questions of constitution and government and cultus arose among Christians.

(9) The *history of doctrine* describes the dogma, or body of doctrine, accepted by the Christian Church, and traces its development along the centuries.

(10) *Symbolic* gives a more detailed attention to the various 'symbols'—creeds or confessions—that have been formulated from time to time in the Church's history than can be given in a general history of doctrine. These are obviously purely historical disciplines, aiming at the ascertainment and accurate presentation of historic facts, for the achievement of which the proper methods to be used are the methods of impartial historical research and inquiry.

(11) The *apologetic of religion* in general has as its function to inquire into the nature and essence of religion generally and to establish the truth of the religious view of the world over against all irreligious, antitheistic, or agnostic views. It aims at discussing and exhibiting (α) the nature and essence of religion in general; (β) the nature and validity of religious belief and the relation of the knowledge got thereby to the knowledge of natural objects gained through perception and rational cognition; (γ) the truth and reality of what is postulated and affirmed in religious belief, as against atheism, materialism, agnosticism, and other forms of unbelief; (δ) the rational proofs for the existence of God or the ways in which the human mind by valid process rises to the apprehension of supreme personal Spirit as the ultimate reality, from reflective contemplation of the changing natural world and its phenomena, of the course of human history, and of the facts of the moral consciousness; (ϵ) the evidence contained in the general revelation given to all men for the immortality of the soul and a future state.

(12) Closelyassociated with the general apologetic of religion is that systematic presentation of the truths underlying natural religion to which the name of *natural theology* is usually given. Its aim is to set forth in a methodical orderly way all that may be known concerning God and the world and man, and their mutual relations, from that general revelation which is given in nature, mind, and history. It is the dogmatic of natural religion, as philosophic theism is its apologetic.

(13) Akin to natural theology is *philosophic ethic*, whose aim is to ground a science of practical conduct on the immediate deliverances of the moral consciousness and the knowledge of God and duty derivable therefrom. The ethic of Kant, associated with what he described as a 'religion within the limits of pure reason,' may be taken as illustrative of the aims and methods of philosophic ethic, defective though it may be as a presentation of the results of such ethic, even as his 'religion within the limits of pure reason' is defective as a presentation of the truths of natural theology. In this region of natural theology and philosophic ethic the aim is to reach not merely historic but permanent normative truth, in which the mind of the rational thinker can find rest and by which practical conduct can be regulated. The methods by which alone, if at all, such results can be reached are those of speculative thought and philosophic reflexion on the data of moral and religious experience—not merely of our own personal experience, but of the experience of mankind generally as far as that can be ascertained, analysed, and used as the basis of rational inference, induction, and deduction. A great accession to the material or data of experience, on which a comprehensive and satisfactory philosophical theology and ethic may be grounded, is given us when we take into account the special revelation, culminating in the fact of Christ, of which the Bible is the record. Apart from this, indeed, the data on which natural theology and philosophic ethic seek to build are so incomplete that the probable conclusions reached are lacking in fullness of content and convincing power. The new data of experience furnished by this special revelation not only add cogency to the probable conclusions reached by philosophic theism and ethic, but also bring a greater fullness of content to constructive normative theology, by which it is enriched and made more satisfying to the mind and heart of man.

(14) *Christian apologetic* has as its function to indicate the nature and essence of the Christian religion, grounded on the historic revelation of which the Bible is the record, and to set forth in order the evidences of its truth. It deals with such questions as these: (*α*) the idea of revelation, its spheres and modes, and the manner of its apprehension; (*β*) the idea of inspiration and its results; (*γ*) the trustworthiness of the Bible as a reliable record of fact and experience; (*δ*) the evidences of a progressive revelation of divine things given in the Bible and the significance of the fact of Christ as consummating and completing that revelation; (*ε*) the evidences of the truth of the gospel proclaimed by Christ and its fitness to meet human need and to bring salvation and satisfaction to mankind. Christian apologetic clears and prepares the way for

(15) *Christian dogmatic*, which aims at setting forth in accurate and systematic manner, and in such a way as to show its consistency with all our other knowledge of truth, the intellectual content of the Christian life as that becomes our inward possession on the ground of divine revelation through the receptivity of faith. It presupposes and includes the conclusions reached by philosophic reflexion in the sphere of theism and natural theology, and gives added cogency and convincing power to them and greater richness and fullness of content to our knowledge of God the supreme reality, as not only intelligent personal Spirit but holy loving Father. It is usually subdivided into (*α*) theology proper, or the doctrine of God involving an exposition and justification of the Christian conception of God as triune, which was the prominent feature of Greek Christian theology in the 4th cent. when various forms of unitarianism (Monarchianism, Sabellianism, Arianism) were combated by Athanasius and the Cappadocian Fathers; (*β*) Christology, or the doctrine of the Person of Christ, to which the attention of the Church was particularly directed after the Council of Nicæa (A.D. 325) by the theories propounded by Apollinaris, Nestorius, and Eutyches, which were condemned at the Councils of Constantinople (A.D. 381), Ephesus (A.D. 431), and Chalcedon (A.D. 451); (*γ*) pneumatology, or the doctrine of the Holy Spirit, to which attention was first prominently given by the Church when the views of Macedonius were condemned by the Council of Constantinople; (*δ*) anthropology, or the Christian doctrine of man; (*ε*) hamartiology, or the doctrine of sin, which first came to the front in the controversy between Augustine and Pelagius in the 5th cent.; (*ζ*) soteriology, or the Christian doctrine of salvation, which, through Augustine and Pelagius, became an important feature in Western theology, receiving fresh development at the hands of Anselm, Bernard of Clairvaux, and Thomas Aquinas, who devoted attention to the redemptive work of Christ and its application to sinful men, and engaging prominently the thoughts of theologians in the Reformation period when the doctrines of justification by faith and reconciliation with God came into prominence; (*η*) ecclesiology, or the doctrine of the Church and the sacraments, which first received prominence in the early Church at the hands of Cyprian of Carthage (A.D. 250), was further developed by Augustine (in his *City of God*) and Thomas Aquinas (in his *Summa Theologiæ*), and received much attention from Lutheran and Calvinistic theologians at the Reformation and from Ritschl and Anglican High Churchmen in modern times; and (*θ*) eschatology, or the doctrine of the last things, which has occupied a foremost place in recent theological discussion.

(16) *Christian ethic* has as its aim to set forth the content of the Christian life as it works itself out in disposition and action on the ground of the self-activity that is rooted in Christian faith. It looks upon the Christian life from the view-point of man and his duty, while dogmatic looks upon it rather from the view-point of God and His will. Both deal with the same subject-matter, viz. God and man and their relations to one another, but under different aspects or from different view-points, so that, while they belong together to systematic theology, they are most conveniently treated as separate or distinct branches of that science. Christian ethic presupposes the conclusions of philosophic ethic, just as Christian dogmatic presupposes those of natural theology. But it adds new fullness and richness of content and new power to philosophic ethic through the new data of moral and religious experience, centred in the fact of Christ, which it contributes. The first attempts to formulate Christian ethic in separation from Christian dogmatic were made by Lambert Daneau, a French Protestant, in 1557, and G. Calixtus, a Lutheran, in his *Epitome Theologiæ moralis* in 1634. Since the time of Schleiermacher this separate treatment of Christian ethic as a branch of theology has been generally followed in Germany, Britain, and America; and numerous works on Christian ethic have appeared in which

the relevant material is dealt with under different divisions. A convenient division followed in the main by Martensen and other writers is (i.) general introduction, dealing with (*α*) the definition and scope of Christian ethic, its relation to other disciplines, and its place in a classification of ethical systems; (*β*) fundamental conceptions of the science —end, norm, and motive; (*γ*) postulates of the science, theological, anthropological, cosmical, and eschatological; (*δ*) the source of our knowledge of the Christian moral ideal, the content of that ideal, and the means of its realization; (ii.) individual ethic, dealing with the origin and progress of the Christian life in the individual soul and its manifestation in the virtues and graces of the Christian character; (iii.) social ethic, dealing with the realization of the Christian ideal in the various spheres of society—the family, the Church, the State or nation.

Practical Christian theology in its various departments treats of the Christian religion from the point of view of its power to expand and to build up Christian life in the Church. It includes those disciplines that are concerned with the application of Christian theology in the practical sphere. It is art rather than science.

(17) *Homiletic* deals with the art of sermon-making.

(18) *Liturgic* deals with worship and its forms.

(19) *Catechetic*, or paideutic, deals with the religious instruction of the young.

(20) *Pastoral theology* deals with the duties of the pastoral office.

(21) *Ecclesiastical polity* deals with Church government, law, and procedure.

(22) *Evangelistic theology*, or theory of missions, deals with the best methods of propagating the Christian religion at home and among heathen peoples abroad.

The methods appropriate for use in the upbuilding of a scientific normative Christian systematic theology, into which the content of Biblical theology as a historical discipline is taken up and adjusted, are in part the methods commonly made use of by science in general—analysis, classification, inference, induction, deduction, etc.—but partly also the less easily applied methods of philosophic reflexion and speculative thought, by means of which the philosopher must seek to bring unity and consistency into his entire knowledge of the real. The God revealed in the Bible and through Christ and Christian experience — the triune God of Christian revelation—must be related and harmonized through rational thought with the God of the theistic proofs and natural theology, if our theology is to be at once Christian and philosophic.

(23) *Philosophy of religion*, which is the highest stage or form of theology, has for its data the results reached as truth by the use of scientific method in the previously mentioned theological disciplines; and its aim is to combine these elements of truth in a comprehensive synthesis of knowledge, such as will exhibit the relations of the various aspects or parts of truth and their harmonious cohesion in an organic whole of truth or reality. Its special function is to harmonize the results reached by reflective thought along the line of philosophic theism and natural theology with the results reached through believing appropriation of the Christian revelation.

If reason is indeed the means whereby we apprehend and know truth and reality, then we should not rest satisfied until what we accept as true or real is shown to commend itself to our reason as reasonable, and so 'worthy of all acceptation.' We must therefore strive to make our theology rational or reasonable, if it is to be the expression of truth. If, again, the Christian revelation concerning God and the world and man and their relations be true, as Christians believe it is, then the Christian philosopher must strive to make his philosophy and metaphysic religious and so adequate to embrace and express the truth of religious, and specifically of Christian, experience. Only when theology becomes rational and philosophy becomes religious can there be hope of such a union between the two as will yield a satisfactory philosophy of religion which will also be the most adequate and satisfactory metaphysic of being. To reach such a philosophy of religion is the worthy aspiration of the Christian speculative theologian who, while not ignoring the importance of faith alike in science, theology, and philosophy, strives to secure that the faith on which he rests shall be a reasonable faith.

D. S. ADAM.

THEOSOPHICAL SOCIETY.—1. Definition and scope.

—Every great religion has two parts, an inner and an outer, a spirit and a body, 'the knowledge of God,' which 'is Eternal Life,' and its dogmas, rites, and ceremonies. The inner part, 'the wisdom of God in a mystery,' spoken of by St. Paul as known to 'the perfect,' is that which has, since the 3rd cent., been known in the West as 'theosophy'; in the East it has been known for ages under its Sanskrit equivalent, *Brahma-vidyā*, 'God-wisdom,' 'God-knowledge,' or 'God-science.' Such theosophy, or mysticism, the direct knowledge of God by man, belongs equally to all great religions, as their sustaining life, and may be possessed by any individual, even outside any religious organization. The Brahmavadins, 'knowers of God,' in Hinduism ; the Gnostics, the 'knowers,' who, Origen declared, were necessary to the very existence of the Christian Church ; the *shaikh* in Islāmic Sūfism—these are typical theosophists from the standpoint of the modern Theosophical Society. No man is truly a theosophist who has not direct knowledge of God, but he may win this through any religion or by his own unaided efforts.

Theosophy, in the modern as in the ancient world, proclaims the possibility of such knowledge, as the inevitable result of the immanence of God. Man is essentially a spiritual being, his self, or spirit, being an emanation from the Universal Self, or Universal Spirit, God, as a ray is an emanation from the sun. Hence, to know himself, his deepest self, is to know God ; he can sink in consciousness into the depths of his own being, beyond the body, the passions, the emotions, the mind, the reason ; these are all his, but they are not he ; he can pass beyond them all, and realize himself as separate from them, the pure 'I,' pure being. This is the universal experience of those who, successfully, seek the Kingdom of Heaven within, and it is followed by the recognition that this Universal Being into which the self opens transcends all the beings in which it is manifested, and is alike in all. Out of this experience, repeated for every one who becomes a knower of God, or theosophist, are built the two fundamental truths of theosophy: the immanence and transcendence of God, and the solidarity, or brotherhood, of all living beings. The realization of the first truth, man's identity of nature with God, as a fact in consciousness, and the subsequent realization of the second, his identity of nature with all around him, by a blending of his self with their self, a conscious dwelling in their forms as in his own—these sum up theosophy in its fullest and deepest sense. The man who has thus reached self-realization in God and in all beings is a theosophist ; those who deliberately aim at such self-realization are also generally called theosophists.

The word 'theosophy' has further, historically, a second meaning: it denotes a body of truths, or facts, concerning God, man, and the universe ; and these may conveniently be classified under three heads: religion, philosophy, and science.

On these truths is based its system of ethics, rational, inspiring, and compelling. In considering this body of truths we are not studying a system invented and published in modern days; we have to do with what has aptly been termed the Wisdom-Tradition, handed down in all civilized countries, ancient and modern, by a long succession of prophets, teachers, and writers. It may be traced in the *Upaniṣads*, *Purāṇas*, and epics of the Hindus, and in the six systems (*darśanas*) of Hindu philosophy; it underlies many of the Chinese systems, especially Taoism, and is seen in such books as *The Classic of Purity* and in the writings of Lao-tse; it is found in Egypt, as in *The Book of the Dead* and the papyri from which its religion has been re-constructed; it appears in the fragmentary records of Assyria and Chaldæa; in the *Gāthas* and other scriptures of the Pārsīs; in the Hebrew Scriptures as expounded by the Ḳabbālā and the Talmud; in the Christian, as treated by the early Fathers of the Church, and by such Gnostic writers as Valentinus, Basilides, and a host of others; in Pythagoras and Plato, with the Pythagorean, Platonic, and Neo-Platonic schools, with Plotinus, Iamblichus, and the theurgists; it is taken up from these by the doctors of Islām and the Ṣūfī mystics; appears in the Rosicrucian students of alchemy and astrology, in Rosenkreutz, Paracelsus, Bruno, Eckhartshausen, Boehme, Eckhart, Vaughan, Bacon, More, Fludd—all these and scores of others have assimilated and handed on the Wisdom-Tradition; it has lent its symbols to masonry, and hidden some of its mysteries in masonic ceremonies; it peeps out of Scandinavian and Celtic folk-lore, out of the Hawaiian legends and Maori traditions, the unburied temples of the Mayas and Quiches, the magic of the Zuñis and other N. American Indian tribes. Its revival and its systematization into a coherent and inter-related body of doctrines, separated from non-essential and irrelevant teachings—this is modern, and is the work of the Theosophical Society, a modern association. But the doctrines themselves are scattered everywhere, through all times, in all places.

The test to be applied to a religious doctrine which claims to be theosophical is catholicity. 'Semper, ubique, et ab omnibus'—such is the test. For all religions come from a single source, the Divine Wisdom, and have as founders divinely inspired men—men who have climbed up the ladder of evolution till they have reached perfection in humanity, and have entered on the superhuman evolution. Such men we call 'masters,' and we regard them as the guides and directors of the evolution of humanity; the similarities in doctrines and ethics, pointed out by comparative mythology and comparative religion, we regard as due to the fact that all the founders of religions are members of the one lodge of masters, possess the same knowledge, and are guided by the same principles.

The universal—*i.e.* theosophical—doctrines of religion are: the unity of God; the manifestation of God as a Trinity for the building of a universe; the existence of graded orders of intelligences, a vast hierarchy of beings, forming the inhabitants, visible and invisible, of a universe, or a solar system. The doctrine of reincarnation, taught in every religion, though in some temporarily overlaid, belongs to the domain of philosophy rather than to that of religion; the immortality, or rather the eternity, of the spirit belongs also to philosophy more than to religion, when dealt with intellectually; the law of action and reaction—*karma*—falls under science, as do the constitution of a solar system and of man.

2. Religious teachings.—(*a*) *The unity of God*, the universal one Existence which is the source of all existences actual and potential, the super-life and super-consciousness in which all lives and consciousnesses inhere, eternal beneath the transitory, changeless beneath the fleeting, unsupported but the support of all, all-embracing, all-containing, the One without a second—this is the central teaching of theosophy as of all religions, the first universal truth of religion.

(*b*) *The Trinity of the manifested God* is the second great and universal truth of religion, and therefore of theosophy. Theosophy speaks of the manifested God as the Logos, borrowing the term from Plato, Philo, and the Fourth Gospel.

'Coming forth from the depths of the One Existence, from the One beyond all thought and all speech, a Logos, by imposing on Himself a limit, circumscribing voluntarily the range of His own Being, becomes the Manifested God, and tracing the limiting sphere of His activity, thus outlines the area of His universe. Within that area the universe is born, is evolved, and dies; it lives, it moves, it has its being in Him; its matter is His breath; its forces and energies are currents of His life; He is immanent in every atom; all-pervading; all-sustaining; all-evolving; He is its source and its end, its cause and its object, its centre and circumference; it is built on Him as its sure foundation, it breathes in Him as its encircling space; He is in everything, and everything in Him. Thus have the Sages of the Ancient Wisdom taught us of the beginning of the manifested worlds. From the same source we learn of the Self-unfolding of the Logos into a threefold form; the First Logos, the Root of all Being, the *Will* which outbreathes and inbreathes the worlds; from Him the Second Logos, manifesting the two aspects of life and form, the primal duality, making the two poles of nature between which the web of the universe is to be woven—life-form, spirit-matter, positive-negative, active-receptive, Father-Mother of the Worlds—the *Wisdom*, or Pure Reason, "mightily and sweetly ordering all things," sustaining the universe; the Third Logos, the Universal Active or Creative *Mind*, that in which all archetypically exists, the source of beings, the fount of fashioning energies, the treasure-house in which are stored up all the archetypal forms which are to be brought forth and elaborated in matter during the evolution of the universe, the fruits of past universes, brought over as seeds for the present.'[1]

(*c*) *The hierarchy of beings* is the third truth universally accepted: the 'seven spirits before the throne of God'; the primary emanations of the Supreme Trinity; the ranks of secondary Logoi, who rule congeries of solar systems, down to the Logos of a single solar system. In such a system the vast hosts of spiritual intelligences (the *devas*, archangels, and angels of religions), the grades of spirits encased in human bodies, the sub-human intelligences and those not yet even awakened to intelligence—all these, with the solar Logos at their head, form the ladder of lives, and evolve within the system. The sub-human intelligences include all nature-spirits, the gnomes, fairies, etc., who play so great a part in folk-lore, the living though limited intelligences who make all nature a living responsive organism instead of a soulless mechanism, whom little children sometimes see, and who are visible to the ordinary seer.

(*d*) The fourth truth in theosophy is that of *universal brotherhood*, the inevitable deduction from the preceding; since there is but one life in all forms, all forms must be inter-related, linked together, and, however unequal they may be in development, they none the less make one huge family, are 'of one blood.' The universal brotherhood of theosophy differs from the political conception of 'equality,' the foundation of modern democracy, in that it postulates identity of origin and of potentiality, but recognizes varying degrees of development, the latter yielding the hierarchy of beings, or ladder of lives. In this freemasonry resembles it, with its broad division of mankind into the enlightened and the profane, and the subdivisions of the enlightened into degrees and graded officers, uniting the essential equality with a hierarchical order and due subordination. In this both theosophy and freemasonry are in harmony with nature, increasing power going hand-in-hand with increasing knowledge and increasing

[1] A. Besant, *The Ancient Wisdom*.

responsibility. Wisdom, supported by strength and made manifest in beauty, rules in a true brotherhood, as in nature.

It is interesting to note that these four primary religious truths of theosophy, of universal religion, are but the intellectual formulation—for the instruction of the people—of the two primary spiritual truths directly contacted by the knower of God, the gnostic, the theosophist. The first three are religious dogmas, expressing intellectually the first spiritual truth; the fourth is the expression in the outer life of the second spiritual truth. The spiritual truths can be *known* only by individual self-realization; they may be intellectually taught and believed as the fundamental dogmas of universal religion, theosophy. A dogma is the intellectual presentment of a truth known by the spirit, and believed on external authority.

3. Philosophical teachings. — Philosophically, theosophy is idealistic; consciousness is primary, the one indubitable fact, which can neither be strengthened nor weakened by argument. 'I am' is the testimony of consciousness to itself, and naught can disprove its witness, since every disproof, every argument, must be addressed to that same consciousness, and imply its existence. To the All-Self, matter is but the limitations imposed by Himself on His thoughts; to us, evolving in a universe which is the manifestation of our Logos, matter is His thought, limitations imposed on us by His thought and activity—limitations which we cannot transcend until we can realize ourselves in Him. Human thought, though feeble and undeveloped, is of the same nature as divine thought, and increases its power over matter with its increasing growth; thought is the one creative and moulding power, and, as evolving man realizes this, and so clarifies his lower nature that this aspect of the self can work through it, he becomes the master of that lower nature and of his surroundings, the creator and controller of his destiny. By thought, mastering the science of physical nature, he bends it to his will and utilizes it; by thought, mastering the science of the emotions, he builds virtues and destroys vices; by thought, mastering the science of mind, he subdues its turbulent energies into orderly obedience; by thought, directing will and controlling activity, he brings all things, within and without, into subjection to the self, 'the inner ruler, immortal.' Only by such fit rule and due subjection can man attain perfect health of body, emotions, and mind, and reach the highest good. Hence many of the practical theosophical teachings deal with this power and control of thought.

The eternity of spirit—more loosely spoken of as the immortality of the soul—is an integral part of theosophical philosophy. It is an inevitable deduction from the identity of nature of the human and the universal Self; 'unborn, undying, perpetual,' it is eternal as God Himself. The continuity of consciousness is equally inevitable, since the self is conscious and continuous, and in the self must consequently abide all its experiences, of which a successive survey is memory. The extent to which these memories are carried on by the material sheaths, or bodies, of the self—*i.e.* the survival of the individual and the person—will be better considered under the constitution of man.

The method of the unfolding of this continuous and conscious self in the human kingdom is by reincarnation. Reincarnation is, in fact, the only doctrine of immortality that philosophy can look at, as Hume said.[1] It means that the self, having unfolded to the human stage, appropriates matter from the three worlds (see below) and builds it into bodies, suitable for life in those worlds, beginning in the stage of barbarism, as a savage of a low type. During earth-life he gathers experiences, pleasant and painful; after death he meets the results of these experiences—the lower in the intermediate world, where he suffers in the appropriate body of matter belonging to that world, and the higher in the heavenly world, where he enjoys in the appropriate body of matter belonging to that world, and converts all these experiences into mental and moral capacities. When all are thus converted, he returns to earth-life, bringing with him these capacities wrought out of experiences, into new bodies built to express and utilize them. In these he goes through a similar cycle, gathering, suffering, transmuting, and so on and on; each birth brings the fruitage of the preceding lives to start the new pilgrimage, and this is the inborn character and temperament mental, moral, physical. Step by step he climbs the ladder, working under inflexible and inviolable laws, until he reaches the stature of the perfect man; he passes through all the classes of the school of life until he has mastered all that this world has to teach, and is *asekha*—he who has no more to learn. He is then a man, beyond birth and death, 'fitted for immortality,' ready for work in the larger life.

[1] In his Essay 'Of the Immortality of the Soul.'

4. Scientific teachings.—Theosophy differs from modern science in the fact that it includes under 'science' investigations into superphysical worlds. Its methods are the same: investigation by observation of objective phenomena, reasoning on observations, framing of hypotheses, discovery of invariable sequences (*i.e.* of natural laws), repeated experiments to verify deductions, and formulation of results. It uses the senses for observation, but the senses intensified — supersenses, in fact—responding to vibrations of matter finer than that which affects the physical senses.

As with modern science, so with theosophical—'occult science,' it is usually called—there is a body of accepted facts, laid down by recognized experts and largely reverified by later experiments, and a fringe of modern discoveries, constantly added to, revised, and modified. The accepted facts have been established by generations of occult experts, and their existence is often referred to in the scriptures of various religions; the more accessible of these are being constantly reverified by occult students to-day, but the larger cosmological facts are beyond our reach. Any discoveries made by students are subject to revision and modification, as observations are repeated and the instruments of observation are improved.

(*a*) *The constitution of the universe.*—The broad outline of this comes from the seers of the past, and is largely confirmed in the scriptures. It appears reasonable to us, and is congruous with the observations which we are able to make. The laws of analogy and recapitulation confirm it, for we see its outlines repeated in miniature within our own range of observation, and we see sequences rapidly repeated in miniature which the seers have described as occurring in a universe—as the æonian evolution of the kingdoms of nature is mimicked in the growth of the embryo in the womb. A universe consists of seven kinds of matter, or planes, of which the densest is called physical or solid; the next finer, astral, or watery; the next, mental or fiery; the next, spiritual or airy; the next, superspiritual or ethereal; and the two finest, divine. What are called solar systems are all on the physical plane of the universe, and a solar system repeats within itself the seven kinds or states of matter, these subdivisions of the vast cosmic plane forming its planes, or worlds.

Within a solar system these subdivisions can be mostly studied by less developed seers, and we are in a field of research open to the occult student of our own day. We find in relation to our own earth: 'physical matter,' all formed by aggregations of similar physical atoms, similar except that some are positive, some negative; these aggregations are grouped into solids, liquids, gases, and three kinds of ethers; 'astral matter,' formed by aggregations of astral atoms, differing from physical atoms in shape, and grouped into states corresponding to the physical; 'mental matter,' formed by aggregations of mental atoms, again distinguishable by their form, and again grouped as before; the 'spiritual' and 'superspiritual worlds' are formed on the same plan, each having its own type of atom and its own corresponding states of aggregation. Of the 'divine worlds' we cannot directly speak.

(*b*) *The constitution of man* is analogous to that of the solar system, and hence the possibility of knowledge concerning it. As said, he is a fragment of the Universal Self, and he is clothed in the matter of his system. In the divine world dwells his

true self, the monad, and his consciousness appropriates matter from each of the five worlds below in order that he may know and conquer them; as the continuing 'I,' he uses matter from the superspiritual, spiritual, and the finer regions of the mental world; this is the 'spiritual body' of which St. Paul speaks; it grows and evolves through the whole cycle of reincarnation, and beyond, but is not changed or lost in birth or death; probably St. Paul refers to this when he speaks of our 'house not made with hands, eternal in the heavens,' which he says 'we have.' It is this spirit in the spiritual body which is the reincarnating Ego, or individual, though the term is often used to indicate only the consciousness working in the finer mental matter, in what is termed 'the causal body,' a subdivision of the spiritual taken separately. When the reincarnating Ego takes a new birth, he appropriates some of the coarser matter of the mental world for his 'mental body,' some of the matter of the astral world for his 'astral body,' some of the matter of the physical world for his 'physical body'; his consciousness, in thinking, uses mental matter; in desiring or sensating, uses astral matter; in acting in the physical world, uses physical matter; these are 'the three worlds' in which his evolution goes on, and in which he is affected by birth and death, and is a personality, or person, *i.e.* the individual, as limited in expression by grosser matter; the mental body is closely related to the brain, though not dependent on it, save for activity in the physical world; the astral body is mainly correlated with the cerebro-spinal and sympathetic ganglia and nerves, and the glands; the three bodies interpenetrate each other, mutually acting and reacting throughout waking life. In sleep consciousness withdraws from the physical body, clothed still in its astral and mental garments, living then in the astral world, and sometimes, on its return, impressing on the physical brain some of its experiences in vivid and coherent 'dreams'; it keeps in magnetic touch with its physical body. In death this magnetic touch is broken off, and the consciousness dwells for a while in the astral world, called often 'the intermediate world,' in relation to those who have passed away from earth. After a while the astral body dies, and the man passes in the mental body into the mental world, or heaven, where he abides for a period extending to many centuries, the length depending chiefly on the richness of his intellectual, emotional, and artistic past life on earth. When he has assimilated all the experiences of this nature accumulated on earth, the mental body disintegrates, the consciousness withdraws to the spiritual body with all it has gathered to enrich the Ego. Then the Ego builds a set of new bodies for a new pilgrimage in the three worlds, and returns to them by birth. Thus the evolution of man is carried on in three worlds, brooded over by the spirit—himself—the spirit garnering the results and unfolding thereby; he is an inhabitant of the three during waking life; of two during sleep and for a period after death; of one during his heavenly life. The lowest, the physical body, is at present the most perfectly organized, and therefore the most capable of receiving impressions from without and transmitting them to the consciousness. The astral body is rapidly becoming organized, and its proper senses are developing, so that it is receiving and transmitting many impressions from the astral world, though generally with a lack of sharpness and accuracy; these include the phenomena of second-sight, premonitions, warnings, visions, perception of phantasms of the living and the dead, etc.—the phenomena to which modern psychology is paying so much attention. An increasing number of people are 'sensitive,' or 'psychic,' and are using the supersenses, *i.e.* the senses of the astral body, more or less consciously. The mental body is becoming well organized in educated people, but more in relation to its organ, the brain, than as an independent vehicle of consciousness, active in its own world. Consciousness, in the mental body, is in-turned rather than outward-turned. The occultist, having by the practice of special methods—meditation, concentration, etc.—artificially forced the evolution of the astral and mental bodies beyond the normal, is, as regards these, many centuries ahead of his time; he uses the supersenses for life in the astral and mental worlds in his waking consciousness, and thus carries on his investigations in them as the physical scientist does in the physical world. The dying of the three bodies, and the building of new ones for each successive life-period, is the cause of the loss of memory of past lives; that memory is in the reincarnating Ego, and is shared by the consciousness when animating the lower bodies only if, in those bodies, the man has realized himself as one with the higher.

(*c*) *The law of action and reaction* is universal, and exists in the worlds of emotion, thought, and spirit as much as in the physical world. Hence a man can build his character as scientifically as he can build up his body, and disregard of the mental and moral laws is as destructive of mental and moral health as disregard of physical laws is destructive of physical health. The study and utilizing of the laws, summed up as *karma*, forms an important part of theosophical work.

(*d*) *Evolution.*—The monad gradually unfolds his powers by coming into touch with matter and appropriating portions of it; he thus passes through the mineral, vegetable, and animal kingdoms, until in a highly developed animal the intelligence reaches the human stage; thenceforward reincarnation under *karma* is his means of unfolding. Humanity, on our globe, takes on a fresh type—more delicately organized as to the nervous system—that of a root-race, when a considerable number of reincarnating Egos are ready to develop a higher quality of consciousness. The third, or Lemurian, race, was the first to assume the really human type in the middle period of its evolution—the previous types being embryonic; the surviving remnants of the Lemurian are the negroes and the many negroid peoples scattered over the world. The fourth, or Atlantean, race with its seven sub-races—of which the Toltec, Akkadian, Turanian, and Mongolian peoples are typical—is still the most numerous. The fifth, or Aryan, race has already five sub-races—the Aryans of India, the Mediterranean Aryans (Arabs, the later higher-class Egyptians, etc.), the Iranians, Celts, and Teutons—and has yet to develop two more. These varying types afford to the reincarnating Egos the necessary varieties for their evolution, each Ego taking birth in the races and sub-races as often as is necessary for the unfolding of the qualities characteristic of each.

(*e*) *Human perfection.*—By repeated reincarnations under inviolable law, each man reaping exactly as he has sown, man reaches his temporary goal—human perfection. At the present stage of evolution it is possible for him to reach this goal in advance of the evolutionary term, which will last yet for many millions of years. By strenuous exertions and noble and unselfish living, he may attract the attention of the spiritual guardians of mankind, who will teach him how to quicken his evolution, so that he may enter on 'the path of holiness,' pass through its five initiations—or stages of widening consciousness—and become a 'master,' the last of the five initiations opening the gateway of superhuman evolution. He may then pass into other worlds, or enter the ranks of the guardians of this world, as he wills. From the hierarchy of these guardians have come the founders of world-religions, the lesser prophets and teachers being their disciples.

5. **The ethics of theosophy.**—These are not definitely formulated into any code, but consist of the highest and purest teachings of the world's noblest saints, prophets, and founders of religions. All that is sweetest and most lofty in the world's Bibles, all that is most inspiring and ennobling in the writings of its philosophers and moralists, forms the ethics of theosophy. As man lives by the highest ethic he can grasp, he becomes capable of appreciating ethic yet sublimer; the theosophist strives to live by the spirit of Christ rather than by any legal code, and, cultivating love, he hopes to be enlightened by the lords of love. Broadly speaking, that which works with the Divine Will in evolution is right; that which works against it is wrong; and the best examples of that Will are found in such divine men as the Buddha and the Christ. These the theosophist looks up to as examples, and strives to reproduce their likeness in himself.

6. **The Theosophical Society.**—This association was founded on 17th Nov. 1875, in New York City, U.S.A., by Helena Petrovna Blavatsky and Henry Steele Olcott. The former was a Russian noble-woman, of extraordinary psychic endowments, and these had been trained and cultivated to the highest point by her 'master,' an Eastern occultist; she gave up social rank, wealth, and family to seek him in Tibet, and spent some years with him near Shigatze, after which, returning to the world, she gave the rest of her life to carrying out his directions. In America she met, at the famous Eddy farmhouse, a man who had won high distinction during the Civil War, Colonel Henry Steele Olcott, and he became her pupil. She endeavoured first to collaborate with the American spiritualists, but, failing in this, she, with Olcott, founded the Theosophical Society; she became its corresponding secretary, an office which she held for many years, and he its president; its organization is due to him and he remained president until his death in 1907, when the present writer was elected as his successor.

The unit of organization is a lodge, of not less than seven members; when a number of lodges, not less than seven, exist in any territory, they may group themselves into a section, or national society, which is self-governing, within the wide limits of the general constitution. The central ruling body consists of president, vice-president, treasurer, recording secretary, a general council consisting of the general secretaries, each elected by his own national society, with not less than five additional councillors, chosen by the general secretaries. It meets once a year and deals only with matters affecting the whole Society; but it may not meddle with the business of the sections, unless there be a transgression of the general constitution. The annual report of 1917 showed 19 national societies, 1074 lodges, with 28,673 active members. Round each lodge are gathered a considerable number of sympathizers and helpers, but these are not entered on the rolls. The headquarters of the Society were first in New York; in 1879 the

founders left America for India, and fixed the headquarters in Bombay; in December 1882 they moved to Adyar, a suburb of Madras, and there the headquarters have since remained. The Theosophical Society owns there an estate of 266 acres, with several fine buildings, and a library which is known all over the world of scholarship as possessing the finest existing collection of *Upanisads*, as well as some unique Sanskrit MSS.

While the Society exists for the purpose of spreading the ideas formulated above, it does not impose belief in them on its members, who, providing they accept the principle of universal brotherhood, are absolutely free to think as they will. Admission to membership is obtained on recommendation of two Fellows of the Society, and the acceptance of the following objects:

'To form a nucleus of the Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste or colour.

To encourage the study of comparative religion, philosophy, and science.

To investigate the unexplained laws of Nature and the powers latent in man.'

The following, written many years ago by the present president, states the general position of the Theosophical Society:

'The Theosophical Society is composed of students, belonging to any religion in the world or to none, who are united by their approval of the above objects, by their wish to remove religious antagonisms, and to draw together men of good will, whatsoever their religious opinions, and by their desire to study religious truths and to share the results of their studies with others. Their bond of union is not the profession of a common belief, but a common search and aspiration for Truth. They hold that Truth should be sought by study, by reflexion, by purity of life, by devotion to high ideals, and they regard Truth as a prize to be striven for, not as a dogma to be imposed by authority. They consider that belief should be the result of individual study or intuition and not its antecedent, and should rest on knowledge, not on assertion. They extend tolerance to all, even to the intolerant, not as a privilege they bestow, but as a duty they perform, and they seek to remove ignorance, not to punish it. They see every religion as an expression of the DIVINE WISDOM, and prefer its study to its condemnation, and its practice to proselytism. Peace is their watchword as Truth is their aim.

Theosophy is the body of truths which forms the basis of all religions, and which cannot be claimed as the exclusive possession of any. It offers a philosophy which renders life intelligible, and which demonstrates the justice and the love which guide evolution. It puts death in its rightful place as a recurring incident in an endless life, opening the gateway of a fuller and more radiant existence. It restores to the world the Science of the Spirit, teaching man to know the Spirit as himself, and the mind and body as his servants. It illuminates the Scriptures and doctrines of religions by unveiling their hidden meanings, and thus justifying them at the bar of intelligence, as they are ever justified in the eyes of intuition.

Members of the Theosophical Society study these truths, and Theosophists endeavour to live them. Every one willing to study, to be tolerant, to aim high, and to work perseveringly, is welcomed as a member, and it rests with the member to become a true Theosophist.'[1]

There have been some offshoots from the Theosophical Society which have become independent of the central organization, but which spread the same truths. There are two international societies, with headquarters in America, and some scattered independent bodies in Germany and Austria.

A. BESANT.

THEOSOPHY.—Theosophy has characteristics which relate it closely to religion, and somewhat more remotely to philosophy. It also attempts to determine man's place in the universe and to solve the riddles of life and of death. Like religion, it aims at guaranteeing to its followers a more favourable destiny by showing them the way of healing and salvation. Like philosophy, it proposes to have recourse only to the resources which nature, on the one hand, and the human intellect on the other, place at its disposal, and it is by knowledge that it saves men. But the knowledge which it obtains is not grounded on the observation of facts which are within the reach of ordinary intelligences; it is intuitive, dependent on the exceptional clear-sightedness of men on a superior level, and communicated by them to their disciples. There is then a theosophical knowledge, just as there is a religious and a philosophical knowledge. Besides, it may well be that the content is throughout materially the same. Such a concept, *e.g.*, as that of the immortality of the soul may be found in all three. By what distinctive marks then can we recognize that a doctrine is theosophical? Now we know that there is a criterion which makes it possible for us, without risk of error, to distinguish between what is philosophical and what is religious. If a doctrine has been established by means of observation, induction and deduction, it is philosophical; it is religious if there has been concerned in its origination an intuition operating under the influence of feeling and imagination; it is only at subsequent stages that the ordinary processes of the human intellect intervene. Theosophy also begins with affirmations having an intuitive basis, and its constructions may have great emotional and imaginative significance. Having once secured this foundation, it may proceed, like theology, to construct, in accordance with the demands of reason, a system of satisfying coherence. The difference between theosophy and religion lies neither in their ideas nor in their method. It is in the attitude which the religious man, on the one hand, and the theosophist, on the other, assume towards the objects presented. The one hopes to work, by fear, reverence, and adoration, upon the will of powerful beings for his own advantage; the other depends upon himself, upon the immediate efficacy of his own knowledge and action; religion is humble, whereas theosophy is proud.[1]

This self-reliance the theosophist has in common

[1] *Theosophy*, p. 91.

[1] It is to be noticed, however, that, though the suggestion of pride is justifiable in connexion with the esoteric tendencies, the prevailing intellectualism, and calm acceptance of grades of religious capacity noticeable in modern theosophical teaching, yet there is also an element of humility frequently to be found in the modern theosophical attitude. There is a constant reference to teachers or adepts, and it is urged that their teaching should be accepted with implicit faith. The general efficacy of knowledge in obtaining the desired results may indeed be exaggerated and become an incentive to pride, but the individual thinker is not encouraged to depend merely on his own knowledge or even on the knowledge of his contemporaries. He, and they also, must look backwards with reverence to the past and accept the teachings which have been handed down from remote ages and are rediscoverable for men of the present age when the more modern excrescences upon religious systems have been removed.

with the magician. Both—the one more consciously than the other—admit the existence in the universe of hidden forces, for the control of which knowledge of them is sufficient. Both also show individualistic tendencies. They detach themselves from the religious community and break through the tradition officially recognized around them. But we may notice at least this difference between the magician and the theosophist: the one aims at using his power in an external way—he desires to control nature for the advantage or the disadvantage of his fellows; the other is a contemplative, who acts but little except on himself and for his own sake.[1] The theosophical spirit has left a very deep mark upon Indian thought. It is possible to trace its influence from its origin to our own day. India would be for the investigator a remarkable field for study if the chronological sequence of ideas and systems were not enveloped in a darkness which up to the present time has not been penetrated. It is impossible for us to date the most important of the texts from which we derive our information. Many of them are much later than the period when the theories which they set forth were formulated. Under such circumstances it becomes exceedingly difficult to settle the debit and credit side of the account of each school. Perhaps, however, one result may be considered to be now established: there has been in India a continuity of theosophical tendency. The systems interlace with and influence one another. The intuition on which their authors pride themselves consists in perceiving afresh the 'truths' which a kind of heredity has tended to fix in the Indian mentality. The task of the great philosophical schools has to a large extent been that of systematizing the ideas already worked out in the *Upaniṣads*. Buddhism would be unintelligible if the way had not been prepared for it, if not in these very schools, at least in antecedent groups bearing a very strong resemblance to them. And the reformers who have appeared in India in such large numbers since the Middle Ages have drunk at the same source. If, then, we cannot yet dream of giving a strictly historical presentation of theosophical speculations, it is at least not impossible to discern the order in which the principal systems have appeared. We shall follow (1) the development of this thought in circles which are, if not, strictly speaking, Brāhmanic, at least closely related to Brāhmanism (the *Upaniṣads* and the Vedānta, the Sāṅkhya, and the Yoga); (2) the transformation of theosophy into religion (into Jainism and Buddhism); (3) its incursions into popular religions of long standing, with which it has associated itself, not without a certain sacrifice of its own character and significance; and finally (4) we shall see how modern theosophy in India is dominated by ancient philosophical tradition.

I. **The Brāhmanic theosophy.**—(1) *The beginnings.*—The two tendencies which characterize Hindu thought throughout its course appear early in Brāhmanic circles. The one is the spirit of tradition: the rites and formulas do not show the expected results unless they are repeated just in the way in which the 'fathers' instituted them at the beginning. Not only will every innovation and every addition be avoided, but an even more necessary requirement is that the sacred acts shall be performed only by those who are in possession of liturgical knowledge, viz. by the Brāhmans. The *dharma*, *i.e.* the rule, which derives its authority simply from its antiquity, thus gradually extends its domination over men's minds. It becomes systematized in one of the six *darśanas*, the *Pūrvā Mīmāṃsā*. Anxious care in observing traditional forms has created the power of the priesthood. The fathers of families have been deprived of their religious importance to the advantage of the Brāhmans. The gulf between sacred and profane makes itself more and more evident.

Contrariwise, it is the spirit of novelty which manifests itself in the other tendency. During all the Vedic period the treasury of hymns and rites is taking form and being constantly enriched. If the gods have at first made use of these, it is not the gods who have revealed the knowledge of them. The *ṛṣis* have 'seen' and have communicated their visions to men.[1] The gods would have preferred to have the exclusive proprietorship.

Signs of this double tendency are to be found even in the same texts. We may be sure that, in circles as yet differing slightly from one another, tradition and originality existed side by side without offence. Why should they have entered into conflict? Did not both of them find their point of departure in the same hymns? Most of the Vedic deities can scarcely be distinguished from the forces and elements in which they reveal their power. They have almost no characterization, and they represent vaguely the divine which permeates the objects and phenomena of nature. Out of this naturalism, frequently rude in character, there easily emerge the pantheistic conceptions which were so soon to dominate Indian theosophy. Besides, do not ritualists and innovators alike make knowledge the essential condition of religious efficacy? Are not both of them Brāhmans, *i.e.* the heirs of the magicians who were charged at the beginning with the protection of the sacred rite from the pernicious influence of evil spirits? Finally—and most important of all—do not both believe that there is in every being and in every sacred act a mysterious energy which establishes harmony and co-ordination between man and the universe? And are they not now on the earth, like the 'fathers' of ancient times and the gods in the heavens, the depositaries and the agents of this mysterious force, creator of order and of life? When there is the thought of turning the secret power of the sacrifice to the benefit of the individual, with a view to assuring him of happiness beyond the grave and guaranteeing him against a second death which would be final, there are here the essential elements of theosophic doctrine—desire for deliverance from suffering and death, hope to succeed by personal effort, confidence in the saving efficacy of knowledge.

(2) *The ancient Upaniṣads.*—Theosophical thought, which is to be found in germ in the hymns and in the *Brāhmaṇas*, obtains form and consistency in the *Upaniṣads* (*q.v.*). Certainly the authors of those old treatises were far from

[1] This statement should, however, be slightly modified when applied to modern theosophy in India. On the one hand, this shows an affinity to magic, in that it is greatly interested in the details of existence upon planes other than the physical, and so takes up a slightly materialistic attitude to those existences which are ostensibly non-material. The inhabitants of the astral and mental planes might for practical purposes be described as materializations of spiritual entities. Again, a distinct claim is put forward by theosophy to the discovery and use of hitherto unknown laws of nature, and the power which is thus put into the hands of the expert occultist who is also a theosophist is not altogether different from the power claimed by the magician. But, on the other hand, it must be frankly acknowledged that the modern theosophist in India does not, like some magicians, separate himself from the community to such an extent as to desire to use his powers for merely selfish purposes. Further, the ends at which he aims are ultimately of a spiritual rather than of a materialistic character, and in this he shows his superiority over the Christian Scientist in respect of the excessive attention paid by the latter to the claims of bodily health. It is thus undoubtedly true that the modern theosophist is a contemplative, to the extent that he places the spiritual far above the material, but he is perhaps less inclined than his forefathers in India to be interested merely in his own concerns, and he is more inclined to use for social purposes the powers which contemplation and thought-concentration have secured for him.]

[1] See art. INSPIRATION (Hindu).

having broken their connexion with the traditional cult. But they love to give the sacred actions a symbolic interpretation which will relieve them of their mechanical and formal character. A still more significant thing is that they manifest a well-marked esoteric tendency: usually a long time is spent in appealing to the master before he consents to reveal the supreme truth, and the disciple is under obligation not to transmit it himself except to a particularly dear and well-qualified person. The method of discovery is always intuition; thought proceeds by abrupt illuminations. Moving impetuously and boldly, it puts assertions side by side with one another without concerning itself about their contradictoriness. It does not demonstrate; it is content to illustrate by beautiful metaphors and arresting similes.

In an as yet vague form the idea of the essential unity of the universe was implicitly contained in the Brāhmanic theory of sacrifice. There is now posited the existence of a Being in which all that is finds its reality. This Being is called *Brahman*, the name of the energy which manifests itself in the sacred action. It is also designated the *ātman*, *i.e.* the self or the soul of all that lives.

'Let one worship *Brahman*, knowing that he is the reality. Let one worship the *ātman*. The *ātman* has for body the life; for form, the light; for essence space. It can take all forms according to its inclination. . . . It permeates all the world. . . . It is the essence of life; it is the essence of myself.'[1]

Thus the theme is stated which the *Upaniṣads* go on to develop and repeat without intermission.

This Being is one and absolute. He has no determinations. One can say nothing of him except that he is. No definition is possible. We may at least try to name him, so convinced are we still that we know the Being of which we know the name. He is 'that,' *tat*. He is 'No, no,' for we deny every quality, which would serve only to limit him. He is the reality—the reality of realities, *satya satyasya*. Beyond the reach of all comparisons, he is bliss, a negative bliss, and, in consequence, absolute. He is without a second. He is my *ātman*, the reality of *me*. There is an identity between the *ātman* which I am and *Brahman*. 'I am *Brahman*.' 'Thou, thou art that.' The universal soul and the individual soul are one.

The world also is real. It derives its reality from *Brahman*, the only reality. A parallel between the psychical and the cosmical is founded upon the unity between the individual soul and the world soul. The cosmos and the ψυχή are the two aspects of the same reality, and the parallel elements which constitute them sustain themselves upon each other.

Finally, *Brahman* is the reality not only of the individual and of phenomenal existence, but also of transcendental existence. For there are two forms of *Brahman*, the one corporeal, the other incorporeal; the one mortal, the other immortal; the one mobile, the other immobile; the one manifested (*sat*), the other transcendent (*tyat*).[2]

In its individualized form the soul could not have the bliss which is the exclusive prerogative of the Absolute Being. The limited Ego is in contact with the non-Ego, and is unhappy while experiencing the alternations of pleasure and of pain, the impermanence and the vanity of finite things. In truth, 'he who is another than himself is suffering.' This misery is born of individuality and lasts equally long. The active self, the *jīva*, is involved, through its activity, in a series of existences of which each one is determined as to its quality by the quality of the existence which has preceded it. 'According as a man acts, according as he conducts himself, so is he reborn.'[3] 'Through good work a man is reborn in a good state, through evil work in an evil state,'[4] and so on, indefinitely. If the life is evil, it is because the man in his ignorance believes himself a person and says, 'I am such and such a one, this thing belongs to me.' This error and the activities which result from it entangle him in the meshes of a life which ever begins anew. Thus the wise man yearns after repose in the Absolute, in the bosom of a Being in whom alone are permanence and truth. How shall a man succeed in quenching individuality, which is the cause of all suffering? It is not by means of action, since action on the contrary is a source of individual life. Even asceticism has only the value of a propædeutic: it tends towards salvation, but it does not save. One way only is open to the soul desirous of deliverance, and that is knowledge. Knowledge is necessary, not now of rites and their meaning, but of *Brahman* himself. And since knowledge of *Brahman* means realization of the identity of the self and the Being who alone exists, one must be able to say to this Being: 'Thou, thou art the *ātman* of all that exists. That which thou art, I am that. . . . Thou art the Reality.' This saving knowledge can be reached only through inner vision. The individual suppressing his senses destroys all contact with the outer world and finds *Brahman* in himself. 'The eye would not flash forth to meet him, nor word, nor sense, nor works, nor ascetic practices. But if the mind is calm, if the heart is pure, then one contemplates the indivisible *Brahman*. One cannot know him except in the heart.'[1] If the Absolute cannot be grasped, one may at least approach him by intense meditation directed towards the symbols of him, and very especially by meditation upon the mystic syllable *Om*, for 'in truth this syllable is *Brahman*; in truth it is the supreme existence; it is the best fulcrum of existence; it is the ultimate ground.'[2] United with *Brahman*, the individual self has no more a distinct consciousness. 'It is when there are two existences that one hears, sees, and knows the other, but when for any one everything has become his own proper self, how could there be anything which he could see, hear, and understand?'[3] Moreover, absorbed in the Being who is altogether happiness, he shares in this infinite bliss.

(3) *The Vedānta.*—Of the six philosophical schools which claim connexion with Brāhmanism—more exactly, of the six schools which Brāhmanism has claimed as its own and which it has annexed—three only have given assistance to the elaboration of theosophical doctrine. They are the Sānkhya, the Yoga, and the Vedānta (*qq.v.*). The last school is the only one of the three which devotes itself to an explicit continuation of the ancient *Upaniṣads*. We shall therefore begin with it, although, very probably, it did not attain its full development until after the two others.

The name Vedānta does not designate a single homogeneous school. There is a strictly monistic Vedānta: reality pertains to *Brahman* alone; all outside of him is nothing but appearance (*advaita*); this is the thesis of Śaṅkara,[4] at the beginning of the 9th century. Other Vedāntins profess a modified monism—the Viśiṣṭâdvaita of Rāmānuja (*q.v.*; 11th century). Others finally abandon monism altogether, not in the sense that they put mind and matter over against each other, but because they allow an essential difference between the individual self and the universal self; these last attach themselves to Mādhva (*q.v.*; 12th century). But, however great their differences, the three teachers all invoke the authority of Bādarāyaṇa, the reputed author of the *Vedānta-Sūtras*, and all three have written on this older teaching a commentary which is the fundamental text of their respective schools.

Rāmānuja has more right than Śaṅkara to claim to continue the teaching of the *Sūtras*. But Śaṅkara more than the two others, more even than Bādarāyaṇa, is in the line of succession to the *Upaniṣads*. While Rāmānuja and Mādhva are explicitly theistic and teach that God, the author of all grace, saves those who give to Him the worship of love and faith, Śaṅkara attributes to God (Īśvara) an apparent existence only, and an accessory rôle in the genesis of salvation. Consequently the history of theosophical doctrines in India is directly concerned with Him alone.

The first *sūtra* of Bādarāyaṇa thus states the object of the Vedānta: 'Now comes the study of *Brahman*.' To know *Brahman*, it is not enough to open the eyes and the ears and search for Being in the world which surrounds us. Between the Ego and the non-Ego there is an irreducible opposition: the senses and the understanding which perceive and appreciate the non-Ego either transfer to the object the qualities of the subject or transfer to the subject that which they believe they know of the object. In either case external cognition is vitiated by error; the true name of this pretended knowledge is 'nescience' (*avidyā*). Outside of us the senses and the understanding give us only the cognition of the phenomena of 'becoming.' Now Being, in reality, does not 'become'; it is. If it were 'becoming,' it would not 'be'; for it is impossible to see how that which is not could come to be. All becoming is only an appearance, an illusion.

This Being, the only reality, retains in the Vedānta the name of *Brahman*. This is the absolute *Brahman*, without determination, or, as the Vedāntins say, without quality; beyond time and space and causation, for time, space, and causation belong to the world of appearance, of *avidyā*. 'Being is one; all plurality results from false knowledge.' As it is impossible for me to doubt the reality of myself—I could not express this

[1] *Muṇḍ. Up.* III. i. 8 f. [2] *Kāṭha Up.* I. ii. 15–17.
[3] *Bṛh. Ar. Up.* IV. v. 15. [4] See art. ŚAṄKARĀCHĀRYA.

doubt except in affirming my existence—'I am *Brahman*,' provided that 'I' am denuded of every quality and of all contingency, of everything which constitutes my individuality. In this way I am *Brahman* entire, for *Brahman*, being absolute, could not have parts.

Nescience is not only a relation between the subject knowing and the object known; it is also the relation which emerges between the absolute *Brahman* and the world of names and forms. To this cosmic power, more particularly, the name *māyā* is given. *Māyā* (*q.v.*) signifies the alteration which takes place in *Brahman* and in the self as both pass from the category of the Absolute into those of time, space, and cause—an illusory alteration, which affects the ultimate Being and the self only in appearance. *Māyā* modifies on the one hand *Brahman* and thus creates the world; but it modifies also in the same way the Ego and creates the individual Egos. By the existence of *māyā* the unqualified *Brahman* becomes the qualified *Brahman*, the effect-*Brahman*, the lower *Brahman*. Śaṅkara gives to this *Brahman* also the name of God, Iśvara; but this God, His attributes, and the world which the lower *Brahman* creates, preserves, and destroys, do not exist save in virtue of nescience; all is phenomenal, illusory. From the point of view of true knowledge, there is neither cause nor effect; neither Iśvara nor world; neither agent nor act; but only Being unchangeable, indeterminate. Under the influence of *māyā*, the *ātman* becomes a *jīva*. The *jīva* becomes individualized through everything which serves it as a substratum, or *upādhi*—the body, the senses, the power of action, and the faculties of knowledge. But the attributes of the *jīva* have no more reality than those of Iśvara. Truly speaking, the self is not a product; it is incorporeal, spiritual, immutable, infinite, one.

For practical purposes and provisionally, both the world and the individual exist. To both of them even Śaṅkara pays considerable attention. Both are subjects and objects of action. Their destiny is determined by *karma*. 'An act cannot be annulled; this is the universal law; or, at least it cannot be annulled except through working out the result.' Action produces life, and life produces action. The self which acts will be reborn for action, and, again, for rebirth. The chain of causes and effects has not had a beginning. How could it have an end? Fortunately, cause and effect, act and result, are the work of nescience. And what nescience has produced, knowledge will destroy. 'As long as nescience has not been abolished, the individuality of the self is not abolished, and the individual soul continues to be the sphere of good and evil.' The individual can, by a knowledge of *Brahman*, escape from *karma* and the misery of a limited life. If he has discovered how he may attain this by a severe spiritual discipline, he can, through concentrating his thought upon himself and by a kind of spontaneous effort, reach the 'perfect vision,' *i.e.*, he can perceive the *ātman* in himself and thus have an intuition of his identity with the supreme *Brahman*. This vision destroys in him the remnants of personality and dissipates the mirage of the empirical world. He is saved. He is *Brahman*, and in consequence he is, in an absolute sense, being, thought, and bliss.

(4) *The Sāṅkhya.* — The Sāṅkhya (*q.v.*) is of ancient origin, for its influence upon primitive Buddhism cannot well be disputed. The main pronouncements of the school are, however, of later date, and several centuries subsequent to the birth of Buddha. Fortunately there are other works—*e.g.*, the *Mahābhārata* and some ancient Buddhistic writings—which mark out the path of development from the *Upaniṣads* to the classical form of the Sāṅkhya. As we now have it, the Sāṅkhya, realistic and atheistical, is Brāhmanical. It has no difficulty in including the Veda among the standards of knowledge. It may be that, originating outside of Brāhmanism, it was at a later date recognized by the latter, and has paid for this advantage by an adhesion, more or less nominal, to the authority of revelation. Nevertheless, as we find in works undoubtedly orthodox the antecedents of several essential doctrines of this system, it is more probable that it has originated from the same circles as those in which the ancient *Upaniṣads* were elaborated. Its genesis can be best explained if it is regarded as a product of reaction against the radical idealism which is implicit in the *Upaniṣads* and develops in the Vedānta.

The Sāṅkhya posits the absolute reality of the empirical world. If it is said that the world of things is the theatre of a perpetual becoming and that it is impossible to predicate being of that which is impermanent, its answer is that a thing is not real only at the moment when it manifests itself; it has also a subtle state, in which it exists potentially in its cause. For the effect is already to be found in its entirety in the cause: 'The effect and its cause are one.' To affirm the reality of things when they are in the subtle state is to assert that they are already substantial. The ordinary man is unable to see them in their causes because his senses are too gross. If, by ecstasy or as a reward of exceptional merit, he intensifies his power of vision, he will perceive the subtle as easily as the gross.

Whether subtle or gross, the world is essentially composite and changing. Now every complex thing implies a simple Being for the sake of whom it is formed; everything that changes changes only for the sake of an immutable Being. Thus, over against a substance composite and changing, the Sāṅkhya philosophy posits a simple and stable substance; with the *prakṛti*, which is the sphere of becoming, it contrasts the *puruṣa*, which is Being. Everything that acts or is acted upon, everything that changes and lives, the object known, the act and the organs of knowledge, all depend upon *prakṛti*. This includes ψυχή as well as φύσις, since, in the living being, the ψυχή must nourish itself like the φύσις, in order to sustain life and growth.

The change which emerges in the physical and psychical universe is a regular evolution, taking the form of a determination, a growing complexity, an increasing materiality. In its creative aspect evolution brings the gross out of the subtle. At the dissolution of the world the gross resolves itself into the subtle. The Sāṅkhya, which has minutely described the successive phases of the evolutionary processes, posits 24 principles (*tattvas*) which are arranged in order, from the *prakṛti*, the common foundation of all phenomenal existence, to the gross elements and their combinations. It is because the *prakṛti* is not simple that it has been able thus to produce all the things of the physical and mental world. It is threefold. It is composed of three factors, themselves substantial, which are called *guṇas*. These are *sattva*, *rajas*, and *tamas*, goodness, passion, and darkness. It is by their presence in infinitely varying quantities that things affect men differently.

The 18 *tattvas* which in the evolution emerge between *prakṛti* at the one end and the gross elements at the other unite to form the 'characteristic body,' the *linga śarīra*. The *linga śarīra* is subtle and is to the gross body as the cause is to the effect; it explains the differences, both physical and psychical, which distinguish individuals from one another. Whilst the gross body is destroyed by death, the *linga śarīra* passes from birth to birth and constitutes the identity of the individual in the series of its existences. In every life it becomes richer or poorer according to all that a man thinks, does, or resolves. It is like capital which bears as interest the quality of succeeding existence. The characteristics of the *puruṣa*, or the soul, are directly the converse of those of *prakṛti*. The *puruṣa* is simple, immutable, inactive, unproductive, without *guṇas*. It is also multiple. Because all the souls have not the same kind of knowledge, and because some are free and others are still bound, it follows of necessity that there is an infinity of souls. But the *puruṣa* is in itself independent of all individualization to such an extent that we can always speak of it in the singular. The *puruṣa* is light and understanding; it is light without even having anything to illumine; it thinks without even having any object of knowledge.

Being and becoming, both infinite, are not placed simply over against each other. There is a relation established between them which explains creation, knowledge, and salvation. The neighbourhood of the *puruṣa* in fact causes in the *prakṛti* an excitation which leads in it to the formation of a subtle body in connexion with each *puruṣa*. But the subtle body is only the substratum of the conscious life. That emerges in virtue of the immediate presence of the soul. It is the form in which is expressed the relation between the *puruṣa* and *prakṛti*. Now this relation involves suffering for the soul. It is real, but it is not inherent in the soul. Because it is real, deliverance is necessary; because it is not inherent, deliverance is possible.

Both the *puruṣa* and the *prakṛti* have to submit to certain consequences of the relation in which they are bound. When illuminated by the *puruṣa*, the modifications which take place in the ψυχή of the individual become conscious. These again are reflected upon the soul, which thus becomes subject to all the interplay of the affections. It is in this roundabout way that the soul arrives at a knowledge of itself. For, though it is the subject of all knowledge, the *puruṣa* cannot know itself directly. This knowledge becomes possible through a reflexion coming from the mirror provided by the internal organ. The *puruṣa*, full of light but inactive, and the *prakṛti*, active but unconscious, stand to each other in the relation of the paralytic to the blind. Their association is discovered to be beneficial for both. In the service of the *puruṣa*, the *prakṛti* is creative, and this creation has no other end than to make knowledge possible for the soul—which knowledge necessarily eventuates in salvation.

A slow and elaborate process is necessary to break the bond and suppress suffering. This is the main intention—not to destroy actual suffering, which on other grounds would be impossible, but to make it abortive in its germ or in the persistent dispositions stored in subtle form in the internal organ. A slow internal struggle brings a man from the natural state—*i.e.* the morbid state—to absolute healing. Works and asceticism may prepare the ground, but it is knowledge which is truly efficacious. By means of study, self-contemplation, and meditation, we may arrive at an assertion of the truth: 'I am not: nothing is mine; this is not me.' One thus gets a direct perception of the distinction between the Ego and the *prakṛti*. To establish this distinction is to destroy the bond and to set the *puruṣa* in its absolute purity. Henceforth the soul has no other substratum than itself; there is no further association with the subtle body, no reflexion cast by it; the soul is healed

The *prakṛti* also derives advantage from a deliverance which, in effect, suppresses suffering for it, inasmuch as suffering is not felt except for so long as the *prakṛti* is illumined by the soul. As it would not be creative except in relation to the soul and its salvation, it ceases to be active and returns to the original equilibrium of the *guṇas*. Moreover, this healing has no value except for the liberated soul. 'Since, notwithstanding the infinity of time, there are still souls not liberated, there will be such to all eternity.'[1]

(5) *The Yoga.* — It might be asked if in the history of Indian theosophy the place of the Yoga (*q.v.*) is truly next to the Vedānta and the Sāṅkhya, if its affinities are not in an altogether different direction and with the group of systems which, though they adopted many theosophical ideas, are obviously theistic and devotional in tendency. Does it not make a place for God, for that Īśvara who is a 'soul apart,' a unique Being, eternal, all-powerful, all-good, all-knowing, exposed to no suffering, to no desire or change? Does not this God show an infinitely benevolent activity on behalf of men desirous of salvation? Does He not vouchsafe spiritual vision to His elect? Does not the *yogī*, to obtain salvation, surrender himself to God with that feeling of complete abandonment which is called *praṇidhāna*? Finally, is not salvation obtained by means of a discipline in which the strictly intellectual processes have little place? What have the recognized means for purifying the body and delivering the soul from the organ of thought to do with the pursuit of *jñāna*, the knowledge which brings salvation?

It is easy to answer these objections. First of all we may remark that the rôle attributed to Īśvara in the scheme of salvation is really secondary. After the preliminary process is gone through, there is no further intervention of divine assistance to second the efforts of the *yogī*, and everything happens as if he had only his own powers to rely upon. Further, the supreme end is not, by any means, as in theistic religions, eternal life in God or near God; what is desired is the absolute isolation of the individual soul. It follows that, probably, when the Yoga came to be systematized, Īśvara was merely a survival of a period when practices of asceticism and sorcery were associated with Śiva, a god whose vigorous personality might seem incompatible with an exclusively human conception of salvation. In fine, Īśvara was no more an inconvenient intrusion in the Brāhmanical Yoga than in the monistic Vedānta; it is even possible that his presence was indirectly the sign of the penetration of the Yoga by the theosophical spirit.

The Yoga, desirous of specially emphasizing the practical conditions of meditation and saving ecstasy, would naturally disregard study and reflexion, since neither of them was of service in securing the marvellous powers for which the *yogī* was ambitious. But, as in Brāhmanizing itself it had adopted very nearly in its entirety the doctrine of the Sāṅkhya, there was really no need to indicate the acquisition of knowledge as among the demands imposed by the need for salvation. This acquisition could have been considered as implicitly prescribed from beginning to end. In any case it is interesting to point out that in an *Upaniṣad* greatly influenced by Yoga ideas, the *Maitri Upaniṣad*, the examination of reflexion had a place among the members of Yoga. Perhaps we have in this a proof drawn from a period before the Yoga became entirely allied to the Sāṅkhya.

In other characteristics the Yoga shows itself faithful to the theosophical spirit. It rests upon very ancient beliefs closely related to magic. The remarkable manifestations of patience, will-power, and intelligence reveal the presence of supernatural faculties and imply in their possessors a new acquisition of energy. Besides, the accomplishment of salvation depends entirely upon personal effort. There is no possible doubt that the Yoga belongs legitimately to the same spiritual family as the Sāṅkhya and the Vedānta.

Properly speaking, the Yoga is the act by which the senses and the understanding are held in restraint; turned resolutely in one single direction, the mind acquires greater force and certain new faculties. The processes regarded as efficacious had already been employed for a long time when Patañjali formulated his theory of them. If, as is probable, the author of the *Yoga Sūtras* is the same as the illustrious grammarian of the same name, then this spiritual discipline was systematized in the 2nd cent. B.C. But, in the influence which from the beginning it exerted upon Buddhism, we have proof that it goes much farther back. The proper object of the Yoga, as supplied with doctrines by the Sāṅkhya, is, as the first of the *Sūtras* says, 'the suppression of the modifications of the thinking principle,' *i.e.* of the understanding. Freed from all *chitta*, the *puruṣa* regains its own nature. We are not concerned, as in the Vedānta, with recognizing by an effort of thought the identity of the Ego and the universal self; nor with distinguishing, as in the Sāṅkhya, the self from that which is not the self; the aim is to bring about the integration of the soul, in which consists her salvation.

The *yogī* pupil has difficult conditions to fulfil. A long and painful process of preparation is imposed upon him, so that he may triumph over all the obstacles inherent in the feebleness of man. It is in the first phase of this process that devotion and the practice of mortification have their parts to play. Whenever this propædeutic has fulfilled its functions, the adept may proceed to exercises which lead to the suppression of the intellectual functions and the detachment of the soul. According to the authoritative scheme, the programme of this gymnastic is divided into eight members. Five of these rubrics aim at the bringing of the body under control. They comprise interdictions and injunctions, prescriptions relative to the positions to be taken in meditation, and others which have for their aim the control of breathing, and, finally, the procedure which has to be followed in restraining the senses and destroying communications between the mind and the external world. There is special insistence upon the regulation of the breath, on the ground that individual life and thought are bound up with respiration, and that to control the one is to dominate the other. When, finally, the body has been purified, it becomes possible to exercise control on thought; three kinds of exercises lead it progressively towards unification, the destruction of individuality, and isolation.

Another method, more violent and more complicated, is founded upon a most bizarre kind of physiology. Through modifying and even stopping the circulation of the vital spirits in the channels of the body, the *yogī* succeeds in suppressing the natural functions of the understanding and in exalting the power of action and of vision. Strange phenomena accompany the last phases of this spiritual process: colours appear which are invisible to the ordinary man; sounds are heard; the *yogī* sinks into a 'mystic slumber.' Sometimes also the strain of so much effort ends in madness. The texts expatiate at great length on the manifold advantages which Yoga brings to its disciples. First of all there are benefits of an entirely mundane character: health, youth, and beauty. Especially there is obtained a 'sovereign power' which enables those who possess it to realize immediately all that they desire, to make themselves at will exceedingly small or big, light or heavy; to control the elements; to guide the will or sentiments of another; to change the nature of substances, to distribute their personality amongst several different bodies, etc. But for the *yogī* the spiritual results have more value. In seven stages the soul obtains liberation, first of all from the external world, then from the hindrances which come to it through its association with the organs of the intelligence and the will. Liberated from the world of results, the soul rejoices in pure tranquillity; dissociated from the internal organs, it tastes the ineffable delights of ecstasy, and reaches without any distraction the state of integration (*kaivalya*) in which is its salvation.

Before leaving Brāhmanic theosophy, we may point out that in more than one characteristic it is very closely connected with Western occultism (*q.v.*). Our theosophists have, like the Vedāntists, a marked tendency towards monism; their anthropology has borrowed much from the Sāṅkhya philosophy; they authorize exercises which are not without analogy to those prescribed by the Yoga.

2. Theosophy as the germ of new religions.—In

[1] *Sāṅkhya Sūtras*, i. 158.

Brāhmanism the theosophical doctrines are placed alongside of the old tradition, and religious society remains confined to the old framework. When theosophy is transformed into a religion, the conditions are altogether altered. Henceforth a man becomes a member of a community, not because of his birth, but because of his adherence to a certain belief; the idea and the group are co-extensive. Moreover, theosophy ceases to be a mere intellectual doctrine; it takes entire possession of the individual, and aims at maintaining among its adherents the unity of discipline and of life.

Two religions have sprung from the movement of thought which we find permeating the old *Upaniṣads*, viz. Jainism and Buddhism. Seeing that they are born in the same spiritual environment, it is not strange that they should have many characteristics in common. Their doctrines, their legends, their rules of life, have an unmistakable air of family relationship. The worship itself, in its outer forms, is so similar in various particulars that from the outside one might easily confuse the two systems; witness only the tale of Aśvaghosa in which one finds King Kaniṣka worshipping a Jain *stūpa* under the impression that it is Buddhistic. Jainism and Buddhism are both products of the process of crystallization which was a feature of the period of the ancient *Upaniṣads*. Besides Brāhmans practising strict observance of rites and a solitary asceticism, India has been familiar with what one might call wandering cenobitism. The teachers, accompanied by their disciples, go from place to place, not settling down anywhere except during the months of the rainy season. These *parivrājakas*, in the course of instructing their pupils, discuss the most diverse subjects. The groups are not closed. Round about a knot of faithful disciples there gathers a numerous body of adherents and friends. If Jainism and Buddhism have been able to transform themselves into Churches, the reason is that they have understood better than some other *saṅghas* how to attach the laity by solid bonds and to organize the community by fixed rules. There is now no doubt that Jainism is prior to Buddhism. Buddhists themselves do not hesitate to admit the fact. But Jain writings are certainly posterior — and very much so — to those of Buddhism. It may well be that, if there has been borrowing, the Jains have been the debtors. If we begin with them, it is not in order to lay stress on the relative dates, but rather because, on the whole, the Jainist Church has remained more faithful to the theosophical tradition of the *Upaniṣads*.

(1) *Jainism.*—Jainism (*q.v.*) has all the characteristics of a theosophical religion. It puts at the centre of its teaching the doctrine of *karma* (*q.v.*), and shows itself chiefly interested in human destiny. It aims at delivering men from the misery of the *saṁsāra*. It demands that the individual should be the instrument of his own regeneration. It searches for the saving truth beyond phenomena and sensible perception, and, as a consequence, asserts the authority of persons endowed with exceptional faculties of vision and knowledge. It places itself outside the Brāhmanic tradition. Nothing more is heard of Īśvara. Jainism is a 'human' doctrine. Śaṅkara sees in this a reason for its condemnation. Because it opposes to Vedic tradition a new rule, this theologian accuses it of not being 'revealed.' And yet Jainism also makes it a duty for its disciples to have faith in the words of an omniscient master, who made known the way of emancipation, who has triumphed over the world of death, and who, because of this, has received the surname of Jina ('the Victorious').

Perhaps because the Jains appeal to omniscient teachers, they have promulgated a theory of knowledge which forbids any absolute affirmation or denial. Every proposition has a relative value only (*anekāntavāda*); a thing is not thus; in a way it is this; I can say that a thing is not, that it is, and that it is not, that it 'cannot be spoken of,' etc., only if it is understood that these predicates are true merely relatively and under certain reservations (*syādvāda*). As far as one can conjecture from the examples which illustrate the various dialectic 'refractions' (*bhaṅga*), the aim of the *syādvāda* is to show that nothing can be known except in relation to the totality of the universe, where birth, duration, and death rule together, and that, relatively to this indeterminate universe, things are themselves indeterminate. 'Everything is indeterminate by the very fact of its existence.'[1] The aim of this doctrine was to destroy at one and the same time the monistic dogmatism of the Vedānta and the negations of the sceptical schools.

Everything in the universe comes under one or other of the five categories of substances (*dravya*): soul (better, life), space, merit, non-merit, and material molecules. Souls (*jīva*) and molecules (*pudgala*) are infinitely numerous; space, merit, and non-merit are single. Merit (*dharma*) has the effect of furthering the progress of the soul; non-merit (*adharma*) leaves it stationary. The progress of the soul is the consequence of its *karma*.

In fact, the soul is by its nature limited and active. As limited, it has the dimensions of the body, which serves as its substratum; it is lessened and increased along with the body. As active, it receives in virtue of its *karma* an influx of material molecules, which, according to their quality, are black, blue, grey, yellow, rose-colour, and white, and which affect the *jīva* by giving it various colours. This influx of karmic matter is the bond which links the soul to the *saṁsāra*. The individual who aspires to salvation has the task of purifying his soul. By asceticism he eliminates the *pudgala* which stain it. By draining off the acquired *karma*, asceticism is the essential factor in *nirjarā*, or the burning up of the effects of *karma*. Thus one of the characteristics of Jainism is the extreme importance which it assigns to *tapas*. It is not sufficient to annul the past; it is also necessary to prevent the formation of new *karma*. And this desirable result is produced by discipline, by *saṁvara*. In its two principal forms it prevents the entrance of the karmic *pudgala* into the *jīva*; the two forms are control (*gupti*) and good behaviour (*samiti*). By *gupti* the soul represses the activity of the body, of speech, and of the mind; by *samiti* it so behaves as not to injure or offend any one. Reflexion and meditation are also efficacious means of discipline and of defence against the pernicious influx. Right vision (*i.e.* right faith), right knowledge, and right conduct complete the way of deliverance. And, just as an elixir does not heal any one except him who knows it, has faith in it, and applies it properly, so the Three Jewels cannot produce deliverance unless they are united.

Henceforth, liberated from the *saṁsāra*, the zealous Jain is a *siddha*, a perfected being. He is disburdened of all karmic matter. He is without colour. His soul, lightened of every hindrance—like a flame which rises by its own strength—begins its course upwards towards the higher regions of the universe. There he enjoys a happy and eternal existence. *Mokṣa* has the effect of rendering the *jīvas* detached and free.

(2) *Buddhism.*—Buddhism also is a theosophy which has expanded into a religion. If the 'high priest' of Ceylon can give his approval to the catechism drawn up by Colonel Olcott, and, still more, if the communities of Ceylon, Burma, Japan, and Mongolia give their adhesion to the fourteen articles in which the same writer gathers together the fundamental beliefs of Buddhism, the reason lies in the unmistakable affinity between the tendencies of present-day Buddhism and those of Western theosophical societies. But we have no need of external proof to enable us to assert the fundamentally theosophical character of the teaching of Gautama Buddha.

'As the ocean has only one savour, the savour of water, so the doctrines which I teach and the rule which I establish have only one savour, that of salvation.'[2] Buddha wishes to save men, not from sin, but from suffering and death.

He summons all men to salvation. 'The gate of immortality is open for all beings. Let him who has ears come, hear the Word and believe.'[3]

He rejects the authority and traditional knowledge of the Brāhmans. 'In a line of blind men who attach themselves to one another, the first does not see, the man in the middle does not see, the last does not see. Such are the discourses of the Brāhmans. Their faith is without foundations.'[4]

He makes salvation a personal matter for each individual. 'Be your own lamps; be your own refuge. Do not search outside yourselves for a lamp or a refuge.'[5] 'You must yourselves make the necessary effort. A Buddha is only a counsellor.'[6]

Finally, the framework of the building erected by Buddha

[1] *Sarvadarśana Sutras*, p. 29. [2] *Chullavagga*, IX. i. 4.
[3] *Majjhima Nikāya*, i. 170. [4] *Ib.* ii. 169 ff.
[5] *Digha Nikāya*, ii. 101 (= *Mahāparinibbānasutta*, ch. ii.).
[6] *Dhammapada*, v. 276.

is constructed almost entirely from materials borrowed from the Brāhmanical schools, nurtured in the teaching of the *Upaniṣads*.

The method of salvation which Buddha preaches to men includes rules of life and truths of an intellectual character. But since it is well understood that his teaching has but one savour, there is no hint that men should practise virtue because it is virtue, or search for knowledge because of the practical or intellectual satisfaction which knowledge brings. Morality and learning, in intention at least, are looked at only from the narrow point of view of salvation. Thence come the limits within which they move. In fact, Buddha did not wish to teach either morality or science, but only a therapeutic of the will and a therapeutic of the intelligence. When once a man is healed from moral evil and from error, he may work onwards towards salvation.

(*a*) *Therapeutic of the conduct.*—Only a soul purified by moral discipline can receive with profit the teaching of the Law. The most formidable enemy of salvation is the desire for sensual enjoyment. Sensuality figures in all the lists of depravities, infections, obstacles, and hindrances. It is against sensuality that men have chiefly to struggle. Hence the imperious necessity of exercising constant control over the senses. Of all the virtues vigilance is most characteristic of Buddhistic moral teaching.

(*b*) *Therapeutic of the intellect.*—Knowledge is not less necessary than good conduct. Like good conduct, it has chiefly a negative value. In theosophies closely connected with Brāhmanism knowledge is a working out of deliverance in a positive manner, because upon the topics of God, the world, the soul, and human destiny there is a body of knowledge directly efficacious for salvation. But the point of view of Buddha and his earlier disciples is quite different. That which they want is to deliver the mind from unfavourable thoughts which may hinder the individual or at least lead him in a false way. It can be understood how different are the conditions under which the spiritual struggle presents itself according as one admits or denies the existence of eternal and immutable beings, whether immanent or transcendent or both. Buddha's aim was to show that in the succession of phenomena no cause was revealed which was not itself phenomenal, and to deduce from this proposition the consequences affecting the moral life of the individual. The earliest Buddhism neither knew nor wished to recognize anything other than phenomena. Phenomena, both physical and psychical, constitute *dharma*. In us and outside of us we reach nothing but *dharma*, not because of our mental incapacity, but because neither in us nor outside of us is there anything but *dharma*. The constituents of *dharma* are not hung, as it were, upon a substance of which they are the momentary phases; they are themselves the whole reality. Primitive Buddhism is thus at the opposite pole from the Vedānta, which abstracts from phenomena and regards Absolute Being as the only reality.

Whether subjective or objective, phenomena are incessantly changing, and things are involved in a perpetual flux. Phenomena are just those states of individuals and objects of which the essential characteristic is complexity. Now only the simple and homogeneous can be permanent. The human individual is an assemblage of five kinds of aggregates, and this composite is modified from moment to moment. What is called the individual (*pudgala*) is a series, more or less lengthy, of the phases of composites continually altering. The movement of aggregates, or of combinations of aggregates, does not take place by chance, or without any system. One cause determines the condition of every new combination, and this cause is the quality of the antecedent combination. With conscious individuals, who alone are interested in the theory of salvation, the causal combination is an agent, and his action produces results of two kinds; it manifests itself externally as the immediate cause of phenomena, and internally as a modification of the doer himself of the action. *Karma* may be defined as the reaction of the act upon the subject. This reaction takes place generally at 'the dissolution of the body after death,' in such a way that the binding force of one individual life reappears in another individual life. As Buddhism has discarded every hypothesis not connected with visible forms of existence, it does not posit a subtle body as the vehicle of *karma*, or an Īśvara as the controller of resultants. Even at a distance *karma* is a force which works mechanically. Moreover, it fulfils in Buddhism the function of explaining the congenital differences which are found among men, and of awakening in the hearts of the faithful adherents the feeling of their moral responsibility.

Karma is far from being a doctrine specifically Buddhistic. The same cannot be said of the two sets of rules the discovery of which transformed the potential into the actual *buddha*: the Four Noble Truths and the Twelve Causes. These Buddhism has always claimed as its own. The Truths are suffering, its cause, its suppression, and the way which leads to suppression. 'What is impermanent, that is suffering.'[1] 'The craving for existence and for the cessation of existence are the causes of suffering.'[1] 'The suppression of suffering consists in the destruction of the craving by the complete suppression of desire.'[2] We arrive at suppression by following the Noble Eightfold Path—right knowledge, right willing, right speech, etc. The ultimate significance of the Twelve Causes is to explain suffering without having recourse to any principle except those recognized by Buddhism, viz. the aggregates, *karma*, and the Noble Truths. Through one causal link after another, the life of suffering is connected with its deepest source, viz. ignorance. In this way there is excluded the notion of a soul which would be essentially and incurably suffering. There is eliminated also the interference of a God who imposes the suffering upon His creatures; if the misery came from outside, it would not be in the power of man to put an end to it. It does not belong to the Ego as a permanent substance, and, since the older theosophy had shown that man cannot find God except in and through the Ego, Buddhism, in denying the *ātman*, is compelled also to deny *Brahman*, the original and immanent cause of the universe.

If Buddhism is a theosophy, it is much more a religion. Religion aims at satisfying much more varied needs than does an essentially intellectual doctrine. Religion is a manner of living, and not only a manner of thinking. The necessities of life and of controversy soon compelled Buddhism to extend considerably the range of its practical and dogmatic teaching.

In ethics Buddhism was far from confining itself to the limits imposed by the demands of salvation. In seeking to give the greatest possible effectiveness to its moral pronouncements, Buddhism does not take the trouble to co-ordinate systematically the lessons which circumstances suggest. When it addresses itself to the laity—as frequently happens—it disregards the special conditions of the strictly religious life, and its precepts obtain a universal significance. The exclusive interests of personal salvation are then so far from its thought that the virtues which it enjoins have a social and human value—compassion, charity, humility. Similarly there is an expansion of doctrine. Questions kept in reserve at the beginning soon had to be investigated, and the reason for this was that facility might be obtained for discussing them with rival schools. Ontological and epistemological topics soon became the order of the day. It was inevitable that, even within the limits of Buddhism, some divergent solutions would be proposed. Hence the appearance of sects in which tendencies showed themselves which had hitherto remained latent: the realistic schools of the Sarvāstivādins, the idealistic schools of the Yogāchāras, the nihilist schools of the Mādhyamikas.

The later disciples of Buddha deliberately abandon the prudent agnosticism of their Master. Their speculations are concerned with the transcendental world (*lokottara*). Even the fundamental unity of the universe is affirmed (doctrine of the *tathatā*). It is noteworthy also that Buddha himself, who from the earliest times had been regarded as the perfect example of humanity, comes to represent, in the theory of the Threefold Body, at one and the same time, phenomenal existence, non-sensible existence, and absolute existence—the body of creation, the body of bliss, and the body of the Law.

But, even when considerably amplified, conduct and knowledge are not given more than a negative importance as regards salvation. Upon the soil cleared by them the problem is now to construct the properly religious life. On what plan will this building be erected? It will be no matter of astonishment that, being at once theosophical and religious, Buddhism has conceived a double ideal of life and has proposed two different methods. To become *arhats* and accomplish their own salvation was the aim of the *sthaviras* of the ancient Church; they are the adherents of the Lesser Vehicle. Those of the Greater Vehicle

[1] *Saṁyutta Nikāya*, iv. 26.

[1] *Mahāvagga*, i. vi. 20. [2] *Ib.* i. vi. 21.

aspire to become *bodhisattvas* and believe in religious solidarity.[1] It was enough for the first to transform a sinner into a saint; the others have more ambition; they desire that the sinner, following in the footsteps of Buddha, should become a saviour. It can easily be understood that the way of the *arhat* and the career of the *bodhisattva* separated themselves perceptibly from one another.

(*a*) *The way to arhatship.*—Conversion makes of the Buddhist a new man. He 'enters into the current.' By an energetic and long-continued struggle he destroys in himself the adverse principles. Two roads to the goal now open up before him. The one is through a series of spiritual exercises. Meditation and intense concentration secure in him serviceable tranquillity (*śamatha*). No more of attachment, no more of desires; the very residues of desire are destroyed. The results of the liberation of the heart are clear vision (*vipaśyanā*) and wisdom (*prajñā*). The other way is that of enfranchisement (*vimokṣa*). The path to the awakening is by ecstatic contemplation (*dhyāna*). From ecstasy to ecstasy the monk rises in eight stages (the *samāpatti*) to a state of being which is neither thought nor the absence of thought. It is the suppression of voluptuous ideas, of discursive ideas, of joy, of breathing—the abolition of the world of forms by that of space, and of the world of space by that of knowledge; of the world of knowledge by that of the non-existence of things, and of the last by that in which there are neither ideas nor the absence of ideas. Arrived at this already very elevated stage, the *arya* enters into possession of superior powers (the six *abhijñā*). But it is necessary to go even higher. A ninth and last *samāpatti* leads to the 'dissolution of all conscious perception,' to 'the awakening,' to *sambodhi*. When one has taken the way of wisdom or of enfranchisement, one becomes an *arhat* (*q.v.*), a saint. The *arhat* has done 'that which he had to do.' When his *karma* is drained off, he will be extinguished without his last thought or his last aggregate giving rise to a further thought or a further combination.

(*β*) *The way to Buddhaship.*—As the ideal is higher, the method is more complicated. The career of the *bodhisattva* (*q.v.*) demands a long preparation and solemn pledges. There must emerge in the man the 'thought of illumination' (*bodhichitta*), that he should take the vow to do everything to arrive at the goal (*praṇidhāna*); that by an act of will he should 'assign' to the advantage of another his actions and the fruit of his actions (*pariṇāmanā*). Then commences the struggle properly so called. In order to obtain illumination, the *bodhisattva* must provide himself with a double equipment, merit and knowledge. The programme which has to be followed includes acts of worship, rules of conduct, and the practice of meditation. The object is to acquire successively the ten perfections (*pāramita*), each corresponding to a spiritual world (a *bhūmi*). At the end of this long ascent the *bodhisattva* obtains finally the illumination which makes him a *buddha*, *i.e.* a liberator of creatures, an ultra-phenomenal being still sojourning for a time in the phenomenal world.

For *arhat* and *bodhisattva* the eventuality is the same—*nirvāṇa* (*q.v.*), extinction. What does it matter that neither Buddha nor his authorized disciples have said what *nirvāṇa* is? If one knows that it is the abolition of suffering and death, of relative and individual existence, that is enough to make it an infinitely desirable state. If Buddha has gained control over natures of the most diverse qualities, it is just because he has left them the liberty of imagining a *nirvāṇa* conformable to their needs and their aspirations.

Let us take a look backwards. We may agree that Buddhism has certainly characteristic marks of a theosophical system. It regards ignorance as the source of all the evil of living, and knowledge as the panacea of suffering. It seeks to deliver its adherents from the fear of death. It endeavours to upset the Brāhmanical methods of salvation. It denies that texts or doctrines have any direct value for salvation, and it affirms the value of 'vision,' of intuition arrived at by internal concentration and ecstatic meditation. It demands that every man should be the architect of his own salvation, and, even though it multiplies the 'saviours,' it no less emphasizes for the individual the necessity of personal effort. It teaches that knowledge is power, and that spiritual excellence manifests itself outwardly in extraordinary faculties. It breaks through the traditional framework and urges the individual to work without procrastination towards his regeneration and so to arrange matters that this labour shall fill his whole life.

[1] See artt. HĪNAYĀNA, MAHĀYĀNA.

3. Introduction of theosophy into sectarian religions.—Brāhmanism in its different aspects was only one of the forms of the religious life; in every period there was also the popular current, powerful, infinitely varied, and mobile. Just as in the sacerdotal tradition minutely elaborated rites occupy the principal place, gods and demons are central in the popular religion, and the worship which is given to them, mixed throughout as it is with superstitions and gross practices, answers more fully to the idea which is generally held of devotion and of piety. These two religious contents have not existed side by side without exerting an influence upon each other. We have here to do only with the influence exerted by the theosophy of Brāhmanism. This influence is only a particular illustration of the growing preponderance which the sacerdotal caste obtained in all the moral life of India, and of which the Buddhistic writings themselves give unmistakable evidence. Nothing is more natural than this primacy. The Brāhmanical families had at their disposal two powerful forces, tradition and cohesion. In a society which was crumbling to its foundations they formed a solid group, cemented by community of interest and of ambitions and reinforced by the habits of knowledge and of virtue. Popular forms of worship, legal and social rules, and secular poetry no doubt flourished to a large extent outside of Brāhmanical circles; but the influence of the latter has none the less succeeded in filtering through at every point. Just as Sanskrit, the scholastic idiom of the Brāhmans, invaded the epic and the drama, the popular style, and the literature of business, so the Brāhmans made themselves the theologians of the sectarian religions. They applied to them the methods of their systematizing temperament. They also introduced into them their conceptions of being, of the world, and of destiny, hesitating less to popularize these conceptions since Buddhism had already deprived them of their esoteric character.

We have in the *Mahābhārata* (*q.v.*) excellent evidence of the appropriation by Brāhmanism of materials which were without doubt independent. This document is all the more significant because it shows clear traces of successive accretions, and because its slow elaboration was carried through during the many centuries when the Brāhmans were gradually establishing their spiritual domination. We may regard the poem as completed, in the form in which we know it, at the time when neo-Brāhmanism was triumphant, *i.e.* in the 4th or 5th cent. A.D. And this voluminous encyclopædia of the traditional knowledge of the Hindus is something more than a witness; it was also one of the agents, perhaps the most effective of all, in the expansion of Brāhmanism in India. Before, during, and after the composition of the great epic, a mass of writings emerge to illuminate or supplement its evidence—sectarian *Upaniṣads*, *Dharmaśāstras* (as the first of which we may regard that which bears the name of Manu), *Purāṇas*, books written in prose or in verse by the numerous reformers of Hinduism or under their influence. Unfortunately the investigation of this rich literature has not yet been completed.

By gaining entrance into works definitely popular, the ideas whose development we have hitherto followed in the texts of a school or in the monastic literature began to exert a powerful influence upon the general thought of India; and nothing proves more effectively the plasticity of religious thought than the faithfulness with which conceptions originally monistic and antitheistic persist, almost

unchanged, in sects permeated with the most ardent devotion.

As in the ancient theosophy, the soul is haunted by the thought of death: 'Every being is in fear of death.'[1] 'Some men in their fear of death have died of fear.'[2] 'The world is under the attack of Mṛtyu. How dost thou not think of it?' 'Do to-day that which you will have to do to-morrow: do this morning what you will have to do to-night. Death does not trouble itself with what one has done or with what one has not done. It seizes a man as a wolf carries off a lamb.'[3] There is not a moment to lose: 'the days pass away; life wears to an end. Rouse yourself and run.'[4]

The new religious conceptions bring home to men the necessity and the way of salvation: 'Let a man search for a remedy through the suppression of suffering and let him apply it without murmuring. Then he will be free from misery.'[5] It is the individual life which is full of suffering and death; it is necessary to get deliverance from it: 'Death has two syllables, for it is *mama*, everything that I consider as my own. *Brahman* has three syllables, *na mama*, for in it nothing is mine.'[6] There is always the same hate of the body and its fugitive pleasures: 'Let one becoming an ascetic, abandon this stinking body, full of filth and urine, subject to old age and disappointment, the abode of maladies, burnt by passions and perishable.'[7] 'All the joys which arise from contact with the world are a source of suffering; they begin: they end; the wise man does not find in them any pleasure.'[8]

How is man to be saved? The means of salvation have become more numerous and more varied. There is nothing more interesting than to mark the persistence of the ancient ideas and the traditional formulas. The new has not destroyed the old. Salvation is the result of an effort entirely personal. 'Strengthening your soul by your soul, vanquish the enemy who reclothes the forms of desire, and who is difficult to strike.'[9] 'The *yogī* is he who finds within himself his happiness, within himself his pleasure, within himself his light.'[10] 'Let a man establish the self by the self and suffer not the self to be overwhelmed, for no man has any other friend than himself, or any other enemy than himself.'[11] Salvation is still the result of knowledge, a knowledge which is acquired by concentration of thought and meditation: 'Knowledge is the best vessel (for traversing the sea of the *saṁsāra*).'[12] To know *Brahman* is to obtain peace 'which has as its final result *nirvāṇa*';[13] it is oneself to become *Brahman*.

As may be seen from the last passages, it is the solution of the Vedānta which obtains most favour of all those proposed by the Brāhmanical schools. Recourse is had readily to the Sāṅkhya when one wishes to analyze the universe and the soul, or to the Yoga for teaching as to the practice of concentration and ecstasy; but the theory of *mokṣa* remains essentially monistic and pantheistic. As far as the evidence gathered from the great epic is concerned, the doctrine which is adhered to is not the radical monism of Śaṅkara (which was indeed later than the centuries during which the *Mahābhārata* was finally redacted), but the monism of the *Upaniṣads* and of Bādarāyaṇa: the world of names and forms is real, but it is *Brahman* who is the reality of its reality. The *Bhagavad-Gītā* does not leave any doubt on this point:

'Others offering me the sacrifice of knowledge, give to me worship as to a being at once universal and individual, who, under various forms, extends himself in every direction.'[14] 'The knowledge of goodness is that through which is seen in all beings the one imperishable Being, a whole in every particular being.'[15] 'One portion of me has entered into the world of living beings, as the soul of the individual, the imperishable portion.'[16] 'The knowledge by which thou wilt perceive all beings without exception in thyself and then in me, will for ever give thee a refuge from error.'[17] 'In the Brāhman, in the ox and the elephant, in the dog and also in the eater of the flesh of the dog, the wise man sees only one and the same being.'[18] 'He who sees me in everything and everything in me, is never far from me, and I am never far from him.'[19]

God is immanent in all beings, but He is not confused with them; He is the principle of life which animates them, the principle of all spirituality.

Finally, He is not only immanent; He is also transcendent. Things are in Him, but He is not in them. The world of phenomena does not exhaust His nature. He has an inferior nature which reveals itself in names and forms, and a superior nature which is also a living soul. He is distinguished from the immortal and imperishable *Brahman* of which He is the foundation, just as He is the foundation of eternal law and perfect blessedness. Thus, without going beyond the limits of the *Bhagavad-Gītā*, we can see theism substituting itself for the original pantheism, and a personal God taking the place of *Brahman*. The evolution completes itself in the modified monism of Rāmānuja, and the spiritualistic dualism of Mādhva. The worship of the *guru*, which is so persistent a characteristic of the modern sects, has its source in the same conceptions. God, who is the essential excellence in all beings and in all the categories of being, specially manifests His adorable nature in the persons who behold and who reveal the truth.

When, in a passage from the *Bhagavad-Gītā* which has just been quoted, the god alludes to the 'others,' who offer the sacrifice of knowledge, he puts them over against those who render the worship of love. At once pantheistic and theistic, the poem places on the same level the two methods of salvation—knowledge and *bhakti*. The explanation is that in Hindu thought nothing which has once been acquired is ever altogether eliminated. Tradition and novelty, animism and ritualism, naturalism and theosophy, scholasticism and mysticism—in short, the most contrary ideas—live together in the same minds and in the same writings. In theory the *advaita* may be professed, but in fact the *dvaita*, and even a plurality of co-eternal principles, is affirmed. It is, as it were, tacitly understood that an affirmation has value in itself, and that it is not annulled by adjacent affirmation. In his everyday life Śaṅkara was a Vaiṣṇava—we could hardly imagine this in reading his commentary on the *Vedānta Sūtras*. These men duplicate themselves with wonderful ease. So it is vain to attempt to apply to the *Bhagavad-Gītā* the critical processes devised for Western works. In separating the disparate elements and the successive layers, we should succeed only in ruining the unmistakable artistic beauty of the poem. Works much later than the *Bhagavad-Gītā* exhibit a character equally composite. Theosophic conceptions and formulas are mingled with effusions of an ardent and humble piety. One marks this characteristic in many writings attributed to the founders and poets of the reforming sects, Kabīr, Tulsī Dās, Chaitanya, etc. The most recent representatives of an enlightened Vedānta, Rāmakṛṣṇa and Vivēkānanda, also unite the *bhakti-mārga* with a phraseology which has become traditional since the period of the older *Upaniṣads*. There has been formed in India as it were a stock of words, ideas, and illustrations which belongs to every one and from which every one has the right to draw and is in the habit of drawing. One example will be sufficient to show how heavy a weight this theosophy of the past lays upon a thought which in other respects shows itself to be original and independent.

Nānak (*q.v.*), the founder of Sikhism, and his successors connect themselves with the religion of *bhakti*. They teach that a man is saved by the fervent worship of God, or by the worship of the *gurus*, the interpreters of God, and of the Book, the perpetual incarnation of the *gurus*. But the God of the Sikhs is like the *Brahman* of the *Upaniṣads*, and frequently borrows His name from the latter. In His own proper nature He is *nirguṇa*, without attributes; when He creates the world by means of *māyā*, He is also immanent in the phenomenal world and becomes *saṛvaguṇa*, endowed with all qualities. In order to be saved, one must discover God in the heart; through self-concentration the mind eliminates all duality. To know God is to make oneself identical with God. God unites with Himself the man who knows Him, and this man is not reborn. As regards this life, salvation wins for him who is assured of it unbounded happiness, and death has no more terrors for him.

The great Vaiṣnavite and Saivite sects are, quite as much as Sikhism, impregnated with theosophy. Their appearance is in itself evidence of an individualism in revolt against the excessive pressure of a religious tradition. Those who assert the authority of the Vedas are ridiculed. The framework in which the divine is placed is broken; no great importance is any longer attached to the name which the gods bear—Śiva or Viṣṇu, the label is different, but it is always the same god. The human framework is also broken; the religious value of caste is denied, and all men are called to salvation. The distinction between the sacred and the profane is abolished. Generally the first concern of the reformers is to put Sanskrit on one side in favour of an exclusive use of the popular language.

'The whole world for me,' says Nānak, 'is a sacred enclosure. Whoever loves the truth is pure.' 'All food and drink which come from God are pure.'[1]

The mechanical and the excessively ritualistic elements in the old religion are removed. Religion tends to become more human, more closely connected with ordinary life; the *Bhagavad-Gītā* has already expressed something approaching a sentiment of human solidarity, then an idea new in India. Moreover, religious tolerance becomes almost universal. Royal inscriptions prove that Brāhmanism, Jainism, Buddhism, Śaivism, and Vaiṣnavism have their representatives in the same families, and the sovereigns extend their favours to all the communities. Is it not clear that religion has become an affair of the individual, and that the son is not in this respect bound to follow the example of his father?

Unfortunately the sects which were originally the boldest very soon fall into the old errors, or, rather, a new tradition, also altogether tyrannical, is established in place of the ancient tradition; or, still more frequently, the older safeguards are restored and most weighty concessions are made to the prevailing ideas. The popular language takes on, in its turn, a sacred character. Caste and restrictions about food recover all their influence. One returns to the old formalism and to the grosser superstitions; and the work of reform, to which men constantly address themselves, has always to be done over again.

Their admission into the popular religions was not a clear gain for theosophical ideas. They remain in the outer courts, in an altogether subordinate position. In the *Bhagavad-Gītā* everything that is merely a heritage from the past, a survival, is theosophical. The elements which are truly living and fruitful are of an entirely different origin. The religious emotion and the fervour of feeling which spring up in hearts full of adoration do not come from the *Upaniṣads* or their derivatives. Far from celebrating the triumph of theosophic ideas in India, the sectarian writings rather indicate their failure, since they make salvation depend on the love and grace of a personal and transcendent God.

4. [Theosophy and ancient Indian philosophy.—In dealing with the introduction of theosophy into sectarian religions we have been tracing what might be described as a waning of the influence of theosophy. In the *Gītā* and in the sectarian writings theosophical elements are largely overlaid by materials gathered from other sources. But the last few decades have witnessed a remarkable revival of theosophical teaching. This is to a great extent connected with an incursion of influences from the West and especially with the teachings of Madame Blavatsky and Mrs. Besant. The authority of Madame Blavatsky has been largely discredited, but Mrs. Besant is still a living force and her followers are numerous. Indeed India can claim a larger number of theosophists than any other country in the world. The latest available report (1917) shows 385 Indian lodges, with a total of 7344 members, among whom are some outstanding personalities. Their literary activity is great, at least in quantity, and the flow of publications from the headquarters at Adyar, near Madras, is unceasing and influential. The implicit influence of theosophical ideas is even more important than that which is explicitly allowed, and theosophical literature is frequently to be found in the hands of thinking men who would disclaim any connexion with a theosophical society. The popularity of theosophy is not, however, always due to purely theosophical causes.

Theosophy in India glories in having no creed, and thus claims to appeal to men of all creeds and to interpret for them the hidden values of their respective religions. But, though it is without a creed, theosophy has a threefold aim which is stated by Mrs. Besant, as follows:

(1) 'To form a nucleus of the Universal Brotherhood of Humanity . . .; (2) to encourage the study of comparative religion, philosophy, and science; (3) to investigate the unexplained laws of Nature and the powers latent in man.'[1]

The popularity of theosophy at the present time in India is largely due to a judicious combination of those three aims. Unless we give a very wide interpretation to the term, the two first are not particularly theosophical, but they are universally acceptable, and they thus strengthen the appeal of the third—the only properly theosophical enterprise. The first aim affords an opportunity for an easy transition from religious to political activity and a reinforcement of the former through the popularity of the latter. The second sets itself in seemingly attractive opposition to the harsh judgments of certain apologists for particular religions, and appeals to that specious liberality of mind which finds expression in the oft-repeated assertion that one religion is as good as another. It calls forth the retrospective tendency which seems to be inherent in all theosophy and thus enables theosophy to serve itself as the heir of the ages. Emphasis is laid upon the idea of a hidden tradition which is traced through the magic of mediæval Europe, through the lore of the Knights Templar and the mystics, through Freemasonry and the speculations of alchemists and astrologers, until the ultimate source is postulated in the Great White Brotherhood, a vague and indefinite society which Madame Blavatsky alleges to have existed from time immemorial in the mountains of Tibet and to have delegated one of their number to act as her Master during a period of many years. This mystic brotherhood is believed still to have operative power and to have charge not only of the education and development of the human race, but also of cosmic evolution. Their doctrines embody the truths which are said to be at the basis of all religions, but, on investigating the matter more closely, we find that they are in a very special manner the fundamental principles of Indian thought. Theosophy thus gives a universal importance to Indian philosophical speculation and in so doing inevitably enhances its popularity in India. It levies contributions from all the more important Indian systems, taking from the *Upaniṣads* the doctrine of a fundamental unknowable and characterless Unity, and the identity of the human and the divine; from the Sāṅkhya the idea that spiritual advancement consists in a gradual detachment from the processes of the phenomenal world; from Buddhism the idea of *karma* and transmigration; and from Yoga the conception of various occult methods by which freedom of thought and

[1] Cf. M. A. Macauliffe, *The Sikh Religion*, i. 243; cf. i. 48.

[1] *Theosophy* ('People's Books'), London, n.d. [1912], p. 89.

spirit may be won. Further, by an application of its ideas of graded being and of development extended over many generations, it is able to allow a moderate amount of justification even to the grosser forms of the popular religions, and thus carry farther the process of infusing theosophical ideas into the cults of the people which, as pointed out, had but moderate success in earlier centuries.

As in Indian philosophy generally, so in theosophy the ultimate Being is an unknown and unknowable ground of all things, acquiring character as a Logos with the triple functions of will, wisdom, and activity. This differentiates itself into the human monads, having a similar triplicity. The human monad descends through various grades of being until it reaches the causal body, which has also a slightly lower mental aspect, uniting it with the grades of being of which even an ordinary man may be aware, and forming the basis of personality as we know it. The mental body has as its appropriate sphere the heavenly world, but the soul as it proceeds downwards enters also the astral world or the world of emotion and desire, and finally reaches the physical world. Over and over again there is incarnation reaching downwards ultimately to the physical world, and in each incarnation new experiences are obtained, leading, if rightly used, to the development of the soul. The supreme aim of the soul is to rise upwards to its original source, and the degree of ascent will be proportionate to the use it has made of the experiences of each incarnation. The working of the law of *karma* is inexorable. A man will receive the fruit of the deeds done in the body, and according to his good or his evil will be the duration of the period spent on each plane before another incarnation takes place. The aim of the whole process is to get rid of the separating sheaths of personality and reach absorption in the Absolute.

Theosophy is thus definitely committed to the doctrine of reincarnation and transmigration, with, on the one hand, its plausible explanation of the inequalities of human life, its stern insistence on moral consequences, its distant prospect of negative salvation, and, on the other hand, its ethical weakness arising out of its tendency to fatalism and encouragement of procrastination, and its lonely outlook as it traces the succeeding phases of individual development and promises reunion with those we love only in a 'togetherness' of absorption in which the definite character which was the object of our love altogether disappears.

The doctrines of theosophy claim a scientific basis in experience, but this experience is found to be very different from the experience of the ordinary man. It is dependent on the development of our latent powers, by the use of which we may acquire that knowledge which is already possessed by the masters of the human race, the adepts or initiates, and which may give to us a wonderful penetration into the hitherto undiscovered laws of nature. It is at this point that theosophy differentiates itself most completely from philosophy. Once make the initial assumption that the operation of these powers is possible and that the latent faculties can be exercised, and all is easy. We may attain a wonderful amount of detailed knowledge about the lower at least of the super-physical planes. We may discover, *e.g.*, that even during physical life the astral body projects a few inches beyond our physical body, and that it is shaped like an egg; also that various astral bodies are formed by the vibrations of thought and desire, the vibrations of unselfish affection producing bodies of pale rose colour, intellectual effort resulting in yellow bodies, devotional feeling in blue, etc. We may discover also facts on a higher ethical level—*e.g.*, that our prayers produce beings functioning as guardian angels and that our thoughts eventuate in actual astral existences, fulfilling the purposes into which our vague wishes would have been transformed, had opportunity waited upon our desires. In short, with an almost total disregard of the law of parsimony and of the rule against the multiplication of entities, we may explain many of the mysteries of our present life and many of the hitherto unexplained problems of nature by simply transferring the difficulty to a higher plane and 'discovering' beings personally responsible for what previously appeared to be a mysterious occurrence. It is at least doubtful whether modern theosophy in India distinguishes sufficiently between subjective imagination and the controlling power of objective facts, and this considerably lessens the force of the rebuke which it administers to our materialism, diminishes the value of its insistence upon the power of thought and prayer, and weakens its encouragement to explore farther than has yet been done the phenomena of spiritualism and telepathy as well as the more weighty experiences of the mystics of all ages.]

Conclusion.—The history of theosophical ideas, far more than that of religious ideas, allows us to establish the spiritual unity and continuity of India. Moreover, we have here an excellent field of observation for any one who wishes to know the meaning of theosophy, its principles, its aspirations, its method, and its influence upon life. With the idea that Indian theosophy is typical of this form of thought, we shall rapidly pass in review its principal characteristics.

(*a*) The most obvious quality is its concentration on the self, which not only occupies the first place in its scheme of thought, but also concerns itself with the Ego as if it were the only existence—as if everything else existed only for it and in reference to it. This theosophical individualism is both proud and exclusive. The vulgar intelligences, concerned with superstitions and traditional practices, are despised, and with jealous care the precious truth is guarded for a small number of the elect. 'There is nothing in common between popular religion and knowledge.'[1] As if to show clearly the existence of a double current in religious thought, a verse in the *Mahābhārata*[2] says that the gods, women, and the worlds have only one divinity, one *guru* only, but that the Brāhmans have two, Agni and Brahman, the god of sacrifice and the Being without a second.

(*b*) It is always flattering to belong to a privileged group; esotericism was an attractive element in theosophy. And there were others. Those who were terrified by threatening death and mysterious destiny, those who were shocked by the spectacle of physical and social injustice, found in the doctrine of *karma*, *saṁsāra*, and *mokṣa* just the solution fitted to give them moral serenity and courage to live. All the theosophical systems teach some way of salvation; they deliver their followers from the painful prospect of a second death, from an interminable series of lives poisoned by the expectation of death.

(*c*) Another advantage: truth is not arrived at slowly and patiently by study and reflexion; it is grasped by sudden internal vision. Once the premisses have been given by intuition, a rigorous dialectic can construct a system whose scientific appearance has an element of attractiveness for persistently intellectualistic minds eager to 'know.'

(*d*) The intuitive method is not only rapid and apparently trustworthy; it is also very fruitful.

[1] Śaṅkara, *passim*; cf., e.g., *Comm. on the Vedānta-Sūtras*, p. 820.
[2] *Mahābh.*, i. 95. 7.

It reveals that which neither analysis nor induction could discover—the supersensible world. Theosophy thus gives satisfaction to the mystical needs in human nature. Then, when one knows that the sensible world is only an insignificant part of being, and that, side by side with the very limited realm of knowledge, there is an infinite transcendental world, one resigns oneself easily to the most glaring logical impossibilities.

(*e*) Finally, the laws of material nature are not valid except for material bodies. Theosophy has been also a discipline of sublimation and dematerialization. Marvellous perceptions and an indefinite enhancement of intellectual and active powers are also privileges which India has always held in the highest esteem.

If now we ask what theosophy in fact did for individual and social life in India, we shall see that it has had some results which are excellent and others which are harmful. On more than one occasion it has vindicated the rights of the individual and struggled against authorities altogether dependent upon tradition. Theoretically at least, it has placed itself outside of social distinctions. It has made salvation a personal affair of the individual. It has opened the eyes of men to the foolishness of their futile occupations and the vanity of sensual pleasures and temporal possessions. It has taught them to seek for happiness in the contemplative life and in peace of heart. But it has also taught contempt of the ordinary life and of finite existence. It has ignored the possibility of progress in human affairs. It has been a school of pessimism. Its followers have searched for the absolute and the whole, when life can give only the relative and the partial. They have thought it possible to arrive by a leap at truth, when in fact nothing has really been secured by this intuitive method and everything has to be begun over again. It has lowered the dignity of virtue by making it a means and not an end. In condemning action and individualizing salvation, it has shown itself dangerously anti-social. Frequently, it is true, these bitter fruits have not been produced, for it has, on occasion, neglected its fundamental principles. Buddhism, *e.g.*, has preached the highest virtues without making them the instruments of salvation. This is intelligible, for in Buddhism, side by side with theosophy, there is a large dose of humanity.

PAUL OLTRAMARE.

[Additions in brackets by W. S. URQUHART.]

THERAPEUTÆ.—The Therapeutæ[1] were a radical offshoot of the movement in pre-Christian Judaism which threw up an order like the Essenes (*q.v.*); but, unlike the Essenes, they were purely an Egyptian phenomenon, a religious confraternity, or θίασος, residing in the neighbourhood of Alexandria, and particularly on the low hills to the south of Lake Mareotis, leading the life of studious recluses and organized on semi-monastic lines. Outside Egypt, indeed outside this district, they are never heard of. They were a local development.

1. **Source of information.**—The only authority for the subject is a short treatise *de Vita Contemplativa* (περὶ βίου θεωρητικοῦ ἢ ἱκετῶν [ἀρετῶν], or, better, Φίλωνος ἱκέται ἢ περὶ ἀρετῶν τὸδ'), included in the works of Philo. It is first quoted by Eusebius.[2] The rise of the monastic movement in the Church drew his attention, and evidently the attention of others, to a tractate which offered striking precedents and parallels for the cœnobitic discipline of Christians, and the general opinion came to be that the Therapeutæ were really Christian monks. This anachronism can be traced from Eusebius and Epiphanius onwards; it flourished right down to the beginning of the 18th cent., when the French scholar, B. de Montfaucon, published his *Livre de Philon de la vie contemplative, etc., traduit sur l'original grec, avec observations, où l'on fait voir que les Thérapeutes dont il parle étoient Chrestiens* (Paris, 1709). So completely had the Therapeutæ been identified with the origin of Christian monachism that even by the 6th cent. *vita therapeutica* had become the Latin equivalent of ἀσκήτικος βίος.

This unhistorical interpretation did one service; it preserved the Philonic treatise. But it was responsible for vehement discussion between Protestants and Roman Catholics—discussion which was so prejudiced that it threw next to no light upon the Therapeutæ (except, of course, to disprove the Eusebian ecclesiastical contention); it was also responsible for an avenging scepticism in the 19th century. To suppose,[3] on the evidence of Eusebius and Jerome,[4] that Philo re-visited Rome *c.* A.D. 44, was impressed or converted by St. Peter, and returned to join this ascetic community of St. Mark's Christian converts near Alexandria, was to expose the *de Vita Contemplativa* to unjust suspicion in a more critical age. The naive theory provoked an equally naive scepticism. It is not creditable, but it is hardly surprising, to find that in the 19th cent. the Therapeutæ were almost blotted out of existence. Some Jewish scholars, especially Graetz,[5] seemed as anxious to disavow any connexion with the poor Therapeutæ as Roman Catholics were to dub them monks; they attempted to rid Judaism of these recluses by relegating them to the 3rd cent. A.D. as Christian monks, the treatise being assigned to some Encratitic, semi-heretical source. Other writers[6] also dated the *de Vita Contemplativa* in that period, although they more prudently regarded it as a Jewish sketch of some ideal, ascetic community. It was reserved for P. E. Lucius[7] to twist the stray threads of this scepticism into a stout denial that the Therapeutæ had ever existed except in the imagination of a Christian *c.* A.D. 300, who ingeniously used Philo's name and authority to create a monastic community in the first half of the 1st cent. A.D. This aberration of criticism carried away many writers great and small. French and English scholarship, however, came to the rescue, in L. Massebieau's study,[8] Renan's decisive judgment,[9] and F. C. Conybeare's work.[10] P. Wendland reinforced the defence,[11] and the historical authenticity of the

treatise was finally vindicated. Whether it was composed by Philo or by some contemporary Jew is another and a subordinate question. The important point is that the treatise is a pre-Christian or non-Christian description of actual recluses in the Judaism of Egypt about the end of the 1st cent. B.C. or the opening of the 1st cent. A.D. Conybeare's edition is the standard authority on the Greek text. His translation[1] is followed in this article. Both he and Massebieau have made out a good case for the hypothesis that the *de Vita Contemplativa* originally was a sequel to the lost Philonic account of the Essenes in the *ἀπολογία ὑπὲρ Ἰουδαίων*, from which Eusebius drew his information. But their interpretation of details in the account of the Therapeutæ is sometimes open to serious criticism.

2. Characteristics.—According to Philo, the Therapeutæ are part of a movement which is known outside Egypt[2]—the more or less organized semi-philosophical, semi-religious retreat from cities and a corrupting civilization to the simple life of retirement. Though the movement is not confined to the environs of Alexandria, it is there that the Therapeutæ are most numerous.[3]

They are Jewish recluses who reside in simple huts, at a short and suitable distance from one another (*i.e.*, they resembled the cœnobites of Pachomius in a later day, instead of being hermits and anchorites). Each hut has a sacred chamber (*μυστήριον* or *μοναστήριον σεμνεῖον*), reserved for their sacred books (the Law, the Prophets, the Psalms, and other writings, *οἷς ἐπιστήμη καὶ εὐσέβεια συναύξονται καὶ τελειοῦνται*, 'by means of which religion and sound knowledge grow together into a perfect whole'). After praying at dawn, they devote the day to meditation upon the Scriptures; these include writings or commentaries (*συγγράμματα*) 'drawn up by the ancient founders of their sect,' by which Philo probably means the literature current under the names of men like Enoch and Abraham, whom he regarded as the primeval ascetics and recluses, the ideal progenitors of the Therapeutic movement. The method of study is allegorical interpretation (*τὴν πάτριον φιλοσοφίαν ἀλληγοροῦντες*), and one outcome of it is the composition of sacred hymns. Prayers at sunset close the day. Such is the life in each hut.[4] On the seventh day the various members meet for common worship; they arrange themselves according to age, sitting on the ground with 'the right hand between the chest and the chin, but the left tucked down along the flank.' The senior recluse then delivers an address, to which all listen in silence, merely nodding assent. A partition, ten or twelve feet high, separates the men from the women, so that the latter can hear the speaker without being seen by the male recluses.

The seventh day[5] is their day for relaxation. On the other days no one eats before sunset, and some go fasting almost entirely for three or even six days, in their contemplative raptures. But all use oil (as a physical refreshment, unlike the Essenes[6]), and on the seventh day all 'propitiate the mistresses hunger and thirst, which nature has set over mortal creatures'; the diet is simply water and cheap bread, flavoured with salt, and occasionally supplemented by hyssop. None[7] of your drunken Greek symposia! Philo anticipates Lucian in his scorn of these rowdy gatherings.

Once every seven weeks[8] they assemble for their supreme festival, 'which the number fifty has had assigned to it,'[9] robed in white and with looks of serious joy. At a given sign from one of their leaders they arrange themselves in ranks, raising eyes and hands to heaven ('their hands, because they are pure from unjust gains, being stained by no pretence of money-making') and praying for a blessing on the festival. Then the senior members recline, in order of seniority, upon their cheap, rough couches; on the left side of the room the women also recline. The younger novices wait upon the older members, for the Therapeutæ (like the Essenes)[1] decline to be served by slaves; 'they deem any possession of servants whatever to be contrary to nature,' which makes all alike free at birth. It is not a banquet of luxuries; no wine, only cold water, heated for those who are delicate; no meat—for the Therapeutæ are vegetarians, living on nothing but bread and salt, with hyssop for the more delicate palates, the hyssop being added 'out of reverence for the holy table of offering in the sacred vestibule of the temple,'[2] to signify that the Therapeutæ are too humble to emulate the unleavened bread reserved for the priests. But, before this Spartan meal is eaten, a quiet address or allegorical exposition of Scripture is delivered by the president. The rest listen in breathless silence; but, if the speaker does not make his meaning clear, they are allowed to indicate their perplexity by a slight movement of the head and a right-hand finger. When he is considered to have spoken long enough, all clap their hands three times. A hymn then follows, sometimes composed in honour of God by the singer (cf. 1 Co 14[26]), 'either a new one which he has made himself, or some old one of the poets that were long ago.' Each member has to sing a hymn in rotation, while the rest join in the chorus. Only after this religious service of an address and praise—nothing is said of prayer[3]—does the banquet proceed.

The final act of the festival[4] is the famous *παννυχίς*, or all-night celebration of a sacred singing dance,[5] by men and women in two choruses, each headed by a chosen leader. Each of the choirs, the male and the female, begins by singing and dancing apart, partly in unison, partly in antiphonal measures of various metres, 'as if it were a Bacchic festival in which they had drunk deep of the divine love.' Then both unite to imitate the choral (Ex 15[1. 20-21]) songs of Moses and Miriam[6] at the Red Sea, sung as thanks *εἰς τὸν σωτῆρα θεὸν* (cf. Rev 15[3]). It is a thrilling performance, this choric dance and exulting symphony; 'but the end and aim' of it all 'is holiness' (the exodus symbolizing, of course, the mystical release of the soul from material bondage). Instead of being drowsy after this all-night ecstasy, the Therapeutæ are more wide-awake in the morning than they were at the beginning of their vigil; they turn to the East, 'and, so soon as they espy the sun rising, they stretch out aloft their hands to heaven and fall to praying'[7] 'for a fair day, and for truth and for clear judgment to see with.' Then they separate to resume the ordinary day's contemplation in their separate cells.

Such, says Philo, is the method of life practised by these true 'citizens of heaven and of the universe.' The term 'citizens' is deliberately chosen. They abjure cities, he means, but none the less, indeed all the more on that account, these recluses belong to a higher polity.

3. Religious significance.—A complete renunciation of the world, resembling that demanded by Jesus in Lk 18[29], lay at the foundation of the Therapeutic society. What they abjured was money rather than matter. In the austerity of their zeal they voluntarily handed over their property to others,[8] since absorption in money-making and the cares of life not only took up too much time and thought but also fostered injustice. Having divested themselves of their possessions, 'they flee without turning back, having abandoned brethren, children, wives, parents, all the throng of their kindred, all their friendships with companions, yea, their countries in which they were born and bred.'[9] Philo describes this with a wistful enthusiasm, as he had described the renunciation of Enoch[10] and of Abraham.[11] But he is careful to explain why they prefer solitude to cities. It is only because intercourse with the unsympathetic world would injure them, 'not from any harsh and deliberate hatred of mankind'—a disclaimer[12]

---

[1] In *JQR* vii. [1895] 755–769.

[2] Philo is trying not only, as he does elsewhere, to show that the recluse tendency is Greek as well as Jewish, but to link the Therapeutæ to the wide-spread phenomenon of *cultores dei* (*deorum*), as their name of 'devotees' (*θεραπευταί*) permitted. In this way he seeks to interpret them to his readers, just as he had already (*de Vit. Con.* 1–2) contrasted them with the inferior 'philosophers' of Greece on the one hand, and with the silly Egyptian worshippers of animals on the other. His attempt to explain *θεραπευταί* as possibly meaning 'healers' of the soul is equally unhistorical. So far as it is not the official title of the community, it means what it meant in the case of the Essenes, whom Philo himself had called *θεραπευταὶ θεοῦ*. The variant title *ἱκέται* meant 'suppliants.'

[3] *De Vit. Con.* 3.

[4] So constant is their sense of God's presence that even in their dreams they have visions of nothing but the divine *ἀρετῶν καὶ δυνάμεων*, while many men talk in their sleep of what they have been studying.

[5] *De Vit. Con.* 4.

[6] Cf. *ERE* v. 398[a].

[7] *De Vit. Con.* 5–7.

[8] *Ib.* 8.

[9] This seems to have been a festival, partly modelled on the five weeks or pentecostal type (for here as elsewhere the Therapeutæ show distinct affinities with Palestine) but celebrated seven times a year, at the expiry of every 49 (7 × 7) days. On the resemblances between this periodical festival and the Feast of Weeks in the book of Jubilees see A. Epstein in *REJ* xxii. [1891] 14 *f.*, 20 *f.*, as well as on the similar institution among the Abyssinian Jews (Falasha).

[1] *ERE* v. 396[b].

[2] *De Vit. Con.* 9.

[3] Is this omission accidental? Or was prayer regarded as a part of private devotion (cf. *ERE* x. 191[b])?

[4] *De Vit. Con.* 10.

[5] A trait of popular religious worship in Egypt (cf. *ERE* v. 238[a]; and, generally, x. 359[a]).

[6] Miriam, in some quarters of early mystical literature, is the counterpart of Isis, and she plays an important rôle in Gnostic speculations, as Reitzenstein points out (*Poimandres*, Leipzig, 1904, p. 136 n.). Her popularity among the Therapeutæ is probably another Egyptian touch.

[7] Lightfoot (*Saint Paul's Epistles to the Colossians and to Philemon*[7], London, 1884, pp. 85, 372) took this to mean sun-worship; but the Therapeutæ did not practise sun-worship any more than the Essenes did (see *ERE* v. 308[a], note 4).

[8] Unlike the Essenes, and the primitive Christians (Ac 2[45]), with whom Eusebius (*HE* ii. 17) would fain connect them on this account, the Therapeutæ did not pool their funds for the benefit of the community.

[9] *De Vit. Con.* 2.

[10] *De Præm. et Poen.* 3.

[11] *De Abrah.* 3.

[12] He had made the same disclaimer of misanthropy in speaking of Abraham (*de Abrah.* 4).

of the *odium humani generis* for which Jews were blamed by the outside world. Philo always protested against the people who withdrew into seclusion, simply because they lacked public spirit. He also anticipated the criticism which might be passed on the Therapeutæ, that they acted from a morbid misanthropy. Hence his defence and admiration of them. The Therapeutæ, in fact, realize for Philo what he had always dreamt of, a small (only a small) number or *θίασος* of spiritual athletes, acting from the highest of motives, carrying out a counsel of perfection, and capable of making the supreme renunciation in order to attain the highest vision of God and truth.[1] To them he applies his favourite Platonic metaphor of the wealth with eyes (*i.e.* the mystic rapture of the soul enriched with the vision of truth); no wonder, when they possess this inward treasure, that they abandon their blind wealth (*τὸν τυφλὸν πλοῦτον*)[2] to blind worldlings! For their renunciation does not empty life. It is not a mere negation; it is the soul surrendering to a higher passion for God (*ὑπ' ἔρωτος ἁρπασθέντες οὐρανίου*), which enriches life past dreams of avarice. The Therapeutæ are recluses and students, but their spirit is an ecstatic yearning for the positive vision of Truth. 'It is as easy to close the eyes of the mind, as those of the body,' Bishop Butler wrote;[3] it is still more easy, Philo felt, to let the eyes of the mind be closed by luxury and money-making, and he applauds the Therapeutæ for sacrificing their great possessions and position in order to keep the higher vision unimpaired.

Another feature of the Therapeutæ which goes to Philo's heart is that their allegorical interpretation of the OT does not render them indifferent to the actual rites and institutions of Judaism. He disliked the ultra-spiritualists[4] who evaporated the historical element in religion, and dropped all adherence to the forms of their faith. But he delighted in people like the Therapeutæ who, *e.g.*, attached, as he did, in his own enthusiasm, a high mystical sense to the number 'seven,' and yet not only kept the seventh day strictly but also celebrated a special festival after every 49 days, out of their reverence for that perfect number and its multiple (7×7). This appeared to him to be a healthy form of mysticism. The Therapeutæ appealed to Philo more than the Essenes did, because they were on old Jewish lines, adherents of the Mosaic law, respectful to the Temple at Jerusalem, and capable of attaining the heights of contemplative ecstasy without abandoning the lowly duties prescribed by the Torah.

A third feature which evidently pleased the gentle Philo was their freedom from angry controversy and flashy rhetoric. With his eye not only upon the quarrels of Greek sages at their symposia but also upon the rabbinic disputants at Jerusalem, he tells of the unostentatious style practised by the Therapeutic speakers, of the rapt attention shown by the audience, and of the respectful demeanour of the gathering — exalting the very virtues which Paul recommended to the showy, noisy Christians at Corinth (cf. 1 Co $14^{23ff.}$). Philo loves them for their quiet demeanour. The Therapeutæ never wasted their time over rabbinic exegesis of the letter of Scripture. They gazed placidly through that, as through a glass, into the mystical significance which held them spellbound. Their wisdom was pure and peaceable; it combined plain living and high thinking, and the sages never lost their tempers.

All this, added to their philosophic aspirations and their distaste for luxury, moved Philo to write his panegyric. He professes that it is nothing but the bare truth. Certainly it is not a Defoe-like work of fiction. At the same time, his enthusiasm probably leads him to idealize the Therapeutæ; a disproportionate amount of space is surrendered to a scornful criticism of the Greek symposia, in which Plato as well as Xenophon is censured; and he forgets to explain how the Therapeutæ lived, if they did no work and held no property. Did they depend, like Buddhists, on charity? It is one of the questions which Philo forgets to answer. The main outline of the sketch, however, has all the marks of accuracy. Though he was not a member of the community, it was so near to Alexandria that he could easily have heard of its life and even visited it. His admiration may have heightened the colours, but it did not invent the content, of his delineation. The tone of his account resembles that in which Izaak Walton, in his biography of George Herbert, speaks of the little settlement of recluses at Little Gidden, under the spiritual guidance of Nicholas Ferrar.

The Therapeutæ were organized on lines resembling the later *lauras* of monasticism in Egypt, *i.e.* in a group or encampment of separate residences, with a common hall for special gatherings; they lived in huts, set close enough for fellowship and for mutual protection against an attack of robbers (which was a common experience of such communities). Plainly, they acted in self-defence when occasion required. The differences between them and the Essenes are patent. The Therapeutæ confined themselves to a life of contemplation; they were a small community of men and women who had been well-born and wealthy,[1] and who lived in a Chartreuse-like retreat; they were not religious communists, and they had no interest in prophecy (their dreams being not of the future but of the celestial order); they fasted, as the Essenes did not, and their relation to women was quite different. Both the Therapeutæ and the Essenes were 'holiness' movements, but the former displayed some unique features, especially the combination of individual contemplation with a periodical outburst of emotional fervour in the common song and dance.

Nothing is known of their history. They are one of the local, transient phenomena of the age that baffle modern curiosity. A single ray of light falls on this tiny community, at the bridge between B.C. and A.D., but we do not know who founded them or what became of them. Philo's description was never followed up by any subsequent writer. Gibbon[2] thought it 'probable that they changed their name, preserved their manners, adopted some new articles of faith, and gradually became the fathers of the Egyptian Ascetics.' This is guess-work, however. A community which was recruited like the Therapeutæ could not survive like the Essenes; so much is clear; and Therapeutism probably was an ephemeral product, an anticipation rather than an ancestor of the later Christian monasticism in Egypt. Abraham E. Harkawy, the Petrograd scholar, in his edition of Kirkisâni, the 10th cent. Karaite savant,[3] points out that Kirkisâni includes among the Jewish sects one called the Margârites, to whom the 'Alexandrine' belonged; this sect practised allegorical interpretation, as a rule abjured laughing, and were called Margârites, or 'cave-folk.' Harkawy identifies the 'Alexandrine' with Philo, and the Margârites with the Therapeutæ, as a branch of the Essenes—a view shared by Bacher,[4] but doubted by Poznański.[5] It seems an interesting, if vague, recollection of the Therapeutæ, lingering in the Judaism which had surrendered its interest in these recluses to the Christian Church.

4. Compositions. — The Therapeutæ were not only ascetics but also students; yet no trace of their literature has survived. (*a*) The *λόγος*, or hymn, coloured by Jewish Hellenism, which is discussed by A. Dieterich,[6] has been sometimes assigned to them. But it shows euhemeristic syncretism; there is nothing specifically Therapeutic about its language or ideas, and, although it does refer to the rescue of Israel from the Red Sea, this is too general to serve as an identification-mark for the choric song of the Therapeutæ (see above). The Therapeutæ are less analogous to the circle of this hymn than an anticipation of the Encratites (*q.v.*) in their aversion to marriage and their avoidance of wine and animal food.

(*b*) Nor is the book of Wisdom distinctively Therapeutic, as some[1] thought.

The emphasis on ὅσιος and on ὁσιότης, rather than on the more outward εὐσέβεια, certainly suggests that Wisdom emanated from some inner circle or set of Jewish pietists, but there are no indications that point decisively to the Therapeutæ, not even the casual use of θεραπεύειν in 10[9.16]. 313f. is not in praise of celibacy, and, even if it were, the tendency to exalt celibacy in the later Judaism was not confined to the ascetic cohabitation of the sexes among the Therapeutæ.[2] 4[7-9] simply echoes the common reflexion that life is measured by its content of wisdom, not by length of years; it has nothing particularly to do with the Therapeutic regulation[3] that seniority was reckoned by the years spent within the society. The allusion in 7[28]–8[2] to the wise man being wedded to Wisdom (τὸν σοφίᾳ συνοικοῦντα . . . ταύτην ἐφίλησα καὶ . . . ἐζήτησα νύμφην ἀγαγέσθαι ἐμαυτῷ) resembles the description of the nun-like recluses in the *de Vita Contemplativa*, 8 (for the most part 'aged virgins, that have preserved intact their chastity . . . because of their zeal and longing for Wisdom; with whom they were anxious to live,' in order to bring forth not mortal children but 'the immortal progeny which the God-enamoured soul is alone able to bring forth of itself').[4] But this metaphorical description applies in the one case to men, in the other to women, and it is too general and common (cf., *e.g.*, Sir 15[2], Pr 2[17]) to be confined to the Therapeutæ; in *de Vita Contemplativa*, 8, Philo is speaking as he speaks elsewhere.[5] Finally, the Therapeutic custom of offering prayer at sunrise (see above) was not peculiar to them among the Jews, so that Wis 16[28] ('one should be before the sun in giving thanks to thee, and one should plead with thee at the dawning of light') need not be a glimpse of these recluses—the less so, that nothing is said about their eastward position by the writer of Wisdom, who is simply moralizing about the story of the manna.

5. Origin.—In view of the various Oriental and Hellenistic influences which were playing upon the later Judaism towards the close of the 1st cent. B.C., a phenomenon like the existence of the Therapeutæ, with their celibacy, their aversion to social life, their absorption in a divine θεραπεία, and their mystical speculations, all carried out 'in accordance with the most holy counsels of the prophet Moses,'[6] is not altogether surprising.

'The societies of the Essenes and the Therapeutæ . . . belong, just as the mediæval and modern Hassidic asceticisms belong, to Judaism quite as much as do any of its more normal institutions.'[7]

It is still less surprising to find such a gild or monastic settlement in Egypt. The soil of Egyptian popular religion was full of 'monastic germs'; there were men and women recluses in the Serapeum at Memphis, whose θεράπευτις embraced both study and mystical dreams; the very name of θεραπευταί was connected with the worship of Isis,[8] which also had its mystic raptures, combined with an emphasis on asceticism and celibacy; the climate itself, and the gaunt deserts, stretching away from the cities and townships, invited those who had recluse tendencies. It was in Egypt that the monastic movement of the Church first developed its varied and most distinctive forms three centuries later, and the development was no more surprising upon the basis of primitive Christianity than that of the Therapeutæ or of the Essenes upon the basis of orthodox Mosaism. One of the most suggestive parallels to the Therapeutic discipline is to be found in the contemporary account of the Egyptian philosopher-priests which is given by Chaeremon, the Egyptian ἱερογραμματεύς. It is quoted by Porphyry,[9] and some sentences deserve to be quoted here for the light they throw upon 'monastic' lines of development in pre Christian Egypt.

'They chose sanctuaries (ἱερά) as the place in which to study philosophy, since to dwell with the statues of the gods was in harmony with their utter longing for vision (τῆς θεωρίας). Besides, this gave them security, owing to the reverence felt for the gods, since all men honoured these philosophers as if they were sacred creatures. They also lived in solitude, only mixing with other people at the sacred assemblies and festivals. . . . Having renounced every other employment and all human toils (πόνους ἀνθρωπίνους), they gave up the whole of their existence to the contemplation and vision of things divine . . . for to be in constant association with divine knowledge and inspiration delivers men from all lust (πλεονεξίας), subdues the passions, and rouses life to intelligence (σύνεσιν). They were also studious to be frugal in food and clothing. . . Their hands were always inside their garments. . . . When they were not engaged in purification, they ate bread cut up along with hyssop, as they declared hyssop was extremely potent in purifying bread. . . . They trained themselves to endure hunger and thirst and scanty food through all their life. . . . The day they spent in the worship of the gods (εἰς θεραπείαν τῶν θεῶν), singing hymns to them three or four times, at dawn and at eventide.'

The origin of the Therapeutæ lay in Jewish Hellenism, as that was specially affected by its Egyptian environment. Nothing more is required to explain the ascetic and mystical habits of these recluses beside Lake Mareotis. But it would be uncritical to dismiss this problem without some reference to the question which has repeatedly been asked: Do not several traits of the Therapeutic discipline recall Buddhistic monasticism—*e.g.*, the combination of a cœnobitic life with study and devout contemplation, and the vegetarianism? The latter is one of the marks which sharply distinguish the Therapeutæ from the Essenes, who were not vegetarians. But there is at least one feature of the Essenes themselves which is analogous to Indian practices,[1] and it is open to conjecture whether some Buddhistic influence had not penetrated Egyptian Hellenism by the 1st cent. B.C., as it is sometimes held to have penetrated the later Gnosticism.[2]

Robertson Smith,[3] after observing that 'in Egypt, the doctrine that the highest degree of holiness can only be attained by abstinence from all animal food, was the result of the political fusion of a number of local cults in one national religion, with a national priesthood that represented imperial ideas,' added that 'later developments of Semitic asceticism almost certainly stood under foreign influences, among which Buddhism seems to have had a larger and earlier share than it has been usual to admit.'

The Therapeutic avoidance of animal food need not, of course, be Buddhistic; the practice of the Orphic societies in Egypt or of the Neo-Pythagoreanism which affected the Essenes in other ways[4] may account for it as well as for the stress on hymns,[5] the παννυχίς, and some other features. Indeed, so far as our scanty data go, with regard to the Therapeutæ or the Essenes, the evidence does not appear to warrant any hypothesis of direct Buddhistic influence, although the Orientalism which had filtered into Jewish Hellenism, even in Egypt, by the 1st cent. B.C. may have contained some elements of Buddhistic religious tendency. The trade connexions between Alexandria and India, and the intercourse of both countries ever since the 3rd cent. B.C., make it quite possible to suppose that Indian merchants reached Egypt by the 1st cent. B.C. Rohde points this out in another connexion, detailing the Indian and Buddhistic elements in Greek fiction.[6] But the interaction

[5] This again distinguishes them from the Essenes. Ch. A. Bugge, in his recent study of the Essenes (*ZNTW* xiv. [1913] 167 f.), argues that the Palestinian Essenes must have cultivated song and music like the Egyptian Therapeutæ; but there is no 'must' about the matter. Had hymns been a prominent feature of the Essenic cultus, they would have been mentioned by Philo or Josephus.

[6] *Der griech. Roman und seine Vorläufer*[2], Leipzig, 1900, p. 581 f.

was not marked.[1] A trait like the presence of the 'nuns' is almost sufficient by itself to justify disagreement with the verdict of Mansel:

'The Therapeutæ . . . appear to have sprung from an union of the Alexandrian Judaism with the precepts and modes of life of the Buddhist devotees, . . . in their ascetic life, in their mortification of the body and their devotion to pure contemplation, we may trace at least a sufficient affinity to the Indian mystics to indicate a common origin.'[2]

On the other hand, even after allowing for the Neo-Pythagorean and Orphic environment, as well as for the fact that certain phenomena of this recluse life spring up independently on any soil at the touch of organized monasticism,[3] we may leave open the possibility that the Therapeutæ and perhaps the Essenes more or less unconsciously developed features which owed their original suggestion to Buddhistic sources. One of the main reasons for hesitating to admit even this possibility is the fact that Buddhistic influence on Gnosticism, two centuries later, appears to be almost unrecognizable, although Gnosticism might be expected to show distinct affinities with this line of Indian religious practice and speculation.

LITERATURE.—Besides what has been noted in the course of the article, the following may be chronicled as among the few significant contributions which the interminable discussions of the subject have thrown up: the notes of H. de Valois (Valesius), the great 17th cent. editor of Eusebius; Thomas Browne, *Dissertatio de Therapeutis Philonis adversus Hen. Valesium*, London, 1695 (Therapeutæ=converts of St. Mark, who afterwards became the monks described by Palladius); two critical letters by J. Bouhier (*Lettres pour et contre, sur la fameuse question, si les solitaires appelés thérapeutes dont a parlé Philon le Juif, étoient chrétiens*, Paris, 1712), which Conybeare calls 'the best commentary on the *de Vita Contemplativa* ever written'; A. F. Gfrörer, *Krit. Gesch. des Urchristenthums*, Stuttgart, 1831, vol. i. pt. 2, pp. 280–299; and A. Neander, *General Hist. of the Christian Religion and Church*, Eng. tr., London, 1850–58, i. 81–85.

None of the older dictionary or encyclopædia articles deserves mention. The main help has been given by critics of Philo—*e.g.*, H. P. Delaunay, *RA* xxii. [1870–71] 268 f., xxvi. [1873] 12 ff., and in *Moïnes et sibylles dans l'antiquité judéo-grecque*[2], Paris, 1874, pp. 10–57; B. Tideman, *ThT* v. [1871] 177–188; A. Edersheim, *DCB* iv. 368–371; L. Cohn, *JQR* v. [1893] 38–42; J. Drummond, *ib.* viii. [1896] 155–172 (reviewing Conybeare's ed.); and E. Schürer, *GJV*[4], iii. 637–691 (still reluctant to give up his scepticism); or by writers like E. Renan, *Hist. du peuple d'Israël*, Paris, 1887–95, v. 366–380; O. Zöckler, *Askese und Mönchthum*, Frankfort, 1897, i. 128 f.; E. Zeller, *Die Philosophie der Griechen*[4], Leipzig, 1876–1903, III. ii. 377 f.; M. Friedländer, *Die religiösen Bewegungen innerhalb des Judenthums im Zeitalter Jesu*, Berlin, 1905, pp. 197 f., 265 f.; W. Bousset, *Die Religion des Judentums im NT Zeitalter*[2], do. 1906, p. 536 f.; É. Bréhier, *Les Idées philosophiques et religieuses de Philon d'Alexandrie*, Paris, 1908, pp. 321–324; W. M. Flinders Petrie, *Personal Religion in Egypt before Christianity*, London, 1909, p. 63 f.; O. Pfleiderer, *Primitive Christianity*, Eng. tr., 1906–11, iii. 1–8, 18 f.; and H. Leclercq, *DACL* ii. 3063–3075.

THERIANTHROPISM.—See LYCANTHROPY.

THEUDAS.—See MESSIAHS (PSEUDO).

THEURGY.—Theurgy (*θεουργία*)—the direct working of God—is closely connected with certain systems of mysticism and theosophy. The word itself is not often used by those who claim that supernatural effects are produced through them by divine action; they more often ascribe the miraculous effects to good 'spirits,' whom God uses for His purposes, and they call this system of divine working 'magic,' frequently 'white magic,' as distinguished from 'black magic,' which is supposed to be the work of diabolical spirits. Vaughan has given a good definition of it. He says:

'I would use the term theurgic to characterize the mysticism which claims supernatural powers generally,—works marvels, not like the black art, by help from beneath, but as white magic, by the virtue of talisman or cross, demi-god, angel, or saint. Thus theurgic mysticism is not content, like the theopathetic, with either feeling or proselytising; nor, like the theosophic, with knowing; but it must open for itself a converse with the world of spirits, and win as its prerogative the power of miracle. This broad use of the word makes prominent the fact that a common principle of devotional enchantment lies at the root of all the pretences, both of heathen and of Christian miracle-mongers. The celestial hierarchy of Dionysius and the benign dæmons of Proclus, the powers invoked by Pagan or by Christian theurgy, by Platonist, by Cabbalist, or by saint, alike reward the successful aspirant with supernatural endowments; and so far Apollonius of Tyana and Peter of Alcantara, Asclepigenia and St. Theresa, must occupy as religious magicians the same province. The error is in either case the same—a divine efficacy is attributed to rites and formulas, sprinklings or fumigations, relics or incantations, of mortal manufacture.'[1]

Some form of belief in theurgy is at least as old as history and literature. Homer's heroes are constantly raised beyond themselves and perform deeds which seem to be done through them by the Olympian divinities who come to their aid. Oriental as well as Grecian mythology everywhere assumes theurgic powers. The eclectic Gnostics, who drew upon many popular religions and sacred books as the sources of their divine *gnosis*, also believed and taught that great divine powers became available to those who were initiated and who thus received something of the fullness—the Pleroma—of the Godhead.

The Neo-Platonists, especially in their later periods, gave new impetus to theurgy and were unwittingly the transmitters of it into Christian circles. Plotinus, the founder of the movement, was a metaphysician of high rank and a noble mystic whose influence on Christian mysticism can hardly be overestimated, but he was not interested in occult knowledge or in theurgic phenomena. His Syrian successors, however, Porphyry and Iamblichus, were concerned with the problem of discovering and applying divine powers or energies in the sphere of human action. Iamblichus, who strongly reveals Gnostic influences, turns the ideas and hypostases of Plotinus into divinities, *i.e.* personified beings, and he holds that these 'intelligences' work wonders in the macrocosm outside and in the microcosm within man. These divine powers come into the soul of the mystic on high occasions, possess it, and enable it to do works beyond human capacity. There are, according to Iamblichus, hierarchal orders of these divine powers in varying ranks, and it belongs to mystical wisdom to know how to invoke the higher and more benign powers and to gain their theurgic assistance. This theurgic system is set forth in Iamblichus' treatise *de Mysteriis*. Proclus, the last important name among the Neo-Platonists, was a much greater philosopher than Iamblichus, but he also expounded a system of theurgy and encouraged belief in hierarchal powers, arranged in triadic orders, who work divinely and mysteriously through those who are raised into union with these higher powers.

Through the Gnostics, through the Neo-Platonists, especially through the Christian Neo-Platonist who wrote under the pseudonym Dionysius the Areopagite, and above all through contact with the pagan world and its wide-spread belief in magic, the Christian Church unconsciously absorbed a multiform faith in theurgy. Angels of many orders, saints who have been glorified, the Virgin Mary and her divine Son, can and do work wonders, it is believed, for faithful worshippers. Water and bread and wine and other elements of nature are by miraculous divine grace transformed into spiritual substances, become, in fact, the real divine presence, and supply to the recipient supernatural powers, which *work* mightily within the soul. Many Roman Catholic saints and many 14th and 15th cent. mystics believed themselves possessed of special theurgic powers. Stigmata of nail-prints were believed to be divinely produced in the hands and feet of Francis of Assisi and of Catharine of Siena. Others had the power to 'levitate' them-

[1] See G. Faber's cautious survey and verdict in his *Buddhistische und Neutestamentliche Erzählungen*, Leipzig, 1913, pp. 10–29.

[2] *Gnostic Heresies*, London, 1875, p. 31 f.

[3] *ERE* x. 729 f.

[1] *Hours with the Mystics*, i. 36.

selves and to soar above the earth in moments of possession. Others had the miraculous gift of shedding tears in extraordinary measure or of emitting fragrant odours from their body in periods of ecstasy, while still others underwent profound physical transformations or radiated light like a self-luminous body. The entire field of theurgic phenomena is thus intimately bound up with the psychology of hysteria and auto-suggestion. Automatism of many types is now scientifically recognized. It seems to the 'subject,' when parts of his own body perform functions without his conscious volition, as though some foreign person had entered and possessed him and were using his hands or his feet or his lips. Where the results are beneficent and constructive, it seems natural to believe that divine power has come to his assistance and is working a miraculous work through him, so that theurgy appears, to persons of this type, to rest upon facts of experience.

An immense revival of theurgy came in with the rise of humanism and during the period when science was emerging from the stage of superstition and pseudo-science. This revival was due, in large measure, to the influence of Neo-Platonism and of the Jewish Ḳabbālā, both of which the early humanists studied with zeal and enthusiasm. Pico della Mirandola (1463–94) gave great prominence to the symbolical, mystical, theurgical Ḳabbālā, and he also glorified the writings of the Neo-Platonists. W. R. Inge quotes the following passage from Pico's *Apology* which illustrates the mental attitude of the first humanists:

'One of the chief charges against me is that I am a magician. Have I not myself distinguished two kinds of magic? One, which the Greeks call γοητεία, depends entirely on alliance with evil spirits, and deserves to be regarded with horror, and to be punished; the other is magic in the proper sense of the word. The former subjects man to the evil spirits, the latter makes them serve him. The former is neither an art nor a science; the latter embraces the deepest mysteries, and the knowledge of the whole of Nature with her powers. While it connects and combines the forces scattered by God through the whole world, it does not so much work miracles as come to the help of working nature. Its researches into the sympathies of things enable it to bring to light hidden marvels from the secret treasure-houses of the world, just as if it created them itself. As the countryman trains the vine upon the elm, so the magician marries the earthly objects to heavenly bodies. His art is beneficial and Godlike, for it brings men to wonder at the works of God, than which nothing conduces more to true religion.'[1]

Reuchlin (1455–1522) carried the study of the Ḳabbālā and of Neo-Platonism still farther and laid the basis for the theurgy and magic which swarm in the writings of Cornelius Agrippa of Nettesheim, Paracelsus, Valentine Weigel, and, in a distinctly less degree, Jacob Boehme. All these theosophically-minded thinkers believed that it was possible to come into possession of direct divine wisdom or light and thereby to discover the secret of the universe and to use the secret in marvellous theurgic ways. Reuchlin expressed this view, in 1517, in a passage which is translated in the appendix to the *Three Books of Occult Philosophy by Henry Cornelius Agrippa.*[2] He says:

'God, out of love to his people, has revealed the hidden mysteries to some of them, and these can find in the dead letters the living spirit. For Scripture consists of single letters, visible signs, which stand in a certain connection with the angels as celestial and spiritual emanations from God. By the pronunciation of the one, the others also are affected; but with a true Cabalist, who penetrates the whole connection of the earthly with the heavenly, these signs, rightly placed in connection with each other, are a way of putting him into immediate union with the spirits, who through that are bound to satisfy his wishes.'

A still better account of the theurgic operations which are believed to work through those who catch the divine secret and find the light is given in the words of 'J. F.,' who translated Agrippa's *Occult Philosophy* into English in 1651. The passage is in the 'Preface to the Judicious Reader,' and is as follows:

'This is true and sublime Occult Philosophy. To understand the mysterious influences of the intellectual world upon the celestial, and of both upon the terrestrial; and to know how to dispose and fit ourselves so as to be capable of receiving the superior operations of these worlds, whereby we may be enabled to operate wonderful things by a natural power—to discover the secret counsels of men, to increase riches, to overcome enemies, to procure the favour of men, to expel diseases, to preserve health, to prolong life, to renew youth, to foretell future events, to see and know things done many miles off, and such like as these. These things may seem incredible, yet read but the ensuing treatise and thou shalt see the possibility confirmed both by reason and example.'

Once more in modern times there has appeared a recrudescence of theurgy in spiritualistic and theosophical circles. The element of fact in it now, as of old in the days of humanism and of Neo-Platonism, is due to the automatisms, *i.e.* to subliminal action, emerging without the subject of the action being conscious that it is initiated by him. It seems to be done through him and not by him and thus is attributed to God, or to spirits who 'possess' him.

THIRTY-NINE ARTICLES.—See CONFESSIONS.

THOMISM.—1. Name.—Broadly speaking, Thomism is the name given to the system of philosophy and theology founded by St. Thomas Aquinas (*q.v.*). Strictly speaking, it is the name given to a group of opinions taught by St. Thomas and held by what is known as the Thomistic school, which is mainly but not exclusively composed of Dominicans.

2. Historical survey.—The foundation of Thomism is incontestably due to the personal influence of St. Thomas Aquinas. It should not, however, be forgotten that Albert the Great did much to prepare the way for the birth of the new system, so that the names of both master and pupil will ever remain inseparable in the great work. Although there were many points of contact between the minds of Albert and Thomas, the genius of the one was entirely different from that of the other. The mind of Thomas was more critical than Albert's. The latter does not possess his subject quite perfectly; there is a lack of precision in details and a certain want of synthesis necessary to unify his knowledge. On the contrary, Thomas possesses his matter perfectly; above all, he has a power for order; his precision is nicer and his analysis finer; his vision is more penetrating and more embracing; and his power of analysis is on equal footing with his power of synthesis. Albert revealed to his age an intellectual world unknown to it; Thomas with the débris of the intellectual world of the ancients created a new one. Both aimed at incorporating Aristotle into Christian philosophy and theology. Albert's endeavour has the merit of initiative, but it remained incomplete and only provisional; Thomas with a magician's hand forwarded the work and produced a masterpiece which he embellished with a finish undreamed of by Albert.

Before the time of St. Thomas several attempts had been made to synthesize the sum of human knowledge, but nothing of any great value had been the result. The work of reformation undertaken by St. Thomas was so vast and complicated that it is not surprising that he was at first a little hesitating and diffident; but, as he advanced in

[1] *Christian Mysticism*, p. 269, footnote 2.
[2] Ed. W. F. Whitehead, Chicago and London, 1898, p. 251.

years and learning, his vision became clearer, and at the age of thirty he took up a position that, with regard to most things, was definite and final. Being perfectly familiar with all the problems discussed by philosophy and theology, and having carefully weighed the value of the respective solutions and examined the systematic points of view already attempted, he saw that a perfect system necessarily demanded the unification of the whole of knowledge. This perfect ordering of the whole of knowledge which he bequeathed to the world was due to his sublime metaphysical sense. It is because St. Thomas surpassed the host of thinkers of his time as metaphysician that he produced a unique work.

In philosophy he is the first to proclaim the autonomy of reason; and he has produced his philosophic works without once having recourse to an authority other than experience and reason to establish his conclusions and defend them. Starting from the 'sensible' world as from a secure basis, St. Thomas passes to the region of the absolute, to the highest and purest intellectualism. In theology he proclaims the autonomy of revelation. At the outset he maintains the impossibility of a real conflict between the natural and supernatural orders which have the same source of truth, viz. God. Thus he synthesizes natural and supernatural, nature and grace, faith and reason. To assimilate his thought it is necessary to understand, above all, the functioning of his general synthesis, and especially of his metaphysics, which rules the whole economy of his work. Eclecticism has no meaning with regard to Thomistic doctrines; their value and strength reside essentially in the marvel of their unity and solidarity.

3. Progress of Thomism. — The Dominican order gradually took up the teaching of St. Thomas, but not without opposition; some of its members were still imbued with the doctrines of Augustinism, and these could not be converted to a new system in a day.

Robert Kilwarby, archbishop of Canterbury and a Dominican, condemned St. Thomas's theory of the unity of substantial form, on 18th March 1277. A few years later, however, the English Dominicans were among the most resolute defenders of this doctrine. In Germany Ulrich Engelbert de Strasbourg († 1277) inclined towards Augustinism and the Neo-Platonism of the Arabs. Eckhart († 1327) was much inclined towards Neo-Platonism. Thierry († towards 1315) was an Augustinist strongly influenced by Avicenna: the latter never hesitated to combat the doctrine of St. Thomas.

In France the great adversary of the new system was Durand de Saint-Pourçain. In Italy Umbertus Guidi was punished by the Dominican Provincial Chapter of Arezzo in 1315 for attacking St. Thomas; and the General Chapter of Puy (1344) cautioned Thomas of Naples for opposition to St. Thomas. Many chapters of the Dominican order encouraged and promoted Thomistic doctrines. Worthy of mention are the General Chapters of Paris (1286), of Saragossa (1309), of Metz (1313), of Castres (1329), of Brive (1346). So great indeed was the attachment of the Dominicans to the *Summa Theologica* that the celebrated Spaniard Arnauld de Villeneuve († 1311) wrote a work against the Dominicans in 1304 (*Gladius jugulans Thomistas*), in which he accuses the Dominicans of preferring the study of the *Summa* to that of the Bible. Two centuries later Erasmus formulated the same reproach.[1]

4. Introduction of St. Thomas's writings as text-books in schools.—At the end of the 13th cent. the Bible was the principal text, and the *Sentences* of Peter the Lombard was the theological text *par excellence*. The Dominicans introduced the reading of the *Sentences* 'in via Thomae,' *i.e.* according to the thought of St. Thomas. Other schools following this example taught the *Sentences* 'in via Alberti,' 'in via Durandi,' 'in via Scoti,' etc. Not until the end of the 15th cent. did the Dominicans substitute entirely the *Summa* for the *Sentences*.

5. Thomistic polemics.—The fights sustained by the Dominican order during the end of the Middle Ages in defence of their school were (1) to make a good stand against Augustinism, and (2) to defend certain doctrines special to Thomism.

(*a*) *General.*—In favour of Augustinism a great reaction was made by the Friars Minor in a work composed by William de la Mare. The Oxford Dominicans replied in a work known as the *Corruptorium*. A further work, *Correctorium Corruptorii*, was published by two Oxford Dominicans, William de Makelsfeld and Richard Knapwell. At the end of the 13th cent. another general defence of Thomism was written by Robert de Bologne, *Apologeticum pro St. Thoma*. Last of all a great work (unfinished) was written by a celebrated Thomist, Hervé Noël de Nedellec, master at the university of Paris and master-general of the Dominicans, *Defensa doctrinæ Sti. Thomæ Hervæus Natalis*.

Other important works written towards the end of the Middle Ages are *Defensiones theologiæ divi Thomæ Aquinatis*[1] by John Capreolus († 1444), who was called the 'princeps Thomistarum,' and *Clypeus Thomistarum contra modernos et Scotistas*[2] by Pierre Niger († 1481). Diego de Deza († 1523), the illustrious protector of Christopher Columbus, wrote two polemical works in favour of Thomism, of which the more important is: *Novarum defensionum doctrinæ Angelici Doctoris beati Thomæ de Aquinas super quatuor libros Sententiarum quæstiones profundissimæ et utilissimæ* (Seville, 1517).

(*b*) *Special.*—(1) St. Thomas formulated the theory of the unity of the human person by making the intellectual soul the only *form* of the human composite. Against the Averroism (taught at Paris) which held the unicity of intellect for the human species, and against Augustinism, which held the plurality of forms, several treatises were written by Thomists—*e.g.*, by Pierre de Tarantaise, Gilles de Lessines, William de Makelsfeld, Thomas de Sutton, Jean de Faënza, etc.

The General Council of Vienne defined the Thomistic doctrine on this matter, which was further confirmed by the 5th Council of Lateran (1515), and by Pope Pius IX. in a letter to the archbishop of Cologne (15th June 1857).

(2) The question of the nature of religious poverty and its practice by Christ and the apostles was hotly discussed between the Dominicans and the Friars Minor. The discussion became so disastrous that Pope John XXII. condemned as erroneous and heretical the doctrine that Christ and the apostles did not possess anything, or did not perform acts of proprietorship, viz. buying and selling; etc. (12th Nov. 1323, *Cum inter nonnullos*).

(3) There was another theological combat between the Dominicans and the Minors with regard to the blood of Christ shed during the Passion. The Minors said that it ceased to be united to the divinity of Christ, the Dominicans that the union did not cease. Eventually Pope Pius II. forbade both parties to discuss the question further.[3]

(4) The Dominicans strenuously fought against the nominalism[4] of the 14th cent. of which Durand de Saint-Pourçain and William Ockham were the leaders.

[3] All the literature of this quarrel is to be found in a MS in the Bibliothèque of Paris (*Cat.* 12390, fol. 1–78; also cf. Benedict XIV., *de Servorum Dei Beatificatione et beatorum Canonizatione*, bk. ii. ch. 30).
[4] See art. REALISM AND NOMINALISM.

(5) The Averroism against which Albert the Great and St. Thomas fought was renewed again at the beginning of the 16th cent. in Italy. Thomas de Vio, called Cajetan, published a commentary on the *de Anima* of Aristotle (Florence, 1509). A few years later the Council of Lateran (19th Dec. 1513) condemned the teaching of Averroism on the point, and further exacted that professors of philosophy should solve contrary arguments, which Cajetan held only theologians could do.

(6) In the 14th cent. disputes concerning the Immaculate Conception arose. St. Thomas undoubtedly leaves the question unsolved, but he was at great pains to show that the Blessed Virgin was not excluded from the redemption. St. Thomas says that the precise moment of sanctification is unknown; he therefore never propounded the question whether Mary was sanctified at the very instant of conception. He believed it better to be silent on this point, although, had he followed his personal inclination, he had without doubt concluded in the affirmative, as his first declaration witnesses in *IV. Sent.* I. dist. xliv. qu. 1, art. 3, ad 3. But his superior theological sense did not let him, in presence of the silence of tradition and the negative position of many theologians, and in particular the reserved attitude of the Church. The endeavour to drag St. Thomas to the negative or positive side is to force his meaning, since he voluntarily abstained from either.

6. Renascence of Thomism.—In the 14th and 15th centuries there was an intellectual decadence in philosophy and theology. Thomism could not altogether abstract itself from the influence of the time. However, even in the 15th cent. there was notable vitality among Thomists like John Capreolus, St. Antoninus of Florence, and Jean de Torquemada. At the end of the 15th cent. the intellectual life of Thomism received new vigour, which manifested itself in the 16th cent. and continued for two centuries afterwards. In 1551 the General Chapter of Salamanca ordered the text of St. Thomas's writings to be used as text-books in all its schools. Hence at this time the great commentaries began to be written. Cajetan wrote from 1507 to 1522; Conrad Köllin on the *Prima secundæ* (Cologne, 1512); François de Vittoria (whose commentaries remained in MSS) and Barthélemy de Medina from 1577 to 1578; Banez from 1584 to 1594; Sylvester Ferrariensis on the *Summa contra Gentiles* (Venice, 1534). The humanist movement of the 16th cent. had a great influence on certain Thomists. François de Vittoria took the lead; of his disciples the most famous was Melchior Cano († 1560), whose work, *de Locis theologicis*, is a tribute to the humanist movement by its purity and beauty of style. Two new doctrines issued from the humanist state of thought: Ambrose Catharin († 1553) put forward new theories on predestination and grace; and Barthélemy de Medina formulated probabilism. Thomists combated the former doctrine; whilst in answer to the desire of Pope Alexander VII. they combated strongly probabilist doctrines.

7. Thomism and the Council of Trent.—Thomists held an important part in this council. The Thomistic school had grave interests at stake on account of the dogmatic question regarding the doctrine of justification. Of the five members of the commission instituted by Paul III. to study this question three were Dominicans, of whom Barthélemy Spina, master of the Sacred Palace, was the most active. The decree on justification was not drawn up without the help of St. Thomas. The text of the decree as regards the mode of preparation for justification[1] is taken in its every detail from the *Summa*, III. qu. lxxxv. art. 5. The decree numbers six acts preparatory to justification. They are the same in nature, number, and order as in the *Summa* (*loc. cit.*). Also, in the following chapter of the decree the causes of justification are exactly those given by St. Thomas in the *Summa*, I. ii. qu. cxii. art. 4, and II. ii. qu. xxiv. art. 3.

[1] Sess. vi. ch. vi.

The official catechism (published by the council), in which the doctrine of the Catholic Church is contained and which was compiled for the use of the clergy, was drawn up by three Thomists—Leonard de Marinis (archbishop of Lanciano), Gilles Foscarari (bishop of Modena), and François Foreiro (theologian to the king of Portugal).

As soon as the Council of Trent was finished, Pope Pius V. on 11th April 1567 proclaimed St. Thomas a doctor of the Church.

8. Thomism and Molinism.—See art. MOLINISM; also see below § 12.

9. Thomism and Jansenism.—In his posthumous work *Augustinus* (Louvain, 1640) Jansenius strove to prove that the new theology, especially that of Molina and Suarez, was against the doctrine of St. Augustine and contrary to the doctrine authorized by the Catholic Church.[1] The *Augustinus* aroused much opposition among the Jesuits. After an examination of the book, the Dominicans found that it militated not only against Molinism, but also against Thomism. Two Dominicans wrote against Jansenius—Alexander Sébille (*de Augustini et SS. Patrum de libero arbitrio interpres thomisticus adversus Cornelii Jansenii doctrinam*, Mayence, 1652), and Bernard Guyard (*Discrimina inter doctrinam Thomisticam et Jansenianam*, Paris, 1655).

[1] See art. JANSENISM.

10. Thomism and probabilism.—The theory of probabilism (*q.v.*) was unfolded by Barthélemy de Medina, a Dominican, in his *Expositio in Primam Secundæ D. Thomæ* (Salamanca, 1577). The Jesuits generally adopted this new theory. But, since the ease with which any opinion could be made probable, provided the contradictory was probable, led to grave abuses, Alexander VII. asked the Dominicans to combat strongly the probabilist doctrines. This they did, and from that time no Dominican theologian has written in favour of probabilism.

11. Neo-Thomism and the revival of Scholasticism.—At the beginning of the 19th cent. Scholasticism (*q.v.*) began to revive, and there followed a revival of Thomism. The encyclical *Æterni Patris* of Pope Leo XIII. (4th Aug. 1879) set up St. Thomas Aquinas as the great model and master of Catholic philosophy and theology. From that time all schools have studied the works of the master and have endeavoured to make his thought their own. The endeavour to keep in touch with the progress of modern science, and to show that the fundamentals of Thomism are in perfect accord with the latest discoveries of science, was set on foot, not, as is sometimes supposed, by the Institut Supérieur de Philosophie of Louvain University, but by the Thomist Sanseverino, one of the most learned and vigorous promoters of the movement. This is evidenced by his work, *Philosophia Christiana cum antiqua et nova comparata*. This great movement has been fostered and developed by the Institut Supérieur de Philosophie, founded by Cardinal Mercier at Louvain. Certain *Revues* are now published in which the teachings of Neo-Thomism and Neo-Scholasticism are consistently set forth. The *Revue Thomiste* and the *Revue néo-scolastique de Philosophie* are worthy of mention.

12. Essence of Thomism.—Thomism is above all a system of philosophy and theology Now a

system necessarily implies harmony and solidarity among the doctrines of which the system is built up. In proportion as a system lacks unity, so much is it less of a system. Many philosophers and theologians have endeavoured to give systems of knowledge to the world, but on examination it is found that they lack the first essential of a system, viz. solidarity of thought in every department. If certain principles are laid down in metaphysics, no doctrine in any department of applied metaphysics (as, *e.g.*, in psychology, cosmology, natural theology, ethics, etc.) should be at variance with those principles. Moreover, if a system claims to be a system of the *whole* of knowledge, both of that attained by human reason and of that attained by revelation, then no doctrine formulated by natural reason should be at variance with the doctrines formulated by faith; and conversely. It is evident that, if there be a system of this nature, it is eminently constructive or synthetic. Every stone in the structure must be in its proper place, and, if the building is to stand firm, there must be some grand unifying principle or foundation upon which it is built up. Now, just as in any architectural building there cannot be several foundations, but only one ultimate foundation, so in Thomism there is one fundamental principle unifying the system and imparting harmony and solidarity to every department which it embraces.

13. The fundamental principle of Thomism.—An examination of the various departments of Thomist metaphysics, of applied metaphysics, and of the whole realm of Thomist theology will show that the fundamental doctrines of each department are applications to various matters of a great principle inculcated by Aristotle in his metaphysics. It is the principle of the real distinction between *act* and *potentiality*. One has not far to seek in order to understand what is meant by 'act' and by 'potentiality.' 'Act' means perfection; 'potentiality' means absence of perfection. A thing in the state of potentiality is in an imperfect state, and is therefore capable of receiving what it lacks, viz. some perfection or an act (as it is termed in scholastic language), whereby it ceases to be in a state of potentiality and is brought to a state of having some perfection. There are, as is evident, many kinds of states of potentiality and many kinds of corresponding states of act, but it is not necessary to enter into a discussion of them, since the doctrine underlying them all is one and the same. Furthermore, it is clear that the state of potentiality must be really distinct from the state of act; for, if this be not true, then 'to run' and 'to be able to run,' 'to know' and 'to be able to know,' 'to be hot' and 'to be able to be hot,' are one and the same, which is absurd. Hence there must be a real (extra-mental) distinction between the two states. This principle, then, may be formulated thus: *Between the state of potentiality and the state of act there is a real distinction.* Further, the first unfolding of this principle necessarily implies that that which is in a state of potentiality cannot cease to be in that state unless it be 'moved' from that state by something which is in the state of act; *e.g.*, cold water has the potentiality to become hot, but it is impossible for cold water to become hot unless it be 'moved' from that state by something that actually possesses heat. It will be seen that this conclusion is an immediate inference of the real distinction between potentiality and act. Hence the principle in a more explicit way may be formulated thus: *Potentiality, which is really distinct from act, can never become act unless it be reduced to act by something which is in act.*

This is the fundamental principle of the entire Thomist system; established at the outset in metaphysics, it is applied without exception to the fundamental doctrines in every department of Thomist philosophy and theology. Whoever draws a single conclusion which is in any way at variance with this principle, although he may hold all other doctrines of the Thomist system, ceases *ipso facto* to be a Thomist.

14. The application of the principle.—(*a*) *In metaphysics.*—The Thomist doctrine of real distinction between essence and existence in created things, wherein essence is conceived as a potentiality and existence as an act, is an application of the principle; likewise the real distinction between substance and its accidents, wherein substance is conceived as in potentiality to the accidents which are its acts or perfections; likewise the doctrine concerning the nature of dimensive quantity, the essence of which is not that it actually extends the parts of a corporeal substance in place, *i.e.* in triple dimension, but that it distributes the parts of that substance within the substance itself (which internal parts are only potentially distributed in triple dimension by dimensive quantity), and that it has the capability or potentiality of *actually* extending those parts in place according to triple dimension. Upon this doctrine of the nature of dimensive quantity is founded the doctrine of the real presence of the whole body of Christ in a small consecrated Host; also the doctrine of the virgin birth of Christ, of His passing into a room, the doors being shut, etc. Likewise the important doctrine of cause and effect, or the principle of causality, is an application of the aforesaid fundamental principle. An analysis of 'that which begins to be (effect) must have a reason (cause) for its inception' shows the underlying great principle.

(*b*) *In psychology.*—The doctrine of the unity of the human composite, viz. that the intellectual soul is the substantial form of the body, and that it is the only form, is an application of the same principle. The 'prime matter,' a pure potentiality, which is informed by the intellectual soul (or act) receives from this act all that makes it body, and human body, and living. Through the same principle it follows that the faculties of intellect and will are really distinct from the substance of the soul, because they are the acts or perfections of the soul, which in regard to them is a potentiality. As a consequence it also follows not only that every faculty is really distinct from its object as potentiality to act, but also that, in regard to it *as object*, every faculty is passive, not active. Hence the important doctrine that the human intellect is a passive, not active, power or faculty, in that it receives, and does not make, its object of thought *as object*.

Further (and this is most important from the point of view of Thomism *versus* Molinism), the human will, which is the faculty of choice, must ultimately be moved to the very act of choosing by something which is in act; and the reason is that, before the act of choosing (given everything necessary for this action save this action itself), the will is in a state of potentiality and must therefore be 'moved' by something outside it to the state of perfection which is 'choosing.' Only God, the *actus purus*, can move the will to the very act of choosing; if aught else did this, the will *ipso facto* would cease to be free. This is the Thomistic doctrine of physical premotion, which is a rigorous application of the aforesaid fundamental principle.

(*c*) *In cosmology.*—In this department of applied metaphysics the fundamental question concerns the precise nature of body, as body. Applying the aforesaid principle, Thomism concludes that

body, as body, is a composite of two principles, one of which is substantial form and the other prime matter. Prime matter is a pure potentiality of which the substantial form is the act; and between the two, as a consequence, there is a real distinction.

(*d*) *In natural theology.*—The classic proof for the existence of God, viz. from the existence of motion in the world, is nothing more than a rigorous application of the same principle. Motion is here taken in its widest sense, embracing not only local motion but every kind of 'passing from potentiality to act.'[1]

(*e*) *In ethics.*—All the doctrines concerning habits and their formation, of the passions, of virtues and vices, of laws, etc., have their mainstay in the same fundamental principle.

(*f*) *In theology.*—For the existence of God see above (*d*). It is only necessary to run through the *Summa* to see that the same principle is fundamental in the doctrines concerning revelation and concerning inspiration (in which is implied the doctrine of cause and effect, and in particular of instrumental causality). By an understanding of the same great principle it is concluded that God alone is pure act with no admixture of potentiality whatsoever, whilst everything created contains both potentiality and act. It is further concluded not only that God's essence is identically the same as His existence, but that His intellect and His will, His attributes of unity, goodness, truth, His knowledge and love are likewise identically the same as His essence. The same grand principle underlies the whole of the doctrine concerning the mystery of the trinity of persons in God. A further application is to be found in the treatise on the angels, whose existence is really distinct from their essence, whose minds and wills are really distinct from their substance, etc. Thus through the whole of the *Summa* one finds the same principle applied. It will be necessary to take only two more cases in order to show the solidarity of Thomistic doctrines. According to St. Thomas, the sacraments are the instrumental causes of grace; they are not mere channels through which grace is infused into the soul; they are real, physical, instrumental causes which produce or infuse grace into the soul. The soul in regard to the sacramental grace that informs it is a potentiality (*potentia obedientialis*), and grace is the act.

The final instance we shall take to illustrate the application of the fundamental principle of Thomism concerns the doctrine of actual grace. Just as in the natural order it was concluded that the human will is physically premoved by God to the act of choice,[2] so in the supernatural order an actual grace is nothing more than a physical premotion in that order. Hence the Thomists speak of 'gratia efficax ab intrinseco,' a grace intrinsically or of its very nature efficacious, and not of grace, intrinsically indifferent, to be made efficacious by consent of the will to accept, or to remain inefficacious by refusal of the will to accept. Thus Thomism, by a relentless logic, applies the great principle to the doctrine of actual grace. To the mind of St. Thomas, in spite of the apparent difficulties, this doctrine is the only logical conclusion. For Thomism the theory of Molina or Suarez bristles with more difficulties in that the theory subverts the doctrines of God as the Prime Mover of all things, of causality, and of the great metaphysical principle: *Potentiality, which is really distinct from act, can never become act unless it be reduced to act by something which is in act.* In short, for the sake of a difficulty in applied metaphysics (*i.e.* the freedom of the will under God's physical premotion), Molina and Suarez gainsay a principle already established in metaphysics, just as he who, on account of some difficulty in mixed mathematics, gainsays a principle of pure mathematics.

Any conclusion other than the one drawn above wrecks a system of the whole of knowledge in the mind of the Thomist. It is owing to the perfect consistency of application of the grand fundamental principle aforesaid to every department of knowledge that Thomas bequeathed to the world a sublime system remarkable for its perfect unity, harmony, and solidarity of thought.

LITERATURE.—For the history of Thomism generally: *Dictionnaire d'Apologétique*, *s.v.* 'Frères Prêcheurs, Leur doctrine' (P. Mandonnet); *CE*, *s.v.* 'Thomism.' For the progress of Thomism: *Acta capitulorum generalium ordinis Prædicatorum*, Rome, 1893–1904, ed. B. M. Reichert, ii. 196–391 (of the Dominican order).

ÆLRED WHITACRE.

THRACE (Θρῃκη, Θρᾴκη). — Thrace was the name given in classical times to the mountainous region lying north of Greece proper. The inhabitants (Θρῆικες, Θρεῖκες, Θρᾷκες) were a barbarous people, having no close affinities to the Greeks in language, culture, or originally in religion. In the last field, however, their influence on their more civilized neighbours was considerable, beginning early and continuing fairly late. In particular, they appear to have been partly responsible for the remarkable change in the spirit of Greek religion which took place about the beginning of the classical epoch or shortly before it. This change must not be thought of as something revolutionary, akin, *e.g.*, to the conversion of most of N. Europe from Roman Catholicism to Protestantism at the Reformation; for the large majority, probably if not certainly, religious beliefs and practices changed little if at all; it was rather the introduction of a new element, which rendered possible the holding by many Greeks of ideas either unknown to their fathers or existing among them in a very undeveloped form, and largely forgotten when first we hear anything definite about the Greek race.

1. Origin and history of the Thracians.—The Thracian invasion of the country which they occupied in historical times is part of a wider movement from the north into the hilly region of the Balkans and the countries west and east of that district (Bosnia and Herzegovina on the one side, the Caucasus and Armenia on the other). The invaders were of Indo-European stock, probably originally from the Carpathians. Driven perhaps by the pressure of Slovak tribes from the region of the Vistula, or possibly from sheer restlessness or desire for fresh

[1] Cf. *Summa*, i. qu. ii. art. 3, *Prima via*.
[2] See above (*b*).

territory, they occupied the country in successive waves. The Phrygians (*q.v.*) and tribes most closely related to them, together with the Armenians, occupied the Asiatic district for the most part; the Thracians seized chiefly upon the European sector. That Thracian and Phrygian were related stocks was already recognized in antiquity,[1] and modern philology, together with arguments drawn from their religious and social organization, inclines us to believe that this is substantially correct. Throughout Greek history the Thracians, or the majority of them, remained politically independent, protected both by their great courage and by the difficult nature of their country; Rome, after much trouble, succeeded in subduing them, the ferocious Dacians finally yielding to Trajan. They remained, however, an intractable people, little influenced by the civilization of their rulers. Finally, about A.D. 400, their ancient priestly tribe, the Bessoi, were converted to Christianity. Some 200 years later a Slovak invasion swept over the country, and from that time begins the history of what ultimately became the Balkan peoples.

2. Ethnology.—The Thracian races fall, broadly speaking, into two groups—a northern and a southern. The latter, inhabiting the region of the Haimos and Strymon, included, besides the Bessoi already mentioned, the Bisaltai, Thynoi, Bithynoi, Sakai, Dioi, Odrysai, and other tribes; the former or Getic group consisted of a smaller number of peoples, individually more important than the tribes just mentioned. Besides the powerful Getai themselves, we must count among them the still more formidable Dacians (Δᾶκοι, Δάκαι, Δῖοι), who are often confused with them, and the Agathyrsoi, whose name seems to indicate that they were held in no great esteem by their Scythian neighbours (the first two syllables are probably to be connected with Zend *agha*, 'bad'), and who appear from Herodotos[2] to have practised the very primitive custom of group-marriage. On the whole, the northern group shows certain cultural affinities with the Germanic tribes, the southern with the Orientals, especially, as already mentioned, with the Phrygians.

3. Language.—As the Thracians seem to have had no knowledge of writing, the few inscriptions we have from Thrace are late and never in the native tongue. There remain, however, a number of glosses, some 36 of which we may take as genuine Thracian words; about 25 names of plants given as Thracian by Dioscorides; and a considerable number of proper names, both of persons (including deities) and of places. From these it appears that their tongue was Indo-Germanic, of the E. European group, having as its nearest ancient congeners Phrygian and Armenian. Traces appear of two distinct linguistic stocks, the result presumably of the blending of two races; and this we may consider along with the fact reported by Herodotos[3] that the cult practised by their chieftains differed from that of the common people.

4. Material culture.—It has been pointed out[4] that Homer does not consider the Thracian culture as an inferior one. In the *Iliad* the Thracians are for the most part the allies of the Trojans; Priam's treasury includes a cup of their giving;[5] the son of Antenor was brought up in Thrace and married there;[6] Rhesos comes to Priam's aid with a strong Thracian contingent.[7] On the other hand, some of them at least trade with the Greeks.[8] No hint is given that they are in any sense savages; in particular, the followers of Rhesos encamp in a soldierly manner.[9] But there is no need to suppose, as Helbig does, that the Thracians of that day, under Phœnician or other foreign influence, were enjoying a short period of 'hothouse' culture which brought them for a time to higher levels than they ever afterwards attained. The true explanation seems to be that Homer knows nothing of the later division between Greek and barbarian, and that the Greeks of his day were not a highly civilized people themselves. A race which lived under the rule of feudal barons, practised the blood-feud, allowed wer-gelt, occasionally mutilated or otherwise ill-treated a dead foe, was not quite free from the custom of human sacrifice, and buried its dead much in the fashion of the historical Thracians,[10] besides keeping up the old custom of bride-price and having only very rudimentary manufactures and handicrafts, was not much superior to the Thracians of historical times. The difference was that the Greeks developed with marvellous rapidity in the next 300 years or so, while the Thracians remained backward.[11]

Passing to classical authors of the later periods, we find our chief account of Thrace in Herodotos.[12] His whole attitude towards the Thracians, while not unfriendly,[1] is clearly that of civilized man describing interesting barbarians; and this is certainly justified. They are, he tells us, a numerous race, of little political importance owing to their lack of unity; their culture is on the whole uniform. They despise agriculture, counting it more honourable to be idle and to live by plunder. They have, however, some arts, as they can weave very good cloth of hemp fibre.[2] To this we may add, what sundry later authors tell us, that they showed skill in making various tools and weapons of iron.[3] They were accustomed to dye their hair and tatu their skin. They were, in some cases at least, polygynous; that they lived under father-right, not mother-right, is clear from the facts that they paid bride-price and that marital jealousy was strongly developed, though the chastity of an unmarried girl was quite disregarded—*i.e.*, their women were apparently thought of chiefly as valuable property, belonging to their fathers so long as they were unmarried—hence the light view taken of their immoralities, for any children that they might bear out of wedlock would also belong to their own family—but afterwards belonging to their husbands, who had paid for the exclusive use of them. When we add that as a race they were cattle-breeders and especially famous for their horses from very early times,[4] it is clear that we shall not be far wrong in comparing them to some one of the principal Basuto peoples, such as the Amazulu, before the latter attained unity of government under T'Chaka. Physically, however, they were at the other end of the colour-scale, being fair-skinned and yellow-haired.

Finally, four points should be noted as giving the clue to many features in their religion. According to the practically unanimous voice of antiquity, (1) the Thracians were desperately brave, having little fear of death; (2) they were excitable, and, in particular, had a bad name for unrestrained indulgence in sexual passion; (3) they were heavy drinkers; and (4) they were intensely fond of music, performing well on both flute and lyre. In addition, their country was a mountainous one, in which caves were no rarity.

5. Religion.—We may take as our starting-point the famous passage of Herodotos, v. 7: 'They worship only the following gods, Ares, Dionysos, and Artemis; but their kings . . . reverence Hermes above all other gods, swear by him alone, and say that they are descended from Hermes.' We must in the first place remember that the names in the above passage are not to be taken too literally. Whereas a modern writer, if he said that a particular race worshipped Buddha, would mean exactly what he said, and the Hebrew prophet[5] who speaks of the name of his God as being 'great among the Gentiles' means his words to be startlingly paradoxical, a Greek always assumes that the gods of all nations are much the same as his own and never scruples to talk of the Egyptian cult of Hermes or the Roman worship of Hera, meaning thereby Thoth and Juno. We shall see that, taken as it stands, Herodotos' statement is true of one deity only.

(*a*) *Ares.*—That Ares is a Thracian deity is a fairly wide-spread opinion. As far back as Homer[6] we find Thrace mentioned as the home of the war-god, and later writers echo Homer.[7] Ares has, moreover, certain non-Greek features; his cult is wholly without any of those higher forms which distinguish, *e.g.*, Apollo or Athene and remains throughout that of a war-god pure and simple. Homer's whole attitude towards him is one of dislike; he supports the Trojans throughout; and in his ritual we find one feature paralleled in Thrace[8] hard to parallel in purely Greek cult—the dog-sacrifice to him under the name of Enyalios at Sparta.[9]

At the same time it must be confessed that none

---

[1] οἱ Φρύγες Θρᾳκῶν ἄποικοί εἰσι (Strabo, x. 471).
[2] iv. 104. [3] v. 7.
[4] W. Helbig, *Das Homer. Epos*, Leipzig, 1884, p. 9.
[5] xxiv. 234; we are not told who made the cup.
[6] xi. 222 ff. [7] x. 434. [8] ix. 71 f.
[9] x. 471. [10] See below § 5 (*h*).
[11] The present writer holds the view of Andrew Lang, van Leeuwen, and other scholars that the Homeric poems are substantially the work of one man, and he would put their date about the 10th cent. B.C. For the Homeric customs above mentioned see *Il.* ix. 632, xxii. 371, xxiii. 175 (the poet clearly disapproves strongly of the sacrifice), and xxiii. *passim*, *Od.* xv. 224, 272 ff., xx. 356, and many other passages. Elaborate manufactures or works of art are regularly the work of gods (as *Il.* xviii. 468 ff.) or imported (as *Od.* iv. 615). Simple weaving and the like are done at home, as *Od.* ii. 94. Cf. the account of Thracian arts above.
[12] Chiefly v. 2–8. References to other passages of Herod are cited in the notes. For fuller authorities see Tomaschek, *Die alten Thraker*, i. 111 ff.

[1] Between Greeks as a whole and Thracians as a whole no bitterness seems to have existed. The references to Thracians as bloodthirsty savages are mostly in comparatively late authors—*e.g.*, Hor. *Od.* i. xxvii. 2. The writer is of opinion that the detestable conduct of certain Thracian mercenaries in the Peloponnesian War (Thuc. vii. 29) may have had something to do with this, while later their savage battles against the Romans prejudiced the latter against them.
[2] Herod. iv. 74, vii. 75.
[3] References in Tomaschek, i. 119.
[4] Cf. Hom. *Il.* x. 436. [5] Mal 1[11].
[6] *Il.* xiii. 301 and elsewhere.
[7] *E.g.*, Verg. *Æn.* iii. 35.
[8] *Vita Euripidis*, i. (vi.) ταύτην δὲ (τὴν κύνα) Θρᾷκες, ὡς ἔθος θύσαντες ἔφαγον.
[9] Plut. *Quæst. Rom.* 290*d*; Paus. III. xiv. 9; Arnob. *adv. Nat.* iv. 25. Such a sacrifice, however, is not wholly unknown elsewhere in Greece.

of the above features are conclusive against his Greek origin. Among a people brave enough, but not fond of war for its own sake, the war-god might well remain 'functional'—too important to be altogether neglected, too unpopular to develop. Among the traditional friends of Troy are also Apollo, Artemis, and at times Zeus himself; not much can be made from a single feature of an obscure ritual;[1] and the references to Thrace need mean no more than that the Thracians, being war-like, had a popular cult of a war-god. And we must remember that the cult of Ares is very old in Athens and Boiotia, and that his name is not only plausibly derived from an Aryan root, which in itself proves nothing, but has a characteristically Greek formation.[2]

We conclude therefore, on the whole, that the Thracians did not originate the Greek cult of Ares, but had from very early times a war-god of their own, about whose ritual we must be content to remain ignorant. It is worth mentioning that Herodotos seems to speak of him as an oracular god in one rather obscure passage.[3]

(*b*) *Dionysos.*—The case of Dionysos is very different, and there is little serious doubt that here Herodotos and the numerous later authors who speak of this god as Thracian are literally correct.[4] The chief arguments in favour of this statement are as follows:

(i.) *Philological.*—The first two syllables of the name are apparently to be connected with the Thracian tribe-name Dioi. Further, a Phrygian inscription gives us the formula *με διως κε ζεμελω*, which almost certainly means 'By heaven and earth.' We thus have a god with a name of which the first part has close Thraco-Phrygian affinities, while the rest is certainly not Greek, whose mother is apparently the earth-goddess of the Thraco-Phrygian stock.[5]

(ii.) *Traditional.*—Strabo definitely calls the cult of Dionysos Thraco-Phrygian.[6] When first we hear of the god at all, it is in connexion with the Edonian king Lykurgos;[7] and his cult is called Thracian far more persistently than that of Ares by authors of all ages. Moreover, all tradition is agreed that he is not genuine Greek. It is true that the usual birth-legend (not the 'Orphic' story; see below) makes him a Theban; but even there he is disowned by his kin and has to win his way into prominence against the vehement opposition of Pentheus;[8] while many similar tales indicate that his cult had to force an entrance into Greece. It is true that many, if not all, of these are misinterpreted ritual tales; but that they were persistently misinterpreted in the same way, as stories of persecution, strongly suggests that a folk-memory of real opposition lies behind the interpretation if not the stories themselves.

(iii.) *Facts of cult.*—On the one hand, very early Greek agricultural festivals either are not Dionysiac, like the Attic Thesmophoria, or present Dionysos as an obvious intruder, like the Anthesteria. On the other hand, the Thraco-Phrygian region is the home of all manner of orgiastic nature-cults,[9] and one detail of the worship of Dionysos which we have good reason to suppose primitive, viz. the oracle, is Thracian and hardly Greek at all.[10] He seems always to have been a wine-god as well as a god of nature in general, and a wine-god we find him in Thrace, which was a wine-growing country very early.[1] Further, he is connected in cult with Sabazios, who is probably Phrygian.

From Thrace, then, his cult spread through Greece some time, probably not very long, before the dawn of Greek history. In Homer he is apparently a foreign god, little known and not much regarded; of the five mentions of him two[2] are certainly interpolations, one[3] is unimportant, the others come in the story of Lykurgos. When we come to the Homeric hymns, however, he is a well-known and important deity, and all later literature is full of references to him. It would appear then that somewhere after the downfall of the Homeric (Achaian) culture, and during the period of reconstruction, of which very little is known, his worship crossed the border and was carried, it is no longer possible to say exactly how, or by whom,[4] to all parts of Greece, meeting with considerable opposition, but finally establishing itself as part of the state religion and becoming largely civilized in the process, though recrudescences of its original barbarism, such as the well-known one in Italy,[5] were always possible.

No detailed description of the cult of Dionysos in Thrace has come down to us from antiquity; but it is not difficult to frame one from various scattered notices,[6] from the wilder and more savage features of his Grecian cult, from the traces of the ancient worship still to be found in N. Greece, and from what we know of similar rites elsewhere.

We learn, firstly, that the most prominent feature of the ritual was a wild orgiastic ceremony held normally, if not always, at night. In this the worshippers worked themselves up into a state of frenzy by dancing and shouting (hence the numerous names of the god, such as Euhios, Iakchos, and perhaps Bakchos,[7] which are derivable from ejaculations or from words meaning 'shout' or 'cry'), to the accompaniment of savage music. They were dressed in the skins of wild animals—we hear especially of fawn- and fox-pelts (*νεβρίδες, βασσάραι*)—and carried the thyrsos, a spear-like implement covered with the sacred ivy, or the narthex (fennel-wand). It is obvious that for an excitable people, not highly civilized, and susceptible to strong sexual emotion, and therefore to nervous emotion of all kinds, including religious enthusiasm,[8] the violent exercise under the stimulating surroundings of their mountainous country in the clear night air would of itself produce an abnormal condition; and this seems to have been further encouraged by the free use of wine and perhaps other artificial stimulants. The result was, at least in many cases, and particularly among their women, a condition of frenzy, involving anæsthesia, abnormal strength and endurance, and other such symptoms, followed by fainting and exhaustion. The natural explanation, to any one at that stage of culture, was that the worshippers were possessed by their god (*ἔνθεοι, κάτοχοι*); and therefore we find them called by his name (*βάκχοι, βάκχαι*). That Dionysos himself was present was

[1] The odd ritual of Ares *Γυναικοθοίνας* (Paus. viii. xlviii. 4, 5) may point to Amazonianism, which is not Greek. But this is exceedingly doubtful.

[2] The forms *Ἀρήϊος* (Hom. Ionic) and *ἀρεύιοι* (Alkaios) indicate a stem in *-ευ-*; cf. *πρεσβήϊον* and *πρέσβυς*. The root is akin to Skr. *ras*, 'roar.' See C. A. M. Fennell in *CR* xiii. [1899] 306.

[3] vii. 76, *ἐν τούτοισι τοῖσι ἀνδράσι Ἄρεός ἐστι χρηστήριον*. The context is corrupt, and it is uncertain who are referred to, quite possibly not Thracians at all.

[4] The counter-theory, that he is a Cretan deity, is supported by J. E. Harrison (*Prolegomena*[2], ch. viii.). The arguments for it reduce to (*a*) the fact that a cult of a god of this type did exist in Crete from very early times and remained so powerful that Zeus himself was absorbed by it; (*b*) certain very primitive features of Cretan Dionysiac ritual. But, in view of the overwhelming arguments in favour of Thrace, these phenomena are of little weight. The former is common to many localities; the latter is naturally explained by supposing that the worship of Dionysos, once it was imported, found favour in Crete because it was so like the native worship, and so was but little modified.

[5] *CGS* v. 94. The attempts to make Semele a thunder-cloud or the like are too absurd to deserve more than passing mention. The syllables *-νυσο-* are unintelligible, but possibly connected with the holy mountain Nysa, which is variously located but apparently Thracian in Homer.

[6] x. 471; cf. Plut. *Alex.* 2. [7] Hom. *Il.* vi. 130 ff.

[8] The best known form of the legend is that given in Euripides, *Bacchæ*. Even in this the final birth of Dionysos, from the thigh of Zeus, does not take place in Thebes.

[9] Cf. art. PHRYGIANS.

[10] See Eur. *Hec.* 1267; Arist *ap.* Macrob. *Sat.* i, xviii. 1.

[1] Hom. *Il.* ix. 72; Arist. *loc. cit.*

[2] *Il.* xiv. 325, and *Od.* xi. 325. [3] *Od.* xxiv. 74.

[4] It was an age of wandering prophets (see Rohde, *Psyche*[4], ii. 63 ff.). The favourable reception of the women may have had a good deal to do with it also.

[5] Liv. xxxix. 8 ff.

[6] To save a multitude of quotations, we refer the reader for detailed authorities to the authors cited in the Literature at the end of this article.

[7] The root is perhaps *Fαχ-* (Curtius), in both names, Iakchos being *ΓιFαχχος*. Euhios is derived from the well-known cry *εὐοῖ*.

[8] The present writer holds religious and sexual emotion to be essentially the same; see, *e.g.*, W. James, *Varieties of Religious Experience*, London, and New York, 1902, *passim*. The frequency of 'conversions' and the like during adolescence and the regular employment by mystics of all nationalities of erotic metaphors are among the facts supporting this view.

a commonplace, familiar to us from many literary and artistic representations of the rites, from Euripides to Titian and Keats;[1] the skins in which the worshippers dressed were those of animal *avatars* of the god; and the culmination of the rite was the tearing in pieces and devouring of one of these animals.

It is far from impossible that in some cases the victim was a man or a child. That the Getai practised a form of human sacrifice we know;[2] Themistokles sacrificed three captives to Dionysos *ὠμηστής*;[3] the legends of Pentheus, etc., point the same way; and in the modified Dionysiac ritual of Tenedos[4] the cow whose calf is to be the victim is tended like a woman, and the calf when born has buskins put on it before being killed.

We have so far a quite normal ritual of a vegetation deity, of the kind familiar from the *Golden Bough*.[5] The god visits his worshippers in early spring (the time of most of the festivals),[6] is welcomed by them, and is joined to them by a sort of primitive sacrament. Of the death or expulsion of the worn-out god, later in the year, we do not hear so much, but there are traces of it. In the legend of Lykurgos already referred to the king pursues the god into the sea—the throwing of the vegetation-spirit into water is a very common rite; there was a strong tradition that he had died, and was buried at Delphi;[7] and there is also a legend of his descent into Hades to fetch up Semele.[8] We are therefore, in view of these facts and on the analogy of all similar ritual elsewhere, justified in supposing that his death was part of the ceremonial of his cult; and this belief is strengthened by the curious relic of Dionysiac worship found in Thrace by R. M. Dawkins,[9] in which the death of one of the characters in the mummers' play is a prominent feature. Closely allied with this went the ceremony representing his birth and cradling in the *λίκνον*, or winnowing-fan. The last detail, however, marking him definitely as a corn-god, is Greek rather than Thracian.[10]

In the ritual of Dionysos the forms of the god change bewilderingly. We have reason to suppose him to have been conceived as bull, goat, kid, sheep, serpent, stag, and even pig,[11] for all these animals, besides the fox and perhaps others, were sacred to him, and, as he is at times said to have taken the forms of some of them, notably bull and serpent, we may conjecture that he was more or less identified with the others as well. But in iconography he is always human, and he had human *avatars*, as might be expected from the human sacrifices.

(*c*) *Divine kings; Lykurgos, Pentheus, Rhesos, Orpheus.*—Several of the legends seem to indicate that in Thrace, as elsewhere, there existed kings of the type familiar from the investigations of J. G. Frazer—*i.e.* incarnations of the local god, who ended by being sacrificed, possibly devoured. As the Greeks probably never had had this sort of king—certainly had forgotten it—they naturally misunderstood the legends. Thus none of the above mythological figures exactly correspond to the Frazerian type. Lykurgos persecutes Dionysos; but the form which his persecution takes is a pursuit (probably originally ritual) of the god and his attendants and the flogging of them with the *βουπλήξ*, by which is possibly meant, not an ox-goad, but a whip of bull's hide, a fertilizing *februum* like the hide thongs of the Roman Luperci. He is not torn in pieces by the god's followers, but in one way or another (the legend varies in detail) is punished, by blindness or otherwise, and imprisoned in a cave.[1] Pentheus opposes the Bakchai and is torn in pieces by them. Orpheus is a royal priest of Dionysos and is torn in pieces by the Mainades—an act for which late mythologizers assign sundry fanciful reasons.[2] Rhesos is a vague figure, but it has been urged that his name may be connected with *rex* (Gothic *raiks*) and the royal Thracian name Rhescuporis. After his death he appears—the exact sense and reading are matters of dispute—to be represented by the author of the play bearing his name as becoming an oracular deity or semi-deity (*ἀνθρωποδαίμων*) of somewhat Dionysiac type.[3] Add to all this the facts that the Getic priest-king was called 'god'[4] and that we get as a royal name of frequent occurrence the word Kotys, which is a by-form of Kotyto, and it becomes at least plausible that the cult of Dionysos and other gods of the same kind in Thrace had at its head in early times[5] a priest-king who was the incarnation of the deity and ended by being violently put to death to make way for a fresh incarnation.

(*d*) *Orphism.*—Of the persons mentioned in the last section one is of such importance as to deserve separate treatment, viz. Orpheus. Concerning this priest-king the tradition of antiquity is fairly constant. He is a more or less historical figure;[6] he existed some time before the Trojan War;[7] he was a Thracian,[8] son of King Oiagros and a Muse, usually Kalliope, sometimes Polymnia. He was a priest of Dionysos, founder of Dionysiac mysteries, public and private, and originator of the Orphic *βίος*, *i.e.* way of life.[9] He was also a seer, a magician, a 'theologian' in the Greek sense of the word,[10] a marvellous musician. His home, when exactly localized, is generally said by our earlier authorities to have been Mt. Pangaion, the site of an ancient and famous Dionysiac shrine, while later writers locate him on the coast of Thrace, near the mouth of the Hebros. After various adventures, the most notable of which was the descent into Hades, familiar in later literature from Vergil's handling of it in the *Georgics*, he was

1 *Bacchæ*; *Endymion*; the 'Bacchus and Ariadne' in the National Gallery.

2 See below, § (*g*).

3 Plut. *Them.* 18.

4 See Ælian, *Nat. Anim.* xii. 34. The Thracian ritual seems to have been toned down almost into a normal sacrifice.

5 See for full references the index vol. to *GB*³, *s.v.* 'Dionysus.'

6 For a few examples see art. Festivals and Fasts (Greek), *ad fin.*

7 See Plut. *de Is. et Os.* 365*a*.

8 *GB*³, pt. vii., *The Spirits of the Corn and of the Wild*, London, 1912, i. 15.

9 Described in his art. 'Archæology in Greece (1906–1907),' in *JHS* xxvii. [1906] 284 ff.

10 Hence Dionysos' title Λικνίτης (Plut. *loc. cit.*); cf. Serv. on Verg. *Georg.* i. 166.

11 A selection of the relevant passages will be found in *CGS* v. 303 f.

1 See Soph. *Ant.* 955 ff., and Jebb, *ad loc.*

2 For examples see Serv. on Verg. *Georg.* iv. 519.

3 See Rohde, i. 161, who rather too confidently assumes Rhesos to have been a faded god. W. Leaf (*JHS* xxxv. [1915] 1 ff.) goes too far in the opposite direction. On the whole the present writer is of opinion that Rhesos may really have been a half-forgotten king of some Thracian tribe, who after his death was supposed to give oracles. The ancient evidence is to be found in *Il.* x.; [Eur.] *Rhes.* 955 ff.; Polyæn. vi. 53.

4 Strabo, vii. 298.

5 Presumably not in historical times, as one can hardly suppose that none of our authors would have mentioned it in that case.

6 For an isolated expression of doubt see Cic. *de Nat. Deor.* i. 38 (108), 'Orpheum poetam docet Aristoteles nunquam fuisse,' which from the context is almost certainly a denial of Orpheus' existence. But Aristotle may merely have meant to deny his authorship of the 'Orphic' poems.

7 Contemporary with the Argonauts, according to most versions of their story—*e.g.*, Pind. *Pyth.* iv. 176, and Apollonios Rhodios.

8 'Thracius Orpheus' (Ver. *Ec.* iv. 55) is his stock epithet.

9 *βίος* is perhaps the nearest Greek equivalent of 'sect' or 'persuasion' and greatly resembles the NT use of ὁδός (Ac 9²). It signifies a form of life depending on certain religious or philosophical principles and is applied especially to the Orphic and Pythagorean bodies.

10 *I.e.*, not a writer on the theoretical basis of religion in general, or of any particular religion, but one who describes the nature, relationships, etc., of deities. In this sense Hesiod, *e.g.*, is a 'theologian' (*θεολόγος*).

torn in pieces by a band of women, possessed by real or pretended Dionysiac frenzy.[1]

From what is said above it is clear that all this may have some historic foundation—*i.e.*, that the legends regarding him go back to some real happenings in connexion with the ritual of Dionysos. The death of an Orpheus, and consequently his descent into Hades, and presumably also his resurrection in a new incarnation, may have taken place, not once but many times.[2] But tradition crystallized all these forgotten personalities into one picturesque figure, the founder and Messiah of a religion of mystical other-worldliness.

The chief tenets, so far as we can reconstruct them, are as follows.[3] At the end of a long succession of deities[4] comes Dionysos-Zagreus, the son of Zeus and Persephone.[5] This god, while an infant, was beguiled by the Titans, who gave him a mirror and other toys and then tore him in pieces and devoured him, all but his heart, which was saved by Athene. The god was re-created by his father, who swallowed the heart and re-bore the child; the Titans were destroyed by the thunderbolt, and from their ashes sprang man. Man is therefore a creature of mixed origin, containing a divine principle (Dionysos) and an evil one (the Titans). The main object of his existence is to get rid of the latter element—a task which cannot be completed in one lifetime. To further it, however, it is necessary to live in strict ritual purity, avoiding the use of meat, wearing white garments, shunning the polluting presence of corpses and of women in child-birth,[6] and practising chastity,[7] all these being observances well known in ancient ritual and not peculiar to Orphism. In addition, it seems that the higher class of Orphics practised a more or less definite ethical code.[8] Side by side with all this went, as might be expected, a lower, popular form, in which a sort of begging friars drove a thriving trade in indulgences, so to call them, 'persuading not only individuals but cities,' says Plato,[9] 'that their sins can be purged with sacrifices and pleasant merry-makings'; *i.e.*, performing quasi-magical rites, effective *ex opere operato*, quite independently of the moral condition of the person concerned, at prices proportioned to the wealth or superstition of their clients.

To return to the higher forms of Orphism. After a life spent in moral and ceremonial purity the soul of the Orphic believer was rewarded in Hades, apparently for 1000 years,[10] or ten times the supposed maximum length of a human life, while those who had sinned, but not beyond remedy, were punished for the same period. After this came reincarnation, not necessarily in human form. Next came another period in Hades, and so on, the process being known apparently as the κύκλος, or cycle of reincarnations.[1] Release from this could be obtained by a series of good lives on both sides of the grave—for apparently each world was the heaven or purgatory of the other. After a triple good life on either side—three on earth and three in Hades—the soul had purged itself from the stain of 'original sin' and was free to enter a permanent paradise, with no more prospect of reincarnation, and in the enjoyment of divine or heroic[2] rank.

This theology, and much besides, was embodied in a large literature, attributed either to Orpheus himself or to his pupil Mousaios,[3] the oldest parts of which probably date from the 6th cent. B.C., while the latest representatives, the *Hymns* and Orphic *Argonautica*, are about 1000 years later.[4] Of this the greater part has perished, and especially the earliest and most valuable part; and we have of undoubted and fairly early Orphic origin only one set of documents, the so-called Petelia Tablets, gold plates found in Orphic graves in S. Italy. It appears from these that a pious Orphic was in the habit of burying with his dead friend directions for his conduct in Hades, to aid him to secure final bliss, since no doubt it was charitable to suppose that the life just completed was the last of the series of good lives required to qualify for escape from the circle.[5]

The tablets present the following picture of Hades. The soul, apparently after long and thirsty wanderings, travels along a road flanked on either side by springs. Avoiding the left-hand spring,[6] it addresses the guardians of the right-hand one, declares itself to be of divine race, and begs for a draught of 'the cold water which floweth forth from the lake of Memory.' The request is granted, and the soul is hailed as having 'endured that which aforetime it had never endured.' It addresses Persephone and the other deities of the under world and is admitted into their society.

The poem to which all these tablets go back is of unknown authorship and date, but it is evident that it or something like it stands behind the passages of Pindar and Plato already cited and also behind much that is to be found in other authors, mostly late. The connecting link is to be found in Pythagoreanism, which, it would seem, found Orphism already established in S. Italy, and incorporated much of its teaching. This results in a confusion between the two systems so complete that it is practically hopeless, with our imperfect documents, to say definitely with regard to any eschatological passage that it is purely Orphic or purely Pythagorean. Through the Pythagorean exiles who reached Greece proper after the dispersion of their communities in Magna Græcia the higher forms of the doctrine became known to Plato, in whom consequently we find side by side strong Orphic-Pythagorean influence and hearty contempt for Orphic charlatanism. Not dissimilar is the attitude of Aristophanes, who, on the one

[1] For full authorities, and variants of the myth, see Gruppe. We give a few of the leading references: priest and founder of mysteries: Eur. *Hipp.* 952 ff.; Aristoph. *Ran.* 1032; Herod. ii. 81; Plut. *Quæst. Con.* ii. 635*e*; seer: Plat. *Prot.* 316*b*; magician: Eur. *Alc.* 966 (973), *Cycl.* 639; musician: Pind. *loc. cit.*, and Verg. *loc. cit.*

[2] Cf. Proclus, *in Plat. Remp.* 398: 'Ορφεὺς ἅτε τῶν Διονύσου τελετῶν ἡγεμὼν γενόμενος τὰ ὅμοια παθεῖν λέγεται τῷ σφετέρῳ θεῷ.

[3] The details varied (see Rohde, ii. 115 ff.; Gruppe, col. 1121 ff.). The Orphic writings being largely lost, much has to be patched together from various sources, many of them obscure.

[4] The theogony does not differ from the Hesiodic in essentials; the chief departures are the insertion of the World-egg laid by Night and of two vague deities, Phanes and Erikapaios.

[5] *I.e.* sky-god and earth-mother. Persephone = Zemelo = the Semele of the Theban myth. The source of the name Zagreus is doubtful.

[6] See esp. Eur. Κρῆτες, frag. 475*a* Dindorf, and *Hipp.* 952.

[7] See *Hipp.* 1002. Hippolytos is apparently represented as the ideal Orphist.

[8] For reference to this see *Hipp.* 992 ff., and Pind. *Ol.* ii. 76.

[9] Condensed from Plat. *Rep.* ii. 364 E.

[10] This is the figure given by Plat. *Rep.* x. 615 A, B; cf. Verg. *Æn.* vi. 748; of these the former is probably Orphic-Pythagorean, the latter contains the Orphic-sounding phrase *rotam voluere*. For other Platonic myths containing similar eschatology see J. A. Stewart, *The Myths of Plato*, London, 1905; cf. A. Dieterich, *Nekyia*[2], p. 84 ff. In Pind. frag. 98 (110) the soul spends only eight years in Hades (*i.e.* an *oktaeteris*; cf. art. CALENDAR [Greek], § 3) before its final earthly life, after which it attains heroic rank.

[1] The word is found in the Petelia Tablets and elsewhere in Orphic literature. This account of Orphic eschatology is put together largely from Pind. *Ol.* ii. and frag. 98–110. In the latter we take the disputable words ποινὰν παλαιοῦ πένθεος as meaning 'atonement for her (Persephone's) ancient grief' (at the murder of Zagreus).

[2] The tablets have ἄλλοισι μεθ' ἡρώεσσιν ἀνάξεις and also ὀλβιὲ καὶ μακαριστέ, θεὸς δ' ἔσῃ ἀντὶ βροτοῖο. The confusion is natural enough in a religion which has much to say of the beatified dead (ἥρωες) and also claims divine ancestry for all men. Ordinarily, a Greek sharply differentiated between a god, who did not die at all, and a hero, who had been an ordinary man but continued to live in some way after bodily death.

[3] Plat. *Rep.* ii. 363 C, 364 E, and commentators.

[4] Onomakritos edits and interpolates Musaios in the time of Hipparchos, son of Peisistratos, Herod. vii. 6; Orphic writings falsely called pre-Homeric, Herod. ii. 81.

[5] Text and tr. by G. Murray in J. E. Harrison, *Proleg.*[2], appendix.

[6] Probably Lethe, of which a soul drinks before reincarnation. The finally purified soul has no need to forget.

hand, parodies private mysteries of the Orphic type in the *Clouds* and, on the other, draws in the *Frogs* on the same type of ideas for his half-serious picture of the other world.

Another problem which we cannot solve with any great exactness is the amount of non-Thracian thought which goes to the making of Orphism as we know it. The very name of the founder is in doubt, for, while to some it appears a Thracian name,[1] others point to the occurrence of Greek cognates[2] as indicating it to be Greek. As to the doctrines, it is unreasonable to suppose that the Thracians produced so elaborate and quasi-philosophical a system of reincarnation; this is rather the result of Greek reflexion on Thracian Dionysiac material. Thrace, on the other hand, is the likeliest claimant for the grotesque myth on which the whole system rests; but here again we do not know how much was contributed by obscure superstitions from backward corners of the Greek world. The asceticism we may not unfairly call Thracian, though the details of it are not definitely non-Hellenic.

Exactly what form the Orphic religion took, in its externals, and how long it remained a potent force, cannot be very precisely determined, still less what proportion of the Greek peoples was seriously affected by it. With regard to the first point, however, it would appear that Orphism had but little organization. There was, and could be, no Orphic state anywhere, and, though there was no doubt a considerable number of Orphic congregations (*θίασοι*), there was no central authority to connect them, nor have we any right to suppose that they were identical with each other in doctrine and practice. It was as if there existed a form of Freemasonry in which each lodge was a law unto itself, and there was no very definite common ritual and no recognized means of communication between the various lodges. Also, though many of the greatest individual minds, notably Pythagoras and Plato, and probably Socrates also, were at one time or another affected by the cult, we have no evidence that it was a particularly numerous body. Pythagoreanism, which seems to have been much more organized and had decided political leanings, was still the faith of a minority, as is seen by its helplessness when popular feeling in Italy turned against it; Orphism, being non-political and probably still more the religion of the few, was not persecuted. As to the length of its existence, we have seen that Orphic documents were still being written in the 4th cent. A.D., but, like other productions of that epoch, they show unmistakable traces of syncretism, and of Orphism we have little or nothing outside of literature. Therefore, on the whole, we are disposed to attach less importance than Dieterich does to the undeniable coincidences between Orphic imagery, *e.g.*, and that of certain Gnostic and Christian writings; we would look for the source of that imagery, and the many common points of ritual and belief in Christian and non-Christian cults, to the numerous Hellenized Oriental faiths rather than to Orphism proper, holding that the language which once was chiefly, if not peculiarly, Orphic had become common property,[3] while Orphism itself had become very unimportant. This, however, cannot be considered as settled beyond reasonable doubt.

We may now consider briefly the moral value of the Dionysiac and Orphic cults. That they were immoral in the obvious sense is not likely. It is true that Livy,[1] *e.g.*, makes out Dionysiac orgies to have been horrible riots of lust and violence; but he is speaking of a late form of the worship, far from its native place, and has all the Roman prejudice against any secret conventicle—the same prejudice which later gave rise to the same tales about the early meetings of the Christians. But in a broader sense we may say that all such cults were immoral, for they were untrue to Hellenism, replacing its clear envisagement of the facts of life with a misty other-worldliness, sure to lead to intellectual decay, however brilliant the first flowerings of its mysticism might be in such a mind as that of Plato. Not till the nonage of the ancient world did such doctrines really become prevalent; and the overthrow of the Pythagorean communities, primarily political, may be thought of as also an unconscious revolt against a force traitorous to Greek civilization.[2]

(*e*) *Artemis.*—Here we need have no doubt that Herodotos is not to be taken too literally. All we have any reason to believe—since of a Thracian origin of the cult of Artemis properly so called we have not the faintest trace—is that some great nature-goddess was worshipped in that country. We can give at least two names of such deities. Kotyto, or Kotys, though generally spoken of as Phrygian, was also Edonian.[3] Another deity, who was to some extent naturalized in Greece in fairly early times,[4] was Bendis, whose cult is mentioned together with that of Kotyto by Strabo.[5] Of the details of her worship we know but little; the torch-race mentioned by Plato[6] fits well enough with any deity equated with the torch-bearing Artemis, but is by no means peculiar to her; and of the native worship of her we hear chiefly that it was noisy.[7] Probably enough there were a score of such female personifications of the fertility of nature, worshipped with orgiastic rites not unlike those of Dionysos himself, possibly in connexion with him.[8]

(*f*) *Hermes.*—With regard to Herodotos' statement that the Thracian kings especially venerate Hermes, we are not aware that any very convincing explanation has been offered, but, in view of the facts mentioned in the next paragraph, we suggest that he means Hermes Chthonios and identifies with him some one of the deities after the pattern of Zalmoxis.

(*g*) *Zalmoxis.*[9]—Our chief authority for this deity is again Herodotos, who informs us[10] that the

[1] See Tomaschek, ii. 52.

[2] Orphe, given as a Laconian name in Serv. on Verg. *Buc.* viii. 29; the Bœotian name Ὀρφώνδας; ὀρφός, the name of a fish in Æl. *Nat. Anim.* xii. 1; and the root of the adj. ὀρφναιός.

[3] Thus the 'cold water' of the formula above quoted is found again on Osirian tombs (G. Kaibel, *IG Siciliæ et Italiæ*, Berlin, 1890, nos. 1488, 1705, etc.), and on at least one which is traditionally Greek in its wording, *ib.* no. 1342; finally appearing as the Christian *refrigerium*; cf. the 'water of life' of the NT.

[1] xxxix. 10, and elsewhere in his description of the Bacchanalian affair.

[2] The above account of the origin and progress of Orphism, while in our opinion the correct one, has been controverted by R. Eisler (*Weltenmantel und Himmelszelt*, Munich, 1910, ch. v.). He endeavours to prove that its origin is due to Asiatic, particularly Persian, influences, and this theory is accepted by some later writers (*e.g.*, Mrs. A. Strong, *Apotheosis and After Life*, London, 1915, p. 274). We hold that, with all deference to Eisler's great learning and industry, his arguments are wholly insufficient for the Orphism of the times of Pythagoras or of Plato, whatever light they may throw on the mongrel system which at the beginning of the Christian era went by that name.

[8] Or in conjunction with some of the other Dionysiac deities, such as Sabazios (Thraco-Phrygian).

[9] Also called Gebeleïzis (Herod. *loc. cit.*). The name is generally written Ζάλμοξις, but with one exception the MSS of Herodotos give Σάλμοξις. As σ and ζ are often confused in Thracian, both forms may be correct.

[10] iv. xciv f. Part of this passage, xciv. 4, runs: οὗτοι οἱ αὐτοὶ Θρῄϊκες καὶ πρὸς βροντήν τε καὶ ἀστραπὴν τοξεύοντες ἄνω πρὸς τὸν οὐρανὸν ἀπειλέουσι τῷ θεῷ, οὐδένα ἄλλον θεὸν νομίζοντες εἶναι εἰ μὴ τὸν σφέτερον This has been oddly misunderstood,

Getai worshipped him, and so exclusively that they regarded no one else as a true god, even the heavens themselves. What his nature was we can gather in part from the rationalistic story told of him, that he was a slave of Pythagoras, who, returning home, taught a variant of his master's philosophy, insisting especially on the immortality awaiting the faithful. To prove this, he disappeared for a time, hiding in an underground room; after three years he returned, and so made every one believe that he had been in Hades and was come again. It is noteworthy that the same story is told of Pythagoras himself,[1] and it smacks strongly of the tales, Greek and other, of superhuman persons who live in caves or under mountains and thence return occasionally or in some way intervene in human affairs.[2] With this story we must join the decided suspicion of Herodotos himself[3] that Zalmoxis is a local divinity, not a mortal at all, and the statement of Strabo[4] that he was worshipped in an *ἀντρῶδες χωρίον* in Mt. Kogaionon. He is clearly, like Dionysos himself, a god belonging to the under world, but not excluded from the surface of the earth, on which, we may perhaps suppose from the myth, he was thought to appear every year, as Dionysos frequently did every second.[5] As an infernal deity, he received a curious sacrifice, if sacrifice is the proper term to apply to what seems to have been rather a sort of fantastic messenger service. Once every four years the Getai chose a man by lot, whom they tossed in the air and caught on spear-points. If he died, he was deemed to have become immortal;[6] if not, the god had rejected him, and he was disgraced. Before being tossed, he was charged with the messages of the people to the deity—a curious form of the idea, found among many races, that the dying can take to the dead the mandates of the living.[7]

(*h*) *Other religious practices.*—Besides the cult of definite gods, we have a few facts relative to the general religious attitude of the Thracians. In particular, we have Herodotos'[8] description of a funeral ceremony, which sounds oddly like Homer's account of the funeral of Patroklos. The corpse, if of an important man, lies in state three days, during which mourning and sacrificial feasts go on; finally there comes the actual funeral, when the body is buried or burned, a mound raised, and games of various kinds, the principal one being a single combat, are celebrated. This was the usual rite, and it indicates at any rate high honour paid to the dead.[9] The duel especially may reasonably be thought to be a form of blood-sacrifice. This, in some of the wilder tribes, was no mere form; beyond Krestone, we are told, lived a race which practised *sati*; the favourite wife, chosen, it would seem, after careful examination of the claims of the whole *harîm* by the surviving relatives, was sacrificed by her next-of-kin at the tomb and then buried with her husband.[1] The Trausoi again made a death a subject of rejoicing, and mourned at a birth.[2] We see, then, that the whole of Thracian religion was permeated by the idea of the vast importance of the future life.

(*i*) *Summary: general characteristics of Thracian religion.*—We find in Thrace a religion of a barbarous kind, but by no means incapable of development into something higher and more spiritual. The chief marks of barbarism, besides the revolting character of some of the rites, were (*a*) the largely magical character of much of the ceremonial, unconnected with anything either ethical or spiritual, and tending rather to excite than to elevate; and (*b*) the materialistic conception of the future life. Gods such as Zalmoxis live underground, occasionally intervening for the bodily good of their worshippers[3] and rewarding the faithful departed with drunken feasts; or so one gathers from the rationalizing story of Zalmoxis already quoted, in which he is represented as feasting the Thracians, and the taunt of Plato that the inferior sort of Orphics considered eternal drunkenness the highest possible felicity.[4] This is not to say that Thracian religion was always of a sensual character. It is noteworthy that the northern races, or some of them, had a reputation not only for courage but also for virtue and even for superhuman powers.

Thus the Getai are the 'bravest and most righteous' of the Thracians; the holy Hyperboreans live somewhere near the Thracian region; in and near the neighbouring Scythian country are the sacred and ascetic Argippaioi, the just Issedones, and the Neuroi, who are all magicians, besides the Sauromatai, who are of Amazonian stock; while the glorified shade of Achilles haunts various localities of the Black Sea region.[5]

A great part at least of this persistent attribution of saintly or magical distinction to the northern districts may well have for its justification the natural complement of the strong sexuality of those races—asceticism, which, as we have already seen, was a strong feature of Orphism. Another reason no doubt is simply the fact that many of these peoples were distant and unknown.[6] Yet another is, quite likely, the existence, not of whole nations, but of castes, which were priestly. We have already seen that the Bessoi certainly, and other tribes probably, had divine kings, and this often enough, as in Egypt, means the domination of a sacerdotal clan or caste.

To sum up, therefore, Thrace had, so far as we can learn from the observations of its nearest civilized neighbours in classical times, a religion predominantly chthonian, other-worldly, orgiastic, gloomy, often cruel and barbaric, but not unspiritual—a sharp contrast with the brightness of the characteristic Greek cult of the Olympian deities.

LITERATURE.—(i.) *Ethnology, etc., of Thrace*: J. A. Tomaschek, *Die alten Thraker*, pt. i., 'Übersicht der Stämme,' *SBA W* cxxviii. [1893] pt. ii., 'Die Sprachreste,' *SBA W* cxxx. [1893].

as if *τῷ θεῷ* meant 'their god,' which would involve a contradiction in terms: 'They threaten the god they believe in because they don't believe in him.' The correct translation is of course 'Heaven' or 'Zeus'; cf. lxxix. 1 f.: *ἐπεθύμησε Διονύσῳ Βακχείῳ τελεσθῆναι . . . ὁ θεὸς* (Zeus, not Dionysos) *ἐνέσκηψε βέλος*, and many other passages in which *ὁ θεὸς* means 'sky' or 'heavenly bodies.'

1 Hermippos, *ap.* Diog. Laert. viii. 41. This story is perhaps imitated from the one in Herodotos, which probably is an invention of the Greeks of the Pontos.

2 Examples in Rohde, i. 111 ff.

3 iv. 96. 4 vii. 298.

5 His festivals were regularly trieteric, *i.e.* in alternate years, by the Greek (inclusive) method of counting. Did this originate in a custom of shifting the cultivation every other year, vouched for by Horace, *Od.* iii. 24, 'nec cultura placet longior annua,' as occurring among the Getai? Among a people backward in agriculture the practice may well have varied, the period of cultivation lasting for one, two, or three years in different districts according to the richness of the soil. The author owes this suggestion to Farnell.

6 iv. 93: *Τέτρας τοὺς ἀθανατίζοντας* (this becomes their stock epithet); v. 3.

7 The idea is particularly common in modern Greek ballads.

8 v. 8.

9 The exact interpretation given to these facts depends upon the view taken of the origin of *ἀγῶνες* in general. The present writer holds that they do not originate in funeral ceremonies, or connote divine or quasi-divine honours, though they are often associated with both. The duel, however, is, like the Etruscan gladiatorial shows, definitely a sacrificial rite in this case.

1 v. 5.

2 v. 4; cf. Eur. *Κρεσφόντης*, frag. 452 Dind.

3 Plato (*Charm.* 156 D) mentions 'physicians of Zalmoxis' and appears playfully to interpret *ἀναθανατίζειν* as referring to their skill. They were probably a sort of shamans or medicine-men, who may, like their Siberian confrères, have combined medicine and prophecy.

4 *Rep.* ii. 363 D.

5 See Herod. iv. 13, 32–36, 23, 26, 105, 110 f., 55; cf. Lykophron *Alex.* 186 ff.

6 Cf. the piety of the Homeric Ethiopians (*Il.* i. 423).

The former deals chiefly with history and ethnology, the latter with linguistics.

TIBET.—The Tibetans are entitled to be regarded as one of the most 'religious' peoples in the world, if by 'religion' is understood not only 'the belief in spiritual beings,'[1] but also the *binding* influence of that belief, as formulated by their Church, for the better regulation of their worldly actions in everyday life, and for procuring for them by pious observance of the inculcated maxims the satisfying hope of a higher position in the life after death. Not only is the proportion of the population in Tibet which devotes its life to religion greater than that in any other country, being at least about one to eight of the population[2] — monks, nuns, non-celibate priests, and neophytes—but the life of the laity is also dominated and pervaded by their religion to an exceptional extent.

1. Climatic environments.—The peculiarities in the climate and physical character of Tibet, and its topographical position, between the two great civilizations on either side, the Indian and the Chinese, from both of which it has derived the elements of its composite form of Buddhism, explain to a considerable extent the peculiarities of its religion. The vast awe-inspiring solitudes with the rigorous nature of the climate have impressed themselves visibly on the religion of the country. And Nature has contributed, by the massive physical barriers she has erected against access to that land, to maintain to the present day the isolation of that country from the rest of the world, and thus to preserve the more ancient and archaic forms of religion and superstitions.

Perched on the summit of the great plateau of Central Asia, and stretching across over twenty-two degrees of longitude, in the palæarctic region, from the Himālayas to the Kuen-lun mountains and Western China, it includes the loftiest tableland on the surface of the earth. Although generally called a plateau, it is in fact covered with innumerable hills and mountains, cut up by ravines, the stretches of level land being relatively few and far apart. The general elevation of the permanently inhabited tract seldom falls below 11,000 feet above sea-level, while a very great extent of the country exceeds 16,000 feet, which is about the limit there of perpetual snow. Its highest border lies along the Himālayas, rising in mountains, the highest on the globe, from which its surface slopes gradually eastwards into China — a feature explained by the fact that in not very remote geological times the land of Tibet formed part of the bottom of the China Sea of the Pacific; and the writer has picked up fossil shells on the Tibetan side of the Himālayas which were of the same species as those he obtained from similar strata-formations on the outskirts of Peking. This also explains why the Mongolic racial elements and the Chinese forms of civilization predominate in Tibet, and why China has maintained for so long its suzerainty there.

Geographically, it is usual to divide Tibet latitudinally into North (Chang) and South (Kham), the North-land comprising all the Northern and Central and much of Western Tibet, and the South comprising South and South-Eastern Tibet. This division is also generally followed by the Tibetans themselves, though they erect Central and South-Western Tibet (U-Tsang), with their twin centres of Lāmaism, at Lhāsa and Tāshilhunpo, into a separate, and for them the chief, division of their country, which they call Bod (pronounced Pöt). The former division they call sTod-Bod (pronounced Tö-Pöt), or 'Upper Bod,' which is the origin of our modern name 'Tibet,' derived from the phonetic spelling of mediæval European travellers to whom only this northern division was accessible, and latterly applied by Europeans to the whole of Bod, though wrongly so. This is also the source of the Chinese name for the country of T'u-Fan, or 'the land of the *T'u* barbarians of the West.'

The northern division, or Chang, through its extreme altitude, has a terrible climate and is uninhabited for the greater part of the year, being mostly used as summer-grazing grounds by nomad shepherds and traversed by miners and occasional caravans of merchants at that season. It consists of a series of parallel mountain-ranges running east and west, with muddy valleys intervening. In these depressions lie a great number of lake-basins, many of which have no outlet, so that their water is salt, and some of their shores are white with borax crystals. It is an altogether treeless region, interspersed with grassy tracts used for summer pasturage. On the other hand, Central and more especially South-Eastern Tibet, which are of considerably lower elevation, are traversed by the Brahmaputra, and upper reaches of the Irrawady, Mekong, Salween, and Yangtse rivers and their tributaries are for a considerable part wooded, enjoy a less rigorous climate, and are the seat of most of the settled population. But the total population of the whole country is probably not more than 3,500,000[1]—*i.e.* a little less than the entire population of Scotland. Snow falls more or less, even at Lhāsa, in every month of the year.

2. Popular religion.—Living in such a rigorous climate and isolated amidst such severe surroundings, the Tibetan builds his daily fears and hopes on his religion, and, despite its inveterate devil-worship, it is not without its elevating and inspiring influence. The current of Buddhism which runs through its tangled paganism has brought to the Tibetan most of the little civilization which he possesses, and has raised him correspondingly in the scale of humanity, lifting him above a life of semi-barbarism by setting before him higher hopes and aims, by giving milder meanings to his demonist mythology, by discountenancing sacrifice of animal lives, and by inculcating universal charity and tenderness to all living things. Their Buddhism, unlike that of the Burmese, is not, however, an educational factor in secular teaching or in the mysteries of their religion; for the Lāmas, while living on the laity by their ministrations as priests, restrict their learning to themselves, like the Brāhmans and most priestly orders of old, and they contemptuously call the laity 'the dark (ignorant) people' (*mi-nag-pa*) and 'the worldly ones' (*hjig-rten-pa*), though they condescendingly

[1] E. B. Tylor, *PC*[3] i. 424.

[2] The census of the population hitherto taken was that by the Chinese in 1737, which gave the proportion of the Lāmas as one to three of the total population. At the present day about one to eight appears to be near the mark, in accordance with the present writer's own observations and those of W. W. Rockhill.

[1] This is the estimate of W. W. Rockhill (*Land of the Lāmas*, p. 296), and it generally agrees with that of the present writer.

also call them 'the givers of alms' (*sbyinbdag*), at the same time making it understood that it is the donors who benefit most by the exercise of this charity. And certainly the last epithet is well deserved, for the Tibetans, the most priest-ridden people in the world, are among the most lavish in their religious gifts.

Notwithstanding the large amount of non-Buddhist elements in Lāmaism, derived from the pre-Buddhist shamanism of the Bon-cult,[1] it is surprising to find how deeply the everyday life and notions of the laity are leavened by the Buddhist spirit. The doctrine of metempsychosis and its *karma* and the potency of acquired merit by good deeds enters into the ordinary habits and speech of the people to a remarkable extent. Their proverbs, folk-lore, songs, and lay dramas are full of it; and they explain human as well as animal friendships on this principle. Even practices which are clearly dishonest and sinful are at times justified on the same principle, or rather by its abuse. Thus the more sordid Tibetan reconciles cheating to his conscience by naively convincing himself that the person whom he now attempts to defraud had previously swindled him 'in a former existence,' and that justice demands retribution. Congenital defects, even such as blindness, dumbness, and lameness, and also accidents are viewed as retributions due to the individual having in a previous life abused or sinned with the particular limb or organ now affected. Indeed this is the orthodox dogma of Buddha's own teaching and forms the basis of the *Jātakas*, or tales of the previous births of Buddha, which are diffused by itinerant or friar Lāmas, and greatly impress the people; a few of the better-known *Jātakas* in manuscript copy or in block-printed booklets form, with the manuals of ritual and divination, the chief books of those Tibetan laity who are able to read; and they also form the subject of the chief dramas enacted by the laity.

This wide-spread belief in metempsychosis also influences the people in the treatment of their cattle and other dumb animals. They treat these exceptionally humanely, and life is seldom wantonly taken. The taking of animal life unnecessarily, even for food, is largely prohibited, and, although in such a cold climate animal food is an essential staple of diet, the professional butchers are stigmatized as sinners and are the most despised of all classes in the country. Yet human prisoners are at times cruelly tortured and mutilated, possibly in some measure after the example set by the Chinese, and possibly in some measure as a deterrent from crime among a rather lawless people. But nearly every crime, even the most heinous, the murdering of a Lāma, may be condoned by a fixed scale of fines; and, when the fine is not forthcoming, the punishment is inflicted, and the prisoner, if not actually killed, is set free, mutilated or maimed (as there are no prisons), to serve as a public warning to other evil-doers. Many of the maimed and blind beggars who swarm around Lhāsa are criminals punished in this way.

The tolerant spirit of Buddhism has, however, stamped more or less distinctly the national character, the mildness of which contrasts strongly with the rough and semi-barbarous exterior of the people. Testimony to this trait is afforded by the experiences of all intimate observers of the people in their own country, as recorded by the present writer and others. Huc, writing of the lay regent of Lhāsa, describes him as a man whose 'large features, mild and remarkably pallid, breathed a truly royal majesty,' while 'his dark eyes, shaded by long lashes, were intelligent and gentle.'[2]

[1] See below, § 3.
[2] *Travels in Tartary, Thibet, and China*[2], Eng. tr., ii. 168.

Similarly Rockhill and others have described many of the headmen and leading Lāmas with whom they came into intimate contact.[1] The spirit of consideration for others expresses itself in many grateful acts of genuine politeness and kindness. Tibetans usually present a stirrup-cup of wine to the departing visitor or traveller, bidding him God-speed and adding, 'May we be able to present you with another as welcome on your return.' The seller of an article other than eatables usually gives his blessing to the buyer in terms such as these: 'May good come upon you,' 'May you live long,' 'May no sickness happen,' 'May you grow rich,' to which the buyer replies with 'Thanks'—'*Thug-rje-chhe*,' literally 'Great mercy,' which recalls the French *merci* tendered on similar occasions.

The personal names of both boys and girls are largely borrowed from mystical Buddhism—*e.g.*, Dor-je-tshe-ring, 'the thunder-bolt of long life,' Dolma (spelt *sgRol-ma*, the Tibetan translation of the Sanskrit name Tārā, the Indian goddess of mercy); and the influence of this religious habit is also seen in the names of various places.

The common oaths or plights of asseveration are mainly Buddhist in character. The oath most commonly used by merchants and the laity as an asseveration in ordinary conversation is, 'By the Powerful Saint' (Śākyamuni, *i.e.* Buddha), or 'By the three Holiest Ones'—the Buddhist Trinity.

The non-Buddhist features and practices of the Tibetan religion, however, are also conspicuous, and reflect their pre-Buddhist cult, the shamanistic Bon. The physical environment of their life, in their rigorous climate where they see Nature in her roughest mood, in pitiless fury of storms and cold, terrorizing the brave as well as the timid, has impelled them to worship the more obvious forces of Nature as malignant demons which seem to wreck their fields and flocks, and vex them with disease and disaster. Their inveterate craving for material protection against those malignant gods and demons, as they thought them to be, has caused them to pin their faith on the efficacy of charms and amulets, which cherished objects are seen everywhere dangling from the dress of every man, woman, and child, not even excepting the Lāmas themselves. These charms, as we have seen,[2] are mostly sentences of Sanskrit texts borrowed from mystical Indian Buddhism, and they are supplemented by bodily and other relics of holy Lāmas, such as bits of their dress, crumbs dropped by them, nail-parings, etc.; and by these charms the Tibetans believe that they muzzle or bind or banish the devils.

A more cheerful and graceful side to their worship is seen in their popular practice of planting the tall inscribed 'prayer-flags,' which picturesquely flutter in the breeze around every village, and in the strings of inscribed flaglets which flaunt from house-tops, bridges, sacred trees, and passes, and from other places believed to be specially infested by malignant spirits or sprites.

As the people live in an atmosphere of the marvellous, no story is too absurd for them to credit, if only it is told by Lāmas. They are ever on the outlook for omens, and the everyday affairs of life are governed by a superstitious regard for lucky and unlucky days and the influences of unpropitious planetary portents. Although special divinations are sought from professed astrologer Lāmas in the more serious events in life—in birth, marriage, sickness, and death, and often in sowing, reaping, building, etc.—each layman determines for himself the auguries for the more trivial matters

[1] See, *e.g.*, the description by the present writer of the regent of Tibet (*Lhasa and its Mysteries*, p. 401 f.).
[2] See art. CHARMS AND AMULETS (Tibetan).

of his ordinary business, for travelling, buying and selling, mending, etc.[1] And yet we are apt to forget that Confucius and Cicero—to mention only these instances—believed in astrological auguries.

Pilgrimages to sacred shrines are very popular,[2] and little is thought of the hardships and expenses of long journeys for this purpose. Every opportunity is seized to visit celebrated shrines and to circumambulate the numerous holy buildings and sacred spots.

Prayers ever hang upon the lips of the people in the intervals of their work and even during their work. But the prayers are addressed chiefly to devils, threatening them with punishment through the saints and deified Buddhas, or imploring them for freedom or release from their inflictions;[3] or they are plain, naive requests for aid in obtaining the good things of this life. At all spare times, day and night, the people ply their prayer-wheels (*q.v.*), and tell their beads and mutter especially the mystic Sanskrit six-syllabled spell, *Oṁ ma-ṇi pad-me Hūṁ!*, '*Oṁ!* the jewel in the lotus *Hūṁ*,'[4] the sentence which, they are led to believe, gains them their goal, the glorious heaven of eternal bliss, the paradise of the fabulous Buddha of Boundless Light (Amitābha) or 'the Boundless Life' (Amitāyus [*q.v.*]). Yet with all their strivings the Tibetans seem never to obtain real peace of mind in religious matters.

3. Bon or pre-Buddhist religion.—The aboriginal pre-Buddhist religion of Tibet is called by the people *Bon* (pronounced *Pön*); and those who profess it are called *Bon-pa*, *i.e.* 'the Bons.' The meaning of the word is unknown. It is essentially a shamanist, devil-charming, necromantic cult with devil-dancing, allied to the Taoism of China, and, like the latter, has become largely intermixed with Buddhist externals. But it still retains its essentially demonist character. It was actively suppressed and its establishments were destroyed by the Tibetan rulers on their conversion to Buddhism from the 7th cent. A.D. onwards, at the instigation of the Lāmas, as it indulged freely in animal and human sacrifices; and it is still strictly forbidden by the Lāmaist hierarchy which holds the temporal rule in Central and Western Tibet. But it is still largely and openly professed over the greater part of Eastern and South-Eastern Tibet, the most populous part of the country, which for many centuries has been under Chinese rule and outside the domination of the Grand Lāmas. Indeed it was an appeal by the people of these provinces to China to protect them and their Bon religion that induced the Chinese to administer these provinces on behalf of the Bons. This unsuspected fact of the wide prevalence of the Bon religion there was brought to light by W. W. Rockhill in his extensive travels in these provinces,[5] where he found it to be much more popular and prevalent than Lāmaism. It was especially popular among the settled agricultural people, whilst the nomads, whose business led them into the territory of the Grand Lāmas, were more attached to Lāmaism. So numerous were its adherents that Rockhill estimated that about two-thirds of the population of Tibet were Bons. In Central and Western Tibet, where the repressive policy of the Lāmas prevents the profession of the Bon cult, it is rare to meet with any Bon priest. The present writer has met only a few itinerant priests who were clandestinely performing their demonist rites for villages in remote places; they were wholly illiterate and uncouth-looking men, exceptionally dirty, with long shaggy hair, and bedecked with little tufts of wool and tiny flags; and they indulged in devil-dancing antics and incoherent chants.

In Eastern Tibet, however, where they are free to practise their cult, the Bon priests live in large flourishing monasteries, which they call *gom-pas*, like the Lāmaist establishments; and they have many images of gods and saints and demons generally resembling in appearance those of Lāmaism, but bearing different names. Their chief god they call gShen-rabs Mi-bo, who is reputed to be a deified priest analogous to the Lāmaist Padma Sambhava. They have bulky printed and MS books of ritual, which Rockhill found to consist of a Sanskritic jargon for the most part interspersed with other meaningless words. The present writer observed that the words in some of their MSS, which are written in the Tibetan script, were the Lāmaist Sanskritic words spelt backwards: the lotus-jewel formula of the Lāmas[1] was spelt 'Muh-em-pad-ni-mo,' thus, while attesting their borrowing from Lāmaism, emphasizing their anti-Lāmaist character. The *swastika* also, which they use extensively, is invariably figured with its ends or 'feet' turned in the reverse direction to that of the *swastika* proper (the feet of the latter turn to the right in the direction of the sun's course), and thus indicate the Bon cult to be of a lunar character, which is evident not only from the bloody sacrifices, but also from the predominance of the dragon-worship therein.

A significant glimpse into the original character of the Bon cult is obtained from the Chinese annals of the 5th and 6th centuries A.D. (*i.e.* before the introduction of Buddhism into Tibet), where the rites of the Tibetans are described:

> 'The officers (Tibetan) are assembled once every year for the lesser oath of fealty. They sacrifice sheep, dogs, and monkeys, first breaking their legs, and then killing them afterwards, exposing the intestines and cutting them into pieces. The sorcerers having been summoned, they call on the gods of heaven and earth, of the mountains and rivers, of the sun, moon, stars and planets, saying: "Should your hearts become changed, and your thoughts disloyal, the gods will see clearly and make you like these sheep and dogs." Every three years there is a grand ceremony, during which all are assembled *in the middle of the night* on a raised altar, on which are spread savoury meats. *The victims sacrificed are men*, horses, oxen, and asses, and prayers are offered up in this form: "Do you all with one heart and united strength cherish our native country. The god of heaven and the spirit of the earth will both know your thoughts, and if you break this oath, they will cause your bodies to be cut into pieces like unto these victims."'[2]

Even in the Buddhist period, in the 8th cent. A.D., similar bloody rites were celebrated by the professing Buddhist king of Tibet in concluding a treaty with the Chinese.[3]

The attire of the Bon priest in his special celebrations[4] is a coat of mail armour, from the shoulders of which project small flags, and a high-crowned hat bordered by effigies of human skulls and ornamented by flags and tufts of wool; a sword and shield are in the hands to fight the demons. (The black-hatted devil-dancers are of the Bon sect.) On ordinary occasions they wear a red robe, and occasionally have human skulls embroidered on their dress. Their hair is worn shaggy, and not tonsured like the Lāmas. They offer on their altars wool and yak hair, and images of men and animals made of dough, presumably, as shown by the present writer, instead of the sacrificed animal of the primitive cult.

Whilst the present-day Bon religion has acquired many of the externals of Lāmaism, many of the elements of the old Bon religion have been incorporated into the latter, just as so many of the pagan rites of Roman and Celtic heathendom have

been incorporated into the later Christianity. The reformed Lāmaist Church of the Yellow-hat sect employ many rites which are transparently Bon, such as the necromantic expelling of the death-demon and the demons of sickness, and much of their divination-ritual. The unreformed Red-hat sects practise the old Bon rites to a much greater extent, including the erection of masts attached to dogs' and sheep's skulls, to 'bar the door' to the earth- and sky-demons.[1]

4. Lāmaism and its sects and rites.—The various aspects of Lāmaism and its sects and rites have already been described in previous articles.[2]

TIME.—1. Introductory.—Temporal characteristics are among the most fundamental in the objects of our experience, and therefore cannot be defined. We must start by admitting that we can in certain cases judge that one experienced event is later than another, in the same immediate way as we can judge that one seen object is to the right of another. A good example of the immediate judgment in question is when we hear a tune and judge that of two notes, both of which come in our specious present, one precedes the other. Another direct judgment about earlier and later is made in genuine memory. On these relations of before and after which we immediately recognize in certain objects of our experience all further knowledge of time is built.

It must be noticed that the relation, as given in experience, connects what we may call protensive events, *i.e.* events that have some duration, and not momentary events or moments. We are not directly aware of events without duration, still less of moments of empty time, and therefore are not directly aware of the relations between such objects. Momentary events, moments of time, and the relations which order them in a series are all known only after a long process of reflexion, abstraction, and intellectual construction. This does not necessarily imply that they do not exist in nature, still less that they are subjective and arbitrary; all that is meant at present is that they are not the objects of direct awareness. Again we must notice that the relations of before, after, and simultaneous with, as given in experience, are not mutually exclusive. Protensive events may very well overlap, and therefore we must recognize that the most general relation between them is that of partial precedence or consequence. Of course, when we become familiar with the conception of momentary events and see how convenient it is, we tend to define partial precedence in terms of them and their relation of total precedence. But the opposite direction must be followed if we want to start with the experienced facts and trace the logical development from them of the scientific notion of time. We must take the experienced relation of partial precedence as fundamental and define momentary events, moments, and the relation of total precedence in terms of partial precedence and events of finite duration.

That such a course is possible is shown by the fact that it has recently been followed to a satisfactory conclusion by Norbert Wiener in the *Transactions of the Cambridge Philosophical Society*, and by A. N. Whitehead in his *Principles of Natural Knowledge*. We may compare the duration of experienced events with the extension of visible and tangible objects, and the relation of partial precedence with the partial overlapping of two extended objects in the field of vision. The problem of defining momentary events, moments, and the serial relation of before and after in terms of protensive events and partial precedence is closely comparable to that of defining material points, geometrical points, and the relations of before and after on a straight line in terms of extended objects and their partial overlapping. The problem for time is, however, easier than that for space, because in the former we have only to deal with a relation that generates a one-dimensional series, whilst with the latter the experienced facts force us to define a three-dimensional manifold.

2. Time and space.—The analogy between time and space has long been recognized; and it will be useful to consider at this point just how far it goes and where it is supposed to break down. Let us consider the likenesses and the alleged differences.

(*a*) *Likenesses.*—(1) Most objects of immediate experience possess a kind of magnitude called extensity, and such objects stand in certain immediately recognizable relations to other objects of the same sense experienced along with themselves. Also the parts of any one such object have relations of this kind to each other. Similarly the objects of our experience have another kind of magnitude called protensity or duration. Such objects have to others of the same kind the relation of partial (or, in special cases, total) precedence, and this relation can be recognized immediately. Likewise the parts of a single specious present can be seen to have this relation to each other.

(2) The relations in each case have magnitude. Just as one object in the field of view can be more to the right of another than a third, so one event in the field of memory or in the specious present can precede another event by a longer interval than some third one.

(3) In each region there is the same close and peculiar connexion between the kind of magnitude possessed by the terms and the kind possessed by the relations. It is possible to say that the interval between two events A and B is as long as the duration of some event C, just as it is possible to say that the distance between two sticks laid in the same straight line is the same as the length of some third stick.

(4) It is commonly believed that, when the analysis is made into moments and momentary events, all the events in the history of the world fall into their places in a single series of moments. So too it is supposed that, when the analysis is made into material and geometrical points, all the points in the world take their places in a single three-dimensional series of geometrical points.[1]

(*b*) *Alleged differences.*—(1) It is commonly held that all events have temporal relations to each other, but that psychical events have no spatial relations. This is denied by a small number of philosophers, notably by Samuel Alexander.

[1] *Buddhism of Tibet*, p. 484 *f.*

ABBOT (Tibetan); ATĪŚA; BHUTĀN, BUDDHISM IN; CELIBACY (Tibetan); CHARMS AND AMULETS (Tibetan); CHORTEN; DEATH AND DISPOSAL OF THE DEAD (Tibetan); DEMONS AND SPIRITS (Tibetan); DIVINATION (Buddhist); FESTIVALS AND FASTS (Tibetan); IMAGES AND IDOLS (Tibetan); INCARNATION (Tibetan); INITIATION (Tibetan); JEWEL (Buddhist); LĀMAISM; LOTUS (Indian); PADMASAṂBHAVA; PRAYER (Tibetan).

[1] We shall consider later what the Theory of Relativity has to say as to the impossibility of separating time and space and as to the notion of one single time-series.

Without questioning the possibility of correlating psychical events with positions in space, we must hold that this alleged difference is a genuine one. If in introspection we do contemplate our states of mind in the same sense as in perception we contemplate other objects, it seems clear that our states of mind show no trace of being extended or standing in spatial relations, but do have duration and stand in temporal ones. Alexander would, however, deny that we can contemplate our states of mind. If this be so, it would of course be quite possible that we should fail to become aware of the spatial characteristics of our mental states, even though they possess them; but of course we have no right to pass from this merely negative position to the conclusion that they actually do possess them. Alexander's positive reasons are bound up with a large and complex metaphysical theory into which we cannot here enter. In any case the present difference is merely an external one, and would not affect the essential similarity of space and time.

(2) A much more important point is that time is said essentially to involve the distinction between past, present, and future as well as that between before and after. Now nothing in space obviously corresponds to these distinctions in time.

(3) Closely connected with this alleged difference are a number of rather vague statements often made—*e.g.*, that parts of space co-exist, but that only the present moment exists.

These two supposed differences between space and time may be treated together. They rest largely on confusions into which it is very natural to fall. The distinction between past, present, and future is not one which, like that between before and after, lies wholly in the experienced objects, but is one that rests on the relations between experienced objects and the states of mind in which they are experienced. To begin with, the distinction between present and not-present at any rate may be usefully compared with that between here and elsewhere in space. Here means near my body; elsewhere means distant from my body. If we want an analogy to the distinction between past and future, we can find one in the distinction between things before and things behind our body. It is true, however, that this analogy is incomplete, and that for an important reason, though one extraneous to the nature of time. The reason is that our practical and cognitive relations towards the future are different from those towards the past. We know a part of the past at any rate directly by memory, but we know the future only indirectly by probable inference. There is no analogy to this in space; our knowledge of what is behind our body is of the same kind and of the same degree of certainty as our knowledge of what is in front of it. But we may imagine that a distinction like that between past and future would have arisen for space also, if we had been able to see straight in front of us but had never been able to turn our heads or our bodies round.

The distinction is sometimes drawn that the past is fixed and unalterable, while the future depends, in part at any rate, on our volitions. In what sense is this true?

Without involving ourselves in controversies about free will and determination, we may at least assume that the laws of logic apply to propositions about the future. Hence any proposition asserting the occurrence of any future event must be true or false, and cannot be both. In that sense the future is as determinate as the past. But two points have to be noticed. (i.) However much I may know about the laws of nature, I cannot make probable inferences from the future to the past, because I am not directly acquainted with the future, but I can make probable inferences from the past to the future; *i.e.*, although every possible proposition about the future is even now determinately true or false, I may be able to judge now, from my knowledge of the past and present and of the laws of nature, that some propositions about future events are much more likely to be true than others. (It must of course be remembered in this connexion that a proposition that is actually false may be much more likely to be true on my present information than one that is actually true.) (ii.) I know with regard to certain classes of events that such events never occur unless preceded by a desire for their occurrence, and that such desires are generally followed by the occurrence of the corresponding events. But the existence of a desire for x does not increase the probability that x *has* happened. If it did we might be said to affect the past in exactly the same sense in which we are said to affect the future. Thus the assertion that we can affect the future but not the past seems to come down to this: (*a*) that propositions about the future can be inferred to be highly probable from a knowledge of the past and present, but not conversely, because of our lack of direct acquaintance with the future; and (*b*) that the general laws connecting a desire for x with the occurrence of x always contain x as a consequent and never as an antecedent.

3. **Relation of time to logic.**—This brings us to the very important question of the relation of time to logic. If we say of any event e that it is present, this proposition will generally be false, and will be true only at one moment. It seems, then, as if the truth of the proposition altered with time. Any other proposition asserting the occurrence of an event—*e.g.*, Queen Anne is dead—seems to be equally at the mercy of time. Then again there seem to be other propositions that are totally independent of time—*e.g.*, $2\times2=4$. These are sometimes called eternal truths; they always state relations between universals, and all our *a priori* knowledge is of such propositions. Lastly, there are propositions which essentially involve time, but claim to apply to any time; *e.g.*, whenever it rains and I am out without my umbrella, I get wet. Thus, on the face of it, there seem to be three kinds of propositions as regards relation to time: (1) eternal truths, which are independent of time because they deal with the timeless relations of timeless objects; (2) hypotheticals asserting temporal relations between classes of events—these contain an essential reference to time, but not to any particular time; (3) propositions which assert the occurrence of particular events, and which *seem* to be true at certain times and false at all others, though this is not really so.

There are two points to notice about the last class of propositions. (*a*) All propositions about events essentially contain a reference to time, and all propositions about particular events essentially contain a reference to the particular time at which the event happens. This reference is not always made explicit; but, until this has been done, we cannot say that the verbal form stands for any definite proposition. (*b*) We have to distinguish between the time at which a judgment is made and the time involved in the proposition that is judged. When the latter is not made explicit in the verbal expression of the judgment, it is a convention of language to assume that the time in the proposition is intended to be that at which the judgment is asserted. Thus, if I say 'It is raining,' this verbal expression, since it clearly intends to refer to a particular event, is incomplete and stands for no definite proposition; for it says nothing about the time at which it rains. It therefore seems to be sometimes true and sometimes false. But, as actually asserted, the words would be taken to express my judgment of the proposition, 'It is raining at the time at which I say "It is raining."' And this proposition is timelessly true or false, subject to a further correction which we shall add in a moment. In fact, whenever we are told that a proposition is sometimes true and sometimes false, we know that we are dealing with an incomplete statement about an event, and that the real state of affairs is that a propositional function of the form 'e happens at t' gives true propositions for some values of t and false propositions for other values. But the propositions themselves are timelessly true or false.

It is important to notice that in practice there is always the possibility of any verbal statement about events, no matter how carefully put, being sometimes true and sometimes false. We are not directly aware of moments of time, and so can date events only by other events. And the persons who read or hear our verbal expressions may know only by some description the event which we use for purposes of dating. Now we can never be certain theoretically that only one unique event answers to any description however complicated, and often there is real ambiguity in practice. Take, *e.g.*, the amended expression offered above: 'It is raining at the time at which I say "It is raining."' To any reader of this article the

expression remains ambiguous, because he knows the event that is used for dating only by the very ambiguous description, 'The writer's statement of the words "It is raining"'—a description which applies to dozens of different events. In practice the difficulty is solved in conversation by the fact that all the manifold circumstances under which the particular conversation takes place go into the description and make it practically unambiguous. In writing, the difficulty is solved practically by using as the origin of dates some event, such as the birth of Christ, whose full description is so complicated that it is almost certain that only one event answers to it. But the theoretical difficulty remains, and so we are tempted to say that any proposition about events is sometimes true and sometimes false. But the proper thing to say is that any verbal expression referring to events, no matter how carefully put, always runs a theoretical risk of ambiguity—*i.e.*, it might with equal propriety make one reader think of one proposition which is true, and another of another proposition which is false.

We can now apply these general results to the special case of events being sometimes future, and then present, and finally past. The statement '*e* is present' is essentially incomplete and ambiguous, for, as we loosely say, it is sometimes true and sometimes false. The first thing, then, is to fill in the special time involved in the proposition. We then get '*e* is present at *t*,' where *t* is some definite moment fixed by some system of dating from a well-known and presumably unique event. What does this statement mean? Assuming that there are such things as moments, it means that *e* is at the moment *t* in an analogous way to that in which an object is at a position in space. The statement '*e* is present at *t*' may be compared with the statement 'Mr. Asquith is present at the meeting,' which means that his body is in the place where the meeting is held. In all complete statements of the form '*e* is at *t*' we must understand the word 'is' as standing for a timeless copula, and distinguish it from the 'is' of the present tense, which is contrasted with 'was' and 'will be.' Let us denote the 'is' of the present tense by 'is now.' Then the statement '*e* is now present' is an incomplete statement which is interpreted in use to mean '*e* is at (or occupies) the same moment as my assertion that it is now present'; '*e* is now past'='*e* was present'='*e* is at a moment earlier than my assertion that *e* is now past.' Similarly, '*e* will be present'='*e* is now future'='*e* is at a moment subsequent to my statement that *e* is now future.' The laws of logic are of course concerned with the timeless copula, and they presuppose that statements containing tenses are reduced in the way suggested above.

4. **Past, present, and future.**—We see, then, that the real source of the distinction between past, present, and future, and of the difference here between time and space, is that our judgments as well as the events judged about are in time, whilst our judgments about things in space are not in any obvious sense in space. These three distinctions correspond to the three possible temporal relations between our judgments and the events which our judgments are about. These distinctions are important, and they have been enshrined in language because they are correlated with important epistemological and psychological differences. Some states of mind are essentially contemporary with their objects—*e.g.*, the immediate awareness of visual sense-data when I open my eyes.[1] Other states are essentially later than their objects—*e.g.*, memories. If we exclude the possibility of prophecy, we may state the important epistemological proposition that all states of mind which give us an immediate knowledge of existents are either contemporary with, or later than, their objects.

It is important to notice that these statements are not merely analytic. There is a psychical difference between memories and awarenesses of contemporary sense-data which is open to introspection (though, of course, there may be marginal cases where the difference falls below the threshold of distinguishability), so that the statement that the former succeed and the latter are contemporary with their objects is a synthetic proposition.

We must, moreover, take into account the facts described in psychology as the specious present. In the first place, we must say that, if an object be known directly by a state of mind which succeeds it by more than a certain short time *t*, which seems to be fairly constant for a given individual, the state counts introspectively as a memory, and the object is judged to be past. If the period between the object and the direct awareness of it be not greater than *t*, the awareness does not count for introspection as a memory, and the object is judged to be present. To say, then, that an object has been present and is now past means that (*a*) it is (timelessly) the object of an immediate awareness which succeeds it by less than *t*, and (*b*) that my statement 'It is now past' succeeds it by more than *t*. We have still, however, to consider what is meant by the presentness of a state of mind. This seems to mean that, if a state of mind be the object of an act of introspection which suceeeds it by less than a certain short period, the state presents a certain peculiar characteristic which it does not present to any later act of introspection.

We can now deal with such statements as that only the present exists, or that the present is a mere transition from one infinite non-existent to another. These phrases are mere rhetoric rooted in confusions. It is perfectly true, of course, that the whole history of the world is not a complex of co-existing parts (in the sense of parts existing at the same time), as a table is. But this does not mean that it is not a whole, or that one part of it exists any less than any other part. To say that *x* no longer exists, or does not yet exist, simply means that it occupies a moment before or after my statement about it. At another moment I may make another statement of the same verbal form about *x*, and, since this no longer stands for the same proposition, it may no longer be true (*i.e.* no longer stand for a true proposition). But this involves no change in *x* itself. That *x* exists at a certain moment simply means that *x* occupies that moment, and this is timelessly true. Similarly, the fact that this moment has a certain temporal relation to any definite assertion that I may make about *x* is timelessly a fact. That it has different and incompatible temporal relations to various assertions of the same verbal form made by me is also timelessly true, and is not merely compatible with but also a necessary consequence of *x*'s existence at its own moment. An event must continue to *be*, if it is to continue to stand in relations; the battle of Hastings continues to precede the battle of Waterloo, and therefore both these events must eternally be at their own respective moments. That both have ceased to be present merely means that they precede any assertion that I or my contemporaries can make about them; that both were once present merely means that both are contemporary with some assertions made about them.

[1] It is better for the present not to call these states of mind either perceptions or sensations, because the object of a perception is generally supposed to be a physical object or its state, and this may exist millions of years before the perception—*e.g.*, the perception of a distant star. Similarly, to call these states of mind sensations would lead to misunderstandings, owing to the ambiguities of that word and the widely held belief that sensations do not have objects.

The fallacy which we have to avoid is that of confusing two different senses of co-existence. In one sense the parts of any related whole co-exist; in another only those events that occupy the same moment of time co-exist. It is clear that the whole course of history does not co-exist in the second sense, and it is thought that this prevents it from co-existing in the first. Yet this is necessarily false, since it is admitted that events do have and continue to have temporal relations, and therefore they must form a related whole all of whose parts have being. The confusion is increased by the belief that past, present, and future are essential characteristics of objects in time in the same way as before and after are, instead of being analysable into the temporal relations of states of mind and their objects.[1]

When it is once recognized that the whole course of events is in a certain sense a *totum simul*, it becomes easy to see the answer to the famous theological problem: How can God's foreknowledge of men's actions be compatible with the freedom of men's wills? The answer is as follows. Whether men's wills be free or not, every man's future actions are as completely determinate as his past ones; this is a mere consequence of the laws of logic. If indeterminism be true, then no amount of knowledge about events previous to a moment t, and about the general laws of nature or the particular habits of a man, will enable us or even God to infer with certainty what the man's volition at t actually is, although it is eternally perfectly determinate. These two statements are clearly quite compatible. Finally, in spite of the fact that God cannot *infer* the man's volition at t, He may at any and every moment be directly aware of it in precisely the same way as we are aware directly (and not merely inferentially) of certain events through memories which are themselves later events. The facts that at a certain moment t_1 God can have a state of mind whose immediate object is the volition of a man at some later moment t_2, and that no amount of knowledge of events before t_2 would enable Him to *infer* the volition at t_2, are perfectly compatible; and they cease to be even paradoxical when we compare the case of memory and note that there is no essential difference between past, present, and future.[2]

5. **Reality of time.**—A great many philosophers have been concerned to deny the reality of time. Their arguments fall into two groups: (1) those that depend on the supposed infinity and continuity of time, and are therefore equally applicable to space; and (2) those that depend on the supposed peculiarities of time—*e.g.*, on the distinction of past, present, and future. Before considering the arguments in detail, it will be useful to make some quite general reflexions.

(i.) It is a matter of direct inspection that the immediate objects of some of our states of mind have temporal characteristics. It is as certain that one note in a heard melody is after another in the same specious present and that each has some duration as that some objects in my field of view are red or square and to the right or left of each other. It is then quite certain that *some* objects in the world have temporal characteristics, viz. the immediate objects of some states of mind. Now it is also certain that these objects exist at least as long as I am aware of them, for, in such cases, I am obviously not aware of *nothing*. Hence there cannot be anything self-contradictory in the temporal characteristics found in these objects, for otherwise we should have to admit the existence of objects with incompatible characteristics. Hence there is no obvious reason why temporal characteristics should not also apply to what is not the immediate object of any state of mind. It follows, then, that criticism cannot reasonably be directed against temporal characteristics as such, but only against the descriptions that we give of the temporal characteristics of experienced objects, and the conclusions that we draw from them or the constructions that we base on them. And arguments that refer to the infinity and continuity of time are really directed against a construction based on what we conceive to be the essential characteristics of the time element which is undoubtedly present in the objects that we experience; for we are not directly aware of infinite duration or of the continuity—in the mathematical sense—of time. If we suppose that such criticisms are successful, the conclusion ought not to be either that reality has no temporal characteristics (for it is quite certain that at least some parts of it have), or that time, as an inference or construction extending the temporal characteristics of experienced objects to others, is unreal (for this goes much too far). The only justifiable conclusion would be that one particular way of describing and extending the temporal characteristics of experienced objects is unsatisfactory, and that it behoves us to look for a better one. This point has not commonly been grasped by philosophers who claimed to disprove the reality of time.

(ii.) It is thus obviously of importance to be clear as to what is the particular view of time that is attacked by special arguments. The important distinction for us to make is this: it is possible to hold (*a*) that there is a series of moments of time, and that events occupy some of them but are distinct from them, and have temporal relations to each other in virtue of those which subsist between the moments that they occupy; or (*b*) that there are no such things as moments distinct from events, but that events really do have direct temporal relations to each other; or (*c*) that there are no moments, and that even events only *appear* to have temporal relations to each other. It is clearly possible to deny (*a*) without denying (*b*). To do this can hardly be called denying the reality of time; it should rather be called denying the absolute theory of time in favour of the relative theory. It is only philosophers who deny both (*a*) and (*b*) and support (*c*) who can strictly be said to deny the reality of time. It is quite possible, however, that some arguments might be equally fatal to (*a*) and to (*b*).

It will be well at this point to say what we can about the controversy between absolutists and relativists. The absolute theory strictly means that temporal relations between events are regarded as compounded out of two relations—(1) that of an event to the moment of time which it occupies, and (2) the relation of before and after between moments of time. The relative theory holds that there are no moments, but that temporal relations hold directly between events. Its most important philosophical upholder is Leibniz, though he goes a good way farther in the direction of (*c*); it is also held, with a good deal of misunderstanding and confusion, by many modern physicists of a philosophical bent. We may say that the relative theory stands at one remove, and the absolute theory at two removes, from what we find in the objects of immediate experience. Here we find, as we have seen, events of finite duration and relations of partial precedence. The relative theory replaces these objects by series of momentary events of no duration, and the relations by those of total precedence and simultaneity. The absolute theory takes the farther step of introducing a new set of entities, viz. moments which have no duration and stand in relations of total precedence but never of simultaneity, and a new relation, viz. that between a momentary event and the moment which it occupies.

Neither theory has been very accurately stated by most of its supporters; *e.g.*, Newton, the chief upholder of the absolute theory, was mainly concerned with the measurement of time and the desire for a constant rate-measurer. But the two theories, when thought out, may be reduced to what has been stated above. We may say at once that we know of no way of deciding conclusively between the two. But, although moments and momentary states *may* exist, we now know that all their

[1] The point can perhaps be made clearer by reflecting that a tune has a pattern in time in exactly the same sense as a wall-paper has a pattern in space.

[2] We can, of course, remember much that we could not infer.

work can be done by certain logical functions of nothing but events of finite duration and their relations of partial precedence. Hence both theories may be said to sin by assuming entities which are not necessary to science and cannot be either directly or indirectly verified (viz. momentary events in the relative theory, and moments in the absolute theory), and the absolute theory is the worse sinner of the two. As certain logical functions of what actually exists (viz. certain classes of classes of events), moments do exist; but whether there also exists anything having the same logical relations but of the type of individuals and not of that of classes of classes it seems totally impossible to determine. It is, however, often convenient to continue to speak in terms of moments, and this is harmless for the reasons given above.

We can now deal with the special arguments against time.

(1) Those based on its supposed infinity commonly confuse infinity with endlessness. They generally proceed on the assumption that what is meant by the infinity of time is that it has neither a first nor a last moment. But this would be perfectly compatible with the whole course of time lasting for no more than a second. The fractions between 0 and 1, arranged in order of magnitude, have neither a first nor a last term, and yet the interval between any two of them is less than unity. But all attempts to prove that time or the series of events must have an end fail. So do attempts to prove that they cannot have ends. The most celebrated argument on both sides of this question is contained in Kant's first antinomy. His argument against the endlessness of time, interpreted as charitably as possible, comes to the statement that, because there are definite points in the time-series—in particular, the point which we have reached when we read Kant's argument—therefore the series must have a definite beginning point. Otherwise, Kant says, the series of events could never have reached the definite point which it admittedly has reached. The argument is, of course, a complete *non-sequitur*, for it practically amounts to saying that a series cannot have *any* definite term unless it has *end* points. And this is sufficiently refuted by considering that the number +2 is perfectly definite, although the series of numbers with signs has neither a first nor a last term.

Arguments to prove that time or the series of events in time cannot have a beginning are perhaps more plausible. It is difficult for us psychologically to imagine a first event or a first moment, because all the events that we can remember have been preceded by others. Also there are special difficulties connected with causation in the notion of a first event, which do not apply to a first moment or to a last event. A first event is one which no event precedes, though there may of course be moments that precede a first event. Now, the only plausible general proposition about causation seems to be that, if the whole universe were completely quiescent for a finite time, it could not begin to change.[1] This means that, if the universe be in the same state at any two moments t_1 and t_2 and at all moments between them, it will be in the same state at all moments later than t_1. Now, to say that a change happens at t_1 means that, if the state of the universe at t_1 be s_1, and if it also be s_1 at any later moment t_2, then there is a moment between t_1 and t_2 at which its state is different from s_1. It follows from this definition that to say that a first event happens at t involves that the universe has been in the same state for a finite time before t. And this is contrary to our proposition about causation. If, then, we accept this proposition as an *a priori* truth, there cannot be a first event, though there might be a first event in certain isolated parts of the universe (*e.g.*, the creation of the world) provided that there had never been a first event in other parts (*e.g.*, in the mind of God). But, of course, there remains the doubt whether our axiom about causation be not a mere prejudice masquerading as an *a priori* law.

[1] The universe here must be taken to include God, if there be one.

It must be carefully noted that, if there be a first event, there need not be a first moment of time, and that, if there be a first moment of time, there need not be a first event. Again, if there be a first moment of time and no first event, either there might be no moment, except the first, that was not occupied by an event, or there might be a duration unoccupied by events. These consequences follow from the continuity of time, and have often been overlooked by philosophers ignorant of the mathematical theory of continuity.

Leibniz based his main argument against the absolute theory of time on the fact that, if it were true, there might be a period, finite or infinite, before any event happened. This period must be definite; and yet, the moments of time having no intrinsic difference, there is no reason why it should be ended or limited by one moment rather than another. If, on the other hand, we avoid this by assuming that there is an event at every moment of time, there is no reason for assuming *both* events and moments, for the series of events will suffice.

This argument is a sound one against assuming that there *are* moments, though it certainly cannot disprove that there may be moments. If there were moments, they would doubtless have intrinsic differences, though we could not discover them; we must further recognize some ultimate facts, and one of these might be that the course of events is preceded by such and such a duration of empty time.

We may sum up our conclusions as follows. Arguments to disprove the reality of time from its infinity and continuity either confine themselves to criticizing infinity and continuity as such or introduce considerations about causality. Arguments of the first kind would be equally fatal to *any* infinite or continuous series, and therefore prove too much, for they would destroy the series of real numbers. And we now know that all such arguments do rest on confusions and on an insufficient analysis of the notions of infinity and continuity. There is therefore no reason why the series of moments at any rate should not be either (*a*) endless or (*b*) of infinite length. The second set of arguments can apply only to events and not to the supposed series of moments, because causation is concerned with events and not with empty time. We saw that, if a certain plausible axiom about change be true, there cannot be a first event. This would not, however, prove that the whole series of events has lasted for an infinite time, though the present writer knows of no objection to such a possibility. There is no more objection to the series of events being endless than to any other series being endless—*i.e.*, there is none at all. The result is that all danger of a valid antinomy against time vanishes. (i.) Whether the axiom about change be true or not, it is equally possible that the series of moments shall be (*a*) endless or terminated, and (*b*) of finite or of infinite length. (ii.) If the axiom about change be true, the series of events cannot have a beginning, but may (*a*) have an end or not, and (*b*) be of finite or of infinite length.

(2) Arguments against the reality of time which turn on the distinction of past, present, and future may be dealt with shortly. One argument asserts that the past and the future do not exist, and that the present is a mere point without duration. It is then supposed that what occupies no finite duration cannot be real, and this disposes of the present. An argument of this kind is used

by Leibniz against absolute time, though it would presumably apply to events just as well. It is met, of course, by the consideration that past, present, and future are all always equally real, and that these characteristics do not belong to events as such, but in virtue of the temporal relations between them and certain psychical events.

A somewhat different argument against the reality of time has been produced by J. M. E. McTaggart.[1] His argument is that every event is past, present, and future; and that the attempt to avoid the incompatibility of these predicates by saying that the event has been future, is present, and will be past involves a vicious circle or a vicious infinite regress. The answer is that, whenever we consider any definite statement about the pastness, presentness, or futurity of an event, we can see that there is no contradiction. Take a definite statement by McTaggart that Queen Anne's death is now past and has been present and future. Suppose we interpret this to mean that Queen Anne's death is not the direct object of any awareness (even a memory) which is contemporary with McTaggart's statement, but that it is contemporary with some states of mind (*e.g.*, Lord Bolingbroke's) which precede McTaggart's statement; and that it is later than some thoughts about it (*e.g.*, William III.'s), which also precede the statement. Then those three propositions seem to be timelessly true, perfectly compatible, and to contain all that is meant in the assertion by McTaggart that Queen Anne's death is past and has been present and future.

We may conclude, then, that no satisfactory proof has been offered even that absolute time is unreal, still less that the series of events and their direct temporal relations are unreal.

6. **Measurement of duration.**—It seems to have been the question of a rate-measurer that led Newton to the theory of absolute time. Newton considers a number of periodic events which are roughly isochronous, and compares their rough isochronism with 'absolute time, which flows uniformly.' It is an unfortunate way of introducing absolute time. In the first place, it is of no practical use to any one. Whether absolute time flows uniformly or not, we can only observe events and must use them, or processes based on them, as our rate-measurers. Again, the statement that absolute time flows uniformly is thoroughly obscure. Time cannot be said to flow, for this seems to imply that time changes; and this would make time consist of a series of events in time. Nor is it at all clear what Newton meant by uniformity in this connexion. Presumably the meaning must be that the moments of time form a series like the real numbers. What we really want to know is whether we can find any periodic process such that the time that elapses between corresponding stages in each repetition is the same. But no essential reference to absolute time is involved here. We must beware of confusing the two statements: (1) there are definite intervals of a certain determinate duration, and this duration is independent of our methods of measurement; and (2) there are absolute moments of time, and the interval between any two of these has a definite magnitude. The latter implies the former, but not conversely. The real problem is: Granted that there is a definite interval between pairs of events, how are we to measure it?

There is a special difficulty in measuring intervals of time between events which is not nearly so much felt in measuring the distance between things. This difficulty is in the temporal analogue to superposition. We may carry a rod about with us in space, and we may have fairly good reasons to believe that it has not altered in length. The corresponding procedure in time-measurement is to find some process which can be started and stopped at any moment and can be assumed to have the same period whenever it is repeated. Such processes may be called isochronous. But, even when an isochronous process has been secured, it cannot be used to measure time in the same direct way in which a rod can be used to measure length. A rod will not as a rule fit an exact number of times into what we want to measure; it is therefore divided into a number of equal parts. Similarly we want an isochronous process that can be divided into equal subdivisions which can be easily recognized; *i.e.*, we want a process which itself consists of a number of similar processes which all occupy equal times. Now, it is not nearly so easy to be sure that a process takes the same time whenever it is repeated as to be sure that a rod keeps the same length wherever we use it; and it is much less easy to divide a process into parts that occupy equal times than to divide a rod into parts that have equal lengths. The recognizable divisions in a process of change are largely fixed for us, while divisions on a rod can be fixed by us with marks without affecting the rod as a whole.

Nevertheless the assumptions that have to be made, and the peculiar mixture of observation and convention that is involved, are the same in principle for the measurement of time and of space. The fact is that we can make immediate comparisons both of length and of time with a certain amount of accuracy. We believe that these judgments are the more accurate the nearer the objects to be compared are in time and space, and the more similar the circumstances under which each is inspected. Trusting to these immediate judgments, we see reason to believe that both the lengths of rods and the time taken by processes may vary when the rods are moved or the processes repeated. But we believe that the variation always depends on the fact that change of position in space or time involves change in the relations of the rod or the process to pieces of matter, and that mere changes of position in absolute time and space—if such could be—make no difference. We have learned by experience what are the most important factors that determine change of length or of period, and we can allow for them. It is found that the periods of recurrent processes are, on the whole, more largely affected by changes in the surroundings than are the lengths of such bodies as steel rods.

Our method of determining an ideal rate-measurer is somewhat as follows. We begin with some process which is sensibly isochronous—*e.g.*, the swing of a pendulum, or the time taken for a complete rotation of the earth on its axis. We can judge of this isochronism with a certain amount of accuracy by direct comparison in memory, just as we can compare lengths by looking at them. We can go farther than this. Just as we are greatly helped in our comparison of lengths by putting the objects to be compared side by side, so we can use expedients to help our judgments of the isochronism of processes. If we start two pendulums together and their periods be not exactly the same, the divergence will become more and more marked the longer they swing. If no divergence be noted after many swings, we may conclude that each swing of one takes the same time as the corresponding swing of the other. This does not prove that the successive swings of either are isochronous; for the period of each may be varying according to the same law. But, if we also find that the period of one of these processes synchronizes with the corresponding period of some other

[1] 'The Unreality of Time,' *Mind*, new ser., xvii. [1908] 457–474.

sensibly isochronous process which is physically very different, it becomes very improbable that there should be any law by which the successive periods of two such very different processes alter in precisely the same way. We are therefore justified in concluding *tentatively* that the successive periods of these sensibly isochronous processes are actually isochronous.

The next step is to state all the laws of nature which involve time on the assumption that equal intervals of time are measured by complete periods of such processes. We find, *e.g.*, that, if it be supposed that the successive rotations of the earth on its axis are isochronous, the laws of motion can be very simply stated and are very nearly verified by all the mechanical phenomena that we can observe. So far we are entirely in the region of what can be experienced or rendered very probable from what we experience. But now a conventional element enters. We shall probably find that, when time is measured by an actual physical process and when our laws have been stated in terms of time so measured, a closer investigation shows that there are slight divergences from the laws which cannot be accounted for by mere experimental errors. The last stage in the determination of the equality of times now begins. We argue that the suggested laws are so simple and so nearly true that the most reasonable plan is not to keep the same time-measures and complicate the laws, but to suppose that the laws are rigidly true but the time-measurer not perfectly accurate; *i.e.*, that successive periods of this physical process are not perfectly isochronous. We therefore erect the laws into principles, define equality of times by them, and apply the necessary corrections to our old time-measurer. There is nothing particularly arbitrary about this. We believed, to begin with, as the result of direct judgments assisted by the use of such expedients as have been described above, that a certain periodic process is isochronous. We admitted, however, that deviations from isochronism so small as to escape the notice of any direct method are possible. We then stated our laws in terms of time as measured by this process, and found them to be simple and very nearly true; but, if they are to retain their simple form and become quite true, a small correction must be made in the assumed isochronism of the process. This contradicts nothing that we have deduced from our experience; for we admitted all along the possibility of errors too small for direct detection. The procedure has the least trace of arbitrariness if, as is often the case, we can see the physical cause of the lack of complete isochronism in our time-measurer and can fully explain this lack in accordance with the laws which we have erected into principles. This has happened, *e.g.*, with the earth as a time-measurer, where we can explain its small defect from isochronism, when once we have to assume it, by the frictional effect of the tides acting according to the laws of mechanics. Even when no physical cause can be detected for the presumed lack of isochronism, it is always possible to suggest a hypothetical one. But, in so far as this has to be done, our procedure does become more arbitrary; and a point may be reached where a full explanation of all the phenomena demands a real change in the form of the laws with or without a change in the time-measurer. This has happened in recent years to the laws of motion, mainly through investigations on the movements of small electrically charged particles with a velocity comparable to that of light.

7. Theory of Relativity.—The next point to be considered is the criterion of beforeness, afterness, and simultaneity among events which are not the objects of any one experience. We have seen that in favourable cases we can immediately judge that one event that we experience is after another that we experience. Other people can make similar judgments about events in their experience. But we cannot directly judge of the temporal relations of events which we do not directly experience. Matters are on exactly the same footing with spatial relations. I may be immediately aware that one object in my field of view is to the right of another in the same field, and another man may be able to make similar judgments about his visual sense-data. But it remains to be seen what is meant by saying that an object which A experiences is at the right of one which B experiences; or again what is meant by the statement that of two objects which no one experiences—*e.g.*, two atoms—one is to the right of the other. What is wanted is to be able to date events in a time-series which is neutral as between A's experience and B's, and shall contain events that do not fall into the direct experience of any one. In this problem we must carefully distinguish between two questions which are liable to be confused: (1) How do we come to understand the nature of the relations in the neutral time-series?, (2) How do we know with regard to any two definite events, e_1 and e_2, whether e_1 is before or after or simultaneous with e_2?

The answer to the first question is that the relations in the neutral series are regarded as having the same logical properties as those which we directly experience, or at any rate as being capable of definition in terms of the logical properties of these relations. Possibly a temporal relation as experienced by A has a sensuous particularity different from that possessed by one experienced by B; just as it is impossible to say whether the quality of what A sees and that of what B sees are precisely the same when they say that they perceive the same colour, and no available test can detect any discordance between their experiences. But, of course, the sensuous particularity is what is shed when we consider a neutral time-series, and only the logical properties of the relations (*e.g.*, transitivity, asymmetry, etc.) are important.

The distinction between the space and time of each man's experience and a neutral space and time runs parallel with the distinction between the immediate objects of each man's experience and neutral (or, as we call them, physical) objects. However we suppose physical objects to be constituted, and whatever we suppose to be the relation between our minds and them, it must be assumed that physical objects are in the neutral space, and that their changes take place in the neutral time and make themselves known to us by correlated changes in the immediate objects of our experience.

It is not necessary here to consider how a number of people, $M_1 \ldots M_n$, come to agree that certain events, $e_1 \ldots e_n$, in their respective sense-data are all correlated with the same physical event. But it is necessary to notice that they will find, first of all in the case of sound, that, if their physical laws are to give at all a simple and complete account of what they may expect to hear under given circumstances, they must assume that the sounds heard by various people, and all correlated by them with a single physical event, are not in general contemporary with each other. The greatest accuracy and simplicity is introduced into the laws of sound by supposing that the hearing of the sounds by the various people takes place at times dependent on the positions of their bodies in physical space and on the spatio-temporal position of the single physical event correlated with all these sounds. This example brings out three very important points. (1) The determination of the temporal

relations between events in the minds or in the immediate objects of the minds of different people can be accomplished only when these events have been correlated in some definite way with supposed neutral physical events; (2) the temporal relations then assigned are such as to make the laws telling us what sensations to expect in given circumstances as simple and accurate as possible; (3) it follows from these considerations that the determination of a neutral time-series and of the positions of physical objects in a neutral space must proceed *pari passu*.

Suppose, *e.g.*, that we say that the velocity of sound is v centimetres per second: (1) we want to connect all the known facts about the sounds which people hear under circumstances that can be directly experienced; (2) we want to do this compatibly with the assumptions which have already been made as to what heard sounds are to be classed together as connected with one physical event; and (3) we want our laws which sum up the known facts and anticipate experience to be as simple as is compatible with accuracy. We find that these ends can best be accomplished by supposing that A's hearing of s_a and B's hearing of s_b (s_a and s_b being both correlated with the single physical event S) take place at times $t + \frac{x_a}{v}$ and $t + \frac{x_b}{v}$ respectively, where t is the date of S in the neutral time-series, and x_a and x_b are the respective distances between the place where S happens in physical space and A's and B's bodies as physical objects. We must remember that the correlation of several sounds heard by different people with a single physical event and the assignment of positions in neutral space to physical events are themselves carried out on the same general principles as the dating of events in neutral time and as the measurement of duration already described; *i.e.*, we start with instinctive judgments of rough accuracy, and then proceed to a more accurate determination of our terms, guided by the general motive of maximizing the accuracy and simplicity of scientific laws.

As we have seen, sound is the first and most obvious case where it is necessary to assume different dates for different members of a group of sense-data which are all correlated with a single physical event. The more accurate researches of science necessitate a similar process for dealing with the sense-data of sight, and so the notion of a velocity of light is introduced. These velocities, once determined, furnish a criterion of before and after among physical events, and, through them, for events in different minds.

Let us denote any moment at A by the symbol ${}^a t_r$, and an event which happens at the point A at the moment ${}^a t_r$ by ${}^a e_r$. Let us use the same notation for events and moments at B. Then we can say: An event ${}^a e_r$ precedes an event ${}^b e_s$ if a disturbance leaving A at ${}^a t_r$ reaches B not later than ${}^b t_s$. Now it is found that we have no reason to believe that any disturbance travels faster than light. It can be shown that, if the above be our sole criterion for before and after between events at different places, there will be pairs of such events of which we have no reason to say that one is either before, after, or contemporary with the other.

To see this, consider the following case. Let ${}^a e_1$ happen at A at ${}^a t_1$. A signal which leaves A at ${}^a t_1$ cannot reach B *before* a certain moment ${}^b t_2$. Again, a signal that reaches A at ${}^a t_1$ cannot have left B *after* a certain moment ${}^b t_0$. On our criterion, therefore, ${}^a t_1$ is before any moment that is after ${}^b t_2$ and is after any moment that is before ${}^b t_0$. But how are events at B which happen between ${}^b t_0$ and ${}^b t_2$ related in time to the event ${}^a e_1$? Take an event ${}^b e_x$ such that ${}^b t_x$ is between ${}^b t_0$ and ${}^b t_2$. You cannot say that it is before ${}^a t_1$; for a disturbance leaving B at bt_x would reach A later than ${}^a t_1$. But you also cannot say that ${}^a t_1$ is before t; for a disturbance leaving A at ${}^a t_1$ would reach B later than ${}^b t_x$ (viz. at ${}^b t_2$). Hence on our criterion we can neither say that ${}^b e_x$ is before ${}^a e_1$ nor that ${}^a e_1$ is before ${}^b e_x$. Moreover, there is an infinite number of events at B of the form ${}^b e_x$ where x is between 0 and 2. Thus we cannot cut the knot by saying that, since they are neither before nor after ${}^a e_1$, they are contemporary with it. For they are not contemporary with each other. Thus one and only one of the class of events ${}^b e_x$ can be taken to be contemporary with ${}^a e_1$, and the rest, so far as our criterion goes, must be held to be neither before, after, nor simultaneous with ${}^a e_1$. We are thus compelled to recognize that we may have no means of deciding whether a pair of events at different places in physical space are contemporary or not in physical time.

We can, if we like, accept this result, and build up our physics on the assumption that physical time really is non-connexive; *i.e.*, that, though all events have temporal relations to some events, none have temporal relations to all events. This has recently been done very fully and ably by A. A. Robb.[1] Or we may take the more usual course of assuming that physical time really is connexive, but that in certain cases all criteria fail to determine the actual temporal relations which subsist between events in different places. We then must simply make a convention (to return to our example) that one particular event of the class of events at B, whose temporal relations to ${}^a e_1$ are left doubtful by our criteria, is contemporary with ${}^a e_1$, and that whatever precedes this one precedes ${}^a e_1$ and whatever follows it follows ${}^a e_1$. It is customary to assume that the event at B which comes midway between ${}^b e_0$ and ${}^b e_2$ is contemporary with ${}^a e_1$; but it must be noticed that this is a mere convention, though doubtless the most reasonable one to make. (On our notation this event would naturally be ${}^b e_1$.)

We must notice further that, for this convention to be determinate at all, we must assume that we know that the time-measurer at B goes at the same rate as that at A, and that both go uniformly. Now, if the time-measurers cannot be moved about, their synchronism can be determined only by sending signals from one to the other—*e.g.*, light-signals. And, even if they can be moved about, our only test for the continuance of their synchronism, when they have been moved apart and are no longer in view together, is by light-signals. On the other hand, the question whether our tests for synchronism by light-signals are genuine tests (*i.e.* involve synchronism in physical time) depends on whether the velocity of light relative to the system containing the time-measurers is constant in time and the same in all directions. And this last point cannot be determined *until* the time-measurers in two places have been synchronized; for it is obvious that to measure a velocity we need to know the time in two places. We see, then, that the possibility of synchronizing time-measurers and the uniformity of the velocity of light stand and fall together, and that neither can be proved independently of the other. If we allow that the velocity of light relative to the system is constant and uniform in all directions, our tests for synchronism and uniformity in our time-measurers are valid; if we allow that the criteria ensure physical synchronism, the physical velocity of light (as distinct from its *numerical* measure on our convention) will be constant and uniform. But neither question is or ever will be capable of independent settlement; and therefore we simply have to make a convention that the meaning to be attached to synchronism in different places is agreement with the tests based on light-signals, and another convention that distances shall be so measured that the measure of the velocity of light relative to the system is independent of time and of direction.

Suppose now that the people on a system S determine their spatio-temporal co-ordinates in this way, and that the people on another system S', moving with uniform translational velocity relative to S, determine their spatio-temporal co-ordinates similarly. Let them arrange, as they can do, that the time-measurers at the origin of each go at the same rate; and further let them arrange their units so that the velocity of light as measured by each from experiments with sources and mirrors fixed in their own system shall have the same numerical measure. Then (a) it can be proved that each will find the same numerical measure for the velocity of light, even though the sources and mirrors be in uniform motion relative

[1] *A Theory of Time and Space.*

to the two systems. (*b*) It is possible to find equations connecting the spatio-temporal co-ordinates which the people on S give to any momentary event which they observe with those which the people on S^1 give to the same event. These are the celebrated transformations of the Theory of Relativity. They are, as we should expect, perfectly reciprocal, since the relative motion of S and S^1 is a perfectly mutual phenomenon. But (*c*) they lead to certain rather startling results. (1) Lengths along and at right angles to the direction of relative motion which are judged to be equal by the people on one system will be judged to be unequal by those on the other. The ratio depends on the relative velocity and on the value of the velocity of light which is common to the two systems.[1] (2) Events in different places which are judged to be contemporary by the people on one system will be judged to occur at different times by those on the other system, and the difference of time will depend on the distance apart parallel to the direction of relative motion.

Although the observers on the two systems thus differ, they cannot criticize each other. Each has pursued precisely the same plan in setting out his co-ordinates and synchronizing his time-measurers. And it would be quite futile for one to claim that his results are the right ones because his system is at rest and the other is in motion. For the relative motion is completely reciprocal, and neither absolute motion nor any consequence of it can be observed. Lastly, it is equally futile for one to say that he is at rest 'relative to the ether,' while the other is in motion; for we know that no experiment whatever has been able to demonstrate motion 'relative to the ether,' and this motion may fairly be dismissed as a fiction. The upshot of the matter is that there is nothing to choose between their respective judgments, and that all the laws of nature can be stated as truly and will have precisely the same form, no matter which of an infinite number of systems in uniform translational motion be taken as the basis for spatio-temporal co-ordinates. This result, with the mathematical consequences that flow from it, is known as the Theory of Relativity. Its philosophical importance is that it enables us to see the tacit assumptions that are made when we talk of events at different places being contemporary; and the fact that measurement of distance is entangled with time, since the distance between two objects at any time involves a decision as to what is meant by the same time in two different places. Though it no more completely refutes the possibility of absolute space and time than does any other argument (for after all it only deals with our numerical measures and leaves it open whether one system of time-measurers is physically uniform and synchronous and one system of space-measures directly represents distances in physical space), yet it helps to render the notions of absolute space and time still more spectral and remote from all possible experience than before. For it enables us to see that there are a certain indeterminateness and conventionality even in the measurement of the distance between physical objects and of the lapse between events; and that therefore what we can know is even at a farther remove than we had thought from the points of absolute space and the moments of absolute time.

The Theory of Relativity sketched above was first fully stated by Einstein in his classical paper, 'Über das Relativitätsprinzip und die aus demselben gezogenen Folgerungen,' which appeared in the *Jahrbuch der Radioaktivität und Elektronik* for 1907. This may be called the restricted Theory of Relativity. It may be briefly characterized as consisting of an experimental fact and a philosophical principle suggested by a great number of facts. The philosophical principle is that, since we can never observe absolute time, space, or motion, even if there be such things, the laws of physical phenomena as learned from experiment and observation must retain the same *form* for acts of observers in uniform motion relative to each other. This persistence of form (or *covariance*, as it is technically called) in the differential equations that express the laws of nature does not in general imply that the actual *magnitudes* measured by two observers in uniform relative motion will be the same.

E.g., an observer moving with his instruments relative to an electrically charged body will detect magnetic as well as electrical forces, whilst one who is at rest with his instruments relative to this body will observe only electrical forces. But the differential equations connecting the effects noted by one observer with each other and with his x, y, z, and t co-ordinates will be precisely the same as those connecting the effects noted by the other observer with each other and with *his* x, y, z, and t co-ordinates.

This principle by itself, however, would be of little use, since it does not enable us to say what connexion exists between the co-ordinates of the two observers. But, if there be some physical magnitude, which is not merely covariant but also *invariant* as between different observers in uniform relative motion, the transformations connecting the two sets of co-ordinates can be found. Now the velocity of light *in vacuo* is found to fulfil this condition; its actual numerical value is found to be the same by all observers. The mathematical consequences of this fact lead to Einstein's set of equations connecting the x, y, z, t co-ordinates of one observer with those of another who is moving relative to the first. The precise significance of Einstein's principle of the 'Constancy of Light Velocity' has been indicated above, and shown to be connected with the way in which we are forced to lay out a system of co-ordinates and to define simultaneity between events in different places.

Einstein's restricted theory has gained many triumphs. It explains at once what is known as Fresnel's dragging-coefficient for light passing through matter that moves relative to the observer. It also accounts for the change of mass with velocity which is observed when small particles move with speed comparable to that of light. The principle necessitates slight changes in the previously accepted form of some of the laws of nature. Maxwell's equations and the equation of continuity in hydrodynamics do indeed at once and without modification fulfil the condition of covariance. But the laws of mechanics, as they stand, are not in accord with the principle and need modifications which only become practically important in dealing with the motion of matter with velocities comparable to that of light.

Considerable philosophic importance, in connexion with the nature of time, attaches to the work of Minkowski.

On the ordinary Newtonian mechanics the form of the laws of nature is unchanged if the three spatial axes be twisted in space about their origin as a rigid body. Now Minkowski showed that the Lorentz-Einstein transformation is equivalent to a twist of the same nature performed on a set of *four* mutually rectangular axes in a four-dimensional space. Three of these axes are the ordinary spatial ones, the fourth is the time axis multiplied by c, the velocity of light, and ι, the root of -1. So far the theory must be regarded as a merely elegant mathematical device, since the fourth axis is imaginary in the mathematical sense, and the angle of solution is also imaginary. But, if we do not assume that the geometry of the four-dimensional 'space-time' is Euclidean, a much more important meaning can be attached to Minkowski's interpretation of the relativity transformations. If we suppose the geometry of 'space-time' to be hyperbolic (*i.e.* the geometry of Lobatchewski), the relativity transformation corresponds to twisting a set of four real axes as a rigid body through a real angle about the origin. The axes are now x, y, z, and ct, and c simply depends on the different units that we use in measuring time and space; so that really we are dealing with a four-dimensional

[1] This is the famous Lorentz-Fitzgerald contraction.

manifold in which space and time are homogeneous with each other, but whose geometry is not Euclidean but Lobatchewskian.

The work of philosophical mathematicians since Minkowski's death has consisted largely in developing the notion that the ultimate data in the world are events in space-time, *i.e.* events extended both in space and in time. The content of a specious present forms an example of such data. Space and time as used in the sciences only emerge at the end as elaborate mathematical constructions built on the immediately perceptible relations between extended events.

The best exposition of this point of view is contained in A. N. Whitehead's *Principles of Natural Knowledge*, which begins with a severe criticism of the concepts of classical physics and proceeds to elaborate the notions of space, time, and matter from the crude data of sense and their immediately given spatio-temporal relations. It seems hardly possible to doubt that this is the right path for further research, but it demands a combination of philosophical and mathematical abilities of so high an order that few can tread it successfully. Alexander in his *Gifford Lectures* at Glasgow has developed the notion of space-time with great fullness from the purely philosophic side, but, at the time of writing, his lectures have not appeared in print, and it is impossible to give a fair account of his views from the short synopses which are alone available.

It remains to say a few words about the generalized Theory of Relativity. So far we have only considered observers in *uniform* relative motion and have laid down a principle of relativity for them. Einstein has occupied himself in the last few years in removing this restriction and thus bringing gravitation, which fell outside the older theory, into the scope of the Theory of Relativity.

A particle is said to be under the action of no force if it move uniformly in a straight line. But the question whether it moves in a straight line and whether it moves uniformly is clearly relative to our spatial axes and to our measure of time. If, *e.g.*, a particle moves uniformly in a straight line relative to the rectangular axes x and y, it will not do so relative to axes which rotate about the origin in the xy plane. Accordingly, relative to one set of axes it will be said to be under the action of no force, whilst relative to the second set it will be said to be under the forces needed to produce the observed accelerations. Now the 'forces' introduced by these mere changes of our axes of reference are in one respect very much like the force of gravitation. They, like it, affect all forms of matter indifferently and depend only on the mass, not on the special nature of the matter. On the other hand, a genuine gravitational field cannot be altogether transformed away by a suitable change of axes, as a purely geometrical field can be. For any one particle this can be done by choosing axes fixed in the particle, but relative to these axes the other particles in the field will still be accelerated. Now it seems clear that a mere change of axes could not make any difference to the form of the laws of nature, and thus, if gravitation were capable of being transformed away merely by a suitable change of axes, the principle of relativity would assert that the presence of a gravitational field makes no difference to the form of the laws of nature. For the reason mentioned above the principle of relativity cannot be taken in this unrestricted sense. It may, however, be taken to assert that the form of the law of nature is unaltered in a gravitational field up to a certain (as yet undetermined) order of differential coefficients.

It is now necessary to see the bearing of these results on the constitution of the 'space-time' of nature.

It has been proved by Riemann that the metrical geometry of any space is completely determined when the 'linear element,' *i.e.* the interval between any pair of infinitely near points, is expressed as a known function of the differentials of the coordinates. Thus a three-dimensional Euclidean space is completely defined by the equation

$$ds^2 = dx^2 + dy^2 + dz^2$$

for the linear element. Now the metrical properties of four-dimensional space-time will be completely determined when ds^2 (the interval of any pair of adjacent points in it) is expressed as a known function of dx^2, dy^2, dz^2, dt^2, $dxdy$, $dxdz$, $dxdt$, . . . etc. In space-time, therefore, the ten coefficients of dx^2, dy^2 . . . must be known in order to determine ds^2. In general these coefficients will be functions of x, y, z, t; they are denoted by the letters g_{xx}, g_{yy}, g_{xy}, etc. Any transformation of axes corresponds to a change in these g's and therefore to a change in the form of the linear element. It follows that, as regards forces introduced simply by changes of axis, it is a matter of perfect indifference whether we say (*a*) that the geometry of space-time is such and such and that such and such forces are acting, or (*b*) that the geometry of space-time is such as to produce the appearance of these forces. The g's can be regarded either (*a*) as completely determining the forces on a given assumption about the geometry of space-time; or (*b*) as determining the metrical properties of space-time itself. The extended Theory of Relativity prefers to take the second view of them and to drop all reference to forces; on the first view the g's are of the nature of potentials. Now, in theory, any function whatever might be chosen for the g's. But, in fact, all parts of nature are subject to gravitation. This means that the choice of g's is not absolutely unrestricted, but that in every permissible system of axes for describing nature the g's will be subject to a set of differential equations connecting them with each other and with the x, y, z, and t of that system. These equations then express the law of gravitation and at the same time express it as a fundamental property of space-time.

It is extremely difficult to render Einstein's theory intelligible without mathematics, and the mathematics needed is somewhat formidable. It is hoped, however, that the above slight sketch may illustrate that extreme entanglement of time with space and with matter which undoubtedly occurs in our crude sense-data and is now seen to persist even in the most refined speculations of mathematical physics. It may perhaps be added that Einstein's generalized theory, as distinct from the special philosophic interpretations which may be put on it, is not a mere idle speculation, but has already explained the anomalies in the perihelion of Mercury, and has correctly foretold the amount of deviation in a ray of light due to its passing near a heavy body like the sun.

8. **Historically important speculations about time.**—Our knowledge of time as of space owes more to the labours of mathematicians and physicists than to those of professed philosophers. The sharp distinction between time and what changes, and between space and what moves in it and is extended, is largely due to the development, first of mechanics, and latterly of electrodynamics.

To the Greeks we owe much less with regard to time than with regard to most matters of philosophic or scientific speculation. This may perhaps be ascribed to the late development of dynamics; the Greek approach to the problems of time was mainly by way of astronomy. Of course, Zeno's celebrated arguments have an important bearing on change and continuity, and, whatever may have been the real intention of their author, they remained the best discussion on these subjects so closely related to time until the final treatment of infinity and continuity by Dedekind and Cantor in the latter part of the 19th century. Time plays an important part in the *Timæus* of Plato; and, although his treatment cannot be called satisfactory, it has the merit of distinguishing time from what is in time.

Plato says that God wished the created world to resemble the intelligible one as far as possible. Now, it was not possible for it to be eternal, and the nearest analogue to eternity which He could provide was to make 'a moving image of eternity.' This is time, and it is closely connected with the motions of the heavens; eternity 'rests in unity,' but the image 'has a motion according to number.' Before the heavens were created, there were no days, years, etc.; but, when God created the heavens, He created these divisions of time also. Time was thus created *with* the heavens, and, if one were to be dissolved, so would the other be. But Plato does not appear to identify time with the motion of the heavens, though it is difficult to see what he supposes it to be in itself. According to Plato, past and future are created species of time which we wrongly transfer to the eternal essence; strictly 'was' and 'will be' are to be asserted only of generation in time, for they are motions. The analogy of the moving image to the eternal

is that the created heavens have been, are, and will be in all time. This view has something in common with that of Spinoza, who makes things as they really are for *ratio* timeless, but holds that this timelessness cannot be grasped by *imagination*, which represents it confusedly as duration through endless time.

Aristotle defines time as 'the number of motions relative to before and after.' Number here appears to mean what is numbered. The now is borne along with the movable as a point may be regarded as moving and making up a line. So in a sense there is only one now, though in another sense there are many nows. This is obviously a very unsatisfactory metaphor, and there seems no reason to think that Aristotle was really clear as to the distinction between time and motion.

The Schoolmen in the main adopted Aristotle's views, though with certain modifications. St. Thomas Aquinas, in the tract *de Instantibus*, discusses time and change with some fullness. He draws a distinction between the time in which angels perform their acts and that in which men and matter operate. The time of angels is discrete, that of men continuous; the difference arises from the fact that continuity is essentially connected with matter, while angels are separated substances. An instant for an angel is the time occupied by a single act; it may thus correspond to a long period in our time. This may be compared with Royce's views about the varying lengths of the specious present in various beings.

In modern philosophy the men who have most concerned themselves with time are Leibniz and Kant. Leibniz argued strongly for the relative view of time in his letters to Clarke, who represented Newton and the absolute theory. His arguments turn mainly on the identity of indiscernibles and the principle of sufficient reason. Leibniz carefully distinguished duration from the relation of before and after, and he compared duration to the extension of matter. Leibniz's view is that time is a system of possible positions of possible events related by before, after, and simultaneous with. He holds that all possible worlds must be in time, though, of course, the particular temporal relations of the actual world are contingent. To make Leibniz's theory coherent, it would be necessary to be much clearer than he is as to the relation between the time-series of each monad and the time-series of the universe. He attempted to explain the relation between successive states of the same monad by saying that the earlier ones have the quality of being desires for the later ones. As an attempt to replace relations by qualities this clearly fails, since 'desire for' anything is clearly a disguised relation. And as an attempt to *define* before and after it also fails; for it is clearly a synthetic proposition that desire for X precedes X. Then again it seems essential to Leibniz's doctrine of the reflexion by one monad of the states of another that we should have some account of the temporal relations between corresponding states in different monads. The state of a monad at a given moment in its own time-series is presumably the reflexion of the *contemporary* states of other monads; but we are not told what is meant by a time-series common to the monads, nor is it clear that this would be consistent with Leibniz's dislike of relations.

The absolute theory of time has never had much philosophic support; there can be little doubt that Leibniz had the better of Clarke. Perhaps the best arguments for absolute time and space are to be found in Bertrand Russell's *Principles of Mathematics*. They do not seem to the present writer to be conclusive, and their author has latterly taken a much more relativistic view.

Locke, Berkeley, and Hume insisted that the notion of time comes from the succession of our ideas. But they never made it clear how their temporal relations are connected with the time that is used in physics. Berkeley and Hume in particular fail to give any reasonable account of the distinction that we certainly make between the temporal order of our ideas and the temporal order of the objects which we claim to know by them. It is a great merit of Kant to have seized on the importance of this point in his 'analogies of experience,' though the distinction will certainly not bear the superstructure which he built on it. He attempted to prove that the distinction involves the permanence of substance (which he seems to identify with the chemical law of the conservation of mass) and the law of causation among experienced objects. But his arguments are entirely inconclusive even to prove that, in order to make the distinction, we must *believe* in these principles; much less to prove, what the transcendental method always tends to confuse with this, that the principles are true.

Time plays perhaps more, and more important, parts in Kant's philosophy than in any other.

(1) In the *Æsthetic* he tries to prove that it is a form of intuition, the form appropriate to the internal sense. This seems to mean that, just as we can only perceive physical objects as being in space, though there is no reason to think that things-in-themselves are spatial, so we can only perceive ourselves and our mental states in introspection as being in time, though there is no reason to think that we really are in time. This certainly seems to raise the special difficulty that, unless we know ourselves as we are and not merely as we appear, we cannot know what our forms of intuition are, but only what they appear to be, whilst Kant's argument certainly assumes that we know what they are. (2) In the *Dialectic*, as we have seen, Kant has an antinomy about time. This apparently would, if valid, overthrow not merely absolute time but also the temporal character of events and the temporal relations between them. We have already seen how grave are the difficulties in the way of any such conclusion, and how entirely powerless Kant's arguments are to prove it. (3) In the *Analytic* time plays an important part in the difficult doctrine of the schematism of the categories. The position seems to be that the categories as pure conceptions of the understanding cannot be applied immediately to the manifold given in sense, even after that has been synthesized by imagination. They have to be mediated through time; thus the category of ground and consequent, which is purely logical, can be applied to the world of sensible experience only after it has been schematized into the temporal form of cause and effect. The whole argument here is confused and weak to a remarkable degree; the principle appears to be that the manifold of sense is provided with temporal characteristics by intuition; that these remain and are elaborated by the syntheses of imagination; and that then the categories can be applied if they be first schematized so that they and the synthesized manifold share the temporal characteristic in common. (4) Kant's critical solution of his own antinomy is that the infinity involved in time is not an actual infinite, as it would have to be if time applied to things-in-themselves, but is only the power that we have of always synthesizing farther than we have yet gone in constructing a temporal series. To this Lotze makes the very pertinent criticism that it surely depends on the nature of things-in-themselves whether we shall be indefinitely supplied with material to synthesize.

The modern development of our knowledge about time is due mainly to two sets of people: (1) philosophical mathematicians, like Dedekind and Cantor, who have given a satisfactory analysis of infinity and continuity, and thus finally refuted all antinomies based on these; (2) mathematical physicists who have been led by their studies in the optics of moving systems to elaborate the Theory of Relativity. The pioneer in this work is Lorentz; the theory itself was first formulated by Einstein; and the mathematical and philosophical consequences have been drawn and elaborated by Einstein, Minkowski, Robb, Whitehead, and others.

It is also necessary to mention among recent philosophers Bergson, in whose works time, nominally at any rate, plays an important part. Bergson holds that the attempt to treat time as similar to space is a perverse one philosophically; it may work very well in dealing with dead matter, but it

shows its falsity in biology, psychology, and philosophy. He also falls foul of the mathematical theory of the *continuum* as applied to time; he admits that it is internally consistent, but denies that it describes what anybody really means by change and motion. Bergson's arguments seem to rest partly on a comparison between change as a sense-datum (*e.g.*, the peculiar characteristic of what we see when we look at the second hand of a watch as distinct from the hour hand) and physical change, and partly on the erroneous view that a whole of related states cannot be a change unless each of its terms be a change. Again, in some of his remarks about memory he seems to suppose that, because a memory-act is a later awareness of an earlier event, the earlier event and the later awareness must somehow be contemporary. Finally, he seems to think that the ordinary view of time is refuted by the facts, of which he is strongly convinced, that no two total states of mind at different times can be exactly alike, that there are not, strictly speaking, distinct elements which can recur as parts of different mental states, and that no amount of knowledge about earlier states will enable us to foretell later ones completely. But Bergson's most characteristic doctrines belong to the subject of change rather than to that of time.

TIPITAKA.—See LITERATURE (Buddhist), vol. viii. p. 85[b].

TIRUPATI.—Tirupati, vulg. Tripetty (Tel. Tirupati, *tiru*, Skr. *śrī*, 'venerable,' *pati*, 'lord'), a town in Chittoor District, Madras (lat. 13° 38′ N., long. 79° 24′ E.), is a famous place of pilgrimage, situated on the Tirumalai or sacred hill, usually known to Europeans as Upper Tirupati, in contrast to the lower town at its base. The whole area is considered sacred, and up to 1870 had never been visited by Europeans. Mark Wilks states that he was on duty for eighteen months in the neighbourhood, and, though he frequently climbed the adjoining hills, he could never catch even a distant view of the pagoda.[1] The belief that much crime was committed without detection in the holy town led to the issue of an order by Government that it should be thrown open to the District officials. This at first produced considerable local opposition; but European visits now cause little sensation. The sanctity of this hill-range rests on the legend that it forms part of the sacred mountain Meru. The range has seven principal peaks, each of which is sacred and has a name and legend of its own. One of the peaks, known as Śeshāchalam, 'serpent hill,' takes its name from the belief that it was torn from Meru by Ādi Śesha, the primordial snake, who contended in a trial of strength with the wind-god, Vāyu. Vāyu raised so great a tempest that the peak was blown away and fell to earth in its present position. Near this peak the great temple stands. Little can be seen of it, and no European has been allowed to enter it. It is a building of little architectural beauty or importance, but the cultus of the deity is interesting as an example of the amalgamation of local non-Aryan beliefs with orthodox worship. Within a small chamber lighted by lamps is the idol, a stone image of Viṣṇu, seven feet in height. It represents the god as Chaturbhuja, 'four-armed,' one of the right hands holding the discus (*chakra*), one of the left the conch-shell (*sankha*), the second right hand pointing to the earth to draw attention to the miraculous origin of the holy hill, while the remaining left hand grasps a lotus. The deity possesses 1008 titles, the most common of which are Śrinivāsa, 'dwelling with Śrī or Lakṣmī,' goddess of prosperity, and Venkaṭachalapati, the title of the sacred hill, which has been adopted into Sanskrit from the Tamil *ven*, 'white,' *kadam*, 'hill slope,' thus showing that the deity was adopted into Brāhmanism from a Dravidian cult. By visitors from the Deccan and N. India he is generally known as Bālāji, which, according to Monier-Williams,[1] is the name of a human incarnation of Viṣṇu or Kṛṣṇa of whom little is known, save that he was remarkable for many extraordinary qualities, and that he lived in the neighbourhood of the sacred hill. Hence visitors to the shrine generally invoke him by the title of Govinda, 'cow-keeper,' one of the names of Kṛṣna. It is remarkable, however, that, according to common belief, the image worshipped was originally one of Śiva. The transformation of the Śaiva cult to that of Viṣnu is traditionally ascribed to the reformer Rāmānujāchārya (born *c.* A.D. 1017). It is said that he procured a conch-shell and discus of gold, which he placed before the image and closed the temple doors. When the shrine was opened next day, it was found that these emblems of Viṣnu were grasped in the hands of the image, and therefore it was really Viṣnu. The tangled hair (*jaṭa*), the cobras carved upon the body, and various other peculiarities indicate that it was intended to represent Śiva, and the priests, who are Dīkṣhita Brāhmans, admit that they belong to the Śaiva sect. The god is provided with a consort, Padmāvatī, said to be the incarnation of a mortal woman, and the offerings are believed to have been originally collected to provide for the marriage of the pair. In an ante-room there is a brass vessel with a bag hanging in it, into which money and jewels are placed. On the other side are two gongs, one of which, when struck, utters the name Govinda, the other Nārāyaṇa—both titles of the god. Many pious persons observe the custom of collecting in their homes monthly contributions which are placed in a money-box and finally offered at the shrine.[2] The anthropomorphism of the cult is shown in the belief that the deity annually announces to certain persons that he needs shoes, which they make and present.[3] Various rites indicate the non-Aryan character of the worship. Thus a feast called *Gangājātra*, 'Ganges festival,' is held in the early spring, when a figure is made of clay or straw, before which animals are sacrificed—a custom quite opposed to true Vaiṣnava beliefs. Even Brāhmans, who will not attend personally, send victims. When the sacrifices are over, the image is burned, and much rude merriment follows. Some votaries carry on their heads a structure made of bamboo, resembling a car, adorned with coloured paper, and supported by iron nails that

[3] Thurston, *Castes and Tribes of S. India*, iv. 310 *f.*

often pierce the flesh of the bearer, who submits cheerfully to the torture. At the *Gangammā* festival held at the temple 'language truly filthy and obscene' is used to the goddess herself.[1] The explanation of this custom is obscure.

'Abusive language is believed in certain circumstances to bring good luck to the person against whom it is directed.'[2]

On this theory the obscenity may possibly be regarded as a form of mimetic magic intended to repel the powers of evil from the deity, and thus advance her powers of promoting fertility.[3]

Again, on the road leading up to the temple 'small stones heaped up in the form of a hearth, and knots tied in the leaves of the young date palms may be seen. These are the work of virgins who accompany the parties of pilgrims. The knots are tied in order to ensure the tying of the *tāli* string on their necks [at marriage], and the heaping up of stones is done with a view to ensuring the birth of children to them. If the girls revisit the hill after marriage and the birth of children, they untie the knot on a leaf, and disarrange one of the hearths. Men cause their names to be cut on rocks by the wayside, or on the stones with which the path leading to the temple is paved, in the belief that good luck will result if their name is trodden on.'[4]

The hope of recovery from sickness and the desire for male offspring are the chief causes of vows being made to the god. The vow need not be performed immediately on receipt of the blessing. Death merely transfers the obligation to the heir, and it is said that the god is never defrauded. A common offering by women is the hair of their heads, which is shorn off by barbers, more than half the women who visit the temple returning with their heads clean shaven. J. A. Dubois[5] describes a custom of binding the idol in chains of silver, apparently with the object of preventing him from leaving the temple. The same writer[6] speaks of the custom of women who desire children passing a night in the temple. He also alleges that at the festival, when the image is taken in procession, the Brāhmans select the most beautiful women as wives of the god; they are branded with a hot iron, and, after serving for some years, are dismissed with a certificate of good conduct which ensures that, as they wander through the country, their wants will be abundantly supplied.[7] By other accounts, when such a woman becomes too old to please the deity, the priests make a mark on her breast, the emblem of the god, and give her a patent certifying that she acted for a certain number of years as one of his wives, that he is now tired of her and recommends her to the charity of the public. H. A. Stuart, however, denies that any dancing-girls attend the god; but he admits that the state of morality among priests and pilgrims has deteriorated, even celibate Bairāgis and priests taking their paramours with them up the sacred hill. In the Deccan it is very common for a woman to make a vow that, if she is relieved from sickness or other trouble, she will shave her head to the god at Tirupati. After being shaved, she walks thrice round the temple, worships the image, pays a fee to have lighted camphor waved round the idol, receives a pinch of the sugar offered to the god, distributes food to the poor and to the monkeys which swarm round the temple, offers charity, and returns home.[8] The tonsure of children is also performed at the temple.[9]

LITERATURE.—This art. is mainly based on an excellent account of the place by A. F. Cox, *Manual of the N. Arcot District*, Madras, 1881, p. 146 ff., supplemented by later information supplied by its writer. In addition to the authorities quoted, see J. B. Tavernier, *Travels in India*, tr. from ed. of 1676 and ed. V. Ball, London, 1889, ii. 243. For various references to the worship of the god among the people of S. India see also E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, i. 195, 835, 389, ii. 43 f., 112 ff., iii. 42, 461, iv. 310, 326 f.

W. CROOKE.

TITANS.—The Titans, like the Giants (*q.v.*), are potencies belonging to an early pre-Olympian stage of Greek mythology. The two tend to be confused by late authors, but in origin they are distinct. The Titans are distinguished from Giants by the following well-marked characteristics: (1) they are gods (*θεοί*), and as such immortal, whereas the Giants are mortal; *Τιτῆνες θεοί*, 'Titans, gods,' is a fixed formulary in Hesiod's *Theogony*; (2) they are sky-potencies (*Οὐρανίωνες*)[1] as contrasted with the Giants, who are earth-born (*γηγενεῖς*); Titans and Giants alike are to Hesiod the offspring of Earth and Heaven, but the Titans tend skywards, the Giants with their snake-tails earthwards. To Shakespeare Titan is the sun.

'And Titan, tirèd in the mid-day heat,
With burning eye did hotly overlook them.'[2]

To Pausanias[3] Titan, according to the local legend of Titane, is 'brother to the sun,' and Pausanias himself held that Titan 'was great at marking seasons of the year.' Empedocles holds a less specialized and perhaps juster view; he places side by side

'Gaia and billowy ocean and air with its moisture,
And *Æther, the Titan*, embracing the All in a circle.'[4]

The Titan Phaethon is the sun and sun's charioteer; the Titaness Phoebe is the moon; the Titans Atlas and Prometheus are the sky-pillars supporting Ouranos. The Titans are an integral part of that primeval cosmogony of earth and sky, ousted in Greece by the anthropomorphic Olympians, but remembered as part of their Indo-European heritage by the Northern Muses who came to Helicon and taught their lore to Hesiod.

The etymology of Gigas, 'giant,' is uncertain; that of Titan is happily secure, and it throws a flood of light on the function of these sky-potencies of older date and explains in a flash the two Titan myths—(*a*) the Titanomachia, (*b*) the rending of Zagreus, which, but for this etymology, must have remained obscure. Three glosses of Hesychius make it certain that *Titan* means simply 'king.' They are as follows: *τιτῆναι· βασιλῆδες* (the word glossed is from a lost play of Æschylus); *τιήνη* (for *τιτήνη*)· *ἡ βασίλισσα*, and *τίταξ· ἔντιμος. ἢ δυνάστης. ὁ δὲ βασιλεύς*. Titan is king, 'honoured one,' but —and here is the interesting point, or rather series of vitally interconnected points—he is the king of the old order, the king-god or divine king, and as such he is a sky-potency, for one main function of the old king-god was to order the goings of the heavenly bodies and generally to control the weather. Here we have that odd blending of physical phenomena with human and social potencies which lies at the back of most gods and certainly of Zeus himself.

The Titanomachia is at once clear. For on the physical point of view it is, as described in Hesiod,[5] just a half-humanized thunder-storm, Zeus, the new sky- and thunder-god, fighting the old sky-potencies; from the theological point of view it is the new anthropomorphism against the old religion of the king-god or medicine-man who controls the weather. The Olympian religion naturally regarded these old Titan kings as criminals, rebels against high heaven, condemned to Tartarus for their sin of *ὕβρις*; they are the counterpart of the arch-Titan Prometheus.

The second Titan myth, the rending of Zagreus, is less transparent, but in the light of the Titan kings even more illuminating, for we catch the king in his earliest stage of all, when he was tribal elder or medicine-man, not yet fully developed into kingship. The Titans, according to a version of the story as early as Onomakritos,[1] lure away the infant Zagreus, dismember, and (in some versions) cook and eat him. The story is an initiation myth based on the familiar initiation ritual of the mock death and resurrection of the initiate. The initiators are the elders or dynasts of the tribe, the embryo-kings.[2] The Titans as old-world kings are well in place; as a form of giant they are absurd. The name Zagreus takes us to Crete, and in Crete we find the Titans in a connexion that again points to initiation mysteries. The Cretans, according to Diodorus,[3] said that in the time of the Kouretes those who were called Titans ruled over the region of Cnossos, where were shown the foundations of the house of Rhea and a sacred cypress-grove of hoary antiquity. These Titans again must have been the old king-medicine-men, contemporary with the Kouretes and, like them, initiators into the 'men's house' of the Mother Rhea.[4] On a red-figured *hydria* in the British Museum[5] Zagreus is depicted as actually devoured by the Titans, and these Titans wear the characteristic dress of Thracian chieftains. We may safely infer that the Titan myth of the rending of Zagreus was known from Thrace to Crete, and we may suggest that it arose in that early stratum of 'satem'-speaking population known to the later Greeks as 'Pelasgian'—a stratum specially addicted to the mystery-cults of the son of Semele.

LITERATURE.—M. Mayer, *Die Giganten und Titanen*, Berlin, 1887. For the Titans as Ouraniones, J. E. Harrison, *Themis*, Cambridge, 1912, pp. 453–460. The right etymology of Titan from the root *ti*, 'honour,' was first seen by L. Preller, *Gr. Mythologie*[4], Leipzig, 1894, p. 44. Its meaning as 'king' was made clear by F. Solmsen, in *Indogermanische Forschungen*, xxx. [1912] 35. The full significance of the 'king' meaning in relation to the mystery-rite of the *omophagia*, as practised in Crete and by Thracian chieftains, was established by A. B. Cook, *Zeus*, Cambridge, 1914, i. 655 ff., in relation to his republication of the British Museum vase in pl. xxxvi. The previous literature of the subject will be found in Cook's notes. On p. 655, note 2, he rightly points out that the present writer's former derivation (*Prolegomena to the Study of Greek Religion*[2], Cambridge, 1908, p. 493, and *Themis*, p. 15) of the word 'Titan' from Τίτᾱνος, 'white-clay man,' is erroneous. As initiators the Titans probably were daubed with white clay, but the name is not derived from the disguise.

J. E. HARRISON.

TITHES.—1. Origin and purpose.—Tithes are connected, on the one hand, religiously, with offerings of firstfruits (*q.v.*); on the other hand, politically, with tribute and taxation. While taxation often took the form of a tenth, the amount might vary, less or more, though the name 'tenth' (*decima*, δεκάτη) was retained. Voluntary offerings to a deity soon became customary, and even necessary, especially where kings began to impose taxation and tribute, and where a god was now thought to be a divine monarch. To keep up his sanctuary was as much an obligation as to keep up the royal person and court. An early example shows this. The people of Tyre paid tithes to Melcarth as king of the city, and the Carthaginians similarly sent their tithes to Tyre.[6] W. R. Smith[7] shows that in this case the tithe was as much political as religious. The voluntary offering necessarily became tribute also, as the ritual of a sanctuary became more elaborate, the sanctuary itself more splendid, and the attendant priests more numerous. Why a tithe or tenth should have been fixed on so generally is not clear, but probably it is connected with primitive views about numbers, or with methods of counting—*e.g.*, by fingers and toes.[1]

In Babylon, whether the tithe was native or borrowed, its use is found in the time of Nebuchadrezzar II. Earlier evidence is so far lacking, and there is no trace of it in the Assyrian period. It was a due paid to the temple of a god from the land, and was paid by all, including the king, who assigned to temples founded by him an annual amount from cultivated lands and from the treasury. Numerous tablets concern tithes, and show that the people were taxed for support of the temple. Tithe was of the nature of a fixed charge on the land and even became negotiable. Such tablets may be regarded as of the nature of a receipt for payment of tithe, which was generally paid in kind—corn, oil, sesame, dates, flour, oxen, sheep, and asses—though this might be commuted for a money payment. One man sometimes paid it collectively for a group of men, and possibly this signifies a systematic collection of tithe in one district by an authorized person.[2] At the same time Babylonian kings had a tithe of all imports, as had also Persian satraps.[3] In S. Arabia tithes were used for the erection of sacred monuments.[4] Cyrus, on the advice of Cræsus, caused his soldiers to devote a tenth of their booty to Zeus.[5] The tithe as a tax on land was well known in Greece and Rome, and the payment of a tithe to temples on special occasions was not uncommon. Pausanias gives many instances of this—*e.g.*, a tenth of war-booty being set aside to make an image or a vessel for a temple.

In Egypt there was apparently greater freedom. Temples were usually provided with lands for their upkeep, but the gods expected to receive a share of the produce of fields, vineyards, orchards, and fish-ponds. The kings in time of war dedicated a tenth of their booty to the temples, as well as of tribute levied on vassal states and of prisoners who were made slaves of the conqueror.[6]

Zoroastrian literature refers to the fourth rank of men—traders, artizans, market dealers, etc.—who should pay a tithe to the high priests and to the king.[7] Chinese sacred literature mentions a tenth of the produce of 'the fields' being annually levied; whether as a religious tribute or not is not clear.[8]

The *Confucian Analects*[9] tell how 'the Duke Gae enquired of Yew Jŏ, saying, "The year is one of scarcity, and the returns for expenditure are not sufficient. What is to be done?"' He desired to take two tenths, instead of the usual statutory single tithe, from the allotments cultivated in common, against which Yew Jŏ protested.[10]

2. Tithe in the Old Testament.—Among the Hebrews the relation of tithes to firstfruits[11] is complicated, and opinions differ as to whether they were distinct or not. Firstfruits would naturally vary in quantity. Tithe expresses more or less a fixed proportion. Perhaps the tithe represents firstfruits made systematic, or different names may have been favoured at different times and in different localities. The tithe is called 'an heave offering' in Nu 18^{24}, but the two are apparently separate in Dt $12^{6ff.}$. In the later legislation firstfruits and tithes appear to be distinguished.

The tithe, which is not mentioned in the Book of the Covenant, appears first in the Northern

Kingdom in the time of Jeroboam II. as the material given for a feast at the sanctuary (Am 5^{11}; cf. 4^4), though the feast was one for the rich at the expense of the poor. Here it appears as a fixed tribute. In Gn 28^{22} (E) Jacob promises a tenth of all to God—perhaps a reflexion of later custom, though not necessarily so—and Melchizedec receives a tenth of all (14^{20}). In 1 S $8^{15.\ 17}$ tithe is paid to the king, and perhaps he devoted this to the upkeep of some sanctuaries. The tithe in the Deuteronomic Code is not a forced tribute. The tithe of corn, wine, and oil, with the heave offering, free-will offering, and firstlings of herd and flock, are to be brought to the sanctuary and eaten there as a feast with servants and Levite (Dt $12^{6f.\ 17f.}$). Here the connexion with firstlings suggests that the tithe was the firstfruits of produce, or perhaps included these. This was a private feast at the sanctuary, and may have been a reform due to the fact that the ruling classes, as in Am 5^{11}, secured the best for themselves. It was not a direct due for the priesthood or for public religious services. If, however, the distance to the central sanctuary was too great for the offering to be taken there, it might be commuted for money, and this would furnish the material for the feast at the sanctuary as before (Dt $14^{22ff.}$). Every third year the tithe was to be laid aside to furnish a feast or feasts at home for the Levite, stranger, fatherless, and widow (14^{28} $26^{12f.}$).

Does the tithe here referred to form the equivalent of the firstfruits, the ritual of which, as perhaps forming part of the tithe, is detailed in Dt $26^{1f.}$? Probably they are ultimately the same, including an offering of part as firstfruits, and a feast for Levite and stranger, just as in 18^4 firstfruits are to be given to the priests. If so, the words in 26^{11}, 'Thou shalt rejoice in all the good which the Lord thy God hath given unto thee, and unto thine house, thou, and the Levite, and the stranger,' would refer to the feast and be equivalent to the feast on tithe of $14^{22f.}$, while the earlier part of ch. 26 would refer to the offering of part as a firstfruits offering.[1]

Is the third year's tithe additional to the tithe given each year, or is it a special form of treating tithe in the third year? Here again opinions differ, but most regard it as a diverting of the usual tithe for the benefit of the local priesthood, who would be deprived of the tithes through the new custom of feasting at the central sanctuary. Others regard it as a second tithe, and this is supported by the LXX, which reads for 'the year of tithing' 'the second tithe,' *τὸ δεύτερον ἐπιδέκατον*. But two tithes in every third year would mean a large amount, and it is unlikely that such demands would be made, or, if made, carried out.

In the Priestly Code tithe assumes the form of a fixed due. A tithe of the produce of the land, of fruit, and of the herd and flocks (*i.e.* of their yearly increase) is 'holy unto the Lord.' If commuted for money, one-fifth part of the value is to be added (Lv $27^{30f.}$). This is probably the tithe of produce referred to in Nu $18^{23f.}$, which was to be given to the Levites, they in turn giving a tenth of it to the storehouse for the support of the priests (cf. Neh $10^{37f.}$), who received now also firstfruits of corn, oil, and wine (Nu 18^{12}). The tithe of cattle and sheep in Lv 27^{32}, which is to be 'holy unto the Lord,' may represent the firstlings used at the Deuteronomic tithe-feast, but claimed later by the priests (Nu $18^{15ff.}$) as apart from the Levites, but it is not referred to in Neh 10^{37}, where the tithe is described (cf. 12^{44} $13^{5.\ 12}$), and may be a later addition. It is, however, mentioned as paid to the priests in To 1^6, by Philo,[1] and in the *Book of Jubilees* (32^{15}). Rabbinic authorities regard it as furnishing, along with a second tithe of produce (Lv 27^{30})—additional, therefore, to the tithe of produce in Nu 18^{21}—a feast for the tither and guests at Jerusalem, as ordained in Dt $14^{22f.}$ The purpose of the Priestly Code was probably to abrogate the law of the tithe in Deuteronomy, but later harmonizers did not take this view and spoke of two tithes, and even three, the third-year tithe of Deuteronomy being regarded as an additional one.[2] The law of P is reflected in Hezekiah's legislation, which ordered that firstfruits and tithes of produce, sheep, and oxen should be brought for the priests and Levites (2 Ch 31^4); hence, if the tithe of animals is in addition to the original law of Lv $27^{30f.}$, it may have come into force after Nehemiah's time.

In Neh $10^{34ff.}$ firstfruits and firstlings and firstfruits of dough were for the priests, and tithes of produce for the Levites—the latter collected by the Levites under the supervision of a priest, and a tithe of the tithe being given to the priests (cf. 12^{44}). The tithe, however, was not always paid to the Levites, as Nehemiah discovered, and they had to cultivate their own land. At Nehemiah's remonstrance it was paid ($13^{10ff.}$). At a later time the priests themselves collected the tithe,[3] and the subsequent history of the Levites in connexion with it is obscure, while they no longer shared in the tithe, either from the time of Ezra[4] or from that of John Hyrcanus.

The Pharisees, as well as the regulations of the Talmud, considered minutely the things to be tithed (Lk 11^{42}), the former even paying tithes of garden herbs—mint, anise, cumin.

Under the Rabbinic system of three tithes referred to above, the first was collected yearly; the second was due in the first, second, fourth, and fifth years; the third in the third and sixth years. Two were thus taken every year, except in the seventh year, when the land lay fallow. The poor's tithe suggested tithing of earnings, all of which was given to them. Extravagant claims were made for the virtue of tithe; *e.g.*, through it Israelites escape the twelve months' punishment in hell which is the lot of the wicked.[5]

[1] Cf. S. R. Driver, *Deuteronomy* (*ICC*), Edinburgh, 1895, *in loc.* The passage in Dt 18^4 assigning firstfruits of corn, wine, and oil, and of wool to the Levites is out of harmony with the other Deuteronomic legislation, if firstfruits and tithe were one and the same.

In Ezekiel's proposed legislation, which marks the transition to P, the first of all the firstfruits of everything is reserved for the support of the priests. There is besides a tax paid to the prince for the support of ritual and feasts out of wheat, oil, and flocks ($44^{30f.}$ $45^{13f.}$; cf. 20^{40}). No mention is made of tithes, nor are the payments to be made to the priests as in P.

3. Early and mediæval Church usage.—In the Christian Church the need of supporting the clergy, who were early withdrawn from secular business, was recognized, but the system of tithe was not generally resorted to for several centuries. Once it did become general, tithe was regarded, on the analogy of its use in the Jewish Church, as *de jure divino*, and supported by such passages as Mt 10^{10}, Lk 10^7, 1 Co $9^{7ff.}$—an argument which Selden was the first to show groundless, in his work on the subject. Until the 4th cent. little is heard of it, and some writers regard the matter from a totally different point of view from that which was later adopted. Irenæus, referring to tithes in the Jewish system, says characteristically that Christians, as 'those who have received liberty, set aside all their possessions for the Lord's purposes, bestowing joyfully and freely not the less valuable portions of their property.'[6] Origen

[5] *JE* xii. 151*b*. [6] *Adv. Hær.* IV. xviii. 2.

regards tithes as something to be far exceeded in Christian giving,[1] and Epiphanius says that tithe is no more binding than circumcision.[2] Augustine regards the tithe as something due by Christians to God, though he and others are prompted also by the finer ideal of freedom in all Christian giving. It was inevitable, however, that, as the Church spread far and wide, circumstances should make it necessary to fall back upon rule, based upon legal provision, and the old standard of a tenth was set up, and the Christian priest was compared in this matter to the Jewish priest and Levite. Ambrose and many other Fathers accordingly maintain that tithes should be given, but their views were not generally accepted in the Eastern Church. Even in the West there is evidence that 'this species of ecclesiastical property was acquired not only by degrees, but with considerable opposition.'[3] The moral duty of paying tithe was now generally taught, but, even after it was made a matter of law, tithe was paid reluctantly and irregularly. In A.D. 585 the Council of Mâcon ordained its payment, while priests were to use it in helping the poor and in redeeming captives. He who refused to pay it was to be excommunicated. Other councils enjoined it, but it was not until the time of Charlemagne that it became matter of law. In one of his capitularies he ordained it to be paid to churches and clergy. Preachers had already exhorted strenuously towards its payment as tending to Christian perfection, and doubtless it was now more generally rendered. At the same time it has to be remembered that, apart from ecclesiastical law, under Roman law colonists had to pay a tenth to the State as rent from the *ager publicus*. This had already in large measure fallen into the hands of the Church. While the ecclesiastical tithe was usually paid to the bishop, who apportioned it, Charlemagne's capitulary regulates its division into three parts—for the bishop and clergy, for the poor, and for the support of church fabrics. In later times tithe was often appropriated to particular churches and to monastic foundations. Once the payment of tithe became a matter of legal due, excommunication or temporal penalties were decreed against those who refused to pay it. Meanwhile abuses had risen in connexion with the appropriation of tithe. Sometimes, instead of appropriating it to a church, monastery, or diocesan treasury, a proprietor would appropriate it to his own uses or even sell it. It had also become common for ecclesiastics to grant tithes to laymen as an award for service or in recognition of their protection. These were now regarded as evils, and it was set forth as a legal maxim that all tithes are of ecclesiastical origin. Where they had been appropriated by laymen, they were withheld from the Church only by robbery or by feudal grant (*decimæ infeudatæ*). No layman could possess tithes without risking his salvation. Hence the Third Lateran Council of 1179 forbade detention of tithes by laymen as well as transference of them to other laymen. The Council also declared that any one who violated this decree endangered his soul, and would be deprived of Christian sepulture. As a result of this, many tithes were restored to ecclesiastical use. Towards the 13th cent. tithe was also extended from the fruits of the earth, or predial tithes, to all kinds of profit and wages. It was divided by the canonists into (1) predial—derived from the fruits of the ground; (2) mixed—of things nourished of the soil, or those due partly to its productiveness, partly to human skill and labour; (3) personal—from the profits of trade and merchandise. But generally the second division is included in the first. Ecclesiastical law in the Middle Ages laid down precise rules regarding what was tithable and what was not, those who were exempt, the sale or transference of tithe to laymen (a custom which gradually came into use), the superiority of tithe to State taxes, and the like.

4. English law and practice.—In England legislation on the subject seems to date from the latter part of the 8th century. Pope Adrian in A.D. 785 enjoined payment of tithe on the Anglo-Saxon Church. This was confirmed in later ecclesiastical councils and synods, sometimes by royal orders. The idea that the civil grant of tithe dates from an alleged charter of Ethelwulf (A.D. 855) is now abandoned; and in any case it appears to grant a tenth of the land, not of produce.[1] In King Edgar's reign failure to pay tithe was made legally punishable (A.D. 950). Towards this time the growth of parish churches was attended by their endowment with part of the tithe paid by the landowner, who was usually the founder of the church, to the diocesan or monastic treasury. In course of time, and with the extension of the parochial system, it became a matter of legal presumption that the local tithe was the property of the rector. In many places rectories with their tithes were the property of monastic establishments, a vicar being appointed to perform the duties of the charge. The Reformation brought about great changes, and, where the rectorial tithes belonged to monasteries, at their dissolution the tithes became the property of the crown. They were now frequently granted to lay impropriators, thus being completely dissociated from their original purpose. The rectorial tithe was the 'greater' tithe, and such tithe or part of tithe as was paid to vicars was the 'smaller.' The greater tithes were generally predial; the smaller were mixed and personal. These distinctions were practically wiped out by the Tithe Commutation Act of 1836, although long before that date commutation of tithe paid in kind for a money payment had been general. By the Act of 1836, tithe, with a few exceptions, was now commuted for a fixed rent-charge, based on a seven years' average of the price of corn—wheat, barley, and oats—the amount being that which formed the legal tithe at the date of the Act. With the difference in values since 1836, the result has not been for the benefit of the recipient of tithe. Further legislation has modified details in procedure. The Tithe Act of 1918 amends the Acts, 1836 to 1891, and orders that the sum payable under these Acts in respect of tithe rent-charge on or before 1st Jan. 1926 shall be the sum payable, as ascertained by the septennial average prices under the Corn Returns Act, 1882, in January 1918. Tithe rent-charge is thus fixed up to 1st Jan. 1926, at £109, 3s. 11d. But the Board of Agriculture and Fisheries shall, after 25th Dec. 1925 and in succeeding years, compute in the same manner as for this septennial average the average price of corn for the preceding *fifteen* years. The sum payable as tithe rent-charge after 1st Jan. 1926 shall be ascertained on this fifteen years' computation.

5. Teinds in Scots law.—In Scotland tithes are known as teinds, and are almost entirely predial, including *decimæ mixtæ*, and only in exceptional cases personal. They were divided into parsonage and vicarage teinds, the former being leviable from grain (wheat, oats, and barley), the latter from natural grass or bog-hay, certain vegetables, butter, cheese, calves, lambs, herring, etc. Where an incumbent was appointed by the patron, he

[1] Hallam, ii. 263.

received the whole teind. In other or 'patrimonial' parishes the teind belonged to the bishop, or to a religious house, and the vicar who served the parish received stipend out of the teinds, sometimes a small part of the vicarage teinds. When teinds first began as such in Scotland is not known with certainty, but they are frequently mentioned in charters of the 12th cent., as well as in writs of that period to enforce their payment. Canons of provincial councils in the pre-Reformation period regulate this payment and appropriation. Many abuses arose regarding teinds, and the decrees of the Lateran Council were often ignored. Certain ecclesiastical lands (*i.e.* lands which were the property of monastic orders) were granted freedom from payment of tithe by papal privileges. When such lands were feued to laymen, this exemption also passed to them. In view of the coming Reformation, ecclesiastics frequently made grants to landowners, called titulars, conferring heritable rights to teinds by feu or by long lease. At the Reformation church lands passed into the hands of laymen by grant from the crown or otherwise, but payment of teind still continued, though the stipends of ministers were entirely at the will of proprietors and were of the scantiest amount. In 1537 the General Assembly petitioned the Privy Council to make permanent provision for the maintenance of ministers. The Council thereupon decreed that one-third of all ecclesiastical revenues should be divided between ministers and the crown. On the rent-rolls being made up, this sum was found to amount to over £6000. But, as a result of imperfect returns, remission, and refusal of payments, much less than half of this sum was available. In 1567 Parliament, under the scheme known as the 'assumption of thirds,' ordered that 'the haill thrids of the haill benefices of this realme' be paid now and for all time coming to ministers until 'the Kirk come to the full possession of their patrimonie, quhilk is the teindes.' This third was never paid in full, but the system remained in force until 1633. While Parliament thus recognized the right of the Kirk to teinds—a proprietary right fully enjoyed by the pre-Reformation clergy—that right was nullified, and teinds had been 'evicted from their former owners, diverted from their former use, and acquired and dealt with by the crown and nobles as their own property.'[1] An Act of 1617 appointed a commission authorized to augment stipends out of teinds, and a number of stipends were so treated. In 1627, as a result of Charles I.'s intention to receive surrenders of alienated church lands and teinds, and of the opposition which this roused, a commission was appointed to deal with the subject and to make provision for churches. Submissions were made to the king by those who had benefited by grants of teinds or were interested in them, and as a result he issued his 'decreets-arbitral,' which were confirmed by Act of Parliament in 1633, and commissioners were appointed to deal with the whole matter. Teinds were to be valued at 'the fifth part of the constant rent which each land payeth in stock and teind where the same are valued jointly,' or, if valued apart, the commissioners were to declare their value. Titulars of teinds were to sell them to heritors at nine years' purchase, but only so far as not already devoted locally to the minister of the parish. The valuation thus made fixed the amount of teind for all time coming, and the minister's stipend was to be paid out of the commuted teinds as a permanent endowment, with a further possible augmentation. Stipend thus forms a paramount claim upon teind. These decrees were confirmed by Act of the Scots Parliament in 1633, and still continue to regulate the right to teinds and the payment of stipends of ministers of the Established Church. The whole matter of teinds was vested in commissioners, but was transferred under the Union of 1707 and subsequent Acts to the Lords of Council and Session, acting as a Court of Commission of Teinds. This Court of Teinds deals with all matters regarding teinds, and in particular hears all claims for augmentation of stipend out of the unexhausted or free teinds, where such exist in the possession of the proprietors after payment of stipend. Such claims can be preferred only twenty years after a previous claim has been upheld.[1]

[1] J. M. Duncan, *The Parochial Ecclesiastical Law of Scotland*[3], p. 230.

In valuing teinds under the Act of 1633, the valuation was made either in grain or in money. Where stipend is payable according to value of grain, it is valued according to fiars prices of the county, as determined by a local court who strike the value for the crop and year.

TITHES (Greek).—It is difficult to separate tithes (δεκάτη) and firstfruits (ἀπαρχή), since the tithe is only a special form of firstfruit. Many nations and tribes, if not nearly all, have had the custom of setting apart a portion of their goods for the gods; and when, as was sometimes the case, the king or chief was a sort of god, he took his share by compulsion. It seems to have been a wide-spread belief that some sacrifice was due to the local spirits whenever men broke new ground, built a settlement, or bridged a river; and it was certainly common in very early times to leave a portion of the new land to the possession of the old divinity. Perhaps for the same reason portions of the fruits of the earth were left, or otherwise given to the gods. It is not likely that this portion was always the same fraction of the whole; but the tenth was found to be a convenient fraction early and in many nations, among them the Jews. No doubt the decimal numeration had something to do with this choice.[2] In Greece a few traces are known of the early custom just mentioned—*e.g.*, the sacred groves of Artemis, with game that no men might kill except in a sacred hunt.[3]

The Pelasgians are said by Stephanus to have offered the tithe, which in later days they dedicated at Delphi;[4] and Herodotus[5] tells how the Hyperboreans used to send their annual tithe to Delos. The tithe is not mentioned in Homer; and the earliest records come with the inscriptions, although legendary tithing is spoken of earlier. When Agamemnon conquered Mycenæ, he is said to have dedicated a tenth to the gods.[6] An epic poem, the *Europia*, two lines of which are quoted by Clement of Alexandria,[7] mentions the dedication of tithes at Delphi. The Liparians, on conquering the Etruscans, dedicated a tithe of the spoils at Delphi.[8] After the Persian invasion the Greeks took an oath to tithe all those cities which

had sided with the enemy.[1] Tithes of that great struggle are also mentioned as being upon the Athenian Acropolis.[2] A helmet exists that was part of a war-tithe, dedicated by Hiero probably from the spoils of Cumæ.[3] Tithes of spoils are recorded also from the battle of the Eurymedon.[4] Tithe is a certain restoration in the inscription that records how the Cnidians built their *θησαυρός* at Delphi.[5] Statues on the Sacred Way at Branchidæ bear the inscription of tithe.[6] Two colossal figures were purchased with the tithe of Platæa;[7] the Clitorians also dedicated another as a 'tithe from many cities.'[8] A bronze Apollo in the Pythium at Athens belongs to the 4th cent.;[9] and an archaic bronze figure of the 'Apollo' type bears the word 'tithe.'[10] Even the private person speaks with pride of the tithes that he offered to Athene, to the amount of more than half a talent.[11] Most of the dedications of arms and spoils are without the distinctive word; but the war-tithe is recorded from the following places: Apollonia,[12] Athens,[13] Bœotia,[14] Branchidæ,[15] Crete,[16] Mantinea,[17] Megara,[18] Sparta,[19] Thessaly;[20] at Delphi by Athenians,[21] Caphyes,[22] Cnidians,[23] Liparians,[24] Spartans,[25] and Tarentines;[26] at Olympia by Clitorians,[27] Eleans,[28] Messenians,[29] Spartans,[30] Thurians.[31]

Other tithes are mentioned in Anaphe,[32] Arcadia,[33] Argolis,[34] Athens,[35] Bœotia,[36] Calabria,[37] Calymna,[38] Crete,[39] Cyrene,[40] Delos,[41] Delphi, Didymi[42] and Epidaurus[43] in Argolis, Halicarnassus,[44] Ithaca,[45] Megara,[46] Naxos,[47] Pæstum,[48] Paros,[49] Rhodes,[50] Samos,[51] Thera,[52] Siphnos.[53] They are dedicated by men or women, or by groups of persons, to Apollo, Artemis, Athene, Demeter, Heracles, Zeus. The articles tithed are all kinds of produce, corn and the fruits of the earth, hunting, fish, gotten minerals, or the profits of trade and industry. Thus we find the Siphnians tithing the output of their mines,[54] the Corcyreans their fish,[55] the Samian merchants their profits.[56] Before the Persian invasion the farmer offers a tithe of his farm;[57] other early dedications of tithes are made by fullers[58] and shipwrights.[59]

W. H. D. ROUSE.

TLINGIT.—The Tlingit, who occupied the coast of Alaska from Portland Canal to Copper River, were organized into two main phratries and one subsidiary phratral group, and the phratries were subdivided into clans. The character of their country and their manners and customs were almost the same as those of the Haida (*q.v.*), though the northern towns had not adopted the elaborately carved poles so characteristic of the latter, and their potlatches were conducted in a somewhat different manner.

1. **Cosmological beliefs.**—The outlines of Tlingit belief were like those of the Haida and indeed of the other tribes of the North Pacific coast, but in details there were considerable divergences. Like the Haida, they believed that the earth was flat and the sky a solid vault hung above it like an inverted cup and tenanted by various supernatural beings. The stars were supposed to be towns and their light the reflexion of the sea. The sun and moon were also occupied by special beings, and more regard was paid to the sun than by the Haida. Shooting stars were supposed to be live coals thrown down by departed spirits, and the northern lights were those spirits at play. Under the earth was an old woman called Old-woman-under-the-earth, who supported a great post, on which the solid land rested. According to one story, she was the sister of four brothers, who were favourite heroes of Tlingit mythology, and who in early days travelled all over the world killing harmful animals, putting things in order, and establishing customs for future generations. One of these brothers, Kashkatlk, was a powerful shaman who succeeded where his brothers had failed, and was frequently called upon to restore them to life, while another, Hlkayak, was always getting them into trouble by his impetuous and trifling character. He was suspected of an amour with his own sister, and, when his brothers discovered that their suspicions were well founded, they drove him away, and he became the wielder of the thunder. His sister, overcome with shame, went down into the earth at a place where the extinct crater of Mt. Edgecombe now is, near Sitka, and became Old-woman-under-the-earth. The remaining brothers and their mother were turned into rocks while trying to cross the Stikine River, and they may be seen there at the present day. According to the version of this story told at Wrangell, the sister was also turned into rock at that place and Old-woman-under-the-earth was an entirely different person. Old-woman-under-the-earth liked to receive food and prayers from human beings, and she was especially fond of girls because they made the fires on earth which warmed her. When she did not get enough attention from mankind, she became angry and moved her pole, causing an earthquake. Others said that the earthquake was caused by her anger at some persons who were teasing her, and Veni-

aminoff[1] was told that it was because Raven was angry with mankind and was trying to drive her away in order that the earth might fall into the sea. Though Hlkayak was said to cause thunder, it was more often ascribed, as in the case of the Haida, to a huge bird; the flapping of its wings produced the thunder and the opening of its eyes the lightning; it lived principally on whales, which it carried up into the mountains, and their bones were often found there. Still another story relates that several brothers became wizards in order to rescue their sister from a giant slug which had dragged her up on the side of a steep cliff, and, having learned to fly, afterwards became thunder beings. When a peal of thunder was heard, people shook themselves and jumped into the air, crying, 'Take all my sickness from me.'

2. Supernatural beings.—Except in the general way common to all American tribes, we do not hear much of sky-beings. The 'above-people' of the Haida were said to have been first heard of through the Tlingit, however, and the conception of Tāxēt's house also originated with them, although they did not recognize any special being of that name.

The four brothers have been referred to as the originators of culture and customs, but they by no means supplant Raven, whose personality, functions, and attributes were the same here as on the Queen Charlotte Islands.[2] It is ethnographically important to note that he began his career on the Nass River, and, according to some accounts, returned to its head as his final home.

In connexion with Raven we have the nearest approach to a supreme deity that the Tlingit seem to have possessed, for the heaven-god of the Haida appears to be entirely wanting among them. This personage was called Raven-at-the-head-of-Nass (Nasshakiyehl), and it was from him that Raven obtained the sun, moon, stars, and eulachon to distribute all over the world. Some of the more thoughtful Indians at the present day elevate this being to a position far above that which he occupied aboriginally, but there is no doubt that he always had a real existence. He was called in some stories 'the king of birds,' and Raven was therefore subordinate to him. Up to the present time, however, no account of him has been obtained in the northern Tlingit towns—a fact which may indicate that Tsimshian and Haida influence has been instrumental in creating him.

Although held in considerable regard, killer-whales did not receive a tithe as much attention as among the Haida, nor do they appear to have been associated with points and reefs. Land-otters, however, and the land-otter men (*kushtaka*)—the Tlingit equivalent of the *gagihit*—played a great part in Tlingit mythology and in the rites of shamans, and were viewed with even greater terror. We also find a counterpart of the Haida Property-woman called Tlenahidak, and a counterpart of Master-carpenter. The increased importance of hunting is shown by the conception of Mountain-dweller, who lived far back among the mountains and had a house always abundantly stocked with game. Mountains generally were called upon for a fair wind. Other patron-deities were undoubtedly believed in, but the tendency in this direction does not appear to have been as strong as among the Haida. Another belief peculiar to the Tlingit was in a race of seal-men. When one of these was seen, they poured a bucket of fresh water into the ocean. The grizzly bears and mountain-sheep, which are wanting in the Queen Charlotte Islands, were naturally held in greater regard than there, and, when bears were killed, their skins were hung up and adorned with eagle-down and red paint, being addressed meanwhile with soothing words. If this were not done, it was feared that the bear's relatives would be angry and would kill the hunter. Favourite among Tlingit myths was that of a hunter named Kats, who was captured by a female grizzly bear that killed her bear-husband in order to marry him. His children by her were a famous race of bears known as 'Kats's children.' They destroyed many people and committed great depredations, but were at last killed, and in later times figures of them served as heraldic crests in many of the most prominent families. There were also special tabus regarding mountain-sheep and the handling of their skins.

People obtained good luck by grasping at the sun's disk and pretending to put it upon anything that they desired to be lucky. Like the Haida, the Tlingit gave food to any thing or any being that they wished to help them, and called to it, mentioning their wants. Everything was believed to have a spirit connected with it—there was one in every trail that a person followed and in everything that he did.

3. The dead.—The regions of the dead are said to have been three—one below and two above the plane of earth. The first was the country of the killer-whales, and was for those who had been drowned, and the third, or highest, was for those who had died by violence, corresponding to the Tāxēt's house of the Haida. The approach to this place was through a hole reached by a single log, and this was guarded by a person who admitted only such as had perished in the prescribed manner. The trail thither was infested by grizzly bears and other animals. All other persons passed after death to the lower sky-country Sagi-kawu-ani ('souls' home'), which corresponded closely to the Giettlgai of the Haida. The person who was to go thither found himself on a trail, and, following it, came to a fork. One of the two paths had been much trodden upon, while the other was very faint. The former came out on the bank of a river, beyond which were the houses of the departed, but, however loudly the new-comer shouted to the other souls to carry him across, they paid no attention until by chance he yawned, when they exclaimed that a soul had arrived, ferried him over, and gave him food. This river was said to be formed by the tears which women shed over the departed, and therefore it was not good to weep much until one's friend had crossed the river. A story recorded by Krause[1] adds the important fact that only the souls of those who had friends among the spirits got to the other side, the remainder being forced to wander about miserably, and also that the river itself was as green and bitter as gall. The souls were dependent for their food on what their friends put into the fire for them, and all had to do their own work except those for whom slaves had been killed. Cremation, which was well-nigh universal among the Tlingit, was accounted for by the belief that only those whose bodies were burned could go near the fire in the spirit-world, the others being forced to shiver near the doors of the houses. According to Veniaminoff,[2] the path of those whose friends wept much was muddy and watery, but for those whose friends wept less it was smooth and even. A world for wicked persons was sometimes spoken of, called Yehlkiwakawo ('Raven's home'), and would seem to be in the place where Raven lived, but it is possible that the belief was due to missionary influence.

4. Rebirth.—As among the Haida, belief in rebirth was general—so much so that it is said

[1] *Ap.* A. Krause, *Die Tlinkit-Indianer*, p. 268 *f.*
[2] See *ERE* vi. 473.

[1] P. 280. [2] *Ap.* Krause, p. 282.

that a poor person would wish to die in hope of being reborn in a higher position in life. If a pregnant woman dreamed of some dead relative, it was believed that her child would contain his soul, and in consequence the child was given the relative's name. A belief in four rebirths followed by annihilation has also been recorded, but this was perhaps a distorted rendering of the Haida idea of reincarnation.[1]

5. Shamanism.—Shamanism reached its highest development among the Tlingit, and nowhere on the coast were shamans of such exalted social rank, so well thought of, or so powerful. When performing, the Tlingit shaman was dressed much like his Haida counterpart, but he also assumed a wooden mask, and, besides being possessed by one principal spirit, he was, if not possessed, at least accompanied, by several subordinate ones. The latter were represented on the masks by small figures round the eyes, jaws, ears, etc., of the principal figure, and were supposed to strengthen the corresponding features of the shaman. Still other spirits had charge of his rattle. With each of the masks went a certain number of songs. One of the most popular spirits was the wood-worm, which enabled the shaman's mind to pierce through anything just as the wood-worm cuts through wood. In addition to his other neck ornaments, the shaman sometimes had a bird's head tied in front. He had an assistant, who took charge of his paraphernalia, beat time for him, and told the other people what to do. This assistant was generally the man who was to succeed to his office. According to Veniaminoff,[2] the successor was a son or sister's son, but for a son to succeed to his father's position seems to have been the exception. The right to certain spirits might be inherited, and in saying that this seldom happened Krause has gone decidedly too far.[3]

Not infrequently the spirit came to a novitiate shaman on the death of his predecessor, but often he was compelled to stay as long as two weeks in the mountains and woods before it showed itself. When it finally made its appearance, it usually sent him the land-otter, the tongue of which he wrenched out, catching the blood on a little bundle of sticks. Krause[4] says that the shaman killed this land-otter by exclaiming 'Oh!' four times very loudly, each time in a different tone of voice. He also notes that none of the sticks in his bundle were retained except those on which the blood had fallen. As the shaman drew out the tongue, he exclaimed, 'May I be skilful in my new calling,' 'May I be able to charm and dance well,' etc. The tongue was afterwards concealed in the bundle, which was then kept in an out-of-the-way place, for, if an uninitiated person were to come upon it, he would lose his reason. The skin he removed carefully and preserved as a visible mark of his calling, but he buried the flesh in the earth. The part played by land-otters in shamanism and in mythology generally inspired the Tlingit with such respect and dread that, before the coming of the Russians, they would not shoot one of them.

If a person could not otherwise succeed in becoming a shaman, he might go at night to the grave of some dead shaman and take from the body a tooth or the end of one of the little fingers, and place it in his mouth. A shaman who did not observe certain regulations carefully might be killed by his own spirits, and, on the other hand, he could throw them into one who did not believe in him and destroy him.

The great exhibitions or performances of the shamans were undertaken only during the new or full moon. Shamans then called upon their spirits to bring good fortune and health to their town and people. From the morning of the day before that appointed until the following morning none of the relatives of the shaman who were to assist him might eat or drink. They cleansed themselves internally by drinking water and introducing a feather into the throat to bring on vomiting. At sunset all entered the appointed house, which had been thoroughly cleansed and provided with new floor-planks. Then the shaman came out from behind a screen and began to run round the fire, his friends singing all the time, until the spirit came to him.

Veniaminoff[1] divides the spirits that spoke through shamans into spirits from above, land-spirits, and water-spirits. The first were the souls from the above-country already referred to. The land-spirits appeared in the form of land-animals, but were said to be the spirits of those who had died a natural death and who had their dwellings in the distant north. The water-spirits appeared in the forms of sea-animals, and were in fact the spirits of those animals. According to Krause,[2] every Tlingit, whether shaman or not, had his own protecting spirit, but this belief does not seem to have assumed the importance which it bears among the inland Indians.

6. Witchcraft.—As shamanism had reached its highest development with the Tlingit, so also had witchcraft, which might almost be described as a diseased shamanism. A wizard accomplished his object by obtaining some portion of the person or clothing of the victim and laying it by an unburned body, among the ashes of a burned body, or on the body of a dog. When a person was suspected of being a wizard, his hands were bound behind his back and he was imprisoned in an empty hut without food and with nothing to drink but sea-water. There he was kept until he confessed, lost his reason, or died, unless his friends were powerful enough to liberate him. The person who confessed to having bewitched any one was forced to wade out into the sea with the medicine or compound which had caused the illness and to scatter it upon the water, accompanying his actions with certain formulæ. Instead of being imprisoned, a suspected wizard was sometimes bound hand and foot and exposed on the beach for the rising tide to cover him. Sometimes he was dealt with in a still more summary manner. Among other accomplishments, wizards and witches were universally believed to possess the power of flight.

7. Charms, etc.—The principal families and many in humbler circumstances kept charms to bring wealth and good fortune. They believed in all sorts of signs, which they extracted from, or rather read into, natural phenomena, and they thought that natural phenomena would be affected by the breaking of this or that tabu. After a person had died, his body was carried through a temporary hole in the side of the house, and a dog, dead or alive, was thrown out after it, either that the spirits might follow it out of the house or that the dead man might be protected in his journey to the spirit world.

LITERATURE.—The monumental work of A. Krause, *Die Tlinkit-Indianer*, Jena, 1885, is the authority on the subject. Most of the important mythological material contained in I. Veniaminoff and other early writers has been gathered into it. See also J. R. Swanton, 'Social Condition, Beliefs, and Linguistic Relationship of the Tlingit Indians,' in *26 RBEW* [1908], p. 391 ff., and 'Tlingit Myths and Texts,' *Bull. 39 BE* [1909]; F. Boas, report v. 'On the North-Western Tribes of Canada,' in *Report of the British Association for the Advancement of Science*, 1889, p. 801 ff. JOHN R. SWANTON.

TODAS.—The Todas are a small community, about 700 in number, living on the undulating plateau, about 7000 ft. above sea-level, of the Nilgiri hills in Southern India. They are a purely pastoral people who eschew all other occupations. They are provided with the products of agriculture by the Badagas, a Canarese tribe who also live on the plateau, while the Kotas, allied to the jungle peoples of Southern India, furnish their metal-work and pottery. Except for these commercial relations, the Todas form a wholly separate community and have few other relations with the Badagas or Kotas. With the Kurumbas, a jungle tribe living on the slopes of the Nilgiris, the Todas have even less frequent relations, and these arise chiefly out of the Toda belief that the Kurumbas are sorcerers.

1. Social organization.—The people are divided into two sections called the Tartharol and the Teivaliol, each of which is strictly endogamous, though irregular unions are allowed between men and women of the two. Each section is divided into a number of exogamous clans. Each clan owns a number of villages, or *mad* (commonly called *mand*), and takes its name from the *etudmad*, or chief of these villages. The villages are small settlements, sometimes consisting of only one or two houses with a dairy and buffalo-pen. They are scattered over the hills, but most of the villages of a clan are near one another. Each clan is divided into two divisions called *kudr*, 'horn,' which should properly be, and usually are, only two in number. These divisions are of importance only in ceremonial. Another division of the clan is the *polm*, by which the sharing of communal expenses, such as those incurred in the repair or rebuilding of the chief dairies of the clan, is regulated. The Todas recognize the existence of the family, or *kudupel*, as a social unit, and this often corresponds with the *polm*. One clan, the Melgarsol, has an exceptional position in that, though belonging to the Tartharol, it shares many duties and privileges with the Teivaliol.

Descent is always patrilineal. A man belongs to the clan of his father. The effect of fatherhood is not determined by marriage, however, but by a ceremony of giving a bow and arrow which takes place at the seventh month of pregnancy. This ceremony is not performed at every pregnancy, but a person is regarded as the child of the man who was the last to perform this ceremony with his or her mother.

The Todas practise polyandry, nearly always of the fraternal type.[1] Formerly this practice was possible in a pure form owing to the existence of female infanticide. Though girls are probably sometimes killed at birth, the practice is now less frequent. There is still a considerable excess of men, but polyandry is often combined with polygyny, producing a state which may be regarded as a variety of group marriage.[2] In addition to orthodox marriage there is a regular system of unions in which a woman has connubial relations with one or more men called *mokhthodvaiol*. This kind of union may take place between a Tarthar man and a Teivali woman or *vice versa*, thus differing from marriage proper, which is confined to members of one section. The orthodox marriage is between cross-cousins, and this institution is reflected in the nomenclature of relationship which in several respects resembles that of the Tamils. The cross-cousin is classified with the spouse, the mother's brother with the father-in-law, and the father's sister with the mother-in-law. Betrothal in infancy is customary, and this practice is probably responsible for a custom of transferring wives from one man to another which has now become very frequent. The custom seems to have been originally one by means of which a widower could obtain a wife in a community where, through the practice of infant betrothal, every woman is already bespoken, but it has now become a process set in action whenever one man desires the wife of another.

The people are governed by a council of five called the *naim*, one of the members of which should properly be a Badaga. This council is chiefly engaged in settling disputes arising out of the transference of wives. It is also the business of the *naim* to arrange when ceremonies shall be performed, especially those of the more important dairies. There is a headman called *monegar*, but he is chiefly concerned with the payment of the assessment to the Government, and the institution is almost certainly recent. On the other hand, the headship of the clan is certainly an old institution. Its functions are not especially important, and this also holds good of the headship of the *kudr* and *polm*.

2. Religion.—The Todas believe in certain superior beings who may be regarded as gods, and speak of them as 1600 or 1800 in number, but these are the customary Toda expressions for an indefinitely large number. The two most important are On and Teikirzi. On is a male deity who presides over Amnodr, the world of the dead. He is believed to have created the Todas and their buffaloes and to have been himself a dairyman. More important in the minds of the people is Teikirzi, a female deity, who is believed to have lived on the Nilgiris and ruled the people. Most of the Toda social and ceremonial laws are ascribed to her ordinance. These two deities are not especially connected with hills, but nearly all the others seem to be hill-deities, each being associated with a special hill-top. Two are river-gods, associated with the two chief rivers of the district.

The ritual of the Toda religion is concerned almost exclusively with the buffaloes and the treatment of their milk. The dairies are the temples; the dairymen are the priests; and various incidents in the lives of the buffaloes, such as their movements from one grazing ground to another, the first milking, and the giving of salt, have become the occasion of ceremonial which has a religious character. This ritual stands in a definite relation to the gods, for these beings are mentioned in the formulas of the dairy ritual, the general character of which indicates that they must be regarded as prayers. The names used for the deities in these prayers differ from those used in ordinary speech, and form part of a series of expressions called *kwarzam*, in which special names of deities, buffaloes, dairy utensils, and other objects are uttered, preceded by the word *idith*, said to mean 'for the sake of.' The dairies and the buffalo-herds form a somewhat complicated organization, especially among the Tartharol. Every village has a number of buffaloes devoid of any element of sanctity, and their milk is churned in a dairy, also devoid of sanctity, with no special ritual. Most of the buffaloes, however, belong to herds with special names with varying degrees of sanctity, and in correspondence with these there are great differences in the elaborateness of the ritual with which the milk is treated and in the ceremonial regulations of the lives of the dairy-priests. This complicated system is confined to the buffaloes of the Tartharol, the Teivaliol having only one variety of sacred buffalo, but the most sacred kinds of dairy of the Tartharol must be tended either by Teivali men or by men of the Melgars clan, which occupies an intermediate position between the two main sections.

[1] *ERE* viii. 427. [2] *Ib.*

The lowest grade of Tarthar dairy is called *tarvali*. Its ritual is comparatively simple and is confined to the evening milking and churning. When the dairyman enters the dairy, he bows down and touches the threshold with his forehead, touches certain dairy vessels ceremonially, lights the lamp, and utters a prayer before beginning to churn. After churning he holds the churning-stick to his forehead, uttering the sacred syllable 'Oṉ.' He also repeats the prayer of the dairy after milking.

The dairy next in order of sanctity differs in the possession of a bell (*mani*). The dairyman is not allowed to put his food on the ground; both curd and milk are put on the bell with the utterance of the sacred syllable; and the chief milk-vessel is beaten three times with the bark of the sacred *tudr* tree (*Meliosma pungens* and *Wightii*), the same syllable being uttered. The dairymen of this grade are allowed to sleep in the ordinary hut only on certain days of the week. Ordinary people are not allowed to drink the milk of buffaloes tended at this dairy.

Certain villages have dairies with special features of ritual, but the next kind of dairy in order of sanctity which occurs in every Tarthar clan, except the Melgarsol, is the *wurguli*, the dairyman of which must be taken either from the Teivaliol or from the Melgars clan. The restrictions on his conduct are more numerous and the ritual of milking and churning is more complex, special features being that he wears his cloak in a particular way, and that the proceedings of both morning and evening have an equally ceremonial character. In many dairies of this rank there are two rooms, the inner of which contains the more sacred dairy vessels. The dairyman, or *wursol*, is allowed to sleep in the village and have intercourse with women only on two nights of the week.

All these dairies are situated at the villages where the people live, though they may be at some distance from the dwelling-houses. The highest kind of dairy, called the *ti*, on the other hand, is situated far from the villages. Each herd has several dairies, all of which are remote from the dwelling-places of the people. The dairyman, called *palol*, must be of the Teivaliol, and his attendant, the *kaltmokh*, must come either from the Teivaliol or from the Melgars clan. The *palol* is not allowed to visit a village or have intercourse with any persons other than dairymen of his own rank, his *kaltmokh*, and men of the Melgars clan who are privileged to visit the *ti* dairy and drink buttermilk. Intercourse with women is entirely forbidden except on one occasion after the *palol* has held office for eighteen years. The ritual of the *ti* is far more complex than that of any village dairy. In this dairy the vessels are more numerous and have special names different from those of the less sacred forms of dairy. The more sacred vessels, viz. those which come directly into contact with the milk of the buffaloes, are always kept in an inner room, together with the bell or bells, and are not allowed to come into contact with the vessels which, being used to contain the products of the churning, are regarded as less sacred. The details of milking and churning are more elaborate and more strictly regulated than in the village dairies, and the prayers are longer and more frequently repeated.

The proceedings when the buffaloes move from one grazing ground to another have a definitely ceremonial character. This is especially elaborate in the case of the *ti* dairies. The more sacred vessels are carried by the *palol*, while the others are taken by the *kaltmokh*, assisted by a man of Melgars, who leads the way. There are elaborate ceremonies of purification of the dairy which is about to be occupied, and a special prayer for the welfare of the buffaloes is offered before going to rest. On the following day there is a ceremony in which the *kaltmokh* takes a leading part. His head and body are rubbed with a mixture of milk and clarified butter, and he is given a ball of a special kind of food larger than he can possibly eat, the remainder of which he has to leave on the spot where the ceremony has taken place. An invocation is uttered that evils of many kinds may afflict the boy, and this is followed by another invocation that these evils may be averted. At some dairies milk and butter are rubbed on certain stones.

Before entering upon office every dairyman undergoes certain ceremonies which may be regarded as a kind of ordination. These increase in complexity with the increasing sanctity of the dairy, but the chief feature common to all is a process of purification by drinking and washing with the water of a stream which is used only for ceremonial purposes. The ceremony is named either after this process or after the act of lighting a lamp, this being the first duty of the newly ordained dairyman. An important part of the ceremony is the use of certain leaves to rub the body and as drinking vessels. The ordinary dairyman uses the leaves of a bramble for this purpose, while the *wursol* and *palol* use the leaves and bark of the sacred *tudr* tree. Another feature is the use of the special kind of cloth which is worn by the *palol*. A fragment only is used by the lower grades, while the *wursol* and *palol* assume a complete garment of this material. The village dairyman of the lower grades touches the various vessels of the dairy, beginning with the less sacred, as the final stage of his ordination, while the *wursol* and the dairymen of certain other villages touch a buried vessel, called *mu*, specially disinterred for the occasion. The ordination of the *palol* is preceded by a qualifying ceremony in which after certain purifying rites the candidate in a state of nudity receives food from an old woman. Though the woman must be past the age of child-bearing, the original object of the rite is probably to test whether the candidates are likely to submit successfully to the abstinence which is incumbent upon the holder of the office of *palol*. In the ordination ceremony proper of the *ti* dairy the rites of purification last for a whole week, and in the later stages of the ceremonial the candidate drinks water from the sacred *tudr* leaves three, seven, and nine times seven times. The *palol* touches a bar of the opening into the pen in which the sacred buffaloes are enclosed at night as the final act with which he enters into office.

An important ceremony of another kind is named after the buttermilk, called *pep*, which is put into the milking-vessel before milking is commenced. A vessel called *mu* is kept buried in the buffalo-pen of the chief village of each clan, and, if this has been tampered with, or if a dairy has been defiled or the bell of the dairy has been taken to a funeral, a new vessel has to be procured and consecrated, the ceremony, however, being called the consecration of the buttermilk. The chief feature of the ceremony is the sanctification of the new vessel with the earth of a buffalo-pen taken from the footprints of one of the buffaloes.

Another ceremony is performed about the fifteenth day after the birth of a calf to one of the sacred buffaloes, and still another when salt is given to the buffaloes. There seems to be little doubt that the great ritual development of the business of the dairy is connected with a belief in the sanctity of the milk of the sacred buffaloes. At the present time the buffaloes themselves are not regarded with any special veneration, and it would seem as if this had been transferred to certain cattle-bells called *mani*, so old that their tongues have been lost, and to the vessels which come directly into contact with the milk of the buffaloes, while another specially sacred object is the vessel, called *mu*, which is buried in the buffalo-pen of the chief village of each clan (see above).

3. Sacrifice and offerings.—An important ceremony is one in which a male buffalo-calf is killed and its flesh eaten, this being the only occasion on which a Toda should eat the flesh of a buffalo. At the *ti* dairy the ceremony, which may be regarded as sacrificial, takes place three times a year; at the other dairies it should probably be annual, but now takes place more frequently. After a prayer in which the calf is asked to appear to certain deities, and after it has been stroked with leaves of *tudr*, the animal is killed by being struck with a log of the *tudr* tree, the bark and leaves of which are prominent in the dairy ritual. The right fore-limb is of especial importance, being placed near the middle of the fire at which the flesh is roasted and eaten together with the pelvis, feet, and head by the dairyman.

There is an annual ceremony in which a fire is lighted by the *palol* at the foot of certain hills, the summits of which are believed to be occupied by gods. Clauses are added to the ordinary prayer asking that fruit may ripen and honey abound.

The ceremonies which have been described are performed regularly, and their occasions arise chiefly out of the necessary events of the pastoral life, the last described standing alone in its reference to vegetation and means of subsistence other than those provided by the buffaloes. The cere-

monies now to be described are more occasional and depend on the commission of some act which has offended the gods and thus brought illness or some other misfortune upon the offender. In these cases the central feature of the ceremony is an offering to the gods of either a buffalo or a buffalo-calf, a piece of the cloth worn by the more sacred dairymen, or a ring.

The simplest kind of offering, often made when some mistake has occurred inadvertently in a ceremony, is to undertake not to kill or part with a buffalo, but allow it to die a natural death. In this case there is little ceremony, the donor simply stating that he is giving the buffalo to the gods while he salutes an elder. A more ceremonial offering of a buffalo-calf is made if a misfortune is ascribed to some serious offence against the dairy, such as stealing milk or its products, quarrelling in the dairy, or going to it in an impure state. In this case the calf is given by the offender to the people of the other *kudr* of his clan. All members of the *kudr* of the offender have to leave the village for a month, at the end of which, after purification with fasting, the calf is driven across certain ceremonial stones to be received by members of the other *kudr*. For minor offences a piece of cloth or a ring is offered with similar rites, the offering passing in every case from the *kudr* of the offender to the people of the other *kudr* of the clan. In all cases prayers are offered, which include in some cases supplications for the health of the people and their buffaloes.

4. Divination.—The offerings just described are made as the result of the finding of diviners called *teuol*, or god-men. The decisions are given when the *teuol* are in a state of frenzy and in a language which is said to be Malayalam. It is believed that they are the utterances of some of the gods. The diviners are often consulted at funerals, usually to discover the cause of death or illness either of men or of buffaloes, or the cause of any harm which has happened to a dairy or its contents. In the case of illness they usually find either that the patient has committed some offence against the dairy or that he is the victim of the sorcery of the Kurumbas.

5. Birth and childhood ceremonies.—Two ceremonies are performed during pregnancy; in the first the wrists of the woman are burnt while she is undergoing seclusion, while the second ceremony is that already mentioned in which the presentation of a bow and arrow determines the fatherhood of the child. Various ceremonies occur at the end of a period of seclusion which follows childbirth. Until a child is three months old no one but the mother is allowed to see its face, and at that age a ceremony is performed in which the face is uncovered and the child is allowed to look at the sun. Ceremonies are also performed when the name is given, when the ears are pierced, and when a lock of hair is cut, the last ceremony only taking place on the day after the second funeral (see below) of a Tarthar man.

6. Death.—The funeral ceremonies are very elaborate and take place on two different occasions often separated by many months. At the first ceremony the body is cremated on a pyre, the orthodox position being face downwards. Several rites are performed before cremation, among them being one in which a cloth is given by a near relative of the deceased to men who have married into the family, the cloth being then placed on the corpse by the wives of these men. In the case of a man the cremation is preceded by a ceremony in which earth is thrown three times into a buffalo-pen by the Teivali dairyman at a Tarthar funeral and by the relatives if the dead man is one of the Teivaliol. In most Tarthar clans the body is placed before cremation in a special three-roomed dairy. Buffaloes are killed, varying in number in different clans. In each case the right hand of the dead man is made to clasp one of the horns, and lamentations are uttered in which each person addresses the dead buffalo by the same term of relationship as he would use to the deceased. Immediately before the body is burned, it is swung three times over the fire upon a representation of a bier. When the body is consumed, a piece of the skull is recovered from the ashes and kept, wrapped with some of the hair in a cloak, for the second funeral ceremony. In the interval these relics are kept in a special village, where they are saluted by any Todas who visit the place. Formerly the body was smoke-dried, after it had been eviscerated, if the cremation ceremony was delayed.

At the second funeral ceremony the earth-throwing rite is repeated. At a Tarthar funeral a ceremony is performed in which the relics are sprinkled with the blood of a buffalo mixed with the bark of the *tudr* tree. This is done by a Teivali man, wearing the cloak in which the remains have been wrapped, after which he touches the remains with a bow and arrow. Buffaloes are killed, as at the first ceremony, and the men dance with a tall pole obtained from Malabar. During the following night the final ceremony takes place, in which the relics together with a number of other objects are burned within a stone-circle. The ashes are interred at an opening in the circle, and the grave is covered with a stone. A bell is then rung and a new pot broken on the stone, after which all go away without turning back to look at the resting-place of the ashes.

The dead are believed to go to a place called Amnodr in the west and below the earth. The god Ön presides over this world of the dead, where the people live much the same kind of life as on earth. The dead travel to Amnodr by a definite route, which differs in some respects for Tartharol and Teivaliol. In each case the dead perform acts on the way by which they lose their love of the earth and regain the vigour of health. They have also to cross a bridge of thread, running the risk of falling into a river full of leeches. Those Todas who have offended against the dairy or have been selfish and jealous are thus delayed in their journey to Amnodr. One of the Tarthar clans, that of Taradr, has an Amnodr, distinct from the rest, at Perithi in the Wainad, where there are still some Toda settlements.

7. Sacred days and numbers.—Many Toda ceremonies must be performed on definite days of the week, and this is probably connected with an institution in which each clan has one or more days on which a large number of activities are forbidden. Thus, on the *madnol*, or village day, neither dairymen nor women are allowed to leave the village, and nothing may be sold or taken away. There are various restrictions on conduct, and funeral and other ceremonies may not be held. Among the Tartharol there are similar restrictions on days sacred to each kind of dairy, so that in a village which has dairies of several different kinds few days of the week are left for the performance of the ordinary activities of life.

Sacred numbers are very prominent in the ritual, three and seven being the most important. Many ritual acts are performed three times, a threefold rite being usually associated in the dairy ceremonial with the utterance of the sacred syllable 'Oñ.' This number is also prominent in the funeral rites, especially in connexion with the ceremonial throwing of earth and the swinging of the body over the pyre before it is burned. The sevenfold performance of ceremonial acts only occurs in the

dairy ritual and is especially prominent in the ordination ceremonies. Several of the most ancient lamps of the dairy are said to have had seven cavities or seven wicks.

8. Sorcery.—Two kinds of sorcery are practised, in one of which an incantation is uttered over some hair, preferably that of the person it is designed to injure. This is then hidden in the thatch of the proposed victim's hut. In the other form the sorcerer uses a bone or lime, which is then buried near the village of the proposed victim. In each case the incantation resembles the ordinary form of prayer, but with less explicit reference to the gods. It consists mainly of an enumeration of the misfortunes which it is hoped may fall upon the victim. The trouble is removed or averted by a corresponding formula as the result of negotiations with the sorcerer to whom the misfortune has been ascribed by one of the diviners.

There are many points of similarity between the ceremonial of the Todas and that of the Hindus, the sanctity of the milk-providing animal being an important feature common to both. There is reason to believe that the two main sections of the Todas differ in origin, and it is probable that the Teivaliol represent the earlier settlers and that they mixed with an indigenous people who practised interment of the dead preceded by some kind of mummification. The Tartharol seem to be later comers, who either brought the practice of cremation or accentuated its importance. The complexity of the dairy ritual is probably due to their influence, and they seem to have adopted the practice, so frequent in India, of employing the earlier settlers as their priests.

A point of especial interest is the relation of the Todas to the stone-circles and other megalithic structures on the Nilgiri hills. The people at present take little interest in these monuments, and this is intelligible if they were erected by the older stratum of the population represented by the Teivaliol, whose beliefs have been put into the background by the greater influence of the purely pastoral Tartharol. Stones of various kinds enter into the ritual of the dairy. The burial of the ashes at the entrance to a stone-circle at the end of the second funeral and the ritual throwing of earth into the buffalo-pen at both funeral rites suggest that the body was once interred in a buffalo-pen, and this is perhaps confirmed by the burial of the dairy-vessel called *mu* in a pen and by the sanctification of this vessel with earth taken from this spot. These features of ritual point to the circular pens as part of the culture of the older people, and in this connexion it is noteworthy that the most ancient dairies are circular and afford characteristic examples of the round house with conical roof. It may also be noted that these dairies are surrounded by stone walls, in one case by two such walls.

TOKEN.—In its broadest sense a token is any portable object serving as a sign or proof of authenticity or credit, by which the issuer guarantees that the claim indicated by the token will be satisfied on its presentation in the proper quarter. In numismatics it signifies a coin-like piece of metal or other material representing money of much more than its intrinsic value, for which money the issuer undertakes to redeem the token when presented; it is also loosely applied to tickets admitting to certain privileges, such as the holy communion, or serving instead of letters of recommendation or other forms of credential.

1. Antiquity. — Many vague statements have been made as to the use of tokens or *tesseræ* (*symbola, synthemata*) for identifying persons who had been initiated into mysteries, but nothing of the kind has been identified. *Tesseræ* were largely used in Roman times for giving admission to shows or entitling to share in the distribution of grain (*tesseræ frumentariæ*), and some of these bear Christian symbols (one is extant in ivory bearing an anchor, two fishes and AΩ). No Christian *tesseræ hospitalitatis* (memorials of hospitality for which a return might be claimed when they were presented) have been identified as extant. *Tesseræ* were also used as credentials, serving instead of *litteræ commendatitiæ* or *commendatoriæ*.[1] Such *tesseræ* would have been used when persons were sent to confessors in prison to minister to them. *Tesseræ* may also have been used to identify the faithful when they desired admission to religious gatherings. Such use is *a priori* possible and probable, but it is important to remember that nothing of the kind, so far as is known, has survived from antiquity bearing a specially Christian character. Even among pagan *tesseræ*, those relating to religious bodies are rare. A certain number are extant bearing the names of the *magistri* and other dignitaries of the *sodalitates* who made distributions at festivals, such as the *magistri Minervales*; there are also *tesseræ* inscribed 'Sacr(a) Lani(vina) iuven(alia),' which were used at the festival of the college of Iuvenes at Lanuvium.

As regards Byzantine times, a certain number of *tesseræ* of churches, convents, confraternities, and other pious institutions have been described; they may have served, as in the West, for the distribution of alms and also for the control of various payments due to the personnel of churches and religious bodies. Such are, *e.g.*, an anonymous bronze *tessera* with the busts of the Virgin and St. Demetrius, and another with God the Father (inscr. ἅγιος ἅγιος ἅγιος) and a bunch of grapes on the reverse, which, it has been suggested, may have been used for the remuneration of cantors. The pieces used for charitable distributions are inscribed (in Greek) with such texts as 'He that hath pity upon the poor lendeth unto the Lord,' 'Blessed are the merciful, for they shall obtain mercy.'

2. Méreaux of the Roman Catholic Church.—The token, or *jeton de présence*, issued to the clergy in collegiate churches as a record of their presence at mass, at the canonical hours, and at other offices, in order that they might claim the statutory payment for their services, was most commonly known as a *méreau*. The Latin word *merellus* (*merallus, maralus*, etc.) is of uncertain derivation. Other names met with are: *plomb* (*plonc, plommet, plumbus*, etc.), even when made of other metal than lead (*plommez de cuyvre* at Aire in 1527), *enseigne, signum, marque, manuel, pulot* (*pallotus*), *moneta capituli, simbolum*, etc. Many of these terms, signifying merely distribution-token, on the presentation of which a share in funds or privileges could be claimed, were not confined to the tokens of religious bodies, but extended to all kinds of corporations. It is uncertain when *méreaux capitulaires* were first introduced; the mention in a charter of the cathedral church of Tours (1216) of a *distributio nummorum matutinalium* does not necessarily refer to such *méreaux* as distinct from ordinary coins, and the *méreaux* which are mentioned in charters of 1167 and 1173 are passes, or *tesseræ* of identification,

[1] Cf. the phrase of Tertullian, *de Præscript.* xx.: 'dum est illis [*i.e.* ecclesiis] communicatio pacis, et appellatio fraternitatis, et contesseratio hospitalitatis.'

without any special connexion with religion. The earliest undoubted documentary reference to their use in churches seems to date from 1375, when Charles V. granted to the canons of the collegiate church of Langeac (Haute Loire) the right of having struck at the Royal Mint of St. Pourçain *merelli* for distribution to clerks and canons present at offices; they were to be of copper, lead, or tin, and to be carefully distinguished by their types, which are specified, from coin of the realm. None of these seems to have been identified. Next in date comes a reference in 1401. In a clause of his will Charles VI. ruled that the distributor of the Sainte Chapelle 'ne baille les méreaux jusqu'à la fin des heures de Notre Dame.' In a letter of 18th July 1401 he announces his intention of carrying out during his lifetime the new system outlined in his will; no one of the clergy who misbehaved or absented himself was to receive *méreaux*. A 15th cent. statute ordered that on every Saturday all the canons, chaplains, and clerks of the Sainte Chapelle should attend in the pay-room and bring their *méreaux* to show what each had earned. But there are extant church-*méreaux* which by their style must be earlier than the documents referred to, and the substitution of these for the custom of paying in actual money at the time, or for pricking in, or for tallies, may date from early in the 13th century. In 1557 the canons of Mâcon claimed that they had had for 'more than three or four centuries' the right of distribution of leaden *jetons* for the payment of choristers and other priests serving in the church; what foundation their claim possessed is not known. Nearly all the examples known come from France or the Low Countries, where *méreaux* were also used by abbeys, convents, hospitals, infirmaries, parish churches, and confraternities. The popular English term 'abbey token' for what are really reckoning-counters must not be taken to prove the existence of the custom in England; there is no evidence for such use in this country.[1]

Such tokens were cashed from time to time by the receivers of the various funds on which they were issued; sometimes they could be exchanged by the cellarer for victuals; and they often had a modified circulation. As long as this did not extend outside, so as to encroach on the currency of the realm, no objection was raised to any body issuing such *méreaux*. But, when it was the custom, as it was at Saint-Amé (Douai) or at Arras (where *méreaux* were used inscribed 'merellus mandati pauperum'), for the clergy to give away such tokens, entitling to portions of victuals, as alms to the poor, it is easy to see how the circulation might extend outside. In 1577 the Cour des Monnaies had to forbid the use of *méreaux* issued by the chapter of Autun except for distributions to the clergy; they had got into circulation in the town. In the case of certain pieces, especially of places in the Low Countries, it is matter of dispute whether they are really church-*méreaux* or base coins, of which the circulation was enforced by local authorities; such are the lead *deniers* of the Abbesses of Maubeuge, which circulated throughout Hainault until they were forbidden in 1541, the copper *deniers* of Notre Dame de Termonde, the 'yellow-money' of the chapter of Notre Dame de Cambrai. The rare *méreaux* of Carthusian foundations, such as the Certosa at Pavia or St. Mary Magdalen at Louvain, were used not for the remuneration of the clergy, but for alms-giving. A similar subsidiary use of *méreaux* is illustrated by the custom at Lembeke (near Eecloo, E. Flanders), where *méreaux* were used for the distribution of alms under the foundation of G. Kerremans (1717); tokens of the value of two *patards* were given to each of the poor who attended at catechism in preparation for communion, and of one *patard* to children who were zealous in preparation for their first communion.

The metal of which church-*méreaux* are made is usually lead, copper, or brass; the ruder specimens in the baser metal may be cast in moulds, but a large proportion are struck from engraved dies. The slate moulds used for casting the *méreaux* of the parish church of St. Julien at Ath, mentioned in letters-patent of 1478, are still in existence. Non-metallic substances such as leather or paper could also be used, but specimens in such material, if they survive, are very rare; a find made in demolishing a wall of the cathedral of Limoges seems to indicate that *méreaux* of leather were used there.

A few typical inscriptions and types found on *méreaux* may be mentioned. The St. Omer pieces are inscribed 'Mo(neta) Ecc(lesiae) Santi Audomari,' with the arms of the chapter, and 'Presentibus dabitur'; those of St. Martin des Champs read 'Distributio pro beneficiatis.' The series of the Ste. Chapelle dating from after 1448 reads 'Capella Reg(u)alis Palacii Parisiensis.' An ordinance of that year shows that those used for prebendaries and cantor bore a long cross with the crown of thorns on it, those for chaplains and clerks had a royal crown; other kinds then in use were ordered to be withdrawn: such were pieces marked with a cross, lance-head, and nail, representing relics in the chapel. Some series bear the names of the various offices for which they were used, as *matines, prime, tierse, missa, sexte, nonne, vespres, comp(lies)*. Dates do not appear before the 16th century. The value in money which the pieces represent is frequently expressed as 'VI . D . T' ('six deniers tournois'). A series mentioned in the archives of St. Pierre d'Aire (Artois), and described by Rouyer,[1] may be given as typical.

There were (*a*) *plombs des matines* or *deniers Marchant*, worth one *denier Parisis*, distributed daily after matins, and paid from the fund known as *du Marchant*; these occur from 1484 to 1637; (*b*) *plombs de la Croix* or *de la procession du vendredi* and the *plombs Lambert* or *du trésorier*; these represent particular foundations, and were of different values, given to canons, cantor, or other clergy; they are not mentioned after the 17th cent.; (*c*) *plombs obituaires*, i.e. *monetæ anniversariorum*, given to those who assisted at anniversary obituary services; (*d*) *plombs des heures canoniales*, instituted 20th June 1571, distributed to each canon present at the canonical hours; (*e*) *plombs des revêtus*, distributed in the 17th and 18th centuries at the masses said at the high altar to the canons who assisted the celebrant as deacons or sub-deacons; (*f*) *plombs des jours capitulaires*, for ordinary meetings of chapter, from 1571 onwards; (*g*) *plombs des chapitres spirituels*, from 1758, for chapters dealing specially with matters of cult; (*h*) *plombs des vicaires*, poor priests or clerks employed by canons to take their more arduous duties, as early as 1465; (*i*) *plombs de la confrérie de Notre Dame Panetière*, or *plombs du Salve*, from about 1520 down to 1790, for offices of the confraternity.

Some specimens of the *moneta anniversariorum* have survived; one belonging to St. Pierre d'Aire has on the obverse a death's head, on the reverse a bone and a key in saltire between three stars. Another inscribed 'Moneta anniversariorum' has a crowned *A* between two lilies; on the other side 'Requiescant in pace,' the mark of value 'XII.,' and three lilies. Yet another is inscribed 'Obit solenel' and dated 1585; and there is a pair of *méreaux* inscribed 'Orate Deum pro vivis' and 'Orate Deum pro defuntis' respectively.

A subsidiary use of tokens, more or less corresponding to the use as communion passes,[2] has at times prevailed in the Roman Catholic Church. There is a tradition that Cardinal Pole in Queen Mary's time made use of such tokens in order to distinguish those who conformed from those who did not. Communion certificates in the shape of tokens or tickets were given to those going to communion at St. Andrew's, Glasgow, from 1840

[1] See, however, § 6 below.

[1] *Rev. num. fr.* xiv. [1849] 363 ff.

[2] Described in § 3 below.

to 1850. At certain churches in Rome communicants at Easter receive them after they have been present.

3. Tokens of the Reformed Church. — The earliest mention of *méreaux* (*marreaux*, *marrons*, *marcqs*) in the Reformed Church abroad is in the registers of the Geneva Council; on 30th Jan. 1560 Calvin advised their introduction, but there is no evidence that they were actually used at Geneva before 1605. On the other hand, the French Protestants immediately adopted Calvin's suggestion, and there are tokens of the Walloon Church at Amsterdam as early as 1586. These tokens (which in the first Helvetic Confession are called *tesserœ*) were used for quite a different purpose from that of the *méreaux* of the Roman Catholic Church; they were certificates, issued to all persons considered after examination to be satisfactory in regard to religious knowledge and moral character, admitting them to partake of the sacrament of the Lord's Supper. In 1584, *e.g.*, Mme. Duplessis-Mornay and all her household were refused tokens for communion at Montauban because she dressed her hair in the court fashion instead of wearing the Huguenot hood. Extant specimens of these French Reformed Church tokens seem to be not earlier than the 17th cent.; they bear appropriate types, such as a chalice, or a shepherd feeding his flock, and the initials of the names of the churches, and sometimes dates; such inscriptions as 'Ne crains rien, petit troupeau' also occur. Copper *méreaux* with an angel-shepherd, and the inscription 'In unum conducam reliquum Israel, Mich. 2,' or 'Christ est le pain de vie,' of good 17th cent. workmanship, were probably made for Protestants in Paris. Another similar piece reads 'Christ habite en nos cœurs par foy,' and bears a flaming heart transfixed by two arrows.

The first French church to employ this kind of *méreaux* was at Nîmes (before 1562). Except at Sedan and Troyes (where it was introduced in 1564), none of the Reformed churches of the East is known to have used it. It was especially popular in Poitou, no fewer than 45 churches in that district being represented. Such pieces are commonest from 1740 to 1840, and are often very rude, being the handiwork of the elders themselves. The material is usually lead, tin, or a mixture, and they are most commonly cast (five moulds are extant), though some are struck. The French Reformed church at Erlangen in Bavaria began to use *méreaux* in 1689, and the same mould has remained in use down to present times.

In England the books of St. Saviour's Church, Southwark, show that communion tokens were used as early as 1559. It was the custom at Southwark to collect Church dues by 'selling the communion'; thus, in 1596, 2000 tokens were sold at 2½d. each; and a similar practice prevailed at St. Peter Mancroft, Norwich. At Durham and elsewhere in the 17th cent. it was the custom to take Easter reckonings of such people as partook of the holy communion, and account with them and deliver and receive tokens. The names of communicants were written down, and they received tokens which at the time of the administration of the sacrament were demanded again, so that it might be known who had paid their Easter offerings and who had failed to do so. The use of tokens in Presbyterian churches in England was derived from Scotland towards the end of the 17th cent., but the earliest actually bearing a date is of 1724 (Etal). Tokens are known of the Established Church of Scotland, the Independent Presbyterian party, the Reformed Presbyterian Church, or Cameronians, the English Presbyterian Church, the Associate Secession Congregation, the Relief Church, the General Associate Congregation, the United Associate Congregation, the United Presbyterian Church, and the Free Church of Scotland. Printed cards have now, as in Scotland, generally ousted metallic tokens.

But it was in Scotland that the sacramental token was most generally used. By the law of the Church of Scotland, no one was permitted to come to the Lord's Supper unless he or she had been provided with a communion token, which was issued after examination had shown the would-be communicant to be of good character and properly instructed. The tokens were sometimes kept as certificates of character, serving the same purpose as ancient *tesserœ*. The Scottish tokens were at first probably written or stamped cards; such 'tickets' were in use as early as 2nd May 1560 at St. Andrews, and continued often to be used after metal tokens were introduced; the word 'ticket' is frequently used indifferently of either. Written tickets were used as late as 1656. The date of the introduction of metal tokens has not been determined. The use of them has continued in both the Presbyterian Churches and in the Scottish Episcopal Church down to the present day, although in the larger towns they have been almost entirely superseded by printed cards. Recently established denominations, such as the United Free Church and the Free Presbyterian Church, appear to use only the latter. The metallic tokens are most often made of lead, tin, or a mixture, but brass, iron, copper, and even leather (the last only at the Secession congregation at Ceres, 1743) have been employed; the Crown Court Chapel, London, and the Presbyterian Church at Charleston used silver tokens, and for the first Reformed Presbyterian Church of New York they were made of ivory. They are generally cast in stone moulds, but are sometimes struck from dies. The oldest extant dated piece is of 1648, but a dated one of 1588 is recorded (Glasgow). At first they were distinguished merely by the initials of the parish (and this occurs as late as 1866); later came the initials of the minister, with 'M.' prefixed. Incuse numerals sometimes indicate the table to which a communicant was admitted when the number was very large. Religious symbols (heart, burning bush, vine, lily, chalice and bread) appear towards the end of the 17th century. The Covenanters' conventicle tokens bear simple texts, such as 'Holiness to the Lord,' without indication of parish or date; and texts are common from the beginning of the 19th century. The cross, which is common on Episcopalian tokens, also occurs on some of Presbyterian origin. In some large towns we find the burgh arms and the initials of the deans of gild. Views of churches first appear in the 18th century.

From Scotland the Presbyterians naturally carried the usage, not only to England, but to other countries such as Ireland, where the oldest dated token known to have been struck is that of the Old Presbyterian Congregation of Larne, of the year 1700. Stamps and moulds for many of these Irish tokens are illustrated by G. R. and D. Buick.[1]

4. Monnaies des innocens et des fous. — A curious phase of Church life is illustrated by satirical 'coins' issued by the bishops and other dignitaries (including archbishops, cardinals, and even popes) who were elected by the clergy at the ecclesiastical saturnalia known as the *fêtes des innocens* or *fêtes des fous*. Such festivals flourished, according to documentary evidence, from the 13th to the 17th cent., especially at Amiens, but also at other places such as Chartres, Reims, Laon,

[1] See reference under Literature.

Senlis, St. Quentin, Roye, Péronne—chiefly therefore in the north of France, but also as far south as Besançon. These dignitaries issued tokens struck in lead, bearing such inscriptions as 'Joha. Fournier eps. S. Aug. 1560,' 'Moneta nova Adriani Stultorum Pap(e),' 'Moneta epi(scopi) innocen-(tium),' as well as texts such as 'Homo non in solo pane vivi(t),' 'Iudica Domine nocentes me,' 'Stultorum infinitus est numerus.' The types are sometimes saints, as on Jean Fournier's piece just mentioned, which was struck by the Augustinians at Amiens and bears St. Augustine. Rebuses are also in common use. Most of these pieces come from Amiens, and bear dates from 1499 to 1583. The custom of issuing tokens on these occasions also prevailed at Thérouanne, Lille, and perhaps Aire, but in those places no attempt was made at humour, and the types are religious or allegorical.

5. **The boy-bishops.**—The boy-bishops who were elected at certain churches in England on St. Nicholas' Day and held office for a week are also supposed to have issued leaden coins. The extant specimens, which seem all to come from Bury St. Edmunds, all bear a head of St. Nicholas or a mitre and are modelled more or less on the groats and pence of the 15th century. They are usually inscribed with an invocation to St. Nicholas on the obverse; on the other side we find inscriptions such as 'Ave rex gentis,' 'Ave rex gentis Anglor. Mile,' 'Ecce nova facies quia, Ecce reges Angelor(um).' The words 'Ave rex gentis Anglorum miles Regis angelorum' are the beginning of an anthem for the Feast of St. Edmund. The constant association of these pieces with St. Nicholas suggests that they were issued by the boy-bishops. On the other hand, it has been argued that they were used for the same purpose as the *méreaux* or *jetons de présence* described in § 2. It would, it is true, be strange if such a method of distribution were confined in this country to a single chapel (that of the Hospital of St. Nicholas) in St. Edmundsbury; but this argument cuts both ways. Another Bury piece inscribed 'Siglum Gilde Sci. Nicho(lai)' round the bust of the saint on the obverse, and on the reverse 'Congregacio Duoce' round the letters 'S T N,' appears to be connected with the Gild of the Translation of St. Nicholas; but from the published description it may perhaps be a seal and not a token.

6. **Church tokens of the Near East.**—The right of coinage by sacerdotal authorities has always existed in the Levant and is revived in periods of stress. During the Russo-Turkish War the churches and convents and the Jewish communities of Constantinople issued much token-money for small change. After the Peace of San Stefano the Turkish authorities called in from the provinces all the metallic token-money issued in the first half of the 19th cent., but the custom still persists. Silver, copper, and lead were issued for the metallic tokens, but many of these issues took the form of small cardboard tickets of different colours. Typical examples are the silver 'obol of St. Irene' (from Smyrna), the copper of St. George's (from Smyrna), dated 1775, and the cardboard pieces of the churches of Maronia (20, 10, and 5 paras, 1894), of St. George at Apolloniada (Apollonia ad Rhyndacum, 10 and 5 paras), of St. Michael at Goulion near Apollonia (10 and 5 paras, 'legal tender inside the church'), of St. John the Divine at Yeronda (Didyma, 5 paras); while the Sefarite synagogue, the synagogue of Akrida, and other Jewish communities are represented by both copper and cardboard.

G. F. HILL.

TOLERATION.—1. The policy.—The word 'toleration' in its legal, ecclesiastical, and doctrinal application has a peculiarly limited signification. It connotes a refraining from prohibition and persecution. Nevertheless it suggests a latent disapproval, and it usually refers to a condition in which the freedom which it permits is both limited and conditional. Toleration is not equivalent to religious liberty, and it falls far short of religious equality. It assumes the existence of an authority which might have been coercive, but which for reasons of its own is not pushed to extremes. It implies a voluntary inaction, a politic leniency. The motives that induce a policy of toleration are various, such as mere weakness and inability to enforce prohibitory measures, lazy indifference, the desire to secure conciliation by concessions, the wisdom to perceive that 'force is no remedy,' the intellectual breadth and humility that shrink from a claim to infallibility, the charity that endures the objectionable, respect for the right of private judgment.

However lamentable the fact may be, it should not surprise us that greater intolerance has been found in Christian nations than among any other peoples. Polytheism allows of an indefinitely enlarging pantheon. Its theology admits the existence of separate national gods among the various nations. But monotheism not only denies the existence of any such divinities; it regards the homage offered to them as a derogation from the worship due to the true God. Christianity, therefore, as well as the Judaism on which it is based, is necessarily intellectually intolerant. The same idea applies to Muhammadanism, which is always an intolerant religion as regards doctrine, even when it is not actively persecuting alien faiths. Then both Christianity and Muhammadanism claim to be universal religions; they are essentially aggressive; and the positive missionary work which this fact implies easily passes over into overt acts for the repression of idolatry and polytheism, contrary as they are to the genuine Christian temper. Add to this the fact that moral earnestness, at its best mounting to enthusiasm, in extreme cases degenerating into fanaticism, urges the devotees of a missionary religion towards a militancy which the hereditary adherents of non-aggressive religions have less inducement to adopt. When paganism is not tolerant, this is generally due to resentment against those who have attacked it, unless political motives are the real grounds of action. The persecution of Elijah and the adherents of Jahweh by Jezebel was occasioned by the prophet's vehement opposition to the introduction of the rites of the Phœnician Baal into Israel. The persecution of the Jews by Antiochus Epiphanes was due to their refusal to admit Hellenizing practices into their national life.

2. Indian toleration.—It has been asserted that Hinduism is the most tolerant of religions. This may be true as regards others than Hindus, because, being entirely racial and hereditary, it cannot proselytize. Judaism is also racial and hereditary, but not exclusively so, because it can admit proselytes. Hinduism has no opening for such. Accordingly, it must tolerate alien faiths, unless, like Tibetan Buddhism, it forbids immigration. Aśoka, the Constantine of Buddhism in India (3rd cent. B.C.), had monuments of his legislation cut in stone expressing his liberal treatment of religion as follows:

'The king, beloved of the god, honours every form of religious faith, but considers no gift or honour so much as the increase of the substance of religion, whereof this is the root—to reverence one's own faith and never revile that of others.'

The Muhammadan invasion put an end to tolerance in India by introducing cruel persecution of Hinduism with a wholesale destruction of the temples; but this was intermittent, the incursions of Turks, etc., taking the form of raids, from the 11th till the 17th cent., when the Mughal empire was established in Delhi. Akbar, the most famous of the Mughal emperors, aimed at combining all the inhabitants of his religion in his own eclectic theism. He held disputations in his palace every Friday when Brāhmans, Buddhists, and Parsis expounded their views as freely as Muhammadans.

3. Greek toleration.—The toleration of the Greeks for great varieties of religious beliefs may be attributed to their intellectual breadth, but also to the syncretism which admitted a plurality of divinities into its pantheon. Accordingly, as Adam remarks,

'There was comparatively little persecution for religious beliefs in Greek antiquity. Religious institutions and ceremonies were carefully guarded; but in respect of dogma the limits of toleration were very wide. We may infer from a remark of the Platonic Socrates that the Athenians in general cared little what a man believed, so long as he did not attempt to proselytise.'[1]

The Orphic believers, who, as the same authority states, were 'analogous to modern dissenters,' were tolerated since they showed no sign of abstaining from the religious services which the city ordained. The Pythagoreans, on the other hand, were attacked because they used their religious organization for political ends.[2] The death of Socrates appears to have been due mainly to animosity against the philosopher on account of his friendship with proscribed leaders of the aristocratic party. He was seventy years old at the time, and his daring teaching had long been tolerated without any interference on the part of the authorities.

4. Roman toleration.—It was a principle of Roman state policy to allow conquered nations to continue the practice of their indigenous religious rites ('Cujus regio ejus religio'). The old Latin cults were not propagandist, and they admitted of alien rites for alien peoples. Nevertheless difficulties arose, imposing limits on this easy tolerance in several ways: (1) by provincials coming to Italy and even to Rome with a claim to bring their own religions with them; (2) by missionaries of these alien faiths propagating them and by Roman citizens adopting them; (3) by the enforcement of the new state worship of the emperor throughout the empire; (4) by the dread of dangerous magic and the suspicion of immoral and cruel proceedings among the adherents of the foreign cults; (5) by a notion that public calamities might have been caused by neglect of the worship of the old divinities ('atheism'). But there were differences. The Twelve Tables had forbidden the introduction of new gods into Rome. Nevertheless for commercial reasons the Jews had a dispensation granted them to practise their religion in various parts of the empire, including the imperial city. But they were supposed to be confined to their own quarters in each locality—the ghetto. They spread their ideas, however, especially among women of the upper classes — in particular in Rome and Damascus, where it became the fashion to 'Sabbatize.' At first the Christians obtained tolerance on account of their Jewish origin, and it was not till their separation from the Jews became marked that they were interfered with by the authorities; nor was that the case at once even then. The Acts of the Apostles shows us Christians protected by Roman magistrates and police when attacked by Jewish mobs. By the time of Nero, however, in Rome the distinction between the two communities had become evident, and then the Christians were no longer sheltered by the licence for Jews. Christianity was not a *religio licita*. It is true that many unlicensed cults were winked at, in particular the religions of Syria and Egypt—the worship of Mithra, the Dea Mater, Serapis, etc. This was due to their great popularity. Christianity was not popular; it was too stern on the vices of paganism. W. M. Ramsay has shown reason for thinking that the tolerance of the Flavian emperors did not secure the protection of the Christians from local outbreaks. Nevertheless, on the whole, previous to the great Decian persecution the authorities were not disposed to initiate active measures against them. When Pliny wrote to Trajan expressing his perplexity at the Christianity of Bithynia and the consequent desertion of the pagan altars, the emperor replied ordering him (1) not to seek out the Christians, (2) to discourage informers, but (3) to punish convicted persons who had been brought before him for judgment. This rescript has been described by some as a persecuting order and by others as a decree for the easing of the case of the persecuted Christians. In fact it was both. Evidently Trajan was opposed to active persecution and favoured a policy of leniency; but his clear pronouncement requiring the punishment of definitely convicted Christians left no alternative but sentence of death for such people. This was the first formal order to that effect. Previously Christianity was implicitly illegal; henceforth it was to be explicitly illegal. In this respect the rescript was a limitation on the Roman policy of toleration. The persecution which had been carried on with exceptional ferocity at Lyons and Vienne under the gentle Marcus Aurelius was stayed by his worthless son Commodus owing to the intercession of his concubine Marcia, who appears to have been a Christian catechumen. This act of toleration cannot be raised to the level of state policy. It was purely personal in its origin, and it emanated from an unprincipled character.

When the emperor Valerian was captured by the Persians, the persecution which he had instigated was brought to an end by his son Gallienus, who issued a rescript in A.D. 260. It has not been preserved. But Eusebius[1] quotes a letter from this emperor to the bishops of Egypt written in the following year, in which he gives directions in accordance with his rescript. He there states that he has issued an order throughout all the world encouraging all to come out of their religious retreats and ordering that no one may molest them. Eusebius adds that there is another ordinance addressed to other bishops in

[1] J. Adam, *The Religious Teachers of Greece* (*Gifford Lectures*), Edinburgh, 1908, p. 7; cf. J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903.

[2] See Adam, p. 356.

[1] *HE* vii. 13.

which the emperor grants them permission to recover their cemeteries in which they worshipped (*τόποι θρησκευσιμοί*). Gallienus's rescript has been claimed as the first Roman edict of toleration; but Uhlhorn and Harnack have shown that our knowledge of it does not indicate that Christianity was now made a *religio licita*. Two things only are ordered: the Christians are not to be molested; their property is to be restored. Since the churches had registered themselves as burial clubs and mutual benefit societies (*collegia fratrum, collegia tenuiorum*), it was in their social relations and with regard to their possession of property that Gallienus was now protecting their rights. Nevertheless, although Christianity was still illegal, in point of fact, since it was not to be molested, this was a policy of toleration. It cannot be justified on grounds of consistency; but practical politics are often guilty of inconsistency and prove themselves all the more humane for their freedom from legal pedantry. In the line that Gallienus was taking we see the exact opposite to his father's calculating measures of repression, devised with the deliberate, but now hopeless, design of stamping out Christianity. Gallienus's mild policy by no means gave to the Christians the legal rights which could assure them against future persecution. They enjoyed in consequence a whole generation of immunity from attack; but all along this was in a condition of unstable equilibrium, since nothing had been done to settle it on a sound legal basis. We might compare the situation to that of the Stuart 'Indulgences.' Christianity was not yet a *religio licita*.

Legalized toleration did not appear till after the last and greatest persecution. It was then seen in two stages. The first of these was spasmodic, insincere, and illogical, but still definite and effective. Galerius, the fierce instigator of the persecution which bears the name of the senior emperor Diocletian, who had been his reluctant associate in it, seized with death-bed terrors, issued the most extraordinary decree ever conceived by a Roman emperor (April, 311). Galerius first takes credit to himself for endeavouring to bring the Christians back to the ancient laws and discipline of the Romans, and, after a jibe at their divisions, for which he suggests he has supplied a wholesome corrective, he gives orders that his subjects may again be Christians ('ut denuo sint Christiani') and hold their assemblies, 'provided they do nothing contrary to the discipline.' Galerius concludes with the remarkable sentence, 'and for this indulgence the Christians will make the prayers of loyal subjects to their god.'

Toleration was not yet the settled policy of the empire. Where it was practised, it was too much subject to the caprice of the individual ruler. Maxentius at Rome was openly anti-Christian and Maximin Daza elaborated subtle devices for the destruction of Christianity; even later, during part of his period of government, Licinius favoured the pagans to the detriment of the Christians. The final stage was reached in the Edict of Milan. That magnificent Magna Charta of religious liberty issued from a meeting of Constantine with Licinius at Milan towards the end of the year 312, after the defeat of Maxentius. Maximin's evasion of the order of toleration granted by Galerius was the occasion which gave rise to it, but the new edict was much more statesmanlike than its curious predecessor, resting on a broader basis, breathing a nobler spirit, and establishing a surer policy. It was issued throughout the whole empire in the year 313. The Edict of Milan is the work of the great emperor Constantine, who induced his colleague Licinius to join him in it. There can be no doubt that Constantine was thoroughly convinced by the enlightened principles that it contains. His colleague's assent must be ascribed to political necessity, and subsequent events showed that Licinius was by no means loyal to it except under compulsion. Unfortunately the original rescript has been lost, but Licinius's edition of it, sent out a few months later, has been preserved, both the original Latin by Lactantius,[1] and a Greek translation, slightly differing verbally, by Eusebius.[2] The toleration granted is absolute and unconditional. It is expressly applied to the Christians, for whose benefit it clearly shows that it was primarily intended. But it also includes devotees of all other religions. This went far beyond the spirit of the ancient world, and indeed only occasionally and in the teaching of exceptional and rare minds has such toleration reappeared until quite modern times, when it has been seen in Cavour's dictum of 'a free Church in a free State.'

Constantine did not live up to his own principle. No sooner did he adopt Christianity than he began to patronize it, and his patronage soon took the form of interference and control. The Christian emperors were rarely more tolerant than the Church of their day; and, as this Church was stern in the denunciation of heresy and schism, too often the imperial government stepped in to give effect to the ecclesiastical sentence. Sometimes it went farther, the emperor taking sides and enforcing his own will, if for orthodoxy against the heretics, if in favour of heresy, as in the support of Arianism by Constantius and later by Valens, against the Catholics. Later emperors interfered in the Christological controversies with the Nestorians and the Monophysites. The iconoclastic emperors were regarded as persecutors of the Church when they took strong measures to put down image-worship. Therefore, while Christianity is not only tolerated but legalized as the religion of the State, the policy of toleration so brilliantly anticipated by Constantine is now buried out of sight, like an untimely birth. The tables are turned, and paganism, ceasing to persecute, comes to be itself persecuted. First magical rites are prohibited as dangerous to the State and the citizens; then the worship of the old gods is prohibited and their altars and temples are demolished. Theodosius II. is the most conspicuous figure in this anti-pagan crusade. On the other hand, it is to be noted that the Christian emperors never went the lengths in murderous violence to which the persecuting pagan emperors had gone. There was nothing approaching the devastating Decian and Valerian persecutions. On the rare occasions when the death penalty was inflicted this was nearly always for magic and sorcery, not as the suppression of a false doctrine but for the extirpation of a dangerous practice. The persecution of paganism naturally led its champions to preach toleration. Libanius argued for the principle of absolute toleration. The pagan reaction under Julian was based on a profession of tolerance, but the emperor was not entirely true to his profession.[3]

5. Early Christian toleration.—The early Christian Fathers advocated toleration, not merely in self-defence, but on principle. Tertullian was most emphatic in asserting this principle:

'Humani juris et naturalis potestatis est unicuique quod putaverit colere, nec alii obest aut prodest alterius religio. Sed nec religionis est cogere religionem, quae sponte suscipi debeat, non vi: cum et hostiae ab animo libenti expostulentur.'[4]

Lactantius maintained the inherent wickedness of persecution.[5] The bigotry which appeared among the Fathers of the 4th cent. was not allowed to prevail without protest. Athanasius advocated a conciliatory attitude for winning heretics back to the faith. While Augustine denounced heretics and schismatics—especially Pelagians and Donatists—Hilary of Poitiers was a thoroughgoing advocate of toleration. Ambrose condemned the persecution of the Priscillianists, and Martin of Tours denounced it as an atrocious crime because it went so far as killing. The Fathers were slow to sanction the death penalty for heretics; Augustine, while advocating milder measures of persecution, was opposed to this extremity.

6. Mediæval toleration.—During the early part of the Middle Ages persecution was comparatively rare, even in the case of sorcery, which, it was thought, could be counteracted by the more potent

influence of the rites of the Church. But with the rise of the Inquisition in the 13th cent. a greater rigour of ecclesiastical discipline crushed out the spirit of tolerance.

7. Toleration in the Renaissance and the Reformation.—The irreligious and pagan habits that accompanied the Renaissance issued in an easy indifference which favoured an unprincipled tolerance. But the intellectuality and breadth of view that it engendered went farther and gave rise to a reasoned doctrine of toleration. Sir Thomas More, while sanctioning persecution, admitted the abstract excellence of the opposite course. Montaigne's scepticism and liberal idea of life made for tolerance. On higher grounds Erasmus laboured incessantly for the same end, combining inimitable wit with immense learning, exposing the folly as much as the wickedness of ignorant, narrow-minded persecution. The duty of absolute toleration was insisted on by Castellio, a Frenchman, who had been a friend of Calvin when the Reformer was a professor at Basel. Denouncing the execution of Servetus, he argued that, if the end of Christianity be the diffusion of a spirit of beneficence, persecution must be its extreme antithesis, and that, if persecution can be the essential element of a religion, that religion must be a curse to mankind.

Most of the Reformers were not advocates of universal toleration; but Zwingli regarded error as not inherently blameworthy and held that it should be tolerated. He went farther and showed a comprehensive appreciation of human excellency apart from religious differences.

Lælius Socinus was a pronounced advocate of religious liberty, and a clear assertion of the principle is put forth in the Socinian Catechism of Rakow. The German Anabaptists and the Dutch Arminians also advocated this principle.

8. The German settlement. — The Peace of Augsburg (1555) was arranged between the Roman Catholics and the Lutherans; it excluded the Reformed Church, both Zwinglian and Calvinistic, as well as all the minor sects. Further, this arrangement left it to the princes of the several states to decide which of the two permissible types of religion should be adopted and imposed on their subjects. Disagreements between the two parties concerned and the exclusion of the Reformed Churches led to the Thirty Years' War. This was concluded with the Peace of Westphalia (24th Oct. 1648), to which there were three parties —the Roman Catholics, the Lutherans, and the Reformers. It made provision for none of the minor sects. The princes were allowed to pass from one of the three religions to the other and to require their selected religion to be imposed on their subjects to the exclusion of all other religions, or to admit other religions, as they saw fit. This right was called the *jus reformandi*. It implied a limited and optional toleration.

Subsequently two influences arose to widen the conception of religious liberty: (1) pietism, which, as both non-dogmatic and charitable, tended towards universal toleration; and (2) the effect of the school of natural law. Pufendorf maintained that no one could be compelled to embrace a given religion and held it to be a fatal necessity that dissensions should exist within the Church. Christian Thomasius, the typical illuminist, bases the principle of religious liberty on his fundamental conception of law. He distinguishes morality from law, on the ground that law is coercive while morality cannot be coerced. Much more is this the case with religion. The difference between the spheres of the prince and the clergy is that it is the duty of the prince to coerce and the duty of the clergy to teach. The clergy should fight heresy with instruction, not by appealing to the secular arm. While urging these principles in all his works, Thomasius devotes three treatises especially to the exposition of them, viz. the two 'Programmata,' *Programma de tolerantia dissidentium in controversiis religionis* (1693) and *Programma varia testimonia Martini Lutheri de tolerantia dissidentium in religione complectens* (1697), and the more popular work in the vernacular entitled *Das Recht evangelischer Fürsten in theologischen Streitigkeiten* (1696). In these works he maintains that all dissidents are to be tolerated so long as they do not disturb the public peace. Frederick William I. of Prussia used the *jus reformandi* in favour of allowing Roman Catholics to live in his Protestant state, and his son Frederick the Great adopted a policy of toleration for all religions with the cynical idea that, since they arose only from the ignorance of the people, they were equivalent in the region of dogma and to be distinguished only by their greater or less ethical import. Thus, since morality is independent of articles of faith, absolute religious liberty should be conceded. In a rescript of 15th June 1740 he says: 'All religions are equal and good so long as those who profess them are upright people.' There was a temporary reaction under Frederick William II., after which the right of religious liberty spread first through Prussia and then through the other German states, although the territorial state recognition of the three favoured religions remained—a policy of general toleration, but not of religious equality.

9. England and America.—In the 16th cent., under the Tudors, the extreme Puritan party, which had shared with other Protestants in the persecutions of Roman Catholic times, did not obtain religious liberty. But the principle of toleration was maintained by the Baptists and the Congregationalists, although there were some limits to the applications of it. The early Congregationalists would exclude from its privileges both Unitarians and Roman Catholics, the latter as themselves a persecuting party and a danger to Protestant liberty. But John Robinson, a large-minded man of liberal views, drew up a covenant for the Pilgrim Fathers who sailed in the 'Mayflower' and founded New England. The first instrument of this covenant conferred equal civil and religious rights on every member of any commonwealth. A little later the colony of Maryland, founded by a charter from Charles I., granted toleration to Roman Catholics as well as to Protestants. Its first law runs as follows: 'No person professing to believe in Jesus Christ shall be in any way molested or discountenanced for his or her religion, or in the free exercise thereof.'

The Pilgrim Fathers, who had claimed liberty at home, have been blamed for the inconsistency of intolerance in their own colony when they were settled in America. The defence is that the exclusive theocracy that they established implied that they regarded themselves as a Church rather than as a State, and as such would refuse membership to unfit persons in accordance with a fundamental Congregational principle. But they have often been unfairly accused of narrowness through a confusion of two different positions—that of the early settlers in New England who had come from John Robinson's church in Holland and were the real Congregationalist immigrants, and that of the Puritans who settled later in Massachusetts. The latter were Presbyterians who had never adopted the principles of religious freedom. It was not until the separation from England that complete equality in religion was established in the United States.

10. The English problem.—In the 17th cent. neither the bulk of the Presbyterians nor the Episcopal party as a whole had any idea of toleration. Under the early Stuarts Laud and the High Church, having the upper hand, persecuted the Presbyterians. Under the Long Parliament the Presbyterians tried to force the Covenant on the whole nation. Cromwell took a wider view and ordered his 'triers' not to molest Protestant godly men who preached the gospel, whatever their ecclesiastical principles might be, and he gave the Jews a legal footing in England.

At this time the Baptists, the Congregationalists (then known as Independents), and the Quakers maintained the principle of religious liberty—the last-named body basing it on their doctrine of the inner light, which excluded all ecclesiastical and official interference with the individual soul. The protest of the five Independents at the Westminster Assembly (1643), which was mainly Presbyterian

in composition, maintained the right of religious liberty.

Later, on the Presbyterian side, Richard Baxter laboured for large measures of comprehension, and John Goodwin, generally regarded as a Congregationalist, but described by Rufini as 'a Puritan *sui generis*—a rationalist Puritan,' maintained that every religion, sect, or schism should be tolerated so long as there was no attempt to interfere with the security of the State. Milton, claimed by both Presbyterians and Congregationalists, but not wholly committed to either party, in triumphantly vindicating the freedom of the press, pleaded eloquently for religious toleration. In the *Areopagitica* he showed that persecution was both unnecessary for the preservation of truth and a hindrance to the discovery of truth. He would tolerate all Protestants, including Socinians, Arminians, and Anabaptists, but not Roman Catholics. On the Anglican Church side the more liberal-minded writers were in favour of toleration and comprehension. Chillingworth affirms that Protestants are inexcusable if they do violence to the consciences of others. He holds it to be a great sin to force on other people our own interpretations of Scripture, arguing that this was the cause of all the schisms and discords of Christianity. John Hales took a similar line in his tractate *Schism and Schismaticks* (1636). Jeremy Taylor, in his famous *Liberty of Prophesying* (1646), was contending for freedom of speech against the tyranny of the Covenant under the Long Parliament.

The reaction at the Restoration and the passing of the Act of Uniformity (1662), followed by the Conventicle, Five Mile, and Test Acts, narrowed the State Church position and imposed great disabilities on Nonconformists; these were to some extent relieved a little later by James II.'s Indulgences, but at the expense of the rights of Parliament. Legal toleration did not appear till the Revolution. In the Declaration of Breda Charles II. promised to respect tender consciences; but, when well established on the throne, he had not the moral courage to stand to his word.

William III. obtained his invitation to England mainly as the champion of religious liberty. His aim was to bring about an agreement between the Church of England and Protestant Dissenters. While in his own country, he had been profoundly affected by the ideas of the Dutch Arminians. In England his most trusted adviser, Bishop Burnet, had adumbrated the policy which the king afterwards adopted in a *Modest and Free Conference between a Conformist and a Nonconformist* (1663). William first aimed at comprehension in 'A Bill for Uniting their Majesties' Protestant Subjects.' The failure of this measure to pass in the House of Commons necessitated another line of action.

II. The Act of Toleration.—The Act of Toleration, which was passed in the year 1689, gave relief to Nonconformists from their chief disabilities; but it did not grant complete religious liberty; much less did it establish religious equality in the eyes of the law. It exempted Nonconformists from the pains and penalties of the Act of Uniformity, the Conventicle Act, and the Five Mile Act; at the same time it required people who desired to avail themselves of its privileges to take the oaths of allegiance and supremacy and make a statutory declaration against Romish superstitions, and it ordered Nonconformist ministers to subscribe to the Articles of the Church of England with the exception of three—those referring to the traditions of the Church, to the homilies, and to the consecration of bishops and priests, a fourth exception, that of the article on infant baptism, being allowed for Baptist ministers. Further, it enacted that every Nonconformist place of worship should be certified by a bishop, an archdeacon, or a justice of the peace. Quakers were allowed to make a solemn declaration instead of taking the oaths and were required to declare their belief in the Trinity and in the inspiration of the Bible. Neither Roman Catholics nor Unitarians were included in the concessions allowed by this Act, and even orthodox Nonconformity was still illegal, the persecuting laws remaining on the statute-books, and only the exaction of their penalties being forbidden. While this measure was logically inconsistent, it was practically serviceable as far as it went. It secured a considerable amount of toleration.

The same year (1689) saw Locke's first *Letter Concerning Toleration* published anonymously in Holland in Latin. It was translated into English immediately. A second and longer letter, and a third longer still, followed in reply to answering letters. Yet a fourth letter completes the series in Locke's work; this is not finished. The collection has become a literary classic on the subject of toleration. Locke bases his argument on the ground that the rightful sphere of the State is wholly confined to externals and does not extend to religion, which is internal. He holds that not only the doctrines and 'articles of faith,' but also 'the outward form and rites of worship,' are out of the province of the civil magistrate. Such a position goes beyond toleration. Logically it involves disestablishment, because, if the State is not competent to deal with religious matters at all, it follows that it should not patronize or support a favoured religion any more than persecute a religion of which it disapproves. With regard to persecution, Locke holds that it is anti-Christian, since love of our fellow-men is of the essence of Christianity, and it cannot be maintained that persecutors are actuated by love to their victims in the cruelties which they perpetrate. But, while on these principles Locke would tolerate Jews as well as all Protestant sects, his toleration does not extend to Roman Catholics or atheists. With regard to the former, though he does not name them in his argument on the subject, he says:

'That church can have no right to be tolerated by the magistrate, which is constituted upon such a bottom, that all those who enter into it, do thereby, *ipso facto*, deliver themselves up to the protection and service of another prince.'[1]

He would also exclude persons who hold views subversive of society and atheists, who, he considers, are to be included in that category.[2] Thus he regards both these parties as obnoxious to the State and to be excluded from toleration on political grounds, not for their religious views. Locke carries his idea of toleration beyond the political sphere to the ecclesiastical, arguing for liberty of thought within the Churches themselves. He writes:

'What think you of St. Athanasius's Creed? Is the sense of that so obvious and exposed to every one who seeks it; which so many learned men have explained so different ways, and which yet a great many profess they cannot understand? Or is it necessary to your or my salvation, that you or I should believe and pronounce all those damned who do not believe that creed, *i.e.* every proposition in it? which I fear would extend to not a few of the church of England; unless we can think that people believe, *i.e.* assent to the truth of propositions they do not at all understand. If ever you were acquainted with a country parish, you must needs have a strange opinion of them, if you think all the ploughmen and milkmaids at church understood all the propositions in Athanasius's Creed; it is more, truly, than I should be apt to think of any one of them; and yet I cannot hence believe myself authorized to judge or pronounce them all damned; it is too bold an intrenching on the prerogative of the Almighty; to their own Master they stand or fall.'[3]

Under Queen Anne the toleration that had been obtained by the accession of William and Mary was threatened by the Schism Act, which made it illegal under heavy penalties for any one to keep a

[1] *Works*, new ed., London, 1823, vi. 46. [2] *Ib.* p. 47.

private school or teach in a seminary unless he signed a declaration of conformity to the liturgy of the Church of England and obtained a bishop's licence to teach on production of a certificate that he had taken the communion according to the rites of the Church of England during the preceding year. The queen's death stayed the execution of this drastic measure, and it was repealed in the reign of her successor, George I. From this time onwards toleration with regard to religious views and practices was firmly established; but its limitations were still numerous. It was the minimum of concession to those who had previously been the victims of persecution. Active persecution was no longer allowed. But the negative policy of exclusion and prohibition left galling grievances long unrelieved. Toleration is far from religious equality. The very practice of it involves an exalted position of power enjoyed by the people who tolerate as opposed to an inferior position in which the tolerated are living. It is not inconsistent with the monopoly of privileges by the one class and the refusal of them to the other. If those privileges are rights of citizenship, toleration is even possible side by side with serious injustice. The tolerated may be denied political power, the parliamentary and municipal franchise, the opportunity of election as members of Parliament or of corporations, access to public schools, colleges and universities, whether as pupils or as teachers, and a host of other national rights and privileges. So it was that under the Georges, and even throughout much of the 19th cent., Nonconformists, Roman Catholics, Unitarians, Jews, and others suffered from various forms of exclusion. The abolition of the Corporation and Test Acts, Catholic Emancipation, the admission of Jews to Parliament, the permission to dispense with the member's oath extracted in order to meet the case of Mr. Bradlaugh, the throwing open of the universities to Nonconformists, the enlarged foundation of grammar schools, and the extension of popular education generally, irrespective of ecclesiastical distinctions, were all steps beyond mere toleration towards the goal of religious equality—a goal which in several directions its advocates have not yet completely attained.

12. Toleration in France.—The fight for religious liberty which was waged principally in Germany, Switzerland, Holland, and England during the 16th and 17th centuries passed on to France in the 18th century. The Edict of Nantes (1598) had conceded toleration for Protestants; the revocation of that Edict (1685) restored and aggravated persecuting intolerance. Bayle established the intellectual basis of toleration in his *Dictionnaire* and in a work entitled *Commentaire philosophique sur ces paroles de Jésus-Christ: Contrain-les d'entrer*—a refutation of the misuse of a text popular with persecutors from the time of Augustine. He holds it to be immoral to compel men to profess religion in which they do not believe, and also irrational, because it discourages the discovery of truth. No one, he maintains, has a right to claim such complete possession of truth as not to need to compare his ideas with those of other men. Montesquieu, in *De l'Esprit des lois* (1748), argues for religious liberty and exposes the futility of coercion. Rousseau, in his *Contrat social*,[1] affirms the complete liberty of individual beliefs; nevertheless, holding that intolerance is inherent in Christian dogma, he would abolish this and establish a civil profession of faith in truths indispensable to a well-organized social life, including that of the existence of God. But it was Voltaire who by his scathing sarcasm did more than any other man in France during the 18th cent. to put an end to persecution and secure tolerance for the Protestants.

[1] Bk. iv. ch. 8.

The ideas of these champions of religious liberty powerfully moulded the course of the French Revolution in regard to religion and the universal toleration that has since prevailed in France.

13. The present situation.—A policy of toleration now obtains throughout Western Europe, North America, the British, French, and Italian colonies, and India, where it is a safeguard of peace and good order under British rule. It is established in Japan and practically observed throughout the provinces of China. It is also practised generally throughout S. America. Eastern Europe and Western Asia are still excluded from its privileges. The exclusiveness of Tibet is national rather than religious in character. Thus it is apparent that the policy of toleration has been adopted throughout the greater part of the civilized world.

Apart from the liberalizing of legislation, great progress has been made by means of Modernism in Roman Catholic countries and by the general spread of Christian charity, culture, knowledge of history, scientific methods of criticism, and the study of comparative religion, by the softening of manners, by scepticism, and by religious indifference, all tending to cool the ardour of the persecuting spirit and so to establish toleration. The champions of liberty now resent the use of the term as representing a gracious concession on the part of the privileged and claim to go far beyond it in their demand for the abolition of all theological and ecclesiastical privileges and the establishment of absolute religious equality.

Cf. also artt. PERSECUTION.

LITERATURE.—The literature of toleration is immense. A few of the more important works are Tertullian, *ad Scapulam*; Lactantius, *Divinæ Institutiones*; Vincentius, *Epistolæ*, 93, 17; Marsilius of Padua, *Defensor Pacis*, 13th cent.; Faustus Socinus, *Opera*, 2 vols., Irenopolis, 1656; Milton, *Areopagitica*, London, 1644; John Goodwin, *Plea for Liberty of Conscience*, 1644; Locke, *Epistola de Tolerantia*, Gouda, 1689, Eng. tr., London, 1689; P. Bayle, *Commentaire philosophique sur ces paroles de Jésus-Christ: Contrain-les d'entrer*, 2 vols., Cantorbery, 1686, *Supplement du Commentaire*, etc., Hamburg, 1688; S. Pufendorf, *De habitu religionis Christianæ ad vitam civilem*, Bremen, 1687, Eng. tr., London, 1698; C. Thomasius, *Disputatio an haeresis sit crimen*, 1697; Rousseau, *Contrat Social*, Paris, 1762; F. M. de Voltaire, *Traité sur la tolérance*, do. 1763, etc.; J. S. Mill, *On Liberty*, London, 1859; Jules Simon, *La Liberté de conscience*[5], Paris, 1872; J. C. Bluntschli, *Gesch. des Rechtes der religiösen Bekenntnissfreiheit*, Elberfeld, 1867; P. Schaff, *The Progress of Religious Freedom as shewn in the Hist. of Toleration Acts*, New York, 1889; H. Fürstenau, *Das Grundrecht der Religionsfreiheit nach seiner geschichtl. Entwicklung und heutigen Geltung in Deutschland*, Leipzig, 1891; M. Creighton, *Persecution and Tolerance*, London, 1895; Wallace St. John, *The Contest for Liberty of Conscience in England*, Chicago, 1900; L. Dubois, *Bayle et la tolérance*, Paris, 1902; L. W. F. ADENEY.

TOLERATION (Muhammadan). — Muslim toleration may be considered under two distinct aspects, with respect to (i.) the faithful themselves, and (ii.) non-Muslims.

(i.) Within the circle of the Muslim Church the basis for toleration is found in the saying traditionally attributed to Muhammad: '*Ikhtilāfu ummatī raḥmatun*,' 'Difference of opinion in my community is a (manifestation of divine) mercy.' In accordance with this principle, it has been possible for the four schools (*madhhab*) of theologians and legists into which the Sunnīs are divided, viz. Ḥanafī, Mālikī, Shāfi'ī, and Ḥanbalī, to exist side by side, and for each of them to permit difference of opinion even in its own midst. There has been

abundance of controversy between these schools, but instances of open violence have been rare.[1] A similar basis for toleration was found in the traditional saying of the Prophet: 'My community will become divided into 73 sects,' and rendered possible the ample sectarian development in the Muhammadan world. Instances have occurred from time to time of the persecution of one sect by another,[2] but a more characteristic feature of the Muslim Church has been the freedom allowed to the exposition of religious doctrine, and the common sentiment of princes and people has generally condemned intolerance on the part of professed theologians.[3]

(ii.) The recognition of rival religious systems, as possessing a divine revelation, gave to Islām from the outset a theological basis for the toleration of non-Muslims. Judaism and Christianity are represented in the Qur'ān as forms of the primitive faith given to man and taught by a series of prophets from Adam onwards:

'Men were of one religion only; then they disagreed with one another.'[4] 'Mankind was but one people; then God raised up prophets to announce glad tidings and to warn, and He sent down with them the Book with the truth, that it might decide the disputes of men.'[5]

But Jewish and Christian teachers had corrupted the purity of this primitive faith, which Muḥammad as 'the seal of the prophets'[6] came to proclaim anew.

This recognition of a common God is put forward in the Qur'ān as the basis for friendly relations with the followers of rival creeds, in the following verses:

'Say to those who have been given the Book and to the ignorant, Do ye accept Islam? Then, if they accept Islam, are they guided aright; but if they turn away, then thy duty is only preaching.'[7] 'Those who have inherited the Book after them [*i.e.* the Jews and the Christians] are in perplexity of doubt concerning it. For this cause summon thou [them to the faith], and walk uprightly therein as thou hast been bidden, and follow not their desires; and say, In whatsoever Books God hath sent down do I believe; I am commanded to decide justly between you; God is your Lord and our Lord; we have our works and you have your works; between us and you let there be no strife; God will make us all one, and to Him shall we return.'[8] 'Dispute ye not, save in kindliest sort, with the people of the Book; save with such of them as have dealt wrongly [with you], and say ye, "We believe in what has been sent down to us and hath been sent down to you. Our God and your God is one, and to Him are we self-surrendered."'[9]

Muslim theologians have found a sanction for the toleration of religions other than Judaism and Christianity in passages such as the following:

'To every people have We appointed observances which they observe; therefore let them not dispute the matter with thee, but summon them to thy Lord: Verily thou art guided aright: But if they debate with thee, then say: God best knoweth what ye do.'[10] 'If any one of those who join gods with God ask an asylum of thee, grant him an asylum in order that he may hear the word of God; then let him reach his place of safety.'[11] 'They who had joined other gods with God say, "Had He pleased, neither we nor our forefathers had worshipped aught but Him, nor had we, apart from Him, declared anything unlawful." Thus acted they who were before them. Yet is the duty of the apostles other than plain-spoken preaching?'[12]

The clearest injunction of toleration is in the verse, 'Let there be no compulsion in religion,'[13] and forcible conversion is condemned in the words:

'But if thy Lord had pleased, verily all who are in the world would have believed together. Wilt thou then compel men to become believers? No soul can believe but by the permission of God.'[14]

In harmony with the injunctions of the Qur'ān is Muḥammad's letter to the bishops, priests, and monks of Najrān promising them the protection of God and His apostle for their churches, their religious services and monastic institutions, and freedom from disturbance or any interference with their rights, so long as they remained faithful to their obligations.[1] He permitted the Jews in Medīna to practise their own faith, until their implacable hostility led to their expulsion from the city, and he gave instructions to Mu'ādh b. Jabal, whom he sent on a mission to Yaman in 10 A.H., that he was not to compel any Jew to abandon his religion.[2]

The teaching of the Qur'ān and the practice of the Prophet thus served as a clear basis for toleration of the Christian and Jewish faiths. As mention is made of the Sabians in the Qur'ān,[3] they also were considered to have received some divine revelation and therefore to be entitled to toleration; it is possible that the Harranians (*q.v.*) and Mandæans (*q.v.*) claimed to be Sabians in order to enjoy the same toleration.[4] Their practice of heathen rites naturally gave offence to orthodox Muslim feeling, and the khalīfah al-Qāhir (932–934) is said to have consulted the jurist Abū Sa'īd al-Istakhrī as to whether the Sabians should continue to be tolerated or not, and was told that, as they were neither Jews nor Christians, but worshipped the planets, they ought to be exterminated; however, the khalifah allowed the Sabians to buy themselves off and disregarded the decision of this pious theologian.[5] About forty years later his successor, Ṭā'i'li-amrillāh, promulgated a fresh edict of toleration in favour of the Sabians, guaranteeing to them protection for themselves, their wives, and property, and free access to their temples and places of prayer, and the undisturbed performance of the rites of their religion.[6] Their last temple was not destroyed until 1230, and then by the heathen Mongols.[7]

Political expediency, and the desire of the jurists of the 2nd cent. of the Hijra to make the religious law tally with the accepted practice, prompted the extension of a similar toleration to such faiths as were not mentioned in the Qur'ān, but were found to have adherents in the rapidly growing Muhammadan empire; *e.g.*, when Arab rule was extended into Persia, it was averred that Muḥammad had given directions that the Zoroastrians were to be treated exactly like the Ahl al-kitāb ('people of the Book').[8]

The Zoroastrians appear to have been but little disturbed in the exercise of their cult up to the period of the fall of the 'Abbāsid dynasty.[9] There is even an account of a Muhammadan general (in the reign of Mu'taṣim, 833–842) who ordered an *imām* and a *mu'adhdhin* to be flogged because they had destroyed a fire-temple in Sughd and built a mosque in its place.[10] In the 10th cent., three centuries after the conquest of Persia, fire-temples were to be found in almost every province.[11]

Even the Manichæans (*q.v.*), though not entitled to toleration according to Muhammadan law, survived as a separate sect until the end of the 10th cent.; in the reign of Ma'mūn, Yazdānbakht, the leader of the sect, held a public disputation with the Muslim theologians in Baghdād.[12]

The severe condemnation of idolatry in the Qur'ān[13] seems to have made any toleration of idol-worshippers impossible for a Muslim ruler, but already in the reign of Hārūn Muslim law had granted the privilege of paying *jizyah* to idolaters—worshippers of idols, fire, and stones—and thus gave them a place among the tolerated cults.[14] The khalifah 'Uthmān, in dealing with the heathen Berbers, followed the precedent of 'Umar in regard to the Zoroastrians, and allowed them to pay *jizyah*.[15] In India the Brāhmans appear to have paid *jizyah* from the earliest days of Arab domination,[16] and to have been allowed to retain their faith undisturbed, but the building of new temples was held to be illegal.[17] Though during the later Muhammadan conquests there was a considerable destruction of Hindu temples, the settled Muhammadan governments appear often to have respected the state endowments granted by the former Hindu rulers to religious foundations, as was done in the case of the temple of Brahmanābād in the province of Sind, where Muhammadan rule was first established in India. At a much later date, in the 16th cent., the Muhammadan government of Bengal is said to have raised the large sum of £100,000 a year by licensing the worship of Jagannāth in Orissa,[18] and even Ḥaidar 'Alī and Tīpū Sulṭān, usually so notorious for their

intolerance towards their Hindu subjects, made grants of money to the monastery of Śringēri, one of the most famous shrines in S. India.[1] The same tradition survives in present Muhammadan states in India, such as Ḥaidarābād and Bahāwalpūr, which still assign revenues for the support of Hindu temples.[2]

Even in such a barbarous country as Baluchistān the Hindus enjoyed religious toleration in consideration of their payment of *jizyah*. 'They were free from persecution and molestation; in any dispute with the tribesmen they could appeal to their protector or the headman for a fair hearing and a fair settlement; the honour of their women was respected; their religion was tolerated; no one tampered with their customs.'[3]

The non-Muslim living under a Muhammadan government was styled a *dhimmī* (lit. 'one with whom a compact has been made'), and the conditions under which he lived were supposed to be regulated by the agreements made with the Muslim conquerors as they extended their dominion over various cities and districts. As an example of such an agreement, the conditions may be quoted that are said to have been drawn up when Jerusalem came under Muslim rule in A.D. 638:

'In the name of God, the Merciful, the Compassionate! This is the security which 'Umar, the servant of God, the commander of the faithful, grants to the people of Aelia. He grants to all, whether sick or sound, security for their lives, their possessions, their churches and their crosses, and for all that concerns their religion. Their churches shall not be changed into dwelling-places, nor destroyed, neither shall they nor their appurtenances be in any way diminished, nor the crosses of the inhabitants nor aught of their possessions, nor shall any constraint be put upon them in the matter of their faith, nor shall any one of them be harmed.'[4]

The theory was that the *dhimmī*, in return for tribute paid and in consideration of good behaviour, received protection from the Muslim government and immunity for life, property, and religion. Tradition attributed to the Prophet a warning against the disregard of this compact: 'Whoever wrongs one with whom a compact has been made [*i.e.* a *dhimmī*] and lays on him a burden beyond his strength, I shall be his accuser.'[5] 'Whoever torments the *dhimmīs*, torments me.'[6] A similar consideration for them was shown by the khalīfah 'Umar, who in his testament enjoined on his successor: 'I commend to your care the *dhimmīs* of the Apostle of God; see that the agreement with them is kept, and that they be defended against their enemies, and that no burden be laid upon them beyond their strength.'[7] Similarly, 'Alī, when he appointed Muḥammad b. Abī Bakr governor of Egypt in 36 A.H., bade him do justice to the *dhimmīs*.[8] In a like spirit, the Turkish code ordains that the *dhimmīs* are not to be disturbed in the exercise of their religion.[9]

The actual practice appears to have varied according to local conditions and the character of the local government; and by the 2nd cent. of the Hijra, when some codification was made of the law relating to the *dhimmīs*, more harsh and intolerant regulations had come into force than those of earlier times. But in the first century of Arab rule the various Christian churches enjoyed a toleration and a freedom of religious life such as had been unknown for generations under the Byzantine government. We have the contemporary testimony of the Nestorian patriarch, Īshō'yabh III. (A.D. 650–660), who, writing to the primate of Persia, says:

'The Arabs, to whom God at this time had given the empire of the world, behold, they are among you, as ye know well; and yet they attack not the Christian faith, but, on the contrary, they favour our religion, do honour to our priests and the saints of the Lord, and confer benefits on churches and monasteries.'[1]

Indeed, the Church to which this ecclesiastic belonged exhibited a remarkable expansion under Muhammadan rule; missionaries were sent from Persia to China and India, both of which were raised to the dignity of metropolitan sees in the 8th cent.; about the same period the Nestorians gained a footing in Egypt, and later spread the Christian faith right across Asia, and by the 11th cent. had gained many converts from among the Tatars.[2] But by the 2nd cent. of the Muhammadan era the condition of the Christians had become less tolerable. The victorious armies that established Arab rule over Syria and Persia appear to have been little swayed by religious considerations, and under the rule of the Umayyads the Christian and other non-Muslim religious communities seem to have been little regarded except as sources of revenue; but under the 'Abbāsids a change in the attitude of the government made itself felt. The orthodox reaction which supported this dynasty and the union of the spiritual and temporal power which characterized it tended to make the administration of the existing laws more oppressive. In the course of the long struggle with the Byzantine empire the khalīfahs had had occasion to distrust the loyalty of their Christian subjects, and the treachery of the emperor Nikephoros was not improbably one of the reasons for the harsher treatment initiated by Hārūn al-Rashīd (786–809), who ordered the Christians to wear a distinctive dress and give up to Muslims the government posts which they held. But the prescriptions of the jurists and theologians[3] were often more intolerant than the actual practice of the government, and it would be rash to assume that the treatment meted out to the non-Muslim population corresponded exactly with the principles which they laid down. Hārūn's great jurist, Abū Yūsuf,[4] leaves no alternative to the Arabs of the Riddah (*i.e.* the Defection, after the death of the Prophet) or to the idolatrous Arabs, except death or the acceptance of Islām, but Cætani[5] has proved that the early conquerors had no power to enforce such a principle, and historical facts do not show that any such alternative was actually imposed on the heathen Arabs.

But protests against cruelty towards the *dhimmīs* are not wanting in the works of Muslim legists themselves; *e.g.*, Abū Yūsuf[6] claims for the *dhimmīs* gentle treatment; they are not to be beaten when called upon to pay *jizyah*, or to be made to stand in the sun, or to be tormented in any way; and he makes an earnest appeal to his patron, Hārūn, on their behalf:

'It is incumbent on the commander of the faithful (may God grant thee his aid!) that thou deal gently with those that have a covenant with thy Prophet and thy cousin, Muḥammad (the peace and blessing of God be upon him!), and that thou take care that they be not wronged or ill-treated and that no burden be laid upon them beyond their strength, and that no part of their belongings be taken from them beyond what they are in duty bound to pay, for it is related of the Apostle of God (the peace and blessing of God be upon him!) that he said, Whosoever wrongs one with whom a compact has been made [*i.e.* a *dhimmī*] or imposes a burden on him beyond his strength, I shall be his accuser on the day of judgment.'[7]

Ibn Qāsim al-Ghazzī († 1512) maintains that the majority of Muslim jurists hold that the *dhimmī* must be treated with kindness and consideration and not with contempt, when he comes to pay the

jizyah.[1] Commenting on this passage nearly two centuries later, al-Birmāwī († 1694) enters a protest against such fanatical glosses on *Qur'ān*, ix. 29, as are referred to in art. PERSECUTION, and holds that the phrase 'being humbled' implies only conformity to the regulations of Islām in regard to the *dhimmīs*, and that these words give no justification for the rough treatment sometimes inflicted on a *dhimmī* when he paid *jizyah*—*e.g.*, that he should be made to stand with bent head and back before the collector of the tax, who should slap his face and pull his beard—for (as he rightly says) there is no evidence that the Prophet or any one of the khalīfahs acted in such a manner.[2]

A powerful influence in the direction of toleration in a period when feeling was acerbated against the Christians, and when the disorder in Muhammadan administration made their position more precarious and exposed them to the tyranny of local officials, was the extension of the religious orders, especially that of the Qādiriyyah, and the popularizing of that mystical presentation of religious thought in which devout Muslims found consolation after the devastations of the Mongol conquests. 'Abd al-Qādir al-Jīlānī († 1166), the founder of the order referred to, emphasized the virtues of charity and meekness, and his attitude and that of his followers towards the Christians was kindly and sympathetic.[3] The tendency of Persian mysticism was opposed to any emphasizing of religious differences, and the teaching of the poets who wrote under the influence of this mystical movement often made for tolerance; a well-known example is the story of Abraham in Sa'dī's *Būstān*,[4] in which the patriarch is rebuked by God for refusing his charity to an aged fire-worshipper on the ground of his infidelity. But in the present article attention may rather be drawn to instances of toleration in contrast to the fanatical usage of legislation; *e.g.*, though the so-styled Pact of 'Umar[5] forbade the building of new churches, there was considerable variation of opinion among the Muslim legists themselves on this question, from the more liberal Ḥanafī doctrine, which declared that, though it was unlawful to build churches and synagogues in Muslim territory, those already existing could be repaired if they had been destroyed or had fallen into decay, while in villages where the tokens of Islām were not apparent new churches and synagogues might be built, to the intolerant Ḥanbalī ruling that they might neither be erected nor be restored when damaged or ruined. Some legists held that the privileges varied according to treaty rights: in towns taken by force no new houses of prayer might be erected by *dhimmīs*, but, if a special treaty had been made, the building of new churches and synagogues was allowed. But, like so many of the lucubrations of Muslim legists, these prescriptions bore but little relation to actual facts. Schoolmen might agree that the *dhimmīs* could build no houses of prayer in a city of Muslim foundation, but the civil authority permitted the Copts to erect churches in the new capital of Cairo. The fact that 'Umar b. 'Abd al-'Azīz (717–720) ordered the destruction of all recently constructed churches, and that more than a century later the fanatical al-Mutawakkil (847–861) had to repeat the same order, shows how little the prohibition of the building of new churches was put into force; and both Christian and Muhammadan historians record numerous instances of the erection of new churches, some of them buildings of great magnificence.[1] Al-Muqtadir (908–932) even gave orders himself for the rebuilding of some churches at Ramlah in Palestine, which had been destroyed by Muhammadans during a riot.[2]

Muslim law made death the punishment for apostasy (*q.v.*), and the convert to Islām was not allowed to return to his former faith, but instances are not unknown of a more tolerant view vindicating freedom of conscience in such cases.

Even the mad Ḥākim (996–1020), whose persecutions caused many Jews and Christians to abandon their faith, ordered the churches that had been destroyed to be rebuilt, and the property settled on the churches that had been taken from the Christians to be restored to them, and allowed the unwilling converts to return to their old faith.[3] It is stated by more than one Muhammadan writer that Moses Maimonides under the fanatical rule of the Almohads in Spain feigned conversion to Islām, but fled to Egypt and there openly declared himself to be a Jew; that towards the end of his life a Muslim jurisconsult from Spain denounced him for his apostasy and demanded that the extreme penalty of the law should be inflicted on him for this offence; but the case was quashed by al-Qāḍī al-Fāḍil 'Abd al-Raḥīm b. 'Alī (one of the most famous of Muslim judges and prime minister of Saladin), who authoritatively declared that a man who had been converted to Islām by force could not rightly be considered to be a Muslim.[4] Jewish writers, jealous for the honour of their great co-religionist, have disputed the accuracy of this story, though the first who narrates it, Ibn al-Qiftī, was himself a contemporary of Maimonides;[5] but in reference to Muhammadan toleration it is of interest to note that the decision of al-Qāḍī al-Fāḍil is reported without contradiction or condemnation. In the same spirit, when Ghāzān, ilkhān of Persia (1295–1304), discovered that the Buddhist monks who had become Muhammadans at the beginning of his reign (when their temples had been destroyed) only made a pretence of being converted, he granted permission to all those who so wished to return to Tibet, where among their Buddhist fellow-countrymen they would be free once more to follow their own faith. J. B. Tavernier[6] tells a similar story of some Jews of Ispahan who were so grievously persecuted by the governor 'that either by force or cunning he caused them to turn Mahometans; but the king (Shāh 'Abbās II. [1642–1667]), understanding that only power and fear had constrained them to turn, suffer'd them to resume their own religion and to live in quiet.' The Yazīdīs who were forced to accept Islām under the oppressive rule of Badr Khān Beg in 1844, were permitted by an imperial firman to return to their own creed three years later.[7]

The practice of Muhammadan governments seems, generally, to have been to leave to each separate protected community the management of its internal affairs, and to permit the religious leaders to administer the laws as to marriage, inheritance, etc., in accordance with the ordinances of the particular faith as accepted by the persons concerned, in some instances in criminal cases also,[8] though, according to Abū Ḥanīfah, there was no obligation resting on the Muhammadan government to recognize the decisions of such a judge or on the *dhimmīs* to conform to them.[9] But, if an appeal was made to the Muslim judge, he would decide the case on the basis of the Qur'ān and Muslim law, and some jurists held that the State could even insist on the application of Muslim law in cases of inheritance in which the public treasury would thereby derive more benefit than if the special law of the *dhimmīs* concerned

were applied.[1] It is recorded of Khayr b. Nu'aym, a judge in Egypt about the middle of the 8th cent., that, after hearing the cases of the Muslims inside the mosque, he would sit on the steps outside the gate in the afternoon and hear the cases of the Christians and Jews, testing the value of the evidence of the witnesses by inquiring into their credibility among their co-religionists.[2]

An important testimony to the toleration of Muslim rule is the fact that persecuted Christian and other sects took refuge in Muhammadan lands, to enjoy there the undisturbed exercise of their several cults. When the Byzantine emperor, Leo, in 714, instituted a persecution against the Montanists and the Jews, forcibly compelling them to submit to baptism, while some burnt themselves alive rather than suffer the loss of religious freedom, others fled for safety into the neighbouring Arab territory.[3] The persecuted Spanish Jews at the end of the 15th cent. took refuge in Turkey in enormous numbers.[4] The Calvinists of Hungary and Transylvania and the Unitarians of the latter country long preferred to submit to the Turks rather than fall into the hands of the fanatical house of Hapsburg;[5] and the Protestants of Silesia in the 17th cent. looked with longing eyes towards Turkey and would gladly have purchased religious freedom at the price of submission to Muslim rule.[6] The Cossacks, who belonged to the sect of the Old Believers and were persecuted by the Russian State Church in 1736, found in the dominions of the sultan the toleration which their Christian brethren denied them.[7]

Of toleration in the Muhammadan world generally it may be said that it was more operative in the earlier centuries of the Hijra than in the days of the decline of the khalifate or the unhappy period of the Mongol conquests or in modern times when the pressure of Christian Powers exasperated Muslim feeling. The civil government has as a rule been more tolerant than the clergy, and the regulations of jurists have seldom been put into force with all their rigour; though practice has varied with time and place, the persecutions[8] that have occurred have been excited by some special and local circumstances rather than inspired by a settled principle of intolerance. The judgment of A. de Gobineau is on the whole justified by the facts of history:

'Si l'on sépare la doctrine religieuse de la nécessité politique qui souvent a parlé et agi en son nom, il n'est pas de religion plus tolérante, on pourrait presque dire plus indifférente sur la foi des hommes, que l'Islam. Cette disposition organique est si forte qu'en dehors des cas où la raison d'Etat mise en jeu a porté les gouvernements musulmans à se faire arme de tout pour tendre à l'unité de foi, la tolérance la plus complète a été la règle fournie par le dogme. . . . Qu'on ne s'arrête pas aux violences, aux cruautés commises dans une occasion ou dans une autre. Si on y regarde de près, on ne tardera pas à y découvrir des causes toutes politiques où toutes de passion humaine et de tempérament chez le souverain ou dans les populations. Le fait religieux n'y est invoqué que comme prétexte et, en réalité, il reste en dehors.'[9]

To this sober conclusion of the historian may be added the eloquent outburst of one of the Spanish Muhammadans who was driven out of his native country on the occasion of the last expulsion of the Moriscoes in 1610:

'Did our victorious ancestors ever once attempt to extirpate Christianity out of Spain, when it was in their power? Did they not suffer your forefathers to enjoy the free use of their rites at the same time that they wore their chains? Is not the absolute injunction of our Prophet, that whatsoever nation is conquered by Musalman steel, should, upon the payment of a moderate annual tribute, be permitted to persevere in their own pristine persuasion, how absurd soever, or to embrace whatever belief they themselves best approved of? If there may have been some examples of forced conversions, they are so rare as scarce to deserve mentioning, and only attempted by men who had not the fear of God, and the Prophet, before their eyes, and who, in so doing, have acted directly and diametrically contrary to the holy precepts and ordinances of Islam which cannot, without sacrilege, be violated by any who would be held worthy of the honourable epithet of Musalman. . . . You can never produce, among us, any bloodthirsty, formal tribunal, on account of different persuasions in points of faith, that anywise approaches your execrable Inquisition. Our arms, it is true, are ever open to receive all who are disposed to embrace our religion; but we are not allowed by our sacred Alcoran to tyrannize over consciences. Our proselytes have all imaginable encouragement, and have no sooner professed God's Unity and His Apostle's mission but they become one of us, without reserve; taking to wife our daughters, and being employed in posts of trust, honour and profit; we contenting ourselves with only obliging them to wear our habit, and to seem true believers in outward appearance, without ever offering to examine their consciences, provided they do not openly revile or profane our religion: if they do that, we indeed punish them as they deserve; since their conversion was voluntarily, and was not by compulsion.'[1]

T. W. ARNOLD.

TOLSTÓY.— 1. Early life and manhood.—Lev Nikoláevich Tolstóy (1828–1910), novelist, social reformer, and religious mystic, was born on 28th Aug. (O.S.), 1828, at Yásnaya Polyána ('Bright Glade'), the home of the family, in the government of Tula, about 130 miles south of Moscow. Lev was the youngest of four sons. His mother having died when he was three, and his father five or six years later, the boy went in 1840 to the university town of Kazán in eastern Russia, where he lived under the charge of an aunt, whom he held in grateful remembrance. After two years' study he left the university without a degree. The blame is usually laid upon the professors, but some portion of it must be attributed to Tolstóy's own dissipated and irregular life. Returning to his estate, he interested himself in the life of his peasants, with the disappointing results recorded some years later in his *A Morning of a Landed Proprietor* (1856). He admits that he did not really know their life, and that he was aiming at their betterment only from the outside. It was, however, the beginning of that interest in 'the people' which led him at last to throw in his lot with the peasants and the poor. In 1851, to escape from the idle dissipation of his class, he fled to the Caucasus, where he wrote his earliest works—*Childhood, A Morning of a Landed Proprietor*, and *The Incursion*—and planned *The Cossacks*, sold ten years later to pay a gambling debt.

Childhood (1852), *Boyhood* (1854), and *Youth*

(1856) form an autobiographical fragment, thinly disguised under fictitious names. Here, as elsewhere, Tolstóy doubles himself, to bring out the dual nature, the natural and the spiritual man of which he was always conscious in himself. Irténev represents the lower nature, his friend Nekhlyúdov the higher. The latter reappears in the *Landed Proprietor* and in *Resurrection*, just as in *War and Peace* Pierre Bezúkhi, and in *Anna Karénin* Konstantín Levín, are Tolstóy himself in that struggle between flesh and spirit which ended only with life. There is truth in Leo Wiener's statement that even the Christ of his religious writings is still the image of the author, and that 'it is Christ-Tolstóy that becomes the final and lasting stage of his spiritual evolution.'[1] This autobiographical fragment reveals Tolstóy as an awkward child, morbidly sensitive to his appearance; a boy, confessing frankly every shade of evil in his heart, such as the rise of sexual feeling; and a youth 'in search of an ideal,' whose one faith was in the possibility of virtuous perfectibility. Beyond this, his creed, though retaining the forms of the Orthodox Church, had become dust, ready to crumble at a touch. Yet we see the beginnings of many things which appear and reappear in his writings to the end—a shame of being rich while others want, a deep hatred of injustice, and the clear poetic vision of Nature and her loveliness.

The Cossacks (1863) represents Tolstóy's revulsion from the artificial and vicious life of cities and his class. The natives had their vices, but they sinned naturally and frankly, and thus escaped the deeper corruption of hidden immorality. In contrast with their bold outdoor life, Tolstóy saw himself (the Olénin of the story) as a degenerate weakling.

Joining the army in 1851, Tolstóy commanded a battery at Sevastopol; and in his three sketches —*Sevastopol in December, 1854, Sevastopol in May, 1855, Sevastopol in August, 1855*—we find the seeds of thought that were to fructify in his *War and Peace*, and many an indignant denunciation of the violence by which nations are governed. The conviction of the sheer wickedness and brutality of war sank deep into his soul and grew with the years. The sketches probably saved his life; by the emperor's orders the young man was removed to a place of safety. On the fall of Sevastopol in 1855 he was sent with dispatches to St. Petersburg, and his career as a soldier came to an end.

Of this period, and up to his marriage in 1862, Tolstóy could never afterwards think without shame. Between 1857 and 1861 he travelled in Germany, France, Italy, Switzerland, England, and Belgium, to study their educational methods, wrote many books on education, and started schools for peasant children on his estate. Yet alongside this generous interest in 'the people' the tides of the passions of the natural man never ceased to flow. His own words in his *My Confession*[2] frankly reveal this moral duality:

'I cannot recall those years without dread, loathing, and anguish of heart. I killed people in war and challenged to duels to kill; I lost money at cards, wasting the labour of the peasants; I punished them, fornicated, and cheated. Lying, stealing, acts of lust of every description, drunkenness, violence, murder—there was not a crime which I did not commit, and for all that I was praised, and my contemporaries have regarded me as a comparatively moral man. Thus I lived for ten years.'

On 23rd Sept. 1862 Tolstóy married Sófiya, second daughter of a Dr. Behrs of Moscow, who bore him thirteen children, several of whom died in infancy. Fifteen years of unbroken domestic happiness followed. Tolstóy was busy with his schools, his works on education, the management of his estate, and, above all, the writing of his greatest novels, *War and Peace* (1864–69) and *Anna Karénin* (1873–77), in which appear all the problems round which his mind never ceased to work—war, the peasants, the land and the serfs, education, the universal duty of manual labour, and, at the root of all, religion and the ethical duties flowing therefrom. Then suddenly, to the dismay of the literary world, Tolstóy cast aside the art in which he was acknowledged the greatest living master, and devoted the remainder of his life to moral and religious tales for peasants and children, and an examination of the Gospels, the Creed, and the foundations of violence on which he believed the entire system of civil government rested. His literary ambitions had been treason to the deepest convictions of his soul. The literary caste set up to teach what they did not know, and for the sake of his family he had shared their delusions:

'The new conditions of my happy family life completely drew me away from all search for the general meaning of life. All my life during that time was centred in my family, my wife, my children, and, therefore, in cares for the increase of the means of existence. The striving after perfection, which before had given way to the striving after perfection in general, after progress, now gave way simply to the striving after making it as comfortable as possible for me and my family. Thus another fifteen years passed.'[1]

The struggle to break away from this treason to the higher life led to great family unhappiness, and ultimately to his mysterious and tragic end.

2. Ethical and religious ideas.—Tolstóy's principal works after his 'conversion' are *My Confession* (1879–82), *Critique of Dogmatic Theology* (1880–82), *The Four Gospels Harmonized and Translated* (3 vols., 1880–82), *My Religion* (1884), *What shall we do then?* (1884–86), *Moral and Religious Tales*, *The Kingdom of God is within you* (1893), *What is Art?* (1897), and *Resurrection* (1899), his last great novel, in which he sums up his indictment of Church and State and the entire structure of society. It is from this vast mass of literature that we must now attempt to deduce the religious and ethical convictions into which, with endless vacillations, Tolstóy finally settled.

(1) Tolstóy's fundamental conviction is that the one purpose of life is to know God by bringing all relations of humanity into harmony with His will. In reply to the decree of the Holy Synod which excommunicated him in 1901 he states his creed:

'I believe in God, whom I understand as Spirit, as Love, as the beginning of everything. I believe that He is in me and I in Him. I believe that God's will is most clearly and comprehensibly expressed in the teaching of the man Christ, whom to understand as God and pray to I consider the greatest blasphemy. I believe that the greatest true good of man is the fulfilment of God's will, but His will is this, that men should love one another and in consequence of this should treat others as they wish that others should treat them, as, indeed, it says in the Gospel that in this is all the law and the prophets. I believe that the meaning of the life of every man is, therefore, only in the augmentation of love in himself; that this augmentation of love leads the individual man in this life to a greater and ever greater good, and gives after death a greater good, the greater the love is in man, and at the same time more than anything else contributes to the establishment of the kingdom of God in the world, that is, of an order of life with which the now existing discord, deception, and violence will give way to free agreement, truth, and brotherly love of men among themselves. I believe that there is but one means for success in love, and that is prayer, not public prayer in temples, which is directly forbidden by Christ (Matt. vi. 5-13), but such as Christ has given us an example of,—solitary prayer, which consists in the establishment and strengthening in our consciousness of the meaning of our life and our independence of everything except God's will.'[2]

(2) Tolstóy warns us that, when he calls God 'Father' and speaks of His 'will,' he is not to be understood as meaning that God is a personal being. He admits that, when he prays, he is inconsistent with his doctrine of the impersonality of God: it is a necessity forced on him by the fact that he himself is a person. The doctrine of the Trinity is blasphemy. Metaphysical speculations conceal God; nothing reveals Him but love in its

[1] *My Confession*, ch. iii. (*Works*, xiii. 16).
[2] *Answer to the Decree of the Synod* (*Works*, xxiii. 235 f.).

application to human life. The fundamental idea of *The Kingdom of God is within you* is that God is, in every man, the revelation of life and the power by which man lives and acts upon the world. Whatever approves itself to the God within has divine sanction and right. Since God thus acts naturally through man, miracles are impossible.

(3) Tolstóy's conception of Christ passed through many fluctuations. In the Crimea he dreamed of a new Christianity 'purged of dogma and mysticism,' giving happiness here on earth. At his brother Nikoláy's funeral he projected 'a Life of Christ as a Materialist.' After reading a German work on the Gospels he inclined to agree with the author that Christ never existed. In the end, while admitting His existence, he denied indignantly His divinity. 'To recognise Christ as God is to renounce God.'[1] On the theory of His divinity the Temptation becomes absurd—'God is tempted by God Himself.' The miraculous Birth is an invention to cover His mother's shame. The Resurrection is 'a trite, contemptible invention,' contrary to reason and needing the invention of other miracles to support it. He is 'the living Christ' only in the sense in which all men live on in the spirits of those who come after them. Jesus is grouped with other great religious teachers of the world, such as Confucius, Buddha, Lao-tse. These views are asserted with a peculiar earnestness: 'I am standing with one foot in the grave, and I have no need to feign.' The truth is that Tolstóy had almost a personal interest in thus emphasizing the human side of Christ: he found in it those elements of wavering of which he was conscious in himself. The Temptation, the shrinking of His soul at the visit of the Greeks, the agony in the Garden, the cry 'My God, my God' on the Cross, seemed to bring Him nearer to his own weaknesses and vacillations. There was even a moment, he held, when Christ resolved to use violence against violence and advised His followers to sell their garments and buy swords; and it was only in the Garden that He was able to overcome the terrible temptation by prayer.

(4) Tolstóy's attitude to Scripture settled down into acceptance of nothing that did not commend itself to the God within himself. The OT is non-essential to Christianity. The Church doctrine of the infallibility of Scripture—myths, miracles, contradictions, immoral stories, and all—only commits the soul to untruth. Yet he admired the OT stories and the Gospel parables as the highest form of art, taught them to the peasant children in his schools, and advocated that cheap unabridged copies be given them, not one word omitted:

'The book of the childhood of the race will always be the best book of the childhood of each man. . . . There is no book like the Bible to open up a new world to the pupil and to make him without knowledge love knowledge.'[2]

After giving elaborate interpretations of the Four Gospels, he warns his readers against all interpretations: let each man read for himself in the spirit of a little child. To get nearer the original meaning he learned Greek; and he used his new-found instrument in the most uncritical and arbitrary way. The Four Gospels were the heart of the Bible; the Sermon on the Mount was the heart of the Gospels; and a few sayings of Christ formed the heart of the Sermon. Whatever in Scripture did not harmonize with these few sayings and Tolstóy's vast 'private interpretation' of them was set aside without scruple as no part of the true original teaching; and, as one has said, if he cleared away superstitions of the Church, he created others of his own.

[1] *Three Letters on Reason, Faith, and Prayer* (*Works*, xxiii. 472).

[2] *The School at Yásnaya Polyána* (*Works*, iv. 308, 310).

(5) In substance, Tolstóy reduces Christianity to five commandments of Christ in the Sermon on the Mount:

(*a*) *Thou shalt not be angry* (Mt 5^{21-26}).—He takes this prohibition absolutely, omitting 'without a cause.' It forbids, not killing merely, but the anger from which violence flows. In his own experience he found that contempt was the root of anger; and, since contempt was possible only to inferiors, he strove to divest himself of the worldly possessions, standing, and privileges which gave him a false sense of superiority over those who were sons of the one Father. If it be said that Christ in this passage speaks of the penalty of judgment and fire for this sin, Tolstóy replies that He never prescribed this penalty, the mention of which only indicates the severity of His condemnation of it. In his discussion of Mt 23 he does not seem to recognize that Christ's indignation against the Pharisees must be a breach of His own law against anger, if understood in the absolute sense.

(*b*) *Thou shalt not commit adultery* (Mt 5^{27-32}).—Tolstóy interprets the words in v.[32], 'saving for the cause of fornication,' as meaning that the husband by divorcing his wife 'causes her also (as well as himself) to commit adultery.' His views pass through several stages and are influenced by his own early lapses. For the first fifteen years of his married life his ideal for woman was the duty of motherhood. He disapproved of celibacy and held that monogamy is 'the natural law of humanity.' The close of *What shall we do then?* is an impassioned appeal to women to fulfil 'the highest act of life,' the duty of maternity. *Domestic Happiness* (1859), however, warns against basing the happiness of marriage on the romantic fever of the senses called love, from which motherhood is the true escape. This view persists through *War and Peace* and *Anna Karénin*. In the latter a young and beautiful woman, married to a man much older than herself, turns to feed her starved heart to an illicit passion; and the suicide in which she ends is, in the author's intention, far less the punishment of her infidelity to her husband than of her unfaithfulness to her lover and their child—the burning out through jealousy of her lover's affection, and her unworthiness of her own maternity. The *Kreutzer Sonata* (1889) marks the extreme development of his views—a sordid story of the murder of a guilty wife and the acquittal of the husband on the ground that he had merely defended his honour. The title implies that in Tolstóy's view Beethoven's music irritates and hypnotizes soul and sense into crime. His final position is given in his *Epilogue to the Kreutzer Sonata* (1890), written to defend himself against many attacks. In substance, he demands an absolute chastity, whether in the married or in the unmarried life. The teaching of the gospel is 'in the first place that a married man must not be divorced from his wife, in order to take another, and that he must live with the one with whom he has come together (Matt. v. 31–32; xix. 8); in the second place, that for man in general, both married and unmarried man, it is sinful to look upon woman as an object of enjoyment (Matt. v. 28–29), and, in the third place, that for an unmarried man it is better not to marry at all, that is to be absolutely chaste (Matt. xix. 10–12).'[1] He admits, however, that this absolute chastity is not a precept, but an ideal, to which the race is meant to approximate. To the objection that this ideal would annihilate the race he replies coolly, Why not? Both Church and science foretell an end of the world; why should it not come through the increase of virtue?

(*c*) *Thou shalt not swear* (Mt 5^{33-37}).—This means much more than mere simplicity and truth of speech: 'Yea, yea; nay, nay.' Christ forbids us to bind ourselves by an oath to any human power or authority. To do so is to abjure the freedom of conscience, which is the divine within us, and to make ourselves the slaves of a human will which may be the enemy of the will of God. It is the deliberate renunciation of Christianity. In short, this command of Christ strikes at the root of all military power, since all armies rest on an oath of allegiance to some human authority; and this plain command the Church explains away, knowing that, if it were obeyed, the entire structure of society, and its own institution as part of it, would fall to the ground.

(*d*) *Resist not evil* (Mt 5^{38-42} 7^{2-5} etc.).—This doctrine of non-resistance dominates all the rest of Tolstóy's teaching. It was the first command of Christ which he understood, and it opened the meaning of all the others. Physical force, being an outrage on the freedom of conscience, which is the Kingdom of God within the soul, must never be applied to make any man do what he does not wish to do. Compulsory military service, the whole system of civil and criminal law and government, parliaments, courts, judges, police, jails, taxation, even the payment of debts—all stand condemned as unchristian. Property must be abolished, since it rests on force; it is not merely theft, but murder, because human life is the price paid for it. He prophesied the bankruptcy of the present system of violence; and, were he alive, it is conceivable that he would point to the Great War and the horrors of Bolshevism as the fulfilment of his prophecy. Non-resistance is the only way to destroy violence. 'As fire does not put out fire, so evil does not put out evil.' Given a non-resisting community, 'no enemies—neither Germans, nor Turks, nor savages—would kill or torture such people.' His fanatical and uncompromising Russian mind admitted no limits to this doctrine. If he saw a madman attack a child or a horde of savages fall on his own wife and children, this command of Christ forbade him

[1] *Works*, xviii. 430.

absolutely to protect them by force. The worst that can happen by not resisting is death, whereas to resist is to 'act contrary to the law of Christ, which is worse than death.' We need not hesitate to say that this carries the doctrine to the point of insanity. The natural instinct of a normal conscience is to protect the weak and the defenceless from a drunkard or a madman.

(*e*) *Wage no war* (Mt 5[43-45. 48], Lk 6[32f.]).—The five commandments of Christ form five widening circles: (1) the individual heart—harbour no anger; (2) man and woman, the family—avoid carnal lust; (3) private worldly relations with others—bind the conscience by no oath or promise; (4) relations to the State—resist no evil by force; (5) the human race—regard no nation as your enemy: 'If they make war on you, submit, do good, and wage no war.' It is absurd to say that Christ, who forbade anger to the individual, now allows anger, and murder which is the fruit of anger, to communities and nations.

From the Sevastopol sketches, on through *War and Peace*, *The Kingdom of God is within you*, and innumerable pamphlets, etc., Tolstóy never ceased to strip war of its 'glory' and to hold up its naked falsity, cruelty, and bestiality. Under all its fine names its true purpose is murder. Three causes are named: '(1) the unequal distribution of property, that is, the robbing of one class of people by another, (2) the existence of a military class, that is, of people educated and destined for murder, and (3) the false, for the most part consciously deceptive, religious teaching, in which the young generations are forcibly educated.'[1] Patriotism is the chief war-criminal—a sentiment fostered by pageants which hypnotize the people into 'loyalty,' by alliances with or against other nations, based on an unreal love and a created hate. There is no such thing as a good patriotism, the aim of all patriotism being that of 'Deutschland über Alles,' to exalt our own nation over others, by violence if need be. It is this sentiment that puts into the hands of rulers a diabolic weapon, making possible military conscription and all the cruelties, atrocities, and bestialization of invasions and battlefields. The one remedy is the substitution for love of country of love for man as man, and the refusal of individuals to submit to military service, be the consequences what they may. Tolstóy had a profound distrust of peace congresses and courts of arbitration, because 'the decision of the court of arbitration against the military violence of the states will be executed by means of military violence.'[2]

(6) Following out his doctrine of human freedom, Tolstóy attacked all current forms of education as the forcible ruin of life and ethics. The schools on his estate were based on absolute freedom. The children came when they pleased, sat where they liked, were at liberty to speak, had no home lessons to torture them. Yet the order and attention were perfect. The teaching included walks in the fields, explanations of natural sights and sounds, history, folk-tales, stories and parables from the Bible, by far the finest instrument of education. Tolstóy wrote a series of tales, which had a great success in Russian schools; but he held that it is the peasant children who can teach us to write, not we them: they are nearer the original harmony of beauty, truth, and goodness than men, whose education has been a system of destroying that harmony. His views are summed up thus:

'I am convinced that the school ought not to interfere in that part of the education which belongs to the family; that the school has no right and ought not to reward and punish; that the best police and administration of a school consist in giving full liberty to the pupils to study and settle their disputes as they know best.'[3]

He opposed 'popular education' because it was not popular, but compulsory, based on violence, and hated by both parents and children, who forgot its artificial results as quickly as they could.

'Schools which are established from above and by force are not a shepherd for the flock, but a flock for the shepherd.'[4]

From infant school to university the system was arbitrary, mechanical, and out of relation to life and its needs. To compel all child-natures to pass through a standardized system, without freedom of choice, is torture. In fine, education has become an elaborate system of demoralizing child-nature, which is good, in the interests of the world and its evils. At an early age it severs the natural bond of parent and child, and of the great mother, Nature herself, and it does so in a way which fosters lying, hypocrisy, and vice, and destroys individuality.

(7) In *What is Art?* Tolstóy sweeps aside with contempt all theories of mere æsthetics and 'art for art's sake,' and reduces the criteria of art to the following: (1) art must spring from a genuine feeling in the artist; (2) this feeling must have the power of infecting others with the same emotion; (3) it must have the power of uniting men by this infection of a common hope, joy, love, or whatever it be: if it separates men, it is not art. The more widely it unifies men, the more worthy is it of the name. 'Upper class art,' dependent on an artificial training, springs from no living infectious emotion in the artist, who has to write, paint, etc., to please his rich patrons, who lead idle, artificial, and parasitic lives. Such art grows ever narrower in its appeal, and its patrons ever prouder of its exclusiveness, whereas 'great works of art are only great because they are accessible and comprehensible to every one,' like the story of Joseph and the parables of Christ. Whole generations of artists, singers, poets, players, artisans, workmen, are practically serfs for the production of false exclusive art—an art which is simply the expression of the pride, sensuality, and weariness of life of the men and women who pay them.

All good art, being universal, depends on universal emotions which unify men by infection. What these are is revealed by 'the religious perception' that all human good is contained in 'the fraternal life of all men, our love-union among ourselves.'

Hence 'the Christian art of our time can be and is of two kinds: (1) art transmitting feelings flowing from a religious perception of man's position in the world in relation to God and to his neighbour—religious art in the limited meaning of the term; and (2) art transmitting the simplest feelings of common life, but such, always, as are accessible to all men in the whole world—the art of common life—the art of a people—universal art. Only these two kinds of art can be considered good art in our time.'[1]

The name of art is denied to emotions which divide men, as patriotism, or religious sectarianism, or the honour given for wealth, education, rank, or profession. The theory has met with much ridicule; but, making allowance for some exaggeration in Tolstóy's dislike of the conventional forms in which every art seeks expression, we may agree with Kropotkin that *What is Art?* is a much-needed protest against the over-artificiality into which modern art has drifted.

(8) Tolstóy's doctrine of the future life may be described as a kind of pantheistic immortality. His novels overflow with studies of death and the process of dying. The higher ranks meet death with reluctance and complaining, the poor with cheerfulness and faith. Of Natálya, the old stewardess in the home of his childhood, he says: 'She executed the best and highest act of this life,—she died without regrets or fear.'[2] During the period of his 'conversion' thoughts of suicide became so strong that he had to hide a rope that hung in his dressing-room and could not trust himself to go out hunting with a gun. There was no meaning in life, no end to which it moved. He was saved from suicide by the discovery that the end was God, God in whom he lived, and moved, and was. The fear of death is a 'superstition' due to the fact that men live in a mere fragment of their own nature and of the world, and this the lower fragment of their carnal and personal being, instead of their rational consciousness in its relation to the sum of things, which is God. Life is given to be a ministry of life to the world, and

[1] *What is Art?*, ch. xvi., tr. Aylmer Maude, London, 1905 (of this tr. Tolstóy in a Preface says: 'I request all who are interested in my views on art only to judge of them by the work in its present shape.' The tr. is from the original MS, and is free from the mutilations of the Russian censor).
[2] *Childhood*, ch. xxviii. (*Works*, i. 136).

it lasts just so long as this ministry is being fulfilled. To cast it away in suicide when it becomes unpleasant to us is sinful, partly because just then is probably the time when this ministration truly begins. Moreover, it is in this life of universal ministry that man finds the only true immortality. Personal immortality is impossible, because true life is the deliberate sacrifice of all personal ends. Resurrection and reincarnation would be nothing better than a return to the carnal and personal relations which are spiritual death. Life is an ever onward movement of reason and love, and the only real death is to arrest the movement at any given point. Live onward beyond the old self, and life becomes a living part of the growing good of the world. This is the life eternal and the only true immortality for man.

3. **The last phase.**—The life of the great Russian ended in a mysterious tragedy of conscience. For many years his life consisted of a struggle to bring his practice into harmony with his principles by escaping from his class, his wealth, his family. In *My Religion*, written in his fifty-sixth year, he lays down five conditions of human happiness: (1) a life that does not break the link with Nature—the open sky, sunlight, fresh air, soil, plants, animals; (2) work, physical labour, giving appetite and sleep; (3) family life; (4) a free and living intercourse with all the various classes of mankind; (5) health, and a natural and painless death. These conditions are open most widely to the peasant, and grow narrower the higher you rise in the privileged classes, the Tsar, *e.g.*, holding intercourse with none but a few of his jailers. Hence Tolstóy's later years were one long effort to transform himself into a peasant; and the asceticism which formed part of his strangely complex nature finally struck out the third condition, the family life. He transferred to his wife the responsibility of managing his estates, and, although he continued to live in the family mansion, it was, as far as possible, as a poor man working with his hands. It was a compromise which gave no peace of conscience. More than once he left his home intending never to return, but family affection always drew him back. The family friction which resulted is portrayed in the form of fiction in *Walk in the Light, while ye have Light* (1888). One's sympathies are not entirely on the husband's side; the countess had much cause for complaining that the burden of the children, the estates, and the publication of his books was transferred to her shoulders. In spite of a true affection between them, they drifted apart.

Tolstóy's actual departure from his home came about through the question of the copyright of his works. From 1882–83 the countess, to counterbalance her husband's neglect of the estates, became the publisher of his writings; and in 1894 she deposited in a public museum for safety large quantities of his manuscripts, producing evidence afterwards that they were given her by Tolstóy. This was done, evidently, to protect herself from a deliberate attempt by one of his disciples, V. G. Tchertkóf, to deprive her of them and of all control of their publication. In 1891 Tolstóy, having convinced himself that to make money by his moral and religious writings was sinful, made public announcement that any one was free to publish his works written from 1881 to the time of his death. About the same time he gave Tchertkóf the right of first publication, in Russian and in English, of his future writings. Although this was almost equivalent to copyright, Tchertkóf was not satisfied with it, and set about a long series of intrigues to induce Tolstóy to make a will in his own favour, and without the knowledge of the countess, on the ground that only through him would his works be published in accordance with his publicly expressed wishes. An unhappy aspect of the affair is that his youngest daughter, Alexandra, was in the intrigue against her mother. After many tentative wills had been drawn up and signed, a final one was made on 22nd July 1910, bequeathing all his productions and the manuscripts themselves into the full possession of his daughter Alexandra. An 'explanatory note' stated his wish that 'all papers extant at the time of his death shall be handed to V. G. Tchertkóf, that he may examine such documents and publish what he may consider suitable.' This will was signed on the stump of a tree near Tchertkóf's house, after a long series of unscrupulous intrigues, and when the old man of eighty-two was fast breaking up in both body and mind. At 5 o'clock on the morning of 28th Oct. 1910 he left his home for ever, accompanied by his daughter Alexandra and his disciple Dr. Makovitsky. His son Ilyá, in his *Reminiscences*[1] of his father, traces his flight to the intolerable moral torture of the dilemma of confessing all to his wife or of repudiating the will. He started with no object but to hide himself somewhere, anywhere. He went first to see his sister Mary, a nun of the Shamárdino convent, and expressed to her his intention of taking a peasant's cottage and living near her; but his daughter, fearing that her mother should discover his whereabouts, carried him off secretly, with the intention of securing a passport and leaving Russia. The old man, however, was nearing his end. At Astápovo he had to be removed to the house of the stationmaster, where he lingered on till the morning of Sunday, 7th Nov. 1910 (20th, N.S.). Tchertkóf, professing to guard him from intrusion, refused to allow the countess—who had learned where he was only through a message from a newspaper office—to see her dying husband until he was in the article of death and past the power of recognizing her.

Thus passed away in darkness the greatest of modern Russians. Nevertheless, he had attained moral and spiritual unity as nearly as was possible to a nature so vast and turbulent. The common idea that his life is broken into two distinct parts is a mistake. His 'conversion' is simply the emerging into clear consciousness of those ideals of truth and right towards which we see him striving even in the midst of his most dissolute life. His fixed idea was God, and, in spite of all appearances, the effort to make God all and in all gave to his life a great and solemn unity. He was like a wild tumultuous river with the fall of the mountains behind it, thwarted by rocks, gorges, precipices, but never ceasing to turn and twist and foam around and over every obstacle in its thirst for the sea.

TOLTECS.—1. Origins.—The beginnings of the Toltec peoples are enveloped in the fogs of mythology. Their origin is rather mysteriously attributed to the acts of a certain hero-god, Quetzalcoatl ('a twin'), compounded of two words *quetzalli*, a plume of green feathers, and *coatl*, a serpent, in other words, a plumed-serpent (-god). Some wild speculations and pious conjectures have identified him with St. Thomas, and others with the Messiah. Another mysterious hero-god (personage) who has been closely linked with Quetzalcoatl was Votan, the reputed founder of the civilization of the Mayas, for a time a contemporary and rival people with the Toltecs.

In the pre-Toltec period of history in Mexico and Central America the Nahua and the Maya were the two leading civilizations. Quetzalcoatl, the plumed-serpent divinity, was the creator of man,[2] the founder of the new order of things among the Nahua peoples. Like the Maya peoples of Yucatan and Central America, the Nahuas did not confine

[1] *Reminiscences of Tolstoy*, Eng. tr., London, 1914.
[2] Bancroft, *NR* iii. 272, 275.

their colonies or activities to any one area of territory, though their main settlement was on the plateau of Mexico. In the 6th and 7th centuries the Toltec Chichimec tribes, representing the Nahua power, migrated from Central America and settled down on the Mexican plateau, in proximity to the wonderful lakes of that region.[1] Of the Nahua tribes who made their homes in this region the Toltecs were one of the prominent sections, the beginnings of whose separate and independent existence cannot be sharply depicted.

2. **History.**—At the opening of historic times the Toltecs were in possession of Anáhuac (a section of the plateau of Mexico) and outlying territory. While the civilization was old, the name Toltec was new, possibly derived from Tollan or Tulan, the original capital of the empire. The boundary lines of the Toltec sovereignty cannot be fixed, though it probably did not exceed that of the Aztec domain of later times. It is thought to have extended so far west as to have covered Michoacan, which was never conquered by the Aztecs, and stretched eastward to the Gulf of Mexico, including also the Totonac territory of Vera Cruz. The many tribes and peoples of which the Toltec empire was composed cannot be identified by name with any of the later nations found in Anáhuac. Outside the so-called Toltec empire, the peoples, particularly in the north, were regarded as barbarians and were popularly known as Chichimecs.

From the 7th to the 12th cent. the Toltec empire was in the main ruled by a confederacy which resembled the alliance of a later time between Mexico, Tezcuco, and Tlacopan with capitals at Culhuacan, Otompan, and Tollan respectively. Each capital in its turn became the dominant force in the confederacy. Tollan on the river Quetzalatl is reputed to have reached the highest point in culture, splendour, and fame. It is now represented by the little village of Tula, about 30 miles north-west of the city of Mexico. Culhuacan was the only one of the three capitals of the confederacy to survive by name the bloody revolution by which the empire was finally overthrown, and to maintain anything of her earlier greatness. The confusion and often contradiction between the numerous reports and records and manuscripts of the native and Spanish writers lays a heavy burden upon a historian; but Bancroft and Nadaillac are apparently faithful to the best evidence available in those writers. Let us make a survey of the history and constitution of the Toltec empire, so called, during its five centuries of domination in the central plateau of Mexico, based on the representations of Bancroft and Nadaillac.[2]

The pre-eminent personage in the beginnings of this new agglomeration of tribes and peoples was Hueman the prophet. It was through his line that a powerful priesthood ruled the destinies of the Toltec empire from its inception to its downfall. The government was in reality a theocratic republic, in which each leader directed his own tribe both in war and in peace, but all were more or less subservient to their spiritual leader in all matters of national import. Seven years after the arrival of these peoples in Tollan the heads of families and chiefs met in assembly and decided to change their form of government, and establish a monarchy, in order to consolidate their strength against any possible future challenge to their rights as a people. On the advice of Hueman, the chiefs sent an embassy to the reigning king of the Chichimecs to ask for a son or other relative to be crowned king over the Toltecs, accompanied by a specific requirement of agreement on the part of the Chichimec king that the Toltecs should ever be a free and independent people, owing no allegiance whatever to the Chichimecs, although the two powers would enter into an alliance for mutual defence and aid. The Chichimec king was only too ready to seize such an opportunity, and sent back with the embassy his second son with the required guarantees, to be crowned first king of the Toltecs at Tollan under the royal name of Chalchiuh Tlatonac, 'shining precious stone.' This young king, by his splendid bearing, fine character, intelligence, and amiability, immediately won the admiration and affection of the people. His coronation and accession to the throne took place about the first quarter of the 8th cent., between 710 and 720.[1] Immediately after his accession the young king and his counsellors laid down a law that the time limit of a king should be 52 years, at the end of which he should abdicate in favour of his oldest son, to whom he might, however, act as adviser. If the king should die before the time limit had been reached, the unexpired term should be filled by magistrates elected by the people. The next task of the king was to find a wife to provide an heir to the throne, so that the dynasty might be perpetuated. The amiable young king left this choice entirely to his subjects—at least so the records say—to their joyful satisfaction. Their choice fell upon the daughter of Acapichtzin, who himself had been a candidate for the throne when it was proposed to found a kingdom. Two Nahua documents give a rival story of the beginnings of the monarchy, but the main features are not so widely different.[2]

Chalchiuh Tlatonac, the first Toltec king, died at the end of 52 years and was buried in the chief temple, about A.D. 771. His son and successor was Ixtlilcuechahuac. He had a peaceful and prosperous reign. The signal event of his rule, and near its conclusion, was a meeting of all the wise men under the direction of the old prophet Hueman. This assembly collected all the Toltec ancient and modern documents, and after a prolonged conference and careful investigation, compiled the *Teoamoxtli*, 'book of God.' On its pages they inscribed the Nahua annals from the creation down; also their religious rites, their governmental system, laws, and social customs; their methods of agriculture; their arts and sciences, and especially astrology; their methods of computing time and interpreting their writings. To these wealthy pages was added a chapter on the forecast of the future events of the kingdom, including the disaster through which it was crushed and destroyed.

The third king, Huetzin, succeeded to the throne about 823. The fourth king, Totepeuh, sometimes given as the second king of Culhuacan, came to his father's throne at the end of 52 years; and handed it down at the same time limit to his son Nacaxoc, the fifth king at Tollan, who was succeeded by Nauhyotl, or Mitl. This sixth reign stretched over 59 years. During all these six reigns there was great advance made in building new cities, beautifying old cities, erecting new temples, one of especial magnificence at Quauhnahuac and another at Tollan rivalling even the Temple of the Sun at Teotihuacan, a city which surpassed Tollan in extent and beauty. These more than 300 years saw the Toltec empire well and prosperously established over a large territory and many peoples.

Looking back at some of the details of those reigns, we gather a few significant facts. The annals of Culhuacan mention Totepeuh (the fourth Toltec king) as the second king of that city. He waged several successful wars, notably in the province of Huitznahuac, where he found, conquered, and married a princess Chimalman, who bore him an heir named Ceacatl Quetzalcoatl. This notable scion of the royal family succeeded in establishing certain laws of succession which prevailed down to the end of the empire; but the most far-reaching act was the conclusion of an alliance between the crowns of Culhuacan, Otompan, and Tollan. Each king was to be independent in his own domain; but in affairs of general interest the three rulers were to constitute a council, in which the king of Culhuacan was to rank first, with a title almost equivalent to emperor. Otompan took the second rank and Tollan the third. The date of the formation of this confederacy or empire was about A.D. 856.

After Quetzalcoatl had ruled in Culhuacan about ten years, he met obstinate opposition to his authority from his enemies. He was a radical reformer whose ideas ran counter to those of the reigning pontiffs. He modified much of the religious ritual and abolished human sacrifices. These sacrifices had had a first place from pre-Toltec times at Teotihuacan, and more or less general acceptance in Culhuacan and Tollan. He absolutely prohibited them in the temples of Tollan, and so stirred up the enmity of the powerful priesthood of Otompan and Culhuacan. The nobility of Tollan also, who resented the curbing of their religious liberties, became jealous of their brothers of equal rank among other peoples of the empire. Nevertheless, Tollan became the metropolis of the confederacy. In the magnificence of her palaces and temples, in the skill and fame of her artists, if not in her population, Tollan surpassed all her rivals on the plateau. This was too much for the other centres, and active aggressive opposition, political,

magical, and religious, raised its weapons of warning. Quetzalcoatl's aversion to the shedding of blood is said to have caused the abandonment of his throne, against the ardent wishes of his more warlike friends, and his crossing over to the eastern part of the plateau of Huitzilapan in 895. His successor in Tollan, Nacaxoc, known under several other names, was the fifth king of the Toltecs.

The reign of Nauhyotl, or Mitl, the sixth king of Tollan, was marked with great prosperity and peace. His entire energy and strength were devoted to the promotion of the glory of his city, where he re-affirmed and carried out the reforms of his predecessor. Cholula, a rival sacred city, really stirred him to vigorous action, in building greater temples and more attractive shrines to prevent pilgrimages from Tollan to the rival city. He also built superb temples in other provinces to the south outside the boundaries of Anáhuac.

Nauhyotl, or Mitl, at his death, was succeeded by his queen, Xiuhtlaltzin, who reigned four years. She showed wonderful wisdom and skill in her direction of public affairs, and her death was greatly lamented by her subjects. Her son and successor was Matloccoatl, whose reign covered 949 to 973; he was succeeded by Tilcoatzin, who ruled from 973 to 994, and who was followed by Tecpancaltzin. The records of this period are almost a blank, except that in Culhuacan Quetzallacxoyatl was succeeded in 958 by Chalchiuh Tlatonac (II.) and the latter in 985 by Totepeuh, the second king of that name.

We now approach the period when the Toltec empire was descending the slopes of ruin. The annals of this period are scarlet with the sanguinary struggles between the powerful tribes and bands from the north and north-west and the civil and religious authorities of the empire. The extensive records of the period of the downfall of the Toltec empire are confusion worse confounded. They abound with tales of marvel and mystery, as if intending to throw dust into the eyes of the reader.

Spanish writers still speak of Tollan as the empire, but Nahua documents find in that city the 'occurrences which caused the destruction of the Toltec power.' Whether this is the truth or not, it seems that a battle was fought between the king of Culhuacan and the king of Tollan, and, while this contest was going on outside the city, a party of invaders was admitted into Tollan. Civil strife followed in the streets between three rival sects, until the city itself was nearly in ruins. The three allied powers fought each other, and later there came a period of famine and pestilence in the land. These events occurred between 1040 and 1047.

Defence was so weakened, the reins of government so loosened, that dependencies took advantage of their opportunity to renounce Toltec authority and declare their independence.

The other Toltec cities of power, Culhuacan, Otompan, and Tezcuco, seem to have gone down before Tollan. Invaders from the north and north-west, from the powerful Chichimec tribes and Nahua peoples, fell upon the weakened Toltecs without mercy and took possession of all their cities and territory. The cities of the confederacy were plundered and burned except Culhuacan, whose king seems to have made a 'delivering' alliance, about A.D. 1000.

The Toltec power was overthrown. The last years of its struggle for existence are inextricably mixed. Plots, intrigues, battles, invasions, assassinations, blot the escutcheon of the once noble kings of the Toltec empire. Many of the nobility of the Toltecs are said to have migrated before the storm burst. They went to foreign provinces with their families, their treasures, and their other movable wealth. But the Toltec peoples of the humbler classes remained in Anáhuac. Some of them are said to have maintained a national existence for a time in Culhuacan, and possibly in Cholula. But they finally became the subjects of the invaders, whose language and customs were probably identical with their own. Even the sanguinary records do not warrant us in believing that the Toltecs as reported were reduced to merely a few thousands in number. The Toltec collapse was the fall of an empire, not the annihilation of a nation. The succeeding period was a struggle to secure the authority which fell from the hands of the Toltec rulers.

3. Physical features and culture.—The Toltecs, we are told,[1] were tall, well built, with clear yellow complexions; their eyes were black, their teeth white, their hair black and glossy, their lips thick, their noses aquiline, and their foreheads receding. They had thin beards, and little hair on their bodies. Their mouths made an agreeable impression, but their facial expression was severe. They were brave, cruel, and vengeful, and their religious rites were sanguinary.

They were intelligent, eager to learn, and are said to have been the first [in Mexico] to construct roads and aqueducts; they used the ordinary metals except iron, cut precious stones, built houses of stone laid up in lime mortars; knew how to spin, weave, and dye cloth; and built mounds similar to those found so plentifully in the Mississippi valley.[2] Their cities were marvels of construction, beauty, and durability. Their temples were ornate with sculptured bas-reliefs and hieroglyphics, cut in porphyry, basalt, and obsidian.

Their commerce was important and pioneering. Their products were exhibited yearly at fairs, spread before the public in the cities of Tollan and Cholula. Though they seemed not to have used iron, they did work in gold, silver, copper, tin, and lead. They were skilled in making fine jewellery, in which precious stones, such as emeralds, turquoises, and amethysts, were mounted. Cholula was famous for its pottery in the form of vases, utensils for the house, idols for the temples, and ornaments for the people.

The weapons used by the Toltecs were slings, bows and arrows, spears, and darts pointed with silex, obsidian, porphyry, copper, or bone. The warriors wore padded cotton armour, practically impenetrable to arrows or javelins, and so heavy that a warrior once fallen could not always get up again. Their round shields of light flexible bamboo were decorated with feathers and covered with cloth or the skins of animals which they had killed in hunting. The shields of the chiefs were decorated with plaques of gold as a mark of their rank.

4. Human sacrifice. — Prisoners of war were often sacrificed to their gods. Funeral ceremonies were also accompanied by the burning of women upon the funeral pile of their husbands; this the women joyfully accepted because it opened to them the door into the first celestial sphere, where they could follow their husbands and thus avoid Mictlan, a gloomy and solitary abode.

5. Religion.—The religious system of the Toltecs is a chaos of ceremonies and ritual, so entangled with the pre-Toltec era and modified in the subsequent Chichimec-Aztec period that little definite and specific can be affirmed beyond those items already mentioned above in § 2. Even the many extracts from native and Spanish writers given by Bancroft and Nadaillac convey merely a hazy idea of the so-called religious systems of the Nahua nations of which the Toltecs were a part. Their multitudinous polytheism only adds to the confusion and attests that religion, mysticism, and mythology were such a conglomerate of everyday life that even the alleged documents of native writers could not disentangle them.

6. Calendar and hieroglyphic language.—The so-called Mexican calendar, found on a block of porphyry uncovered in the old city of Mexico in 1790, probably supplies us with the Aztec astronomical cycle. The Mexicans kept a solar year, and a lunar year only for religious holidays; the latter was divided into periods of thirteen days, corresponding to the phases of the moon.[3] The Toltecs (and Mayas) had a month of twenty days, apparently based on the normal number of a man's fingers and toes.[4] The key to the ancient hieroglyphic language of the peoples of Mexico and Central America, as found on their great monuments at Palenque and Copan and other remarkable ruins, is practically lost.[5] A few signs are known, but, until a sure key is established, we shall have to rely mainly on the native sources, as reported to and by Spanish writers, for any information regarding the hieroglyphic era of the pre-Aztec, and even of the Aztec, peoples.

Even the most comprehensive works on the Toltecs are inadequate and insufficient in method to clear up the problems that native and Spanish authors pour out on the table of the modern student of ancient Mexico.

TONGANS.—1. Introduction.—Tonga—or at least the Tonga of this article—is the name of a group of islands in the Western Pacific, lying to the north of New Zealand, the east of New Caledonia, and the south of Fiji and Samoa. It is sometimes known as the Friendly Isles, the name given it by Captain Cook. The Tongans who inhabit this group are a tiny nation of the Polynesian race. Although few in number—about 20,000 only—their nationality is clearly marked, and they can easily be distinguished from their neighbours the Fijians and Samoans. Typical Tongans are tall, large-limbed, of a light coffee colour, with upright forehead and straight hair; but a little acquaintance with them shows that there has been an admixture with a race that was short and had receding foreheads. This agrees with their traditions, which state that, when the Tongans came to the group, some five or six centuries ago, it was already occupied by an aboriginal race. Traces of these have been found in one of the volcanic islands, but the vestiges have not been scientifically examined. Still it is clear that the Tongans, and Polynesians generally, have emigrated from a distance; and the most probable theory is that of Fornander, that they came from the head of the Persian Gulf.

Old navigators used to speak of the Tongans as 'the most splendid savages in existence,' and they were certainly the terror of the neighbouring groups, all of which are said to have been once conquered by them. They acknowledge themselves to be mentally inferior to the European; but it cannot be said that they come very far behind; and occasionally students at Tubou College have achieved results that could be equalled only by the best pupils in English schools. A fair measure of the size of their brains may surely be found in their language, which contains, it is estimated, at least 10,000 words in use. The verbs have about 20 voices, and the pronouns are developed to such an amazing extent that there are more than 100 ways of saying 'our,' against two in English, 'our' and 'our own.' As the adjectives, too, have many degrees of comparison, and there are more than two articles, shades of meaning can be produced to an almost infinite extent. That the Bible translates well into a language like this is not surprising; but geometrical treatises, and such works as Milton's *Paradise Lost*, can also be well rendered.

Physically, then, and mentally, the Tongans stand high; and it comes as a surprise that their spiritual development, as represented by their old religion, was low. Their pantheon was a medley, and their theology unredeemed by any gleams of philosophy as in the religion of India.

2. The gods of Tonga may be divided into three classes.

(1) In common with other parts of Polynesia, their great gods comprise the two groups of the Tangaloa and the Maui (pronounced Mow-y: Mow as in *now*). The *Tangaloa* were the earlier group, and consisted of Tangaloa 'Eiki ('Lord Tangaloa,' or 'Tangaloa the Elder'), Tangaloa Tufunga ('Tangaloa the Smith, Carpenter, or Artificer,' who made axes and built canoes), and Tangaloa 'Atulongolongo ('Tangaloa the Sender-forth-of-sound'). The *Maui* group consisted of five persons: Maui Motu'a ('Old Maui,' or 'Maui the Father'), Maui Loa ('Maui the Tall'), Maui Buku ('Maui the Short'), and Maui 'Atalanga ('Maui the Vigorous Planter'). This last had a son called Maui Kijikiji (pronounced Kitsikitsi: 'Maui the Violent, the Mischievous'), who was, of course, the grandson of Maui Motu'a.

There were, however, older gods than any of these. One was called Tama-bo'uli-ala-mafoa ('Son-of-the-Darkness-that-can-have-a-dawn'). Some accounts represent him as the original deity. Another of the primitive gods was 'Eitu-matubu'a ('Eitu-of-the-olden-time'). He is spoken of as the father of the Tongan people. Another of these gods was Hikule'o, the Tongan Satan. *Hikule'o* means 'the echo,' and there is no doubt that this was the original signification of the name; but as it *might* mean 'Watching Tail,' the legend grew up that the tail of this deity was so long that when he, the god, went about, the tail kept watch at home. But even now the Tongans, when they hear an echo, say it is Hikule'o walking in the woods; and the other explanation was evidently an afterthought.

These with others were the original gods of Tonga. By and by a division of departments took place. To the Tangaloa was assigned the Sky (or Heaven); to the Maui group the Under World; and to Hikule'o the World and Bulotu (Hades). But in order to keep Hikule'o in his place, as he was a god that delighted in mischief, a cord was attached to him, one end of which was held by Tangaloa in the sky, and the other by a Maui in the under world, to prevent his leaving Bulotu to damage the world. This division was effected by an older god than any, namely, Taufulifonua ('Frequent-Upsetter-of-the-land'), who also assigned the sea to Hemoana, and the woods and dry land generally to Lube (the Dove). Hemoana's name is sometimes pronounced Heimoana, and the present writer *believes* that Tongavalevale spoke of him as Hea-Moana, though he is unable to speak positively on that point. *Hea-Moana* would signify 'Hea-of-the-deep-sea'; *Hemoana* would be simply 'the Deep Sea' = Oceanus. His shrine was the banded sea-snake. These were the Olympian gods of Tonga; but, with the exception of Hikule'o, they were rarely worshipped, and few if any temples were erected in their honour. The exception is due to the fact that Hikule'o was a mischievous god, and must therefore be propitiated.

(2) The second class of gods were an inferior race, who had their shrines in animals, birds, fishes, trees, whales' teeth, clubs, and even stones. Yet these were the gods worshipped by the people, and their temples were to be found in every village. Here are a few of them: Tu'i 'Ahau ('King of the town of 'Ahau'), whose shrine was a volcanic stone of peculiar shape; Tu'i Lalotonga ('King of Rarotonga,' or perhaps of the world below Tonga), whose shrine was the dragon-fly; Taliai Tubou (the god of the reigning dynasty while yet heathen),

whose shrine was a shark [Mariner renders *Taliai Tubou* by 'Wait there, Tubou,' which is certainly incorrect; Taliai Tubou was probably the name of a king]; Bulotu Katoa (the Pleroma of the Spirit World, who presided over hurricanes, and agriculture), whose shrine, we think, was a tree at Kolonga [Mariner mentions several the present writer has never heard of: Tubou Toutai ('Tubou the Mariner'; Tubou is the familiar designation of the king, and one of his family is usually called Tubou Toutai); Hala'evalu ('Eight Ways'; also the name of a chief); 'Alo'alo ('the Fanner'), the god of wind and weather, rain, harvest, and vegetation; Tu'i Bulotu ('King of the Spirit World')]. Other gods resided in the turtle, the cuttle-fish, the kingfisher, etc. Fonokitangata's shrine was a war-club. These were, so to speak, the private gods of the people, and the shrine of each was tabu to its worshippers. Thus the people of Te'ekiu were forbidden to eat the octopus, that being the shrine of their god. In the neighbouring villages, however, it would be freely eaten. In Nomuka one particular family were thus debarred from eating turtle, while the rest of the town were free to partake of that delicacy.

(3) In addition to these there were a number of supernatural beings whose position in the Tongan pantheon is not clear. They were looked upon as gods, and the term expressive of highest deity was applied to them; but they were never worshipped, nor were temples built to them. On the contrary, they were looked upon with contempt, and their follies freely portrayed and laughed at. It is curious to see these ascriptions of high divinity and expressions of contempt standing side by side. Is it that these were the gods of the inferior race which the Tongans found in the group when they landed?

Take an instance or two. Jiji and Faiga'a were two goddesses in this class, who had set their affections on a Tongan of great masculine beauty called Bajikole. He, tired of their attentions, plaited two large baskets of cocoa-nut leaves, put one goddess in each, and, shouldering them like a Chinaman, conveyed them into the bush, and hung them on the branch of a tree, and left them there for two years, until the baskets rotted, and they fell to the ground. They made another attempt on his affections, and he finally got rid of them by inveigling them into his fish traps, and leaving them at the bottom of the sea, where they lay until Tangaloa took pity on them, and sent a god to release them. Take another instance. In this case also it was two goddesses, who set out to meet a mortal lover. While waiting for him, they took off their heads to dress their hair. Suddenly his footsteps were heard, and they put their heads on again; but in the hurry one of them put hers on hind before; and when she attempted to move, her face went one way and her legs another. It is extremely puzzling to meet with tales like these, referring to those to whom the titles of highest deity are given: and yet, after all, they do but recall the vagaries of the Olympian deities as described by Homer, when

'Unextinguished laughter shook the skies.'

On the subject of ancestor-worship, Mariner speaks positively (vol. ii. p. 97): 'That there are other Hotooas or gods, viz. the souls of all deceased nobles and matabooles.' The present writer was disposed to agree with him at first, especially as it was a custom of the people to go to the cemeteries to pray, even after a sacrifice had been presented at the temple. But further inquiry has convinced him that they did so because they fancied themselves nearer the spirit-world in such places. Intelligent chiefs like Valu, who were acquainted with heathenism, are equally positive in the other direction, and deny that they looked upon the spirits of deceased chiefs as gods. We think the truth lies between the two statements, and that Mariner himself gives us a key to the solution of the question. In vol. i. p. 376, he speaks of Feenow as being frequently inspired by the spirit of Mumui (a late king of Tonga). Now we can readily understand that in such circumstances Feenow would pray to Mumui, and others would join him; so that in time Mumui would be looked upon as a god. This would account for such gods as Tu'i Lalotonga, Tu'i 'Ahau, Taliai Tubou, and others. All the inquiries of the present writer negative the assertion that the spirits of chiefs as a general thing became gods. We may then look upon the gods of the first class as primitive, brought by the Tongans from their original home, and the third class as the gods of the aborigi-als whom they conquered. The second class contained also some primitive gods, but was recruited largely from the spirits of ancestors—*i.e.* the spirits of certain deceased chiefs by whom kings and notable personages fancied themselves to have been possessed.

The other point the present writer made special inquiries about was whether the Tongans worshipped the clubs, whales' teeth, animals, trees, stones, etc., before which they placed their offerings, or the god who was supposed to be temporarily residing in them. The answer was decisive. The clubs, trees, etc., were simply the *vaka*, the god itself was spiritual. *Vaka* signifies a 'mode of conveyance,' usually a canoe, but also a carriage, or anything by which one is conveyed from place to place.

Probably we may see here a development of their spiritual ideas. The oldest class—Tangaloa, Maui, Hemoana—were undoubtedly corporeal. Their bodies performed all the functions of human bodies, and they were inflamed with human passions. But the Tongans had long ceased to pray to them, and scarcely any vestiges of their worship remained when the missionaries came. The third class of gods, too, were corporeal, but there are no signs of worship being paid them at any time. These two classes existed side by side; but long before the introduction of Christianity both had been discarded as objects of worship, which was paid only to the second class. In other words, the Tongans had worked out a theology, which had, at any rate, this noble feature in it, that God was a spirit, and they that worship Him must worship Him in spirit.

The general Tongan term for supernatural beings is *fa'ahikehe*. This is often shortened into *fa'ahi*, and when the adjective *lahi* ('great') is added—*fa'ahi lahi*—the idea conveyed is that of full deity. *Fa'ahi* signifies properly 'a party,' 'a side' (as in cricket); or it may be short for *fa'ahinga* = 'kind,' 'class,' 'race,' 'species,' 'genus.' *Kehe* = 'other' (ἕτερος, not ἄλλος), so *fa'ahikehe* is 'different folk,' 'other kind of people.' The usual word for 'God' is *'Otua*. Mariner spells it *Hotooa*, but there is no *h* in it. The inverted comma represents a guttural, a half *k*, which is one of the difficulties of the language. It is not readily recognized by the European ear, and is mostly neglected by foreigners, while being as intractable as the Ayin in Hebrew. The present writer has failed to find any derivation for *'Otua*, or meaning other than 'God,' and believes it to be a primitive Polynesian word. In some parts of the Pacific it appears as *Atua*.

The other great word is *'Eiki* = 'Lord,' which is used as in English for both earthly and heavenly lords. Hence it is not so high a term as *'Otua*. Indeed it seems sometimes to mean only 'supernatural.' Thus a corpse is called *ha me'a faka'eiki*, which apparently signifies 'a thing belonging to the spirit world.' Probably Mariner was thinking of this when he said (vol. ii. p. 130): 'The human soul after its separation from the body is termed *hotooa*, *i.e.* a god or spirit.' He is certainly wrong in that statement. It is clear that *'eiki* was not the original form of the word, which the laws of the language point out to have been *ikeiki*.

We must not pass over the fact that the members of one of the dynasties of kings were regarded as gods. This was the earliest line of kings, and their title was *Tu'i Tonga* ('King of Tonga'). They were certainly looked upon as in some sense divine beings; and instances are on record of prayers being offered to them. Words applied only to the gods were used in addressing them; such as *'Ei*, already referred to, *ha'ele*, and *'afio*, used of the movements of deity. The face of the Tu'i Tonga was termed the 'sky,' and to him, as the representative of the gods, were presented the 'first-fruits.' This ceremony, called the *'inaji*, or 'portion,' is described by Mariner (vol. ii. p. 196). When a Tu'i Tonga died, he was said to be 'missing' (*hala*), and he was buried in a *ziqqurat*, or pyramid

of steps. This was called a *langi*, or 'heaven'; and many of them remain in tolerable preservation, and excite the wonder of the visitor by the huge size of many of the stones, some of which measure over 20 ft. in length.

Many, probably most, of the names of the Tu'i Tonga have been preserved, and their history curiously reminds us of the story of the Carlovingians and Merovingians in France. One of the Tu'i Tonga, called Takalaua, was murdered, and his son and successor Kau'ulufonuafekai, from weariness or fear, devolved the duties of government on his younger brother, reserving to himself the honours and emoluments of the office. His brother assumed the title of Tu'i Ha'a Takalaua ('King of the Takalauans'), and soon got all the power into his hands, the Tu'i Tonga becoming a *roi fainéant*. After a few generations, however, the Tu'i Ha'a Takalaua became effete, and the government was handed over to another branch, called the Tu'i Kanokubolu ('King of Kanokubolu,' the town in which he lived). This is the title of the present dynasty. Representatives of the other two lines, however, still exist, but the titles are not used. The representative, however, of the Tu'i Tonga holds even now a quasi-sacred position, and is still addressed as the gods used to be; and words sacred to deity are used for all his movements.

Mariner mentions another semi-divine person called the Veachí (vol. ii. p. 80). This part of his narrative is very perplexing, as neither Veeson nor Thomas nor any of the modern chiefs knows anything about him.

The word used all over Polynesia for 'religion,' 'worship,' 'prayer,' etc., is *lotu*. Fortunately this has a meaning in Tongan, and signifies 'a seeking for something that is hard to find.' Thus when famine prevails, the people *lotu kai, i.e.* go all over the land looking for food. It is also used for the restlessness of a caged animal seeking an outlet, and for the cry of an animal for its mate or companions. This is not the only word common to Polynesia which finds its meaning in Tongan. *Tabu* (or *taboo*), now of world-wide use, signifies in Tongan that something which might be opened is closed. These and other considerations lead one to think that the Tongan language comes nearer than most of the dialects to the original Polynesian tongue.

3. **The religious rites** of the Tongans were few. There was nothing in their religion corresponding to our idea of worship. If they wanted something —rain, fair winds, good crops, successful fishery— or if they wished to prevent some calamity—such as sickness, death, hurricanes, war—they would seek the favour of a god, would offer sacrifice and pray. But to come into his temple, to worship, to sing his praises, to dwell upon his attributes—this was a foreign idea altogether. Hence there was very little in the Tongan religion to cultivate the conscience, or to control the passions, or to elevate the thoughts. Mariner thinks otherwise, and we would gladly believe his favourable report of the Tongan character. But all our information—and much of it goes back to Mariner's time—contradicts his statements. He even contradicts himself. The Feenow he speaks so highly of was a monster of iniquity; and there is no doubt that for centuries theft, murder, lust, treachery, and almost everything in the catalogue of evil, have been rife in Tonga. No man's life or property, and no woman's honour, was safe for a day.

They never went to their gods empty-handed; a piece of kava root for making the native drink was a *sine qua non*. Baskets of food, too, were usually brought in addition, and presented to the god or his priest. One of the party would then state the object of their visit, and implore the deity to grant their request, or use his influence with the gods of Bulotu in their favour. Sometimes the priest would remain silent; at other times he would object that their gifts were too small. If he spoke at all, he spoke as the god, being supposed to be 'possessed' by the god at the moment. John Thomas says (Farmer's *Tonga*, 128): 'Often there was another person present, the friend of the god, who acted as mediator, and addressed the priest on behalf of the offerers.' Hingano, a chief lady of great age, described to the present writer how she and others would take baskets of food to the door of Taliai Tubou's temple in Nuku'alofa, and, bowing down, would implore the god's favour. Shortly a white (*sic*) foot would be protruded from beneath a curtain, which they would kiss and then retire.

If their object was to deprecate a calamity, as in a case of sickness, the rite assumed a darker hue. Fingers were cut off, wrapped in banana leaves, and presented; or children were strangled, and their bodies brought as a sacrifice. When prayers were offered to Fonokitangata, the sacrifice was always an adult. Generally a man obnoxious to the community was hunted down and killed, and his body brought in a basket and laid before the priest; but Mariner speaks of a chief of rank being killed in one instance. The offerers, clothed in old and dirty mats, and wearing necklaces of chestnut leaves, would squat on the ground at a distance, and weep and beat their breasts, while the priest, holding in his hand a war club, the shrine of the god, would listen to their prayers with his eyes fixed upon the club or upon the ground. Sometimes he would reply in his ordinary voice, but more often in unnatural tones, as if some one were speaking in him; and frequently he would begin to shake as if in a fit, and to roll about and foam at the mouth. Any words he might utter whilst in this condition were eagerly caught up as the direct utterances of the god. After a while the shaking would cease, and the priest, striking the ground with the club, would announce that the god had departed. Mariner (vol. i. p. 160) has a good description of this kind of possession; and he evidently thought that the phenomena were not altogether voluntary, but that a real possession of some kind took place—a belief which was shared by some of the earlier missionaries.

4. **The Tongans believed in the immortality of the soul.** Mariner, Veeson, and Thomas are agreed on this point.

Veeson says (Farmer's *Tonga*, p. 131): 'One day they were conversing about a person that was lately dead, and said, "He goes to the island through the sky." "How can he be," said I, "in that place, when he is dead, and his body here? Did you not bury him some moons ago?" But all they answered was, "But he is still alive." And one took hold of my hand, and, squeezing it, said, "This will die, but the life that is within you will never die"—with his other hand pointing to my heart.'

Mariner and Veeson, too, agree in stating that this immortality is enjoyed only by the upper classes: the souls of the Tu'as, or common people, die with their bodies. This, no doubt, was the belief of the upper classes, who looked down upon the Tu'as as little better than animals; but it is no evidence of the belief of the Tu'as themselves. Thomas says more truly: 'Of the faith of the common people there was no certainty.'

The 'island' referred to was called Bulotu, and 'through the sky' meant 'over the horizon.' Bulotu is, the present writer thinks, a primitive Polynesian word, and is the name for Paradise in all the dialects. It was situated west or north-west of Tonga, and could be reached by sea. At least the ballads speak of canoes touching there; but how the disembodied spirits got there is not stated. Mariner tells us (vol. ii. p. 101) that Bulotu was believed by the Tongans to be a large island, stocked with all kinds of useful and

ornamental plants in a state of high perfection, and that when these were plucked others would immediately occupy their place. The whole atmosphere was filled with a most delightful fragrance; there were also beautiful birds of all kinds, and abundance of hogs—all of which were immortal unless killed to provide food for the gods. At the moment a bird or a hog was killed, another living bird or hog came into existence. Further on he gives another account of Bulotu brought by a canoe which touched there:

'The crew landed, and proceeded to pluck some breadfruit; but to their unspeakable astonishment, they could no more lay hold of it than if it was a shadow. They walked through the trunks of trees, and passed through the substance of the houses without feeling any resistance. They at length saw some of the gods, who passed through the substance of their bodies as if there was nothing there.' The gods were supposed to have no canoes, not requiring them; 'for if they wished to be anywhere, there they are the moment the wish is felt.'

Now, is this again a development? For the ballads, which date from a time long antecedent to the visit of Mariner, give a very different description. According to them, everything in Bulotu was material. Its entrance was guarded by a woman with eight tongues. There was a large canoe for the gods to voyage in, which was called Langotangata ('the human-rollered'), because it was dragged down to the sea on living rollers, each being a human being. The same trees grew as on earth: cocoa-nuts, breadfruit, yams, etc.; and provision was made for the favourite pastimes of chiefs. There were eminences for netting wood-pigeons, reefs for shark-catching, *'ulua* to be fished, and gigantic clams to be dived for. Ovens of food were cooked as on earth, and kava was prepared and drunk. The houses had solid posts, and the roofs were constructed in the usual way. One of the halls in Bulotu was panelled with the pupils of men's eyes 'which sparkled and flashed.' The women had a hall lined with mirrors—a veritable crystal palace. There was a *Vaiola*, or Fountain of Life, whose waters were so potent that a child plunged into it grew up to manhood in a few days. There was also a *Vai-lolofafanga*, or Fountain of Perfumery, and other delights of women (see 'Voyage of Faimalie,' *Tubou College Magazine*, vol. iii. p. 39).

5. **Cosmogony.**—The earliest chapters of the Tongan genesis ran somewhat as follows:

Some seaweed and slime clung together, and were carried away by the sea, and washed up on the island of Totai in Bulotu. By and by there grew up between them a large metallic stone called Tou'iafutuna ('Pregnant-how-long-ago'). Suddenly it began to shake, and sent out a sound like thunder; and, splitting, there sprang out a male and a female twin. The male was called Biki ('Sticky') and the female Kele ('Slimy'). Again the huge stone rolled about as if there was an earthquake, and other twins sprang out: the male called Atungaki (?), and the female Maimoa'alongona ('Vagaries-of-sound'). Again the stone groaned, and twins sprang out, called 'Land-turtle' and 'Sea-turtle.' Again the stone sounded and earthquaked, and twins sprang forth, Hemoana (the Sea-snake), and Lube (the Dove).

They grew up and married, *i.e.* the first pair and the second and the third. The eldest child of Biki and Kele was a son, Taufulifonua ('Frequent-overturner-of-the-land'[1]). The next was a girl called Havea-lolofonua (Havea-of-the-underworld'). The second pair had a girl called Vele Lahi, and the third pair a girl called Vele Ji'i. (*Vele* signifies 'longing' or 'desire'; *Vele Lahi* = 'Desire the Elder,' *Vele Ji'i* = 'Desire the Younger'). Sticky and Slimy created a new land called Tonga Mama'o ('Distant Tonga'), and put on it Taufulifonua and Havea-lolofonua.

[The next incident is unprintable, but is a realistic setting of the words, 'And they were both naked, the man and his wife, and were not ashamed.' They were ignorant even of the sexual function, which they discovered only by accident. The result was a boy called Hikule'o ('the Echo,' the Tongan Satan: see above).]

Then Havea said to Vele Lahi and Vele Ji'i, 'Come and marry your brothers as I have done, for there is no man for you.' They did so, and Vele Lahi gave birth to the Tangaloas, and Vele Ji'i to the Maui family. Then Taufulifonua divided the heaven and earth as stated above.

In process of time the Tangaloas ordered Tangaloa 'Atulongolongo to go down and see in what condition the world was. So he entered into the Kiu (? 'Sea-lark'), and went down, and flew in all directions, but could not see any land, only shallows Then went he up to heaven and reported to the Tangaloas that there was no land, only something that looked like shallows Said the heavenly chief, 'Wait seven nights, and then go again and see': so Tangaloa 'Atulongolongo remained seven days in the sky, and then went down to look at the shallows The bottom was evidently coming up, and he reported to heaven, 'It looks like a reef.' He said also, 'I can find nothing to stand on and rest.' So they said, 'Go to Tangaloa the Smith, and let him throw down the dust of the pumice he sharpens his axes with.' So Tangaloa Tufunga did so, and threw down the dust of his grindstone, and produced the island of 'Eua. On this being reported, Tangaloa was sent down to stand there and watch. By and by a bit of the shallows would become dry, and ultimately a large land grew up, which consisted, however, only of sand. Tangaloa reported, 'My land is large, but nothing will grow on it.' Then said Lord Tangaloa, 'Take this seed, and set it in the land you have discovered.' It was a *fue* (convolvulus). So he set it, and it overspread the land. Then said he, 'There is vegetation enough, but no people: and Lord Tangaloa and the other heavenly chiefs replied, 'Go and split the root of the *fue*.' He did so, and it rotted and produced a grub. So he reported to the sky, 'A great thing is lying in the *fue* I split.' They ordered him to cut it in two, and to call the head Kohai ('Who is it?') and the tail Koau ('It is I'). He did so, and both parts became men: as did also a little piece that had adhered to his beak. This was called Momo ('Little Bit'): and he with the other two were the first men.

Now at that time Maui the Elder ordered his family to go on board a canoe, and fish up lands. There were four Maui in the canoe: Maui Loa, Maui Buku, and Maui 'Atalanga with his son Maui Kijikiji; and they took their mother Vele with them. She was the maker of mats and fine robes. They called at Manuka, a part of Samoa that was already above the waters. And Maui Kijikiji, leaping ashore, went to get a fish-hook. Meeting the chief's wife, he ravished her; and she, taking kindly to him, revealed her husband's secret, that the magic fish-hook, which would bring up lands, was not a bright and glittering one, but an old and rusty hook, stuck in the reeding. So they got the hook, and, having tried it successfully near Samoa, sailed on boldly, and pulled up Tonga and many other groups of islands. When they came to 'Eua, and saw the three men, they asked whether they had any women; and on their replying 'No,' they went and fetched three, so that they might have one each.

At that time the sky was very low, and an ironwood tree that stood in Tonga reached quite up to heaven. So 'Eitu-Matubu'a was wont to climb down, and visit the earth; and, cohabiting with a woman in one of the islands, had a child by her called 'Aho'eitu. When he grew to man's estate, he asked who and where his father was; and was directed by his mother to climb up the ironwood tree, and seek him in the sky. He finds him, is recognized, and sent to play with his brothers, who become jealous, and finally kill and eat him. 'Eitu, finding this out, makes them vomit into a large tub, and covers the *disjecta membra* with the leaves of the tree of life (*Nonu*). By and by the fragments cohere, and ultimately 'Aho'eitu is found sitting up alive. His brothers are punished by being turned out of heaven, and have to serve 'Aho'eitu on earth, who becomes the first Tu'i Tonga, superseding the children of the 'grub.' The Maui afterwards pushed the sky higher up, as it is at present.

Now the Maui dwelt in the under world, but one of them, Maui 'Atalanga, said to his brethren, 'Have you any objection to my living on the earth, if I visit you from time to time? And they said, 'No.' So 'Atalanga went up to the earth, taking his young son Kijikiji with him. He lived in Vava'u, and married a mortal wife. Now Maui 'Atalanga did not plant in Vava'u; for he was a mighty planter, and there was not land enough; so he had his plantation in the under world. He kept this, however, a secret from his son Kijikiji, for he was such a mischief. But Maui Kijikiji tracked his father by his footsteps, and, seeing him lift a bush and descend into the earth, waited a while and followed him. Many tricks did he play, until one day his father sent him to Maui the Elder to get a fire-stick. Kijikiji kept quenching the fire and going back for more. At last old Maui told him to take the whole log. This was of enormous size, but the young Maui took it up with ease. Old Maui, who had not recognized his grandson, perceiving that he was a superhuman being, challenged him to wrestle—with the result that the elder Maui was thrown and left for dead. 'Atalanga, hearing of it, strikes his son with his spade and kills him. On going, however, to see how his father was faring, he finds the old man alive, and rather pleased than not with his defeat by his grandson, and angry with his son for having killed him. They apply, however, the leaves of the tree of life, and Maui Kijikiji revives. His next exploit is to carry some fire from the under world to earth, in spite of the efforts of his father to prevent him. They then devote themselves to fighting with and destroying the monstrous animals that infested the world—a huge rat, a gigantic bird called the Moa, a lizard, and some carnivorous trees, etc. Maui 'Atalanga is at last devoured by a huge dog that lived in a magic cave which opened and closed automatically; and his son, after killing the dog, died of grief for his father, etc.

LITERATURE.—The principal authorities on the state of Tonga in early times are these: William Mariner, *An Account of the Natives of the Tonga Islands*[2], London, 1818; G. Veeson, *Authentic Narrative of Four Years' Residence in Tongatabu*, do. 1810; S. S. Farmer, *Tonga and the Friendly Islands*, do. 1855. [Mariner's is a most valuable work. He gives evidence

[1] *Tau* is sometimes intensive. This would then mean 'complete-overturner.'

of being possessed of no common ability, and of an excellent memory; and, if the present writer has ventured to differ from him, it is for the following reasons: (1) the shortness of Mariner's stay—only 4 years; (2) his obvious want of acquaintance with the niceties of the language; (3) the considerable time that elapsed between his leaving Tonga and the writing down of his reminiscences; (4) the fact that the present writer's acquaintance with Tonga extends over a period of 40 years; (5) that most of his information was taken down from the lips of the 'Last of the Bards,' a once heathen chief called Tongavalevale, who was the repository of their folk-lore and ballads; (6) that he has had access to the unpublished journals of the Rev. John Thomas, Wesleyan minister, who went to Tonga in 1826, and was the first missionary to make a lengthened stay.]

J. EGAN MOULTON.

TONGKING.—Ethnographically Tongking is divided into two parts: South Tongking, the special domain of the Annamese race, and North Tongking, bounded on the north by the Annamo-Chinese frontier, on the east by the sea, on the west by the range where the waters separate into the Red and Black Rivers (Song-Koi and Song-Bo), and on the south by a line bisecting the provinces of Kwang-Yen, Bac-Giang, Thai-Nguyen, Tuyen-Kwang, and Yen-Bay. This Upper Tongking has an area of 54,700 square kilometres, and a population of 374,528, belonging to 26 different ethnic groups. There are no Annamese or Chinese except officials and merchants; the country is peopled chiefly by Tai, Man, or Yao, Pa-Teng, Meo, Lolo, Muong, and a very small number of representatives of far more ancient ethnic groups, such as the La-tchi (La-ti) and the Keu-Lao.

I. *TAI.*—The Tai element, most important in point of numbers (239,179 individuals—about 60 per cent of the total population), is divided into numerous sub-groups, the most important being the Thô (146,000), who are found round Cao-Bang, the Nung (66,000), and the Black Tai (14,500). The Tai have a strong admixture of Chinese and Annamese and are thus closely related to the Siamese and Laotians.

1. Physical characteristics.—The Tai are strong and of a lively disposition, careless, fond of pleasure and play, and extraordinarily indolent. This race seems to be on the decrease; there are few births, and infant mortality is very high. They are not absolutely averse to mixed marriages: their daughters may marry Chinese or Annamese if they choose, and their sons take wives from any variety of the race whatever, even from the Man; these mixed marriages produce a stronger and more provident race than the pure Tai.

The Tai live in the plains and low valleys by preference. Their houses are, as a rule, built on piles, the ground-floor being reserved for live-stock and poultry, the upper storey for the inhabitants. The Nang and several other tribes dress like the Chinese; the rest of the Tai follow the Annamese fashion, but wear much brighter colours—indigo blue is almost universal—and far more ornamentation. Rice is the staple food. The Tai also use beans, sweet potatoes, and gourds; pork is their most usual meat, chickens and ducks being reserved for feast-days; they also eat fish. Tea is their chief beverage, though they sometimes drink too much wine or spirit made from fermented grain. The use of tea and betel is practically universal among them; opium is confined to the rich.

The Tai are essentially farmers. They cultivate rice, maize, buck-wheat, beans, peas, sweet potatoes, and sesamum. Industry and commerce are practically non-existent owing to the indolence of the race. They can, however, distil alcohol, weave cloths, make rich embroidery, and do fine basket-work. The Thô even spin a little silk.

2. Religion.—On their original animism the Tai have superimposed a confused mixture of Taoist, Buddhist, and Confucian ideas, derived from the Chinese and Annamese. A few priests or lettered men have a vague knowledge of the cosmic system of the *di-kinh*.

They believe that the primordial principle of nature gave birth to the male and female principles, from which issued everything and everybody. The male principle is the sun, the sky, the intellectual soul of men; the female is the dark earth, the moon, the vital and sensual soul of beings. Man has three subtle souls, or *hôn*, which emanate from the male principle, and seven or nine (according as the sex is male or female) vegetative souls, or *vid*. At death these *vid* return to the earth whence they came, while the *hôn* go to the infernal regions. Here we see the influence of the Buddhist doctrine of the transmigration of souls and their purification by punishment. After undergoing the punishments which they have merited, they may approach the throne of the emperor of Jade, the supreme Taoist idol.

The great majority of the people, a most superstitious race, confine themselves to the worship of the evil spirits which infest the air and lie in wait for man even in the most insignificant actions of his life. These are combated by means of forethought and offerings, and especially by the help of more powerful good spirits which are rendered propitious by devoted worship. Among the good spirits the genius of the hearth and the tutelary deity of the village are held in highest honour; of the evil spirits, which have different names in the various Tai groups, the most dreaded are the spirits of people who have died a violent death and the chicken-spirits that insinuate themselves into people, especially women, and give them the evil eye. Of course the Tai believe in white and black magic, spells, lots, and philtres.

Their priests are chiefly sorcerers, who earn their living by offering sacrifices to the spirits, exorcizing the sick, and warding off all the evils invoked against man. They also choose the material with which to build villages or houses, the propitious day for beginning any work, etc. Among the Tai they are nearly all connected with an official cult, but there are independent sorcerers and sorceresses.

The only temples that the Tai possess are small rustic pagodas, nearly all dedicated to the tutelary genius of the locality.

Their religious festivals are borrowed from the Annamese; but among certain tribes, particularly the White and Black Tai, there are some festivals which seem peculiar to the race. (1) *Kin lao mao* ('drink,' 'alcohol,' 'drunk') takes place in September. All the inhabitants of the village meet in one of their houses for a banquet, which is followed after sunset by music and singing. The feast lasts three days, during which no one may enter or leave the village. (2) *King pang* ('to eat bread') takes place in January. It is characterized by round dances to the accompaniment of chants. Among the White Tai it is the women who dance, among the Black Tai the men. (3) *Kin tien* ('to eat coined money') takes place in December in honour of the dead. It lasts three days, with banquets, dancing, and singing. Both men and women take part.

Ancestor-worship exists among the Tai, but only a more or less slavish imitation of Annamese ritualism. It is practised chiefly among the Thô, who preserve the names of their ancestors to the fourth generation, make offerings at prescribed times, and train their children to honour the dead as the protectors of the hearth. Only those who have died a natural death have a place on the family altar; those who have died a violent death, out of doors, have only a small outside altar, usually built in the garden.[1]

3. Myths and legends.—Among all the Tai is found the tradition of a universal deluge, from which the god of the earth saved only a brother and a sister—a poor but pious couple—who shut themselves at his command inside a hollow pumpkin, with some rice for provision. After the subsidence of the waters the present-day races were born from the union of this couple.

4. Medicine.—The Tai regard nearly every illness as the work of evil spirits, and the best medicine is the sorcerer; the more enlightened members of the race sometimes admit that there are natural ailments, which they treat with simples and mineral products borrowed from the Chinese pharmacopœia.

[1] It should be noticed that the Tai know nothing of the property called *hu'ô'ng hoa* in Annam—an inalienable part of the patrimony reserved to meet the expense of the cult of the dead and the upkeep of the tombs. As a rule after a few months, at most after four years, the Tai have nothing more to do with the tombs.

5. **Marriage.** — Although the manners of the Tai are not so free and easy as those of the Laotians, youths and maidens meet freely to sing and play—which often leads to sexual relations; all that Tai morality requires is that there be no tangible proofs of these relations, and hence recourse is had to abortive measures or the suppression of children.

The father is the unquestioned head of the family, yet it is only among the highly Annamitized Tai that he chooses a mate for his child; among the Tai of the right bank of the Red River the young people make their own choice. The proposal is made by a go-between; the young man pays a dowry, and the engagement is settled after a sorcerer has compared the genealogical forecasts of the couple, in order to see whether any supernatural influence opposes their union. The engagement is generally long—from three months to three years—and is rather expensive for the *fiancé*, who is expected to give a great number of presents. The engaged couple are bound to observe the strictest reserve; they are not allowed to take any notice of each other until the wedding-day, while they have complete liberty in their relations with the other young people of both sexes. The marriage-ceremony itself is borrowed from the Annamese.

The outstanding characteristic of marriage among the Tai—with the exception of the Thô in the west, the Nung, and the Thô-Tï—is the quaint custom of separating husband and wife after the celebration of their union: among some tribes the wife spends a fortnight with her parents and a fortnight with her husband; among others she cannot go to her husband except when invited. This state of affairs comes to an end with the appearance of pregnancy, or, in cases of sterility, at the end of the fourth year of married life, when the wife takes her place at the family hearth. As the separated husband and wife retain complete liberty of behaviour outside with people of their own age, Tai morality suffers some strange drawbacks from this custom. The Tai youths marry usually between twenty-three and twenty-five, the girls between sixteen and eighteen.

The Thô of the west and several other tribes practise marriage by adoption and marriage by contract also. A poor young man can enter a rich family without paying the usual dowry, on condition that he takes his father-in-law's name, and lives with and works for his father-in-law. Should he wish later to live apart with his wife, he is liable to pay an indemnity to his father-in-law. A young man can also marry without paying a dowry and without changing his name, by undertaking a contract to serve his wife in her father's house for a stated number of years—from four to seven. If he dies before the contract has expired, his widow is responsible for his debt. These two forms of marriage, which are not held in high esteem, entail no long engagements and no costly wedding-feasts.

Polygamy is allowed by the Tai, but seldom practised; the number of wives is usually limited to two, only the first having honour and authority at the hearth, the other being practically her servant. Among the White Tai, however, the daughter of a chief has the rights of first wife, no matter when she is married. The Tai woman, though she enjoys a life of perfect freedom in her youth, becomes after marriage a sort of beast-of-burden; all the hard work in the fields and in the house falls on her. She has no real individuality till she becomes a mother. Divorce is rare; by right only the husband can seek it; in actual life it is the wife who applies for it. Repudiation is still more rare and is nearly always due to sterility.

6. **Birth.**—The house of the mother is forbidden to strangers during and for a certain time after confinement. If they did enter, they might themselves be contaminated and bring harm to the child. The confinement is made known to those outside by a branch of shaddock and a piece of coal among the Thô of the west, by a piece of wood, a knife, and a green branch among the Thô of the east, fastened to the ladder of the house. The first visitors to enter the house of the mother have to pass over a burning brand or a pail of water, into which red-hot iron is plunged. The Tai woman is delivered nearly always in a standing position, holding on to ropes with her hands. The eastern Thô alone light a brazier on the camp-bed whither she is afterwards carried. The placenta is secretly buried by the midwife. The birth is announced with libations to the ancestors by the head of the family. A propitious day is chosen for putting the child in the sack that does duty as swaddling. The choice of a name is surrounded with the same superstitious fears as are found among the Annamese, and the same unpleasant designations are chosen.

7. **Death and disposal of the dead.**—The Tai originally practised cremation and still do so for certain chiefs. As a rule they have now adopted burial. Funeral honours are paid only to men over 18 years of age and to married women. The rites are imitations of those of the Annamese. The medicine-man determines the position of the coffin and the situation of the grave. The deceased is dressed in his best clothes and a pair of new sandals, and is put into a coffin containing about 10 kilogrammes of ashes. On the bier are placed some duck-feathers to help him to ford the rivers of the other world, and a pencil and paper for him to make his wishes known. On the day of burial—usually the third after death—the corpse is placed on a paper catafalque and taken to the cemetery with great ceremony. The one idea at this juncture is to prevent the dead from returning to torment the survivors at home and at the same time to protect him from evil spirits. It is for this purpose that the medicine-man is employed; he brandishes his sword at intervals round the coffin and the mourners, who strew the road with gold and silver paper in order to tempt the evil spirits to stop and gather it up. The coffin is then put into the grave under the protection of the medicine-man's sword; food is placed on the tomb, near which the catafalque is burned—a house for the dead in the other world. Among the Chong-Kia Tai, when the coffin has to cross a river, the children stretch a piece of cloth from side to side for the souls of the dead, to keep them from wandering. Commemorative rites are not observed regularly by the Tai, except where they are very much under Annamese influence.

8. **Tabu.**—There seems to be only one kind of tabu among the Tai, viz. the entering or leaving a village during a local festival. Strangers are warned to turn back by notices placed outside the village.

II. ***MAN.***—This Chinese name, which means 'barbarous,' 'rude,' is applied in Tongking to the ethnic group of the 'children of Pan-Hù or Pïen-Hù,' who claim to be descended from the union of the dog Pan-Hù with the daughter of the emperor of China, whose inveterate enemy had been vanquished by Pan-Hù. The Man, or Yao, probably inhabit the high parts forming the basin of the Li-Kiang in the north, and are about 50,651 in number in N. Tongking and much more numerous in the west than in the east. Their various groups have been classified in six great families issuing, they say, from the six sons of Pan-Hù: the Man Côc, or 'horned Man'; the Man Tiên, or *sapèque*

Man; the Man Lan-Tien, or 'indigo-tinted Man'; the Man Quân Trăng, or 'blue-trousered Man'; the Man Quân Côc, or 'short-trousered Man'; and the Man Cao-Lan, or 'great rainbow Man.' The Man Côc, most numerous and most important, live in the highest parts of the country; lower down are the Man Tiên; the Lan-Tien hardly ever are found at a greater altitude than 300 metres; the others follow by various stages to the borders of the deltic plains; as a rule, they all find life in the valleys uncongenial.

1. Physical characteristics.—The Man are not so tall as the Tai, but are more robust, more intelligent, and much more active. As they have no rice, their staple food is maize, vegetables, and yams. They eat meat sparingly, chiefly pork, rarely buffalo or ox, never the dog—for this is the totem of their race. They do not chew betel, but both men and women smoke tobacco and the rich consume opium.

Their houses are built sometimes on the ground, sometimes on piles, and sometimes half-and-half. A random group of these houses forms a village, and the village is scarcely ever surrounded by a wall. The Man borrow their style of dress from either the Chinese or the Annamese according to their locality. The women's garments are embroidered on the skirts, facings, neck, and sleeves with bright red and blue designs so intricate and elaborate that it takes three years to embroider one costume. Their hair-dressing is also elaborate, and is nearly always finished off with a large turban having coloured edging and embroidery.

The Man are essentially agriculturists; but they are also good blacksmiths, and can make the trinkets that their women use, and also paper from bamboo-fibre. They are good fishers and hunters.

2. Religion.—Their beliefs are like those of the Tai, but even more confused—a few vague notions from the three great religions of China; but the mass of the people are animists, though not quite so superstitious as the Tai. Ancestor-worship is held in great honour among them. They have the same flood legend as the Tai. The Man have only a few pagodas dedicated to the tutelary deity of the village. They are nearly always built against a fruit-tree. They have medicine-men who present offerings, exorcize spirits, and work cures. The reputation of these sorcerers varies with the Man Côc according to whether they have or have not received complete initiation to the third degree. Among the other tribes initiation generally comprises only one degree. The Man worship consists in sacrifices, songs, and dances. They observe the Chinese feasts with varying regularity. They have also two curious local feasts celebrated with great pomp, especially by the Man Côc. The one takes place every three years in certain tribes, every five years in others, and commemorates the rescue of the Man race when—so long ago as to be in the region of hypothesis—it was shipwrecked in sight of the Chinese coast on its way from an island in the east. The second feast, called 'the great fast,' comprises five days of extraordinary pomp, and occurs only once in ninety years. We have no data of any value on its origin or symbolic meaning.

3. Medicine.—Their medicine comes from the Chinese, but the Man would not believe in the efficacy of any medicine that was not accompanied by incantations and exorcisms.

4. Metamorphism.—The Man believe that their neighbours, the Mao, have a third cutting of teeth in their old age, and after death escape from their graves and reappear as tigers.

5. Marriage.—The Man do not attach much importance to virginity. When a child is born before marriage, it is suppressed without a thought of the law which demands a fine for such an offence. Violence is also punished by a fine. The young people themselves, and not their parents, arrange their marriages. The young man makes his choice, then tells his parents, who send a go-between to make proposals to the parents of the girl. After examining the genealogical forecasts, the go-between may, at a second visit, discuss the amount of the dowry and the presents to be offered by the suitor. The engagement is concluded when the young man himself brings all or some of the presents. All intercourse between the engaged couple is stopped until the wedding-day, which is signalized by the customary banquets; the couple drink a cup of rice-wine together and prostrate themselves before the ancestral altar. They live together after the marriage-ceremony. The daughter-in-law must scrupulously avoid touching her husband's parents, though she serves her father-in-law at table.

The Man are also familiar with marriage by adoption and contract. Among the Man Cao-Lan the newly-married couple do not live together until two or three months after the marriage-ceremony. Among the Man Quân Trăng the marriage is preceded by a term of three years spent by the young man in his future father-in-law's house, the girl being usually about thirteen or fourteen at this time. The youth may marry her at the beginning of the three years on condition that he indemnifies his father-in-law for the three years' service which he owes. If pregnancy occurs during this term, the parties are bound to each other; if the youth changes his mind before the end of the term, he can leave without paying or receiving anything; if he is dismissed, he can claim an indemnity for the service rendered. After marriage the couple serve seven years in the paternal home of the husband.

Polygamy is practised among the Man; the number of wives is usually restricted to two, the first alone having authority in the house. The Man Quân Trăng allow polygamy only in exceptional cases. The material status of woman is high among the Man, the men doing all the heavy work; her legal status is different: she is the property of her husband, who can give her away and repudiate her. She, on the other hand, is not allowed to leave him. In cases of adultery the husband has the right to send his wife back to her parents and reclaim the dowry that he paid for her; if he keeps her, he can claim damages.

6. Birth.—From the third month of pregnancy sexual relations cease, and the woman abstains from fat, green vegetables, and garlic. She is not allowed to sew or embroider except outside her house. The Man Lan-Tien believe that, if a pregnant woman were the first to cross a new bridge, it would fall; that the touch of such a woman spoils rice and alcohol; the Man Quân Trăng, on the other hand, keep her away from these things for her own sake, in case they should cause miscarriage. The birth is announced to outsiders by a bunch of grass hung on the door among the Man Côc, by threads stretched across the door among the Quân Trăng; no announcement is made among the Lan-Tien. The Man woman is delivered sitting on a little stool. No fire is put under the bed after delivery. The placenta is taken far away and hidden in a hole in a tree or rock; it is buried under the mother's bed among the Man Lan-Tien; if eaten by an animal, it would bring misfortune on the child. Children born out of wedlock among the Quân Trăng belong to the mother; but the father, if known, is liable to pay a fine and give two months' service free in the house of the mother's parents to repay them for the loss of work caused by the birth. They practise adoption freely and thus receive into their families many Annamese children as their own.

7. Death and disposal of the dead.—The Man Côc used to burn their dead, and this custom survives west of the basin of the Red River. The Lan-Tien nearest the delta buried only those over fifty; the Quân Trăng buried all the heads of families. The burial rites are copied from the

Annamese. The Man Côc do not make 'the white silk soul' or catafalque; a sorcerer of the second degree exorcizes the tree from which the coffin is to be made so that the tree-spirit may not come to torment the dead.

III. *PA-TENG.* — The Pa-Teng, about 200 in number, live near the Man on the heights separating the Red River and the Clear River (Song-Ka). They are often classed with the Man, but are really separate linguistically. Their beliefs and customs are practically those of the Man.

IV. *MEO.* — The Meo, or 'cats,' numbering 21,471, are found in Cao-Bang, Bao-Lac, Lao-Kay, and Coc-Len as well as in the provinces of Thai-Nguyen and Yen-Bay. They claim to have come originally from the Chinese provinces of Yun-Nan, Kwei-Chu, and Tse-Chuen. Their last invasion into Tongking, in 1860, was very violent.

1. **Physical characteristics.**—The Meo are little and squat, very vigorous on their short legs, brave, hardy, and independent; they can be very abstemious, but are inclined to eat and drink heavily. Maize is their staple food; they eat very little meat, and drink a great deal of alcohol, but tobacco is not used and betel is unknown among them. Their rustic huts, of *pisé* or mud, are dirty to repulsiveness.

2. **Religion.** — Their traditional beliefs are borrowed from China and are very unprecise and wavering. They dread evil spirits—among others, the souls of beheaded people and of the unburied dead. A vague form of ancestor-worship is practised; it amounts to a few prayers and offerings of food, which are quickly consumed by the survivors. They are familiar with the flood-legend of the couple saved in the hollow pumpkin. Their priests are sorcerers.

3. **Marriage.**—Paternal authority is not strong. The young people make their own choice of mates, and marriage is accomplished through a go-between. In some districts the suitor has both to pay a dowry and to serve his future parents-in-law for two years before marriage. The Meo marry freely with other ethnic groups. Marriages are always accompanied by dances, songs, and games; if the bridegroom cannot afford the expense, he may leave it for his father-in-law to bear, on condition that he and his wife give so many years' work in payment. Marriage by capture is also found: the youth may carry off the girl who has been denied him, and he atones for his offence by paying a heavy dowry. Polygamy is allowed, but is not practised except when the first wife has no children. In adultery the husband has the right to kill the culprits, but as a rule he is content with repudiating his wife and taking back the dowry.

4. **Birth.**—There is nothing to mark the house on the occasion of a birth; the mother is delivered sitting and remains indoors for 33 days. The placenta is buried in front of the house, if the child is a boy; under the fire-place, if it is a girl.

5. **Death and disposal of the dead.**—The Meo bury their dead. The watch by the corpse consists of three days' feasting and dancing; the children of the deceased invite him to join in the banquets, and even slip a piece of food between his teeth. By the side of the corpse, which is dressed in new clothes and fixed in an upright position to a wall of the hut, a dead dog, killed for the purpose, is placed. The two are bound together by a strip of paper going from the dog's mouth to the dead man's wrist. The dog's duty is to guide his master in the other world. The coffin and the body are taken to the grave separately; the body is carried on a litter and is followed by the sorcerer, the family, and some friends, while guns are fired to frighten the evil spirits. When the grave is filled in, the litter is broken over it, some food (which must be renewed for several days) is placed on the tomb, and the funeral-procession returns to a banquet at the deceased's house.

V. *LOLO.*—The Lolo, a people almost certainly originating in the Brahmaputra valley, are about 2300 in number in Tongking and live chiefly in the region of Bao-Lac.

1. **Physical characteristics.**—Of medium height, muscular and well built, with fine regular features and a copper complexion, they recall to the Western mind the Bohemians of Europe. They are luxurious and indolent, marrying only among themselves; but their race is degenerating through the use of opium. Their chief foods are rice, maize, vegetables, and gourds, meat being reserved for festivals. They make alcohol from fermented maize. They use no betel and very little tobacco, but indulge in opium to excess.

Their houses are built on piles in the rich villages; in poor villages they are wretched huts placed on the ground. In dress the Lolo resemble the Chinese or the Thô according to locality, but their garments (those of the women in particular) are shorter and much more elaborately embroidered. The Lolo are great agriculturists and hunt and fish a little.

2. **Religion.**— Their beliefs and psychical life vary according as their villages are next a Tai, Man, or Meo clan. Their chief cult appears to be that of evil spirits, and they countenance ancestor-worship, theoretically. They also have the story of the flood and the survival of their ancestors in a pumpkin.

3. **Marriage.** — Marriage, which takes place during the night, comprises no religious ceremonies, but simply banquets and dances. After marriage the wife lives only two or three nights with her husband, and then returns to her parents until pregnancy privileges her to take her place in her husband's home. Marriage by capture is practised, the captor paying a double dowry. Adultery is punished by the death of both offenders. Polygamy exists only in theory.

4. **Birth.**—The rites connected with birth have no peculiarities among the Lolo. Adoption is of frequent occurrence, either by free consent or as the result of a bargain, and is the occasion of great festivities.

5. **Death and disposal of the dead.**—Burial takes place, without ceremony and in presence of relatives only, three days after death. For nine days in the case of a man, eight for a woman, and six for a child, the family keep a fire burning on the tomb, and after that take no more trouble. Certain tribes exhume the dead, after one or three years, with great pomp, and put the head or all the bones into a little wooden box, which is then placed on a neighbouring rock, where the survivors can see it while at work. Their ancestor-worship is very crude. The place of the tablet is often taken by a representation of the dead made from an orchis stem and little bits of paper, placed against a partition or between the wall and the roof of the hut.

6. **Tabu.**—Women after puberty are forbidden to eat pork, chicken, duck, or dog, and must not even cook their food in dishes which have been used for preparing these foods; hence the necessity of two fire-places and two utensils in a Lolo house.

VI. *MUONG OR MON.* — The Muong or Mon are an ethnic group centring in the province of Hoa-Binh. They are of uncertain origin, but appear to be closely connected with the Annamese, whom they resemble strongly in physical type, dress, and customs. Their religion is a development of the popular animism of the Annamese.

It should be noted that in one thing they are very different from the Annamese: among the Muong the relations between the sexes before marriage are very free. Whenever a girl becomes pregnant, her family and that of her seducer are made to pay a fine to the village. As among the Annamese, the blood-test is applied when the father of a child denies his paternity. Marriage is celebrated according to the Annamese rites. Accouchement takes place on a camp-bed under which the usual fire is kept burning, and the house is marked to outsiders, after the delivery, in the

same way as among the Annamese. The placenta is buried underneath the house itself. The dead are buried in accordance with the Annamese rites. The corpse is placed in a coffin made from a hollow tree-trunk and set up in front of one of the doors of the hut. Outside, and facing it, there stands on a bamboo tripod a basket containing a little dog killed for the purpose, some rice, alcohol, and incense-sticks. A special cord binds the tripod to the coffin. After the coffin has been let down and the grave filled in, a wide-mouthed jar is emptied near the stone which marks the position of the dead man's head; and, if rain-water comes and fills this jar again, it shows that the grave has been well chosen and it brings a thousand blessings to the survivors. The bodies of the *quan-lang* (village chiefs) are kept, it appears, for three years before burial in front of the ancestral altar; a long bamboo tube leading from the hermetically-sealed coffin right up beyond the roof of the hut preserves the hut from mephitic vapours.

VII. *KEU-LAO.*—The Keu-Lao, of whose origin and customs we know next to nothing, form an ethnic group of seven families in the neighbourhood of Dong-Vân.

VIII. *LA-TCHI.* — The La-tchi or La-ti are about twenty in number and live in the village of Chi Ka, near the upper valley of the Song-Chay. Though resembling the Annamese of the delta in physical type, they claim to be aboriginals. They are very little known and seem to live like the Meo. Their characteristic trait is their abstention from pork, the diet *par excellence* of the Far East, because, they say, their orphaned ancestors were fed by a sow.

ANTOINE CABATON.

TONGUE. — **1. Physiology.** — The essential organ of taste is 'the mucous membrane which covers the tongue, especially its back part, and the hinder part of the palate.'[1] Here are found certain cells, arranged in groups which are known as 'taste-buds' and are connected with two cranial nerves. Sensations of taste are intermingled with accompanying sensations of touch, and often of smell.[2]

'There appear to be distinct terminal organs for bitter tastes, for sweet tastes, for acid tastes, for salt tastes, and possibly for other tastes, all differing from the terminal organs for tactile sensations, and from the structures, whatever they may be, which are concerned in general sensibility.'[3]

Modern knowledge of the physiology of taste began (1665) with Malpighi (1628–94), who employed the newly invented microscope.[4] The sense of taste was grouped by Aristotle under that of touch, both operating only through immediate contact.[5] Pliny notes that the human palate also possesses the sense of taste, and he gives many details about the variety in the tongues of animals.[6] An Anglo-Saxon leech-book, in prescribing 'for men in whom the string under the tongue is badly swollen,' says that 'through the string first every disorder cometh on the man.'[7] But the chief significance of the tongue for primitive thought is obviously in regard to the faculty of speech, to which it contributes, together with the throat and lips, in the modulation of the voice. That vibration of the vocal cords which is called 'voice' is modified by the varying shape of the resonant chamber formed by the mouth. The tongue, however, is not indispensable to speech; Huxley refers to a case in which conversation remained quite intelligible though the tongue had been completely amputated.

2. Localization of psychical function.—This characteristic of primitive thought concerning the physical organs[1] is frequently illustrated by primitive practices in regard to the tongue. Since the nervous system and the minuter structures of the tissues were unknown to the ancients, the tongue was thought to possess an *inherent* faculty of speech, as something residing in it, so that the faculty or its special qualities could be transferred by acquisition or assimilation of the tongues of specially gifted animals or men.

Thus, among the Tlingits of Alaska, the chief of the spirits sends the candidate for shamanism 'a river-otter, in the tongue of which animal is supposed to be hid the whole power and secret of shamánism. . . . If, however, the spirits will not visit the would-be shamán, or give him any opportunity to get the otter-tongue as described above, the neophyte visits the tomb of a dead shamán, and keeps an awful vigil over night, holding in his living mouth a finger of the dead man or one of his teeth; this constrains the spirits very powerfully to send the necessary otter.'[2] 'In Bohemia the tongue of a male snake, if cut from the living animal on St. George's Eve and placed under a person's tongue, will confer the gift of eloquence.'[3] 'A North American Indian thought that brandy must be a decoction of hearts and tongues, "because," said he, "after drinking it I fear nothing, and I talk wonderfully."'[4] In S.E. Australia 'one of the Wakelbura was observed to take the tongue out of a certain grey-and-white lizard called Bungah, and give it to his little son, a child of about thirteen months old, and gave as a reason for doing so that after eating the tongue his child would soon be able to talk.'[5] 'When a child is late in learning to speak, the Turks of Central Asia will give it the tongues of certain birds to eat.'[6] The converse is illustrated by the belief that the saliva of a queen touching the tongue of a bird gave it human speech.[7] Among the Nubians, 'before the tongue of any animal is eaten, the tip is cut off; on human analogy they believe that "here is the seat of curses and ill-wishes."'[8] It is a common custom of hunters to cut out the tongues of animals that they have killed. Perhaps 'the removal of the tongues is sometimes a precaution to prevent the ghosts of the creatures from telling their sad fate to their sympathising comrades, the living animals of the same sort, who would naturally be frightened, and so keep out of the hunter's way.'[9] The cannibal practice of eating the tongue of a slain enemy is partly based on the idea that the localized qualities are in this way acquired.[10]

3. Ordeals.—The idea of the localization of psychical function and its ethical qualities underlies different forms of the tongue-ordeal.

Lady Anne Blunt records an interesting case of this in connexion with a dispute as to the parentage of a child: 'The matter, as all such matters are in the desert, was referred to arbitration, and the mother's assertion was put to the test by a live coal being placed upon her tongue.'[11] Here the original thought seems to have been that the truth would be elicited when the inherent falsehood of the tongue was, if necessary, burnt out. Similarly, in case of theft among certain W. African tribes, use is made of a needle which the operator 'thrusts through the tongue of each member of the household in succession, to discover the thief, it being believed that it will fail to pierce the tongue of the person who committed the theft.'[12]

Reference to the tongue-ordeal among E. African natives was recently made in the British House of Commons: 'A native chief was investigating a case of cattle theft in the presence of

the District Commissioner, Mr. Dundas. The chief called on the accused, one of his people, to go through the native form of ordeal by fire, by licking a hot knife. Mr. Dundas did not prohibit this procedure, but took care that the knife was not sufficiently heated to burn the tongue of the accused.'[1] An ordeal of a different kind is undergone by the medicine-man in certain tribes of Central Australia. The tongue is mysteriously mutilated, and 'remains throughout life perforated in the centre with a hole large enough to admit the little finger.'[2] But this may rather be an example of the frequent practice of mutilating an organ before its special use in order that it may be used with impunity (cf. circumcision, etc., at puberty).

4. Religious usages.—The tongue is not often named as a separate offering in the rites of sacrifice.

The Homeric Greeks concluded a feast by casting the tongues of the victims upon the fire, over which they poured the drink-offering.[3] 'According to some accounts, the tongues of the victims were assigned by the Greeks to Hermes, as the god of speech, or to his human representatives, the heralds.'[4] The Yakut made a special sacrifice, for a sick man's recovery, of tongue, heart, and liver, consuming the rest of the meat themselves.[5] In the horse-sacrifice of the shamanists of N. Asia the tongue of the sacrificed animal is torn out (in order to make its spirit dumb under the shaman's control?).[6]

Honey was placed on the tongue of one who was being initiated into Mithraism, as was the custom with newly-born infants;[7] we may compare with this the ceremonial tasting of milk and honey by those being baptized into the Christian faith.[8] In this connexion may be noticed the miracle of healing ascribed to Martin of Tours, wrought by anointing the tongue of a dumb girl with oil after exorcism.[9] The wide-spread rule of silence (*q.v.*) during particular religious ceremonies falls beyond the scope of this article, but the idea of the localization of function probably underlies the Indian usage recorded by Devendranath Tagore:

'On another elephant sat the Rajaguru (religious preceptor of the Raja) dressed in the ascetic's brick-coloured robe, and silent. He had his tongue encased in wood, lest he should speak.'[10]

5. Penalties.—In the light of these illustrations of the fundamental idea of localized function (or 'diffused consciousness'), we may better understand certain barbarous mutilations widely practised by way of penalty or revenge. These have often survived into times relatively more civilized than those of their origin, when the idea that first prompted them has been lost, viz. the idea of penalizing the guilty organ in which the original evil resides.

The Laws of Hammurabi enacted that in certain cases an adopted son denying his new parents was to have his tongue cut out.[11] According to 2 Mac., when the seven brethren were being tortured, the king 'commanded to cut out the tongue of him that had been their spokesman' (7[4]). Judas Maccabæus, 'cutting out the tongue of the impious Nicanor, said that he would give it by pieces to the birds' (15[33]). Maximus and two other opponents of Monotheletism were dragged from Rome to Constantinople, where their tongues and right hands were cut off, before they were driven into exile.[12] Blasphemy for the fifth time was punished by excision of the tongue, according to a law (1347) of Philip of Valois (1293–1350).[13] Evagrius writes of the heretic Nestorius: 'I learn from one who wrote an account of his demise, that when his tongue had been eaten through with worms, he departed to the greater and everlasting judgment which awaited him.'[14] The instinct which doubtless created this legend worked also in Fulvia's savage action, when she thrust her needle through the tongue of her dead enemy, Cicero.[1] 'The Clarendon Papers, quoted by Southey, state that at Henley-on-Thames, as late as 1646, it was ordered that a woman's tongue should be nailed to a tree, for complaining of the tax levied by Parliament.'[2]

6. 'Figurative' usages.—The selected evidence already given will prepare us to recognize a deeper meaning in many phrases of ancient literature which the modern mind is apt to dismiss as simply figurative and poetical. The Biblical usages will sufficiently illustrate this. The quality of 'a backbiting tongue' is as inherent as that of 'an angry countenance' (Pr 25[23]); a lying tongue hates those that it wounds (26[28]); the tongue devises wickedness, like a sharp razor (Ps 52[2]); Job asks more literally than most readers suppose, 'Is there injustice on my tongue?' (6[30]). The Servant of Jahweh declares that his Master has given to him the disciple's tongue, that he may know how to help the weary by his words (Is 50[4]). In the Messianic future the tongue of the stammerers will be prompt to speak plainly (32[4]), the tongue of the enemies of Israel will consume away in their mouth (Zec 14[12]). The tongue is not named in the well-known narrative of Isaiah's call (Is 6), but the cleansing of his lips by the live coal illustrates the principle of the localization of psychical function. So in the NT, when the tongue is said to defile the whole body, and to be a restless evil, full of deadly poison (Ja 3[6. 8]), there is a hidden intensity of meaning derived from primitive thought. The importance of this is seen in regard to such a phenomenon as the 'gift of tongues,'[3] which implies that the local and quasi-independent organ has been taken possession of by the Spirit of God. This is more difficult for the modern mind to conceive sympathetically than it was for the ancient, largely because we have lost touch with the idea of the localization of psychical function and ethical attributes, and have replaced it by that of the cerebral centralization of consciousness.

LITERATURE.—J. G. Frazer, *GB*[3], pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 269 f. (where a number of primitive practices in regard to the tongue are collected in a long footnote); J. B. Mayor, *The Epistle of James*[3], do. 1910, pp. 219–221, discusses the ethical aspects of the use and abuse of the tongue. See also H. Wheeler Robinson, art. 'Tongue' in *DAC*.

TONGUES.—See CHARISMATA.

TONSURE.—Tonsure is the shaving or cutting of the hair after a particular fashion as a sign of reception into the clerical order and to the privileges pertaining thereto. As a rite it is preparatory to the reception of holy orders, and is administered by the bishop or by a mitred abbot or by certain privileged priests in whom its administration has been vested by the pope. At first it was part of the ceremony of ordination, but was separated from it towards the end of the 7th century. The origin of the tonsure is obscure, but from passages in the Fathers it is clear that long hair in men was considered effeminate or worse, and this was particularly true in the case of monks. Epiphanius censures some Mesopotamian monks for their long hair against the rule of the Church, and Jerome is particularly indignant at the custom.[4] A monk's hair had thus to be cut short, though not shaven, as this was the custom with the priests of Isis.[5] The earliest tonsure was probably no more than a close cutting of the hair of the entire head, though this may have become a shaving of the whole head after the manner of

the Nazirites and those under a vow (Nu 6^{18}, Ac 21^{24}).[1] It may also have been adopted by monks as a symbol of a penitential life, since penitents had their hair shorn. This is the Eastern form of tonsure, or that of St. Paul. Bede tells how Theodore of Tarsus, before being consecrated by Pope Vitalian in A.D. 668, waited four months for his hair to grow, that it might be shorn into the shape of a crown (the second or Western form of tonsure, or St. Peter's), 'for he had the tonsure of St. Paul the apostle, after the manner of the Eastern people.'[2] The Petrine tonsure consists in leaving only a circlet of hair round a shaven crown, this symbolizing the crown of thorns or the crown of Christ's royal priesthood. It had displaced the Pauline form in the West, and is first mentioned by Gregory of Tours (6th cent.), and was worn by Pope Gregory the Great (A.D. 590–604), who sent Augustine to England.[3] It is ordered in the 41st canon of the Council of Toledo (A.D. 633)—that 'all clerics must shave the whole front part of the head, and leave behind only a circular crown' of hair on the lower part. While tonsure arose as a monastic custom, it was soon adopted by all clergy, probably before the end of the 6th cent., and the Quinisext Council of 692 appoints it for such lesser orders as readers and singers.

A third form, that of St. John—or of St. James, as its upholders claimed—seems to have been peculiar to the Celtic Church, and occasioned great controversy with the missionaries from Rome, who were astonished to find it in use in Britain, and vigorously combated its use. Nevertheless it continued to be used long after the Synod of Whitby (A.D. 664), which decided against it. What precisely its nature was is uncertain. The Irish Druids are known to have used a tonsure, perhaps denoting servitude to the gods, as it was customary for a warrior to vow his hair to a divinity if victory were granted him.[4] The Druidic tonsure seems to have consisted in cutting all the hair on the anterior part of the head from ear to ear, except a small patch at the forehead.[5] This was looked upon as the tonsure of Simon Magus, regarded as the archdruid or Magus. It has been thought that the Celtic Christian tonsure resembled this and was retained through national feelings. But there was apparently some difference, possibly slight, and it is hardly likely that, while other Druidic observances were banned, this would be retained. Two views are held regarding the Celtic Christian tonsure. (1) It left the hair long at the back, the upper part of the front being shaved so as to leave a band of hair round the forehead from ear to ear.[6] This view was first mooted by Thomas Innes, who says:

'The tonsure of the Scots was not fully round and did not reach the hindermost part of the head, and therefore resembled a crescent or semi-circle.'[7]

(2) All the front of the head was shaved, to a line from ear to ear, behind which the hair was grown.[1] Each of these forms has strong supporters, but the former is probably confirmed by Ceolfrid's account of his discussion with Adamnan, who wore the Celtic tonsure, and to whom he said:

'You who think you are advancing to the crown of life which has no end, why do you wear on your head the representation of a crown which has an end, as Simon Magus did? His tonsure resembled a crown in front but on closer inspection was seen to be imperfect.'[2]

The adherents of the Petrine tonsure generally ascribed the origin of the Celtic to Simon Magus, by way of contempt, or, for the same reason, to the swine-herd of King Loigaire MacNeill.[3] At an earlier time St. Patrick, who was tonsured after the then prevailing Roman manner, viz. the whole head shorn, tried to induce its adoption, but apparently in vain.[4] According to Bede, the community at Iona and the others subject to it accepted the Petrine tonsure about A.D. 716, but other Britons did not conform then.[5] The Celtic tonsure, carried by emigrant Britons to Armorica, was known there in the 9th century.

The Latin form of tonsure with regulars leaves often no more than a circlet of hair; with seculars it is smaller. According to the Synod of Placentia (A.D. 1388), it was to be of the breadth of three fingers. Once the tonsure has been received, it must always be retained.

LITERATURE.—Besides the works cited, see E. Martène, *de Antiquis Ecclesiae Ritibus*, Venice, 1783; artt. 'Tonsur' in *PRE*[3], and in H. J. Wetzer and B. Welte, *Kirchenlexicon*[2], Freiburg i. Br., 1882–1901. J. A. MACCULLOCH.

TONSURE (Buddhist).—There is no mention of tonsure, and no regulation as to the method to be adopted in wearing or not wearing the hair, in the 227 original rules of the Buddhist order of mendicants. But in the *Khandhakas*, or collection of subsidiary and supplemental rules, completed at the end of the first century after the Buddha's death, we find the following paragraphs:

1. 'You are not, O Bhikkhus, to wear long hair. Whosoever does so, shall be guilty of a minor breach of the regulations [*i.e.* of a *dukkaṭa*]. I allow you, O Bhikkhus, hair that is two months old, or two inches long.'

2. 'You are not, O Bhikkhus, to smooth the hair with a comb, or with a snake's hood [*i.e.* with an ivory instrument so shaped], or with the hand held in that shape, or with pomade, or with hair-oil.' . . .

3. 'I allow you, O Bhikkhus, the use of razors, of a hone to sharpen the razors on, of powder prepared with Sipāṭika-gum to prevent them rusting, of a sheath to hold them in, and of all the apparatus of a barber.' . . .

4. 'You are not, O Bhikkhus, to have the hair of your heads or on your face cut by barbers, nor to let it grow long.' . . .

5. 'You are not, O Bhikkhus, to have your hair cut off with a knife.'[6]

We should not draw, from the fact of these paragraphs being found among the subsidiary rules, any conclusion that they belong to a later time than the original rules. The subsidiary rules refer quite often to what were evidently older customs in the order, and only legalize and give authority to practices already followed, though not mentioned in the older rules. But we should notice in the first place that there is no mention of scissors. The reason of this is curious; scissors had not then been invented. This is confirmed by an exception to rule 5 above. If a *bhikkhu* had a sore on the head, and the hair round it could not be removed by a razor, then a knife might be used.[7] In this case no doubt, if scissors had been

[1] And also as a mark of servitude to God, since Roman and Greek slaves had their heads shaven.

then known in the Ganges valley, their use would have been allowed, at least as an alternative.[1]

The members of the order, we see, were to be shaven, not only on the face, but all over the head; and the shaving had to be performed, not by a barber, but by fellow-members. Why was this the rule? Undoubtedly because this was the custom previously followed by the *religieux* belonging to the other orders that we know to have been older than the Buddha's time. It was only natural that men who had devoted themselves to the higher life, and whose main duty was the learning by heart and the repetition of texts dealing with the higher life as they conceived it, should have thought it becoming to themselves to avoid, not only the use of fashionable clothing, but also the elaborate hair-dressing then habitually used by men of the world. The medallions carved in bas-relief on the stone railings round the Bharhut tope may serve as illustrations of these turban-like arrangements, in which strips of brocaded cloth are intertwined with the hair (left long), the faces being clean shaven.[2] Though the sculptures are later in date, earlier texts confirm the general style by descriptions ambiguous without the help of such illustrations.

There is one passage in a very early text, about the same age as the five paragraphs, which confirms the suggestion that those paragraphs probably give us the earliest customs as to shaving followed in the order. That is *Dīgha*, i. 90, in the *Ambaṭṭha Suttanta*, where a Brāhman, reviling the adherents of the new movement, and in fact referring to the Buddha himself, calls them 'shavelings, sham friars, the off-scouring of our kinsman's heels.'[3] It is clear that, in the view of the compilers of this passage, the members of the order had their heads shaven. Another such passage is preserved in the popular anthology called *Dhammapada*, 264, which says: 'Not by his shaven crown is one a *samaṇa*' (a member of any order of *religieux*, a 'religious'), if he be irreligious. It should be noticed that the technical word used is not *bhikkhu* (a member of the Buddhist order), but *samaṇa*, which included non-Buddhist orders also.

In the much later legend of the Great Renunciation—it is at least about seven centuries later than the event which it purports to relate—we are told that the first act of the future Buddha after he had 'gone forth' was:

'Taking his sword in his right hand, and holding the plaited tresses of his hair, and its twisted decoration with his left, he cut them off. So his hair became two inches long, and lay close to his scalp curling from the right, and so it remained his life-long; and his beard the same.'[4]

Now the oldest representations of the Buddha that we possess—the so-called Græco-Buddhist bas-reliefs and statues—are an endeavour to reproduce the coiffure thus described. This story, therefore, as to the imperfect form of the tonsure habitually followed by the Buddha himself, must have been credited, incredible as it seems to us, at the date of those sculptures, not only in the Ganges valley, but also beyond the present frontiers of India, in the extreme north-west. In the second place, the inventors of the story ascribe to the Buddha the belief that every *religieux*—not only Buddhists, for there were none then—should have the hair cut quite short. In other words, they claim a pre-Buddhist origin for the custom followed in the Buddhist order. Perhaps the whole episode is merely invented as a popular explanation of the odd rule as to two inches in the first of the five paragraphs quoted above.

[1] *Vinaya*, ii. 134, tr. *Vinaya Texts*, iii. 139.
[2] See figs. 21 and 22 in Rhys Davids, *Buddhist India*, pp. 94-97.
[3] The whole episode is translated in Rhys Davids, *Dialogues of the Buddha*, i. 112 ff.
[4] *Jātaka-nidāna*, p. 64 (vol. i. of the *Jātaka*, ed. Fausböll).

At the present time the *bhikkhus* in Burma, Siam, and Ceylon hold theoretically to the two-inch rule, but in practice never appear in public without the head and face clean shaven. The numerous sects of Buddhists in Tibet and Mongolia, China, and Japan have long ago forgotten, if they ever knew, the ancient rule. But we have no exact particulars as to when and where they have enacted and carried out any newer rules of their own.

T. W. RHYS DAVIDS.

TONSURE (Chinese).—**1. Confucian.**—Confucianism, being a system of ethics, has no priests or monks. The tonsure is therefore unknown in it.

2. Buddhist.—(*a*) *Monks.*—The Buddhist tonsure was brought into China by monks from India. The whole head is shaved once a month or oftener. With boys brought up in monasteries, being either dedicated by their parents to a religious life or bought by the monks for that purpose, the tonsure takes place early, but with others the age is often eighteen or twenty. At the reception of a novice the liturgy directs that the introducer of the candidate shall ask the chapter assembled that the tonsure may be granted. This acceded to, the vows are taken.[1] A rite which is apparently a constant sequel of the tonsure consists of the branding of the head with from three to eighteen small circular spots.[2] A mutilation of one or more fingers is also sometimes undergone. An explanation of the Buddhist tonsure given by some of the Chinese is that it indicates the 'desire to put away . . . everything of the world, so that the monk does not claim as his own even his hair.'[3]

(*b*) *Nuns.*—Aspirants are received at the age of ten into the nunnery, and their novitiate continues till they are sixteen. During these years only the front part of the head is shaved, but all the hair is shaved when they become nuns. A woman desiring to become a nun must obtain the consent of parents, husband, or guardians.

'One of these must act as sponsor to her at the time of initiation and must hand the razor to be employed in shaving her head to the Prioress who is to perform the ceremony.'[4]

3. Taoist.—(*a*) *Monks.*—Taoist monks shave all about the crown, but the rest of the hair is allowed to grow long and is gathered together into a top-knot fastened by a wooden article like the back of a tortoise.[5] In some cases all the hair is allowed to grow.[6]

(*b*) *Nuns.*—Taoist nuns do not shave their heads, but have their hair done up on the top of their heads.[7]

4. Dislike of the tonsure.—Though Buddhism has benefited largely in the past from the favour of emperors, the tonsure has often been very obnoxious to the governing classes in China, who doubtless took it as the outward sign of the celibate priesthood, which severs its connexion with the family, entirely against Chinese ideas of the paramount importance of domestic life. Memorialists inveigh strongly against it. The following are instances:

In A.D. 624, in a memorial to the emperor requesting the suppression of Buddhism, it was stated that it caused people to

[1] L. Wieger, *Buddhisme chinois*, Ho Kân Fu, 1910, i. 151.

'shave their heads and abandon their ruler and their parents.'[1] The memorialist says again: 'Before the Western Tsin Dynasty [A.D. 256–317] reigned, the ruling dynasties enacted stringent laws by which the people of the Middle Kingdom were prevented from shaving the head at pleasure.'[2]

In A.D. 995 an edict threatened severe punishment to those who were 'shaved surreptitiously' without first obtaining permission of their district prefect to become monks or nuns.[3]

In A.D. 1408 it was decreed that, 'if any person surreptitiously took the tonsure to become a monk,' he should be punished with a term of hard labour, and after that become a husbandman.[4]

The determination of the Chinese Government to keep the tonsure as well as the age of receiving it under their control is seen in other enactments. Taoists are also mentioned in some of these cases.[5] Eight blows was the punishment under the Manchu dynasty to Buddhist or Taoist who in the one case took the tonsure and in the other did up his hair on his own account.[6] At the same time monks were not allowed to go about without the tonsure, and pupils adopted by the Buddhist clergy had to be tonsured. Those in monasteries without the tonsure had to return to secular life, being neither monks nor laymen.[7] This was the case also in A.D. 1458 for those who had been tonsured after twenty, but the culprits were to be banished for life;[8] and in A.D. 1537 it was decreed that not only those who privately shaved their heads, but also their parents, neighbours, and helpers,[9] were to be punished.

5. Ridicule of the tonsure.—The tonsure of the Buddhist lends itself to the derision of the Chinese, who are very susceptible to anything that opens a way to mockery or banter. One term applied to the Buddhist monk is 'bald-headed ass,' another is 'bald-headed thief.'[10] As a further example of the way in which the shorn and shaven priest is despised may be instanced the curious custom of shaving the head of a young boy in order that the evil spirits may think that he is of no consequence—in fact worthless to the parents—and thus pass him by uninjured. The boy is then called 'Buddhist priest.' The present writer saw an instance of this in the case of a neighbour's son in Canton.[11]

6. The Manchu tonsure.—A species of tonsure was practised by every male except monks in China under the Manchu rule of the country. The hair is now allowed to grow, instead of the greater part of it being shaved off.

7. Tonsure of children.—Young children's heads are also shaved to a large extent. The first shaving of an infant's head, when a month old, often has a religious character, being done before an idol or the ancestral tablets.[12]

LITERATURE.—See the works referred to in the footnotes.

J. DYER BALL.

TONSURE (Hindu).—*Chūḍā*, 'tonsure,' is the name of an ancient rite in India, also called *chūḍākaraṇam* or *chūḍākarma*, *chaulam*, which is performed on boys, sometimes on girls also, and derives its name from the tuft of hair left on the top of the boy's head (*chūḍā*). According to the ancient rule, this rite is to be performed when the boy is three years old, or, in the lower castes, in his fifth or seventh year. The boy is dressed in new clothes, and placed on his mother's lap. A barber cuts his hair with a razor, while sacred verses from the Veda are recited. The hair is thrown on a heap of cow-dung, and afterwards dug into the ground (see Hillebrandt, *Rituallitteratur*, Strassburg, 1897). It is interesting to note that this rite, as pointed out in Gerini's monograph on the tonsure rite in Siam, has spread into Siam, together with other Brāhmanical institutions. In India it has been invested with some legal importance, the Sanskrit lawbooks stating that a boy on whom the ceremony of tonsure has been performed in the family of his birth is no longer capable of being affiliated to another person (see Jolly, *Tagore Law Lectures*, Calcutta, 1885). The tonsure rite is carefully kept by many castes of the present day, though the time of its performance varies. Thus the Kanoj Brāhmans of Poona perform the rite when a boy is from six months to two years old; the Lingayats, after a year; the Vanis, at any time from six months to five years. Sometimes the child is taken to the village temple for the ceremony, or after its performance (see the *Bombay Gazetteer*, *passim*; Rai Bahadur L. B. Nath, *Hinduism*, Meerut, 1899). The tonsure rite is supposed to belong to the common heirloom of Indo-European nations, because similar rites and superstitions occur in the Avesta of the Zoroastrians, and, particularly, among some Slavic nations, such as the Servians and Bohemians.

J. JOLLY.

TOPHET.—Although the OT references to Tophet, the scene of the Moloch sacrifices in the Valley of Hinnom, leave no doubt as to its great importance in the popular religion of Judah in the period before the reformation under Josiah, the place itself is mentioned only in the following places: 2 K 23^{10}, Is 30^{33}, Jer $7^{31f.}$ $19^{6.\ 11.\ 12-13}$. The similar word in Job 17^{6} is clearly not to be understood in this connexion. The original pronunciation of the word, which is transliterated in the LXX Τάφεθ or Θαφέθ, is unknown, the Masoretic pronunciation in this case, as in others, being due to the substitution of the vowels of בֹּשֶׁת, 'shame.' Moreover, the etymology of the word is quite uncertain, and it cannot be determined whether the final *ṯ* is radical or is merely the feminine ending. In Is 30^{33} indeed the form is תָּפְתֶּה, which, if the text could be trusted, would be evidence of the former alternative, unless the word should be understood as having a double feminine ending such as תְּהִלָּתָה (Ps 3^{3}). But against this supposition is the fact that the word is construed as masculine in its immediate context. In any case, since, with the exception of Is 30^{33}, it always has the definite article or is capable of being so pointed, it is evident that it is not strictly a proper name. We may reasonably infer that there were several *tophets*, although we know only of the one which was situated in the Valley of Hinnom.

Robertson Smith,[1] arguing from the fact that 'at the time when the word תפת first appears in Hebrew, the chief foreign influence in Judæan religion was that of Damascus (2 K 16),' sought to connect the word with the Aramaic *tfaya*, which means a 'stand or tripod set upon a fire . . . of which we might, according to known analogies, have a variant *tfāth*. The corresponding Hebrew word is אִשְׁפַּת (for *shfāth*), which means an ashpit or dunghill, but primarily must have denoted the fireplace.' But this explanation of the word by an Aramaic etymology takes for granted that the cult practised at the *tophet*, or at any rate the precise ritual of the cult, was a comparatively new-fangled thing in the 7th cent. B.C., and there are grave difficulties in such an assumption. Even if Ahaz did bring from Damascus a new contrivance for burning the children's bodies, why should it have kept in Hebrew its Aramaic name, when the Hebrew language itself possessed the same word with the ordinary dialectic difference? When the same king introduced in Jerusalem the innova-

tion of a great stone altar, it was called by the Hebrew word for 'altar,' not the Aramaic. Moreover, it is extremely improbable that such a practice as the sacrifice of the first-born should have been suddenly introduced into Jerusalem as late as the 8th cent. B.C. When it is considered how hard debased superstitions have died in our own country—if indeed they are dead—we can understand the survival or even the recrudescence in Palestine of aboriginal superstitions, but not the adoption of so terrible a rite as human sacrifice by a people who had reached an altogether higher level of religion. The OT is unintelligible unless it is recognized that the population of Palestine in the days of the kings of Judah and Israel was not so homogeneous as later writers imagined it to have been, and that the true-born Israelites were in a minority. In a fusion of races there is, no doubt, a tendency for the higher to be drawn down to the level of the lower. When a man of fairly good intelligence, but not possessed of any strong religious convictions, marries a thoroughly superstitious woman, it is the wife's superstition rather than the husband's intellect that will be the dominant factor in the household. And that the sacrifice of the first-born was a deeply-rooted Canaanite cult is proved not only by the excavations at Gezer,[1] but also by more than one passage in the OT. It is most significant that the E document of the Pentateuch represents God as commanding Abraham to sacrifice Isaac (Gn 22^2), and that the same document in its legislation (Ex $22^{29f.}$) puts the first-born of men and cattle on exactly the same level, not requiring the redemption of the former as is ordered in Ex 34^{20} (J). And that a law allowing, if not requiring, the sacrifice of the first-born was at one time issued in Jahweh's name is evident not only from Ezk $20^{25f.}$, but also from Jeremiah's protest (7^{31}; cf. 19^5) that Jahweh had never commanded or contemplated any such cult. Although Ahaz is the first king of Judah of whom it is definitely stated that he sacrificed his first-born, it would be unsafe to conclude that he was the first who actually did so; for what had been done by earlier kings unheeded may well have called forth a vehement protest in the days of Isaiah. Certainly, if the stories of David recorded in the books of Samuel are based on a sound tradition, and are not merely what later prophets of the non-reforming party thought David must have done, there would be no difficulty in supposing that even David had presided over the Moloch cult at the *tophet* in the Valley of Hinnom. On the other hand, it must not be forgotten that, as the story of the Rechabites proves, certain strata of the population remained till a late period aloof from and uncontaminated by the Canaanite elements, and it is doubtless these non-Canaanite elements that we ought to credit with the attempts made from time to time to abolish the worst of the pre-Israelite superstitions which threatened to swamp the religion of Jahweh. There is no reason to question the statements in the book of Kings that reforms were attempted in the days of Asa and of Jehoshaphat.

While it is not improbable that the method of burning the bodies at the *tophet* in the Valley of Hinnom was the same as that adopted elsewhere,[1] it is by no means clear that either the cult itself or its ritual came from Damascus. It must not be overlooked that the *tophet*, or at any rate the place of the *tophet*, is called in Jer 19^6 32^{35} 'the high places of the Baal.' The point of Jer 7^{32} is that in the massacres which may be expected corpses not slain in sacrifice will be buried at the *tophet*—proof of the impotence of the *tophet* sacrifices to avert the divine wrath.

Robertson Smith, in discussing the meaning of Is 30^{33}, writes as follows:

'It appears that Tophet means a pyre, such as is prepared for a king. But the Hebrews themselves did not burn their dead, unless in very exceptional cases, and burial was equally the rule among their Phœnician neighbours, as is plain from researches in their cemeteries, and apparently among all the Semites. Thus, when the prophet describes the deep and wide pyre "prepared for the king," he does not draw his figure from ordinary life, nor is it conceivable that he is thinking of the human sacrifices in the valley of Hinnom, a reference which would bring an utterly discordant strain into the imagery. What he does refer to is a rite well known to Semitic religion, which was practised at Tarsus down to the time of Dio Chrysostom, and the memory of which survives in the Greek legend of Heracles-Melcarth, in the story of Sardanapalus, and in the myth of Queen Dido.'[2]

But surely at a time when sacrifices were being offered to Moloch, *i.e.* the king, at the *tophet*, a statement that a *tophet* has been prepared for a king must have suggested the ritual of the Valley of Hinnom; the prophet declares with grim Hebrew irony that a *tophet* has indeed been prepared for a king, only in this case the king will be the victim and not the recipient of the sacrifice.

How long *tophets* remained in Palestine it is impossible to say. It is asserted (2 K 23^{10}) that the one in the Valley of Hinnom was defiled by Josiah; but this statement occurs in a passage which appears to be secondary, and, even if Josiah tried to put a stop to the cult, there may have been a recrudescence of it after his death; and beyond the limits of his diminutive kingdom it probably continued considerably later. It is difficult to see why Jeremiah should have published his denunciation of the *tophet* in the fourth year of Jehoiakim, if it had been abolished once for all in the eighteenth year of Josiah. And if, as seems probable, Deuteronomy is to be dated in the 6th cent. B.C., it is evident that as late as that time it was still necessary, at least in some parts of Palestine, to protest against the sacrifice of children (Dt 18^{10}). Moreover, the prophecy in Is 30, though based on a genuine utterance of Isaiah, bears many evidences of having been modified at a later date, and, if Asshur here, as in $11^{11.\ 16}$ and $19^{23ff.}$ (cf. Ezr 6^{22}), means the Seleucid empire, the king referred to in the present form of the passage may be Antiochus Epiphanes. It is certainly not impossible that in some outlying districts of Palestine, such as Ammon, Moab, or Edom, the cult associated with the *tophets* held its own down to the 2nd cent. B.C.

TORCH (Greek and Roman).—

In common with other races, the Greeks and Romans held many festivals at night, when torchlight was a practical

[1] That the skeletons found at Gezer belonged to children who had been sacrificed appears more natural than the explanation adopted by J. G. Frazer (*GB*[3], pt. iv., *Adonis, Attis, Osiris*, London, 1914, i. 108 f.), nor is the greater age of some of the children whose skeletons were found in Tell Ta'annek conclusive proof to the contrary. It is evident that the redemption of the first-born must have been a not uncommon custom before it was required by law (Ex 34). Parents would endeavour to save their children by substituting some other victim, and, if all went well afterwards, would assume that the god had been satisfied. In time of great distress, however, it would be imagined that the god had not been contented with the substitute and demanded his real due. See art. REDEMPTION.

[1] 'The human holocaust is not burned on an altar, but on a pyre or fire-pit constructed for the occasion. This appears both in the myths of Dido and Heracles and in actual usage. At Tarsus a very fair pyre is erected yearly for the burning of Heracles; in the Carthaginian sacrifice of boys the victims fall into a pit of flame, and in the Harranian ox-sacrifice the victim is fastened to a grating placed over a vault filled with burning fuel: finally, Isaiah's Tophet is a broad and deep excavation filled with wood exactly like the fiery trench in which, according to Arabic tradition, the victims of 'Amr b. Hind and the martyrs of Nejrân found their end' (Robertson Smith[2], p. 376 f.).

[2] P. 372 f.

necessity, and need have no particular religious significance. But the torch was also important in various ceremonies where its presence was not merely utilitarian; and in many cases where it may have been originally used for merely practical purposes it acquired a sacred or symbolic meaning. In agricultural festivals, *e.g.*, the use of fire is a well-known rite, although its precise significance may be doubted. Mannhardt and Frazer have collected a large number of customs which illustrate fire-ritual as a means of promoting the growth of crops and animals.[1] The underlying idea may sometimes be a belief that earthly fire represents the sun; and torches, carried over the fields, may be the means, by sympathetic magic, of 'making sunshine.' It is more probable, however, that the fertility which the use of fire is believed to cause is to be explained by its purifying power.

In Greek myth and ritual the torch is specially connected with Demeter. According to the Homeric hymn, the goddess, after the rape of Persephone, rushed wildly in search of her daughter with lighted torches in her hands. The hymn deals with the Eleusinian mysteries, and it is probable that the actual rites observed by the initiated were attributed to the example of the goddess. The Eleusinia[2] included a 'torch-day' (*lampadum dies*), when the *μύσται* roamed along the shore with torches. They supposed themselves to be imitating the wanderings of Demeter; but the original meaning of the rite was doubtless to purify the land and ward off pestilence from the crops. In the same way the early Eleusinians seem to have purified their children by making them pass over the fire, as the myth of Demophon, in the same hymn, appears to indicate.[3] The most solemn ceremonies at Eleusis took place at night, when the hall of the mysteries (*μυστικὸς δόμος*) was lit by torches. One of the chief officials was called the 'torch-bearer' (*δᾳδοῦχος*), and a priest bearing the same title took part in another festival (the Lenæa), and assisted at a rite of purification or atonement of sin.[4] Juvenal[5] speaks of the torch as the special emblem of the Eleusinian priest.

The torch is an attribute of various Greek deities besides Demeter. Persephone has the same emblem as her mother. In literature and art we find the torch regularly associated with Hecate, perhaps as a moon-goddess.[6] Artemis is also commonly represented with a torch in literature[7] and in art from the 4th cent. B.C. Here the torch may be the symbol of a moon-goddess; but Farnell,[8] who holds that Artemis was originally an earth-goddess, thinks that it belongs to her as a deity of vegetation. The torches which in art are a frequent attribute of the Mænads are perhaps best explained by reference to their nocturnal festivals. Finally, Ares sometimes carries a torch, an appropriate emblem for the god of war.[9]

In Greek custom the most conspicuous example of the use of torches is in the torch-race (λαμπαδηφορία, λαμπαδηδρομία, or, most often, simply λαμπάς). This competition is best known as Athenian; but it is also recorded for other Greek states, and Alexander included it in most of the festivals which he established in various cities. In Athens the torch-race was a feature of various festivals, in honour of Prometheus, Athene (in the Panathenæa), Hephæstus, Pan, Bendis, Hermes, and Theseus. It was even held in the festival of the dead (*ἐπιτάφια*). The date of its institution is unknown, but it was first held in honour of Prometheus, the fire-bringer, at whose altar the competitors lit their torches. As regards the festival of Pan, we know that the race was instituted after the battle of Marathon. At the Bendidea it was run on horseback, and was a novelty in the time of Socrates; elsewhere the race was on foot. The competitors were apparently chosen from the several Attic tribes. The torch was passed from one member of a team to another, at fixed intervals along the course, and the victory rested with the team whose lighted torch first reached the goal—an altar on which fire was kindled with the torch. This procedure gave rise to the famous simile of Lucretius ('et, quasi cursores, vitaï lampada tradunt'), the idea of which is found in Plato.[1] An equally famous line in Æschylus[2] also refers to the race, although the exact point is doubtful.

Æschylus might possibly have meant that all the runners in the winning team have an equal share in the victory, the last no less than the first; but more probably he refers to the fact that the winning torch was handed in by the last to receive it. This man would be first in relation to the rival teams, but last in relation to his own.

The Greeks themselves explained the torch-race as a commemoration of the gift of fire by Prometheus;[3] but the original motive must have been something more than a mere commemoration. The essential feature seems to lie in the transference of fire from one altar to another at the greatest possible speed. It is probable, therefore, that the underlying idea is the need of carrying fire from a pure source to take the place of a polluted fire. At Athens all fires were extinguished before the race began (at least in the Promethea), and were rekindled from the new fire. A belief in the pollution of fire is shown in the Argive custom of extinguishing fire after a death, and rekindling it from another source *ὡς μεμιασμένον*.[4] Similarly the fires at Platæa were defiled by the presence of barbarians, and new fire was brought from the sacred hearth of Delphi. The attraction of such a rite to the cults of Prometheus and Hephæstus needs no explanation. Athene, too, might well have adopted a torch-race, as being the patron of handicrafts and metal-working, for which fire was a necessity; but more probably she claimed the torch-race as the supreme head of the city. The race seems less appropriate to the other gods, with the possible exception of Pan. The theory that he was a sun-god cannot be accepted; but fire certainly played a part in his ritual, and an ever-burning lamp was maintained in his cave under the Acropolis. Most probably, however, the Athenians instituted the race in his honour to commemorate his appearance to the runner Phidippides after the battle of Marathon. Once established, the race became popular, and was attached to other festivals without any special religious fitness.

The Romans had no torch-race, and the torch was less prominent in their ritual than in Greek religion. But the same ideas can be traced in Italy as appear in Greek fire-rites, although it is not always possible to distinguish the indigenous from the borrowed element; *e.g.*, the festival of Diana at Aricia (Nemi) no doubt belongs to a primitive Italian stratum, but it is impossible to say how far Greek influence may have modified its

details. In this festival women whose prayers before child-birth the goddess favourably heard bore lighted torches to her shrine. It is difficult to say whether this custom is a survival of a purificatory rite (Diana representing a forest deity or the goddess of agriculture) or whether the torch is only a symbol of the moon-goddess, who was the natural patron of women in child-birth.

In Greek and Roman private life the torch was an important feature in marriage, as the bridal procession took place at night or towards evening. As early as Homer[1] there is mention of this torch-light procession. It was the duty of the bride's mother to light the nuptial torch.[2] In Italy the bride was also escorted to her new home by torch-light, under the protection of Juno Domiduca or Iterduca. Hence the god of love, both in Greece and in Rome, is often represented with a torch—an idea no doubt assisted by the common conception of love as a 'fire.'

The torch had also funereal associations to the Romans, being used to light the pile on which the corpse was burned. Those who applied the torch averted their faces.[3] The 'two torches' (of marriage and death) are mentioned by Propertius[4] and Ovid.[5]

LITERATURE.—The λαμπαδηφορία has been frequently discussed—*e.g.*, by A. Mommsen, *Heortologie*, Leipzig, 1864, p. 282; P. Foucart, in *Revue de Phil.* xxiii. [1899] 112; N. TORTURE.—*Quæstio*, said Baldus de Periglis, an interpreter of that word of dire significance in Roman law, 'is a certain kind of inquisition made for the purpose of tearing out the truth ('eruendae veritatis') by torments and bodily pain.' Few institutions have more signally failed even to afford rational excuse for their evil existence as a method of extracting evidence. Starting from a deep instinct of violence, it consistently made manifest its inherent viciousness, which no fundamentally good intention could redeem and no humane afterthought of qualification and exception could withhold from pernicious and cruel consequences. Unlike the ordeal (*q.v.*), which was in some measure an appeal to a fairly equal chance, torture was without even the negative virtue of offering a percentage of probabilities of right and truth in its results. It is difficult to think of any principle which could make it really assist in evoking truth from reluctant witnesses or reliable confession from accused persons. The one point of affinity to ordeal was the resort to torture when there was a deficiency of direct legal evidence. Its basis in injustice is shown not only in its penalizing the innocent and unconvicted, but in the fact that its applicability was long confined in both Greece and Rome to slaves—significant of its palpable unfitness for freemen. It never was universal, though in ancient use among Assyrians, Egyptians, Medes, and Japanese; it does not appear in the early laws of Chinese, Hindus, or Jews. There is no mention of it in the OT record. The metaphoric heaping of coals of fire on the head probably refers to torture, as appears from a Muhammadan penalty of a live coal laid on a lascivious palm. From a remote age torture prevailed in Greece for slaves, and, although freemen were generally exempt, the exemption was overborne in cases of conspiracy and murder. Slaves in Athens were subject to torture in causes civil as well as criminal. At times the actions were determined by balancing the testimonies of the slaves of the opposing litigants put under the pressure of the wheel, the ladder, the rack, or the burning tile. Grecian practice has not transmitted any code; that was reserved for Roman law, which unfortunately hardened into permanence the crude tradition of force which it shared with Greece.

In this exposition we are not dealing with torture as a method of punishment, to which some speculations give an earlier place than belongs to the torture of witnesses or accused persons. It is as a process for obtaining testimony or confession, chiefly in causes criminal, that torture has historically played its most unreasoned and baneful part. In the Roman Republic it had wide currency in spite of sharply defined restrictions which instructively exhibit the efforts, too tardily made and not thoroughgoing enough, to modify and restrain an institution for which abolition was the only remedy. And yet credit must be given to the insight and humanity of some of the distinctions made. The exemption of freemen gave way under imperial impulses when lese-majesty was imputed. The general safeguard that there must be vehement presumptions of guilt before resort to the torture was clear enough in theory, but was widely ignored in practice. Most curious fact of all perhaps is the frankness of the authorities grouped in the *Digest* on the primary desirability of doing without torture, on the frailty and peril of the method as an engine for ascertaining facts, on the delusive character of confessions induced by modes which were tests not of truthfulness but of physical endurance, and on the danger to third parties from the allegations wrung from men willing to say anything to save themselves. Evidence of slaves under torture was declared inadmissible against their masters, but there were exceptions of some intricacy. The apostle Paul (Ac $22^{24ff.}$) pleaded with success his right as a Roman freeman as a protection from examination under the scourge. Mainly used only in causes criminal, the institution made good its footing in some civil causes also. Exemptions of minors, patricians, priests, and pregnant women were inapplicable when charges of treason were made. The direction of Antoninus Pius that torture was not to be used to secure betrayal of alleged accomplices was as wise as it was humane, but the very object of getting at other culprits came ultimately to be a main occasion of its employment. The provisions of the *Digest*[1] and the *Code*[2] systematize several contradictory doctrines 'de quaestionibus' illustrative of a considerable development. The emperors were not long in discovering what Dante was to illustrate by extreme examples, that treason was the worst of crimes. This was the creed too of Anglo-Saxon as well as of later feudal criminal law, and it encouraged violent processes of detection. In Rome the kind of torture with widest currency was that of the *equuleus*, or rack, which passed on as perhaps the worst legacy of Roman law to mediæval Europe.

The abolition of the barbarian ordeal by the Lateran Council of 1215 left a vacuum which was partly filled by a still worse expedient—the Roman method of 'tearing out the truth.' Under the Salic law ordeal and torture had co-existed, but the latter for slaves only, the provisions obviously echoing Roman practice. The Ripuarian code apparently countenanced ordeal alone. The renaissance of Roman law explains the return of torture after some measure of abeyance. In

France and Italy it seems to have re-established itself during the 13th century. Continental charters cited by Du Cange[1] gave exemption from torture. Its French name, *gehenne*, was fit enough. There were many modes—the *brodequin*, the *estrapade*, the *chevalet*—all used in the *question préparatoire*, preliminarily in the trial, and in the definitive *question préalable* after conviction to disclose accomplices. In England, though without place in the common law, it was practised as an abuse notably in the anarchy under King Stephen and in King John's processes of extracting treasure from the Jews. The *peine forte et dure*, however, or torture by pressure of weights to compel a prisoner to put himself 'upon the country' or verdict of a jury, appears about 1300. Under Edward II. in 1311 papal inquisitors in the trial of the Templars applied torture admittedly never legally countenanced in England before. Though long without regular sanction in the courts for crime, the practice of torture crept in with what may be called council government under the Tudors. As always, secret courts favoured secret methods, and torture loved the darkness. With Shakespeare and other Elizabethan dramatists 'rack' and 'strappado' were household words. Coke might excommunicate the institution from the common law, but Coke and Bacon alike countenanced it in practice when the scent of treason was strong.

In Scotland the law and practice appear to have nearly paralleled the state of things in England. Isolated examples of torture, such as that given by way of punishment to the murderer of James I., may have been preceded, as one annalist asserts, by judicial torture at his trial. So late as 1542 the point of law was established that a confession procured by torture was null. George Buchanan, in spite of the risks that he himself had run from the Inquisition, recognizes without censure the obtaining of proofs by torture. The deplorable inhumanities resulting from the witchcraft craze, nurtured in Scotland by the sapience of the demonologist James VI., and absolutely paralleled by the like frenzy in England and France, were a distressing combination of the mischiefs of torture with a recrudescence of the ordeal. The victims were often old, miserable, and insane; the pitiful and pitiless mania, however, was not merely a British but equally a European crime; its creed on the Continent was of one context with that in Britain; everywhere the witch-finders used the same methods of pain. It was the last stage of a sort of common law of torture, although the variety of local usage shows a wide range of divergence in detail. In the Covenant time a last outburst of persecuting zeal revived the decadent engine of violence. A dubious tradition traces the thumbikins in Scotland to a Russian origin.[2] Museums of torture such as those of Nuremberg, The Hague, and the Tower of London—competitions in horror as they are—unite in a kind of commonplace of malignancy. Authorities on torture in like manner dwell with the same tedious insistence on the *indicia*, or preliminary evidences needed to justify torture, and on the conditions of its infliction. The *Summa Angelica*, a great cyclopedia of instruction to confessors, enjoins the interrogation to judges in confession whether they had put people to torture without sufficient *indicia*, which was very rightly classified as a deadly sin. Now and again a tractate of law and practice of torture, such as that of Paulus Grillandus, breaks away from its companions in the great folio vol. xi. of Zilettus (1584) by its superior realism. Grillandus distinguishes with grim precision the five degrees of torture: now a mere threat, now a suspension on the rack for the space only of an Ave Maria or a Paternoster, now a graver suspension for the space of a Miserere, now for a period which might reach into hours, and, last degree of all, where the victim's limbs, weighted down, were jerked and twisted till the agony was greater than the amputation of the hand. It is marvellous how men endured such torments, but that they did so is attested by occasional observations by the judges or assessors of court who wrote the treatises. Grillandus, *e.g.*, drawing upon his experience at Pisa and at Rome, registers the wonderful case of a most cunning thief whose absolute impassiveness was ascribed to certain words that he whispered when the torture was applied until a slip of paper was found bearing as a charm the Scriptural text (well known for its use in amulets) 'Jesus autem transiens.' Finally, however, with the charm removed altogether, this stout malefactor defied the torture again by his whispered invocation so that it was necessary to abandon the torture. And still greater cases, the commentator concludes, were seen at Milan and Rome when certain words touching the milk of the Virgin enabled the victim to go through the torment as if he slept. This particular variety of charm was reported to be no less effective as a counter-charm, but Grillandus shows no faith in its potency as an aid to the prosecutor.

An unfortunate feature of torture was its adoption by the inquisitorial courts of the Church for the investigation of charges of blasphemy, heresy, and the like. Was persecution not, like the Inquisition itself, a confusion of a secular with a sacred function, in which the analogy of treason to an earthly potentate carried priests of religion to extremes not compatible with the conception of a majesty which, though wounded, was divine? Whatever of error lurked in the concept itself, the tribunal which was its executive of vindication added to the wrong in principle by a series of false directions of the practice in prosecution. It surely was a blunder worse than a crime to adopt methods which doubly branded with public odium courts which were designed by processes of barbarism to repress the freedom of the human mind. The fact that already by the middle of the 13th cent. papal dispensations to churchmen were needed for irregularities in the use of torture casts a lurid light on the procedure. No safeguard of institutions is so sound as publicity—the liberty of moderate criticism, the freedom of defence, and the avoidance of the abuses which wait upon invisible dungeons and courts. Secrecy inevitably means tyranny and obscurantism. The refusal of counsel to the accused was a fundamental and far-reaching error in a 'court of inquisition into heretical depravity, which by its very object tended to unite the zeal and interest of both prosecutor and judge against the heretic. The double sanction of royal and ecclesiastical authority sometimes enabled the machinery against heresy to be used for political rather than spiritual ends. The most notorious persecution of the 16th cent. was in the Netherlands, and torture was the keynote of its procedure. The Renaissance had not wholly escaped the persecutions which rose to their evil eminence during the transition period in which the swaying boundary-line came to a stand between Lutheran reform and Roman orthodoxy. In 1532 the Constitutions of Charles V. codified for Germany a system which incorporated torture among the fundamentals of procedure. His establishment of the Inquisition in 1550 inaugurated a period of atrocities perhaps worse than any other in human history. Philip II. of Spain found in the Duke of Alva a spirit of

[1] *Glossarium Mediæ et Infimæ Latinitatis*, new ed., Niort, 1883–87, vi., *s.v.* 'Quæstio.'

[2] Maclaurin, *Arguments and Decisions*, preface, p. xxxvii.

merciless executive in the Netherlands, scarcely less jealous of public liberty than of private creeds, and Alva's *horrenda gloria* of death penalties earned for him not only his downfall but also the execration ever since attached to his name. Out of that fierce time aptly came its strange definitive and callous expression in a contemporary book, the *Praxis Rerum Criminalium* of Josse de Damhoudère, a councillor under both Charles and Philip in the Netherlands, published in French and Latin in 1554 and repeatedly afterwards, remarkable among other things for its matter-of-course attitude to torture, which makes only too intelligible the excesses of practice under the most illustrious and excellent Alva, whose honour and sagacity a preface in some editions incidentally extols. Woodcuts queerly illustrate the varieties of crime, while seven whole chapters on torture make transparent the vices of a system the radical barbarity of which, despite its antiquity of sanction expounded by generations of civilian glossators and jurists, all its touches of humanity—and there were some—were hopeless to redeem. Damhoudère harrows the modern soul perhaps most by his passionless exposition as of a principle doubtless imperfect, yet itself of the nature of things. Leading modes indicated are by the rope (*i.e.* the rack), by water forced through the mouth, by oil internally administered, by burning pitch or lime, by hunger, cold, or the thumbscrew, by mice or parasites that gnawed the flesh, or by fire intensified by basting the body with oil—these were only a few of at least fourteen species of torments. What wonder that Damhoudère after this enumeration should consider that torture often could most happily (*felicissime*) be applied by scourging alone? Two pictures complete the impression, one showing a victim girt and twisted with ropes and swung stretched out with weights at his feet, the other an idyllic group of the doctors, knights, priests, old men, children, and prospective mothers, who were benignly excusable from torture.

It was a law from which no conceivable evolution could eliminate the initial anomalies (1) of punishing an accused by torture before he was found guilty or a witness before he was proved a perjurer; or (2) of torturing an accused after conviction when torture was no part of the sentence, and when the judge's function was ended and the process was no part of the trial. These were dilemmas from which no escape was ever devised, and they gave effectual leverage to criticism when—late in the day, it must be owned—the opposition developed energy enough to make abolition of torture a direct object of humane propaganda. Illustrious opinions against torture were many; those in its favour were perhaps less illustrious. Augustine, Ulpian, Quintilian, and Montaigne could be cited on one side, and Demosthenes, Aristotle, Bodin, and Pothier on the other. But the lawyers were indifferent, and their neutrality and acquiescence gave the practice a long lease of life. Roman tradition persisted little shaken in Europe till Beccaria and Voltaire threw a new intensity into attack on abuses, and the objection to torture passed from being a mere dissent into a positive and earnest movement to repeal what was at once a futility and a cruel injustice. From the middle of the 18th cent. until the beginning of the 19th the Continental countries by degrees followed the example of repeal set by Great Britain. Torture had died out in England by the middle of the 17th cent.; it was abolished for Scotland by statute in 1708. Its extinction on the Continent has been assigned in Prussia to 1740, in Portugal to 1776, in Sweden to 1786, in France to 1789, in Russia to 1801. But in the last-named country it is said that so late as 1906-07 political prisoners underwent grievous treatment in a 'museum of torture' comprising brutalities in which 'scorching of the feet at the fire' was among the least revolting. In the Far East the persistence of the evil has been still greater. In China the usage has long held, and presumably still holds, place as a fundamental law. But in Japan it was abolished in 1876. Suspicion, however, obtains that in Oriental lands, despite reforms and prohibitions, illegitimate torture is still secretly carried on. One main fact in Europe is perhaps that, while the lawyers 2000 years ago already saw the fallacy and futility of torture, seventeen centuries had passed before its abolition was taken firmly in hand. The many generations of clerical jurists and judges did no better than the laymen, accepting the institution and 'passing by on the other side,' if indeed the ecclesiastical tribunals were not the worst offenders. The divorce of the judges from all legislative function has much to answer for in checking the critical initiative of amendment sometimes induced by judicial experience. Abolition at last came neither from the logic of the law nor from the impulse of the Church, but from the impassioned zeal of humanitarian philosophy.

G. NEILSON.

TOTEMISM.—1. Introductory.—The word 'totem' is derived from *ototeman*, which in the Ojibwa and cognate Algonquian dialects means 'his brother-sister kin.' Its grammatical stem *ote*, meaning the consanguine kinship between uterine brothers and sisters, the group of persons recognized as by birth or adoption collectively related together as uterine brothers and sisters who cannot intermarry, is never used alone.[1] The word was introduced into the English language by J. Long[2] in the form of *totam*. This he wrongly defined as the favourite spirit which each of the savages (Chippewa or Ojibwa) believes watches over him, adding:

[1] J. N. B. Hewitt, in *HAI* ii. 787.

[2] *Voyages and Travels of an Indian Interpreter and Trader*, London, 1791.

'This *totam* they conceive assumes the shape of some beast or other, and therefore they never kill, hunt, or eat the animal whose form they think this *totam* bears.'[1]

The first to give an account, accurate as far as it goes, of totemism on the American continent was Peter Jones, himself an Ojibwa chief, but an ordained Wesleyan Methodist minister and missionary to his tribe. He wrote the *History of the Ojebway Indians*, published without a date in London after his death, which took place in 1856. He says:

'Their belief concerning their divisions into tribes is that many years ago the Great Spirit gave his red children their *toodaims*, or tribes, in order that they might never forget that they were all related to each other, and that in time of distress or war they were bound to help each other. When an Indian in travelling meets with a strange band of Indians, all he has to do is to seek for those bearing the same emblem as his tribe; and having made it known that he belongs to their toodaim, he is sure to be treated as a relative. Formerly it was considered unlawful for parties of the same tribe to intermarry, but of late years this custom is not observed. . . . Each tribe is distinguished by certain animals or things, as for instance the Ojebway nations have the following toodaims: the Eagle, Reindeer, Otter, Bear, Buffalo, Beaver, Catfish, Pike, Birch-bark, White Oak-tree, Bear's Liver, etc. etc. The Mohawk nation have only three divisions or tribes—the Turtle, the Bear, and the Wolf.'[2]

What Jones calls a tribe is now usually called a clan or gens, meaning a group, not necessarily localized, of persons regarded as united by a bond of kinship real or fictitious, extended beyond the family properly so called to a brotherhood bearing the same name and including strangers who have been formally adopted into it. This brotherhood or clan may, and frequently does, extend also beyond the boundaries of the local body called by Jones a nation, but now usually known as a tribe.

In the meantime Sir George Grey, then governor of S. Australia, in the account of his travels in W. Australia, drew attention to the similarity between the Australian *kobong* and the American totem, describing the *kobong* at some length and giving genealogical lists to illustrate the mode of descent.[3] A series of articles in the *Fortnightly Review*[4] on 'The Worship of Animals and Plants' by J. F. McLennan was suggested, at all events in part, by Grey's observations. It was this series of articles, with McLennan's important but erroneous speculations, which finally brought the subject of totemism before the scientific public in Britain. Among others whose attention they attracted were Lord Avebury (then Sir John Lubbock) and W. Robertson Smith. It was especially the use made of totemism by the latter in the speculations embodied in his important work, *The Religion of the Semites*, that started the controversies incessantly waged on the subject from that day to this.

2. Definition; plan of the article.—Totemism as exemplified in N. America and Australia, where it has been found in the fullest development, is a form of society distinguished by the following characteristics: (1) it is composed of clans or bands of men each united among themselves by kinship real or fictitious, a kinship frequently extending beyond the limits of the local tribe; (2) the clan is distinguished by the name of some species of animal or plant, or more rarely of some other natural phenomenon, such as the sun, rain, etc.; (3) the species or object which gives its name to the clan is conceived as related to the clan, and to every member of it, in some mystic way, often genetically; and in this case every individual specimen of the object, where it is an animal or plant, is regarded as belonging to the clan; (4) such species or object is usually the subject of a religious or quasi-religious emotion, and every individual specimen is the subject of tabus or prohibitions: subject to certain limitations, ceremonial or in self-defence, it may not be injured or killed, or (where eatable) eaten; (5) moreover, as in all societies organized on the basis of kinship, the members of the clan are entitled to mutual defence, protection, and resentment of injuries. They may not marry or have sexual intercourse within the clan.

These characteristics are general, but they vary to some extent not merely from area to area, but from tribe to tribe. After detailing a few typical examples, it will be necessary to mention others where totemism seems to be decadent, and then to consider whether it has ever prevailed among peoples where it is not now to be found, and lastly to inquire into its origin. Various influences tending to modify, submerge, or destroy it will be indicated from time to time in the course of the article.

3. Typical examples.—(*a*) *America.*—Somewhat fuller accounts than that of Peter Jones are now available concerning the totemism of the Ojibwas. They were divided into about 40 exogamous totemic clans, of which those of the Crane, Catfish, Loon, Bear, Marten, and Wolf were the principal, and the first five appear to have been the original. The other clans are said to have been formed by the segmentation of these. Nearly all the clans are named from animals of either land or water. Members of a totem-clan were held to be closely related to all other persons of the same totem, even though belonging to different tribes.[1] We have no information whether the Ojibwa clans regarded themselves as having descended from the totems whose names they bore; but the clans of some other Algonquian tribes claim such descent. Thus, among the Delawares or Lenape the Tortoise, Turkey, and Wolf clans (the three chief clans of the tribe),[2] among the Sauks the Fox, Eagle, Bear, Beaver, Fish, Antelope, and Raccoon clans,[3] among the Menomini the Bear, Golden Eagle, Wolf, and other clans,[4] and among the Ottawas the Carp clan,[5] are specified as tracing their lineage to the animals after which they are named; and in the last-mentioned tribe the Bear clan ascribed its origin to a bear's paw without explaining the precise nature of the relationship. However this may be, the Ojibwa Bear clan was held to resemble the bear, its totem, in disposition. The members were surly and pugnacious, the acknowledged war-chiefs and fighting men of the community; the war-pipe and war-club were committed to their custody. The Crane clan took its name (Bus-in-as-see, 'Echo-maker') from the loud, clear, ringing cry of the crane; members of the clan were thought to possess naturally a loud ringing voice, and they were the acknowledged orators of the tribe.[6] We are not informed whether in their personal appearance, dress, or ornaments the Ojibwa totem-clans were ordinarily in the habit of imitating the totem-animals, as some other tribes do. The Abenaki, also an Algonquian tribe, painted their totems on their arms, breasts, and legs.[7] An Ojibwa sometimes had the figure tatued on him, or carried some

other token by which his totem might be known.[1] Unfortunately our reports are chiefly confined to the social aspects of the Ojibwa organization, so that we have little or no information as to the religious outlook. Religion is inextricably mingled with other aspects of savage life; hence we may be sure that it reacted upon social and political life. Among their neighbours, the Sauks or Musquakies, dances in honour of the totems were held. At these dances — a religious exercise — those who took part were covered with masks and dresses to resemble the totemic animals, so dreadful that the women were seriously frightened, and the old masks were therefore destroyed and milder ones substituted.[2] Special ceremonies were performed by the Bear clan of the Ottawas to soothe a bear when they killed it, including an offering to the dead animal of its own flesh. When a member of that clan or of the Carp clan died, he was buried, whereas by command of the totem a member of the Great Hare clan was cremated — at least, whenever he died at a distance from home.[3] Among the Menomini a member of the Bear clan who, when hunting, met a bear would apologize and ask forgiveness before killing it; and no member of the clan could eat of the meat (though members of other clans might do so) except the hunter himself, who was permitted to eat of the paws and head, the bones of the head being carefully preserved in a place of honour in the wigwam as a relic of the totem-animal to which due reverence must be paid.[4] The Ojibwa reckoned descent and kinship through the father only; but there is some evidence that they formerly reckoned through the mother only — a change possibly accelerated by white, and particularly missionary, influence. Such a change is known to have occurred elsewhere.[5]

The Iroquois, a confederacy of six tribes in what is now the state of New York, on the other hand, were matrilineal. They were organized in totemic clans, of which all of them possessed three—the Bear, Wolf, and Turtle—some of them eight. There is some reason to think that the larger numbers were derived by segmentation from the three original clans, though it is possible that, in some of the cases at all events, the number of the three clans may have been augmented by the adoption of captives from other tribes, who formed separate clans. The clans were exogamic, but in the eight-clan tribes they were formed into two phratries. The members of the clans were not allowed to marry indiscriminately into any other clan; they could marry only into a clan of the opposite phratry, the phratry thus becoming the exogamic unit in place of the clan. On the social side of Iroquoian totemism we have fairly full information. The members of a clan were united for mutual defence and the resentment of injuries; and the phratries, where the tribe was organized in phratries, had certain important functions at the death of a chief and the election of his successor.[6] On the religious aspect, however, our information is sadly deficient. There is one account by a chance traveller, in which the Iroquois were stated to believe in their descent from the turtle (or tortoise), the bear, and the wolf—their three chief totems;[7] and among their myths one has been preserved by a scientific inquirer relating how the turtle became a man and the progenitor of the Turtle clan.[1] But neither L. H. Morgan nor Horatio Hale, to whom we are indebted for nearly all that we know of the organization of the Iroquois, has told us anything concerning the intimate relations between the totem and its clan, or the aspect in which the totem was regarded by the clan, or the members by one another.

The Iroquois, however, had one custom common to a number of N. American tribes. Each clan had a stock of personal names appropriated to it only, which other clans of the same tribe were not permitted to use, so that, if a person's name was known, it was possible to say to what clan he belonged. To such a length was this custom carried by some tribes that, when the clan organization began to decay, a child could be assigned to another clan than that into which by hereditary descent he was born, by the simple process of giving him one of the personal names belonging to the latter clan—at all events if the clan recognized the child and thereby confirmed the choice.[2] The clans of some of the N. American tribes performed ceremonies for the control of their totems for the common good of the tribe. This was the practice, *e.g.*, among the Omaha.[3] But its utmost development is found in the south-west of the United States among the various tribes of Pueblo Indians.[4]

(*b*) *Australia.*—In Australia totemism has been crossed, and among some tribes superseded, for exogamic purposes by a system of marriage-classes.[5] The consequent variation in the social arrangements of the different tribes has introduced a confusing factor into the totemic organization. Among those tribes whose organization has been least affected is the Dieri, inhabiting part of the Lake Eyre basin in S. Australia. They possess a number of clans of which the names of 27 are known. Their totems belong chiefly to the animal world; but the list includes some vegetable totems and such objects as rain and red ochre. It seems to be common to all the tribes in the Lake Eyre basin, though it is not ascertained whether all the totems are recognized by every tribe. Each tribe, like some of the Iroquois tribes, is divided into two moieties, or phratries, some of the clans belonging to one phratry and the rest to the other. These phratries are called by the Dieri Kararu and Matteri respectively; and, as among the Iroquois, not only the clan but also the phratry is exogamous. A Kararu man must marry a Matteri woman, and conversely a Matteri woman a Kararu man; but within the limits of the opposite phratry the mate may belong to any clan. Both the clan and the phratry descend in the female line, the children in all cases taking those of the mother.[6] The Dieri clans do not claim their totemic animals or plants as ancestors. More than one legend accounts for them.

According to one story, the totems (*murdus*, properly *madas*) came out in an unfinished condition from the earth in the midst of Lake Perigundi and lay on the sandhills around the lake until the warmth of the sun strengthened and raised them up as human beings, whereupon they separated in all directions. Hence the *madas* (totemic clans) are now scattered all over the country. According to another story, a malignant *mura-mura*, or supernatural being, was killed by the people for his misdeeds, but came to life again. He followed footprints, and, finding the people busy fishing, opened his mouth and swallowed water, fish, and men. Some escaped, running off in all directions, and to every one as they ran he gave a *mada*. In proof of the story, rocks are pointed out which are said to be the body of the *mura-mura* in question, and his teeth.[7]

If we may trust one account, the Dieri do not regard the animal or plant which is their totem as sacred, but will kill or eat it.[8] It is not, however, certain that we can rely on this statement. Its author, for a long time a mounted constable in the district, and hence brought much into contact with

the natives, was, we know, mistaken in other matters with respect to them. In general throughout Australia the clansmen regard their own totem with reverence.

Thus, in the Wakelbura tribe we are expressly told that the totem-animal is spoken of as 'father.' 'For example, a man of the *Binnung-urra* (Frilled-lizard totem) holds that reptile as sacred, and he not only would not kill it, but would protect it by preventing another person doing so in his presence. Similarly a man of the Screech-owl totem would call it "father," and likewise hold it sacred and protect it. . . . A man who was lax as to his totem was not thought well of, and was never allowed to take any important part in the ceremonies.'[1] In the tongue of the Wotjobaluk *yauerin*, 'flesh,' is used for totem, indicating the close relationship of the totem and the totem-clan.[2] Grey, writing of the tribes of W. Australia, reports that 'each family [clan] adopts some animal or vegetable as their crest or sign, or *kobong*, as they call it,' and that 'a certain mysterious connection exists between a family and its *kobong*, so that a member of the family will never kill an animal of the species to which his *kobong* belongs, should he find it asleep; indeed he always kills it reluctantly, and never without affording it a chance to escape. This arises from the family belief that some one individual of the species is their nearest friend, to kill whom would be a great crime. Similarly a native who has a vegetable for his *kobong* may not gather it under certain circumstances and at a particular period of the year.'[3] So far is this belief in a connexion between the totem-clan and its *kobong* carried that in the Wakelbura tribe, 'when a man could not get satisfaction for an injurious action by another, he has been known to kill that beast, bird, or reptile which that man called "father," and thus obtain revenge, and perhaps cause the other to do the same, if he knew of it.'[4] Such is the influence of belief that the killing of a man's totem has been known to hasten his death.

An interesting development of totemism in Australia is the assignment of a number of sub-totems to each totem. Thus in the Wotjobaluk tribe the Deaf Adder totem has for sub-totems the Native Cat, Black Swan, Tiger-Snake, Sulphur-crested Cockatoo, Crow, and Dingo; and the other totems have similar lists.[5] Where, according to the peculiar exogamic regulations, the phratries developed into marriage-classes, the sub-totems were attached to the latter. Ultimately the result was to divide the universe between the various classes and sub-classes—a result expressed in diagrammatic form in accordance with the points of the compass by the Wotjobaluk, who buried their dead orientated to agree with the diagram thus obtained.[6] What the reason was for assigning these sub-totems to the different totems and classes has not been ascertained; to us it seems arbitrary. At any rate the Australian native extended the regard for his totem to the sub-totems comprehended in the totem-clan or class to which he belonged.

A man of the Buandik tribe, we are told, 'does not kill or use for food any of the animals of the same sub-division with himself, excepting when hunger compels; and then they express sorrow for having to eat their *warigong* (friends) or *tumang* (their flesh). When using the last word they touch their breasts to indicate the close relationship, meaning almost a part of themselves.'[7]

Another custom developed extensively in Australia, but (as already intimated) not unknown among the Sioux in N. America, and elsewhere, is that of the performance of ceremonies by a totem-clan for the purpose of exercising control over the totem—*e.g.*, for multiplying its numbers, especially where it was edible, or for ensuring its capture, or, where it was injurious, for driving it away. The *intichiuma* ceremonies of the Arunta have by the investigations of Spencer and Gillen become the best known; they are perhaps the most elaborate, but by no means the only, ceremonies of the kind. The Dieri and other tribes perform such ceremonies, though it is not clear in all cases that the performers are confined to members of the totem-clan. From the analogy of cases both in Australia and in the islands of Torres Straits we may probably assume that they are. Whether these ceremonies should be called religious or magical is a question of terminology, though it seems certain that the performers are under the influence of emotional excitement such as we usually connect with religious rites.

Little is known about the relations of the clansmen in Australia among themselves. From vague references by Howitt and others it would seem that they enjoyed mutual defence and responsibility. But offences were brought before a tribal council, by whose decision blood-revenge was pursued in a quasi-legal manner and, if resisted, ultimately involved the whole tribe in the blood-feud.

(*c*) *Africa.*—Another area in which totemism has been found is that large portion of Africa which is occupied by the Negro and Bantu races. Of the totemism of some of these peoples, particularly of the Negroes, our information is fragmentary. Concerning the Tshi-speaking Negroes of the Gold Coast we have on the whole most information. They are divided into totemic clans, or 'families,' of which the principal are twelve in number, viz. Leopard, Buffalo, Dog, Parrot, Plantain, Corn-stalk, Servant, Red-Earth, Palm-oil-Grove, Abadzi, and Dumina or Dwimina. The meaning of the names of the last two clans is uncertain. The last is probably a local variant of the name of the Nsonna, or Bush-Cat, clan; and, according to some accounts, Abadzi, which may mean 'cannibal,' is another name of the Ntwa, or Dog, clan. About certain of the clans little or nothing beyond the name is known, and questions of identity arise on some of them. These difficulties are incidental to traditional lore where we are dependent upon natives who are not familiar with all the clans about which inquiries are made. To the Leopard clan the leopard is sacred, though members of it are reported now to abstain from the flesh of all the *felidæ*. No member may kill a leopard; if he were to do so by accident, he would exclaim, 'I have killed my brother,' and would put palm-oil on the wounds. If he sees a dead leopard, he must scatter shreds of white cloth upon it and anoint the muzzle with palm-oil, as a sign of respect and sorrow. If a dead leopard is brought into the town, the members of the clan smear themselves with chalk (a sign of mourning) and bury the body. If on a journey a member of the clan were to meet a leopard, he would turn back. The Buffalo, Bush-Cat, Dog, and Parrot clans abstain from eating the totem-animal. The Bush-Cat clan, it is said, abstain from killing not only a bush-cat, but also a crow, under penalty of sores on their bodies. Formerly, if they found a crow or a bush-cat dead, they would bury it, and with the crow a piece of white cloth, with the bush-cat a piece of speckled cloth. The traditional accounts which have reached us of the origin of these clans do not generally claim genetic descent from the totem.

One account states that 'people originally came from the earth, sky, sea, mountains, and the animals, etc., that came with them are their totems'; *e.g.*, the Parrot clan came with the parrots on their loads; the Dog clan came from a river with a broom and with a dog carrying fire.

Other clans, fewer in numbers and conjectured to be of more recent origin, claim that they are descended from an actual animal which possessed the power of assuming human shape at will. In the case of two such clans tales belonging to the Swan Maiden type are told to account for them. The totem-animal is revered. It is addressed as 'grandfather,' a title of respect used in addressing the kings of Ashanti. It is supposed to help the clansmen in various ways; and restraint is said to be placed upon it in order to compel it to grant the wishes of the tribe. There are no marks or dresses distinguishing the clans; but, when a member of

the Leopard clan dies, the mourners (clansmen) make spots on their bodies with red, white, and black clay to represent a leopard, and scratch the figure of a leopard on the wall of the house and on the coffin. The Nsonna clan in the like case put white clay or white cloth round their necks, because the crow which the clan respects has a white band round its neck. The clan is always matrilineal and exogamous; and it has a common burial-place. There is said to be a belief that at death a clansman becomes or transmigrates into an individual of the totemic species, and, further, every clansman's life is bound up with one such individual, so that, if it dies, he will also die.[1]

The Bantu have for the most part advanced from maternal to paternal descent, though among some tribes we find an intermediate stage. This has not been without its effect upon their totemism, which in several ways varies from the pattern of true matrilineal totemism. The Bechuana, who occupy the centre of S. Africa, are divided into a number of independent 'tribes' generally called by totemic names and having totemic practices and beliefs. In many cases, however, these 'tribes' are not true totemic clans. Since the wife always goes to reside with her husband, the result of the change to paternal descent is to collect the members of the clan together, instead of distributing them as in a matrilineal people, and hence the clan tends to become identified with the geographical and political tribe. Every Bechuana tribe is ruled by a chief, whose totem is recognized as that of the tribe. The political conditions were such that before the European occupation of the country members of a tribe who were discontented with their chief used to desert him and go to a neighbouring rival, with whom they were sure of a welcome. Thus a powerful chief was liable to be reduced to weakness, and perhaps conquered by a neighbour, if his rule was unpopular. It followed that a tribe frequently comprehended members of many totemic clans. But they all accepted the chief's totem, and in time became indistinguishable from the true clansmen, though we do not read of any formal adoption into the clan or of any blood-covenant. The chief is always addressed by the name of the totem, as 'O Crocodile!' 'O Lion!' The Bechuana word for 'totem' is *siboko*, which has led Van Gennep to propose the name 'sibokism' to distinguish the S. African variety of totemism. The chief's totem is held sacred, and the animal, plant, or other object is regarded with fear and reverence.

Thus the Banoku, 'they of the porcupine,' are reported to 'sing,' *i.e.* 'feast, worship or revere' that animal. 'When they see any one maltreat that animal, they afflict themselves, grieve, collect with religious care the quills, if it has been killed, spit upon them and rub their eyebrows with them, saying: "They have slain our brother, our master, one of ours, him whom we sing."' They fear that they will die if they eat the flesh of one.' Yet they doctor a new-born child with it, mixed with the juice of certain plants.[2] The Bakuena, 'they of the crocodile,' call the animal their father; 'they celebrate it in their festivals, they swear by it, and make an incision in the ears of their cattle, by which they distinguish them from others.' They call it 'one of them, their master, their father.' Similar practices are recorded of other clans. 'No one dares eat the flesh or clothe himself with the skin of the animal the name of which he bears. If this animal is hurtful, as the lion, for instance, it may not be killed without great apologies being made to it and its pardon being asked. Purification is necessary after the commission of such a sacrilege.' The Bataung, 'they of the lion,' 'carefully abstain from touching his flesh as other people do; for how could one think of eating his ancestor?' Nor does even the chief dare to wear, like other chiefs, a lion's skin by way of royal mantle.[3]

But totemism is decadent among the Bechuana, and has been so for a period which probably dates from before the coming of the European,[1] due partly to the change to paternal lineage, partly to the political conditions, and partly to the keeping of herds of cattle, a custom that seems to have been adopted from the Hottentots.

America, Australia, and Africa are the three chief areas in which totemism has been found widely spread and fully developed. It will be perceived that each of them has its own type, though variations in detail are found in individual tribes and peoples. The remaining areas are India and Melanesia.

(*d*) *India.*—In India totemism is found only among the non-Aryan tribes, and chiefly among the Dravidians. Of these we may take the Orāons on the plateau of Chotā Nāgpur in Bengal as representing the type. Though they have to a great extent emerged from the hunting and pastoral stages of culture, totemism 'still forms the fundamental feature of their social organization in so far as kinship, marriage, and relations of the sexes are concerned.' They are divided into a number of exogamous clans distinguished by names supplied by 'the fauna and flora of their past and present habitats'; and to these, 'with the acquisition of a knowledge of agriculture and the use of metals, a few new totem names have been since added.' The animal and vegetable names amount in number to 62. There are also (probably of more recent origin) two mineral totems, those of Iron and Salt; two which may be called place-totems, viz. Bāudh, an embanked reservoir of water, and Jūbbi, a marsh or surface-spring; and two which belong to a class known elsewhere, called 'split-totems' as involving tabus of a portion only of an animal or vegetable, and frequently known by the name of that portion. Among the Orāons these split-totems are Anvir (rice-soup) and Kispōttā (pig's entrails). Sexual union within the totem-clan is reckoned incestuous, though at the present day, if a marriage takes place in which the rule is infringed wittingly or unwittingly, the offending pair, after paying a fine and giving a feast to the clansmen by analogy with the usual caste practice in India, are formally re-admitted to the tribe and their union is thus legalized. The remaining ordinary totemic tabus are observed. 'An Orāon must abstain from eating or otherwise using, domesticating, killing, destroying, maiming, hurting or injuring' his totem. A wife, in addition to the tabus of her own clan, is required to observe those of her husband's while she actually resides in his village. Men of the clan whose totem is any kind of tree may not go under the shade of the tree or use its produce in any shape. But some modifications have been introduced where the totem is an indispensable article of diet or household use.

Thus members of the Paddy clan abstain only from eating the thin scum on the surface of rice-soup when left standing in a cool place; members of the Salt clan abstain only from taking raw salt, the tabu not extending to food or drink in which salt is an ingredient or flavour; members of the Iron clan abstain only from touching iron with their lips or tongue; members of the Pig clan are forbidden only to eat the head of the pig; members of the Bārā clan, of which the *Ficus Indica* is the totem, may eat the fruit whole, but not by dividing it in two.

On the other hand, the tabus of some clans have been extended to objects having a real or fancied resemblance to the totem or bearing the same or a similar name.

Thus members of the Tiger clan not only have to observe various tabus in reference to the tiger and to the wolf, but also must abstain from eating the squirrel's flesh, since the squirrel is striped like the tiger, and they may not marry in the month of Māgh (December–January) because the name Māgh rhymes with *bāgh*, the Hindi word for 'tiger.'

[1] W. C. Willoughby, *JAI* xxxv. [1905] 298.

In this case the foreign word *bāgh* points to a late and highly artificial origin for such a tabu, which is obviously due to the timidity of superstition. Other additional tabus have been suggested to be due to the fusion of clans, just as some 'split-totems' may have arisen from the opposite process of the division of clans.

'The general attitude of an Orāon to his clan-totem is that of a man to his equal—to his friend and ally,' though some periodical practices seem to indicate a more religious regard—at any rate for its effigy. But totemism is now in decay, as it is over the rest of India. An unintentional breach of a tabu is no longer believed to entail any serious consequences, though looked upon with social disapproval. There is no difference between the clans in personal dress or adornment, nor is a man supposed to partake of the qualities of the totem. There are very few traditions of the origin of totem-names. Such as there are do not reveal any belief in the descent of the clan from the totem, but rather in some other relation between the totem and the human ancestor of the clan. The Orāons are patrilineal.[1]

(*e*) *Melanesia.*—In Melanesia (including New Guinea and the islands of Torres Straits) there is a tendency to associate with the principal totem of a clan a number of subordinate totems which have been called 'secondary,' 'subsidiary,' or 'linked' totems. The western islands of Torres Straits have for many years been the scene of successful missionary enterprise. Under this influence the totemism which formerly existed among the people has almost disappeared. But twenty years ago the members of the Cambridge Anthropological Expedition, who spent some time on the islands, were able to recover very definite evidence of its existence. The population was divided into a number of exogamous totemic clans. As a rule each clan had subsidiary totems in addition to its chief totem. 'In some cases two or more clans might have the same chief totem, while differing in their subsidiary totems'—which looks like the fission of an original clan. Members of a clan were distinguished by wearing an emblem of the totem, or more rarely bearing it in cicatrices or keloids on the flesh. Personal belongings also, it is said, were adorned with a representation of the owner's totem. Descent was reckoned in the male line; but adoption seems to have been practised. In conformity with patrilineal reckoning there was a tendency to a geographical distribution of the clans. This, however, was apt to result in quarrelling; and the missionaries had accordingly succeeded in inducing the people, at all events of one of the islands, to abandon the localization of the clans.

'The solidarity of the totem-clan was a marked feature in the social life of the people, and it took precedence of all other considerations; not only so, but there was an intimate relationship between all members of the same totem [-clan] irrespective of the island or locality to which they might belong and even warfare did not affect the friendship of totem-brethren. Any man who visited another island would be looked after and entertained as a matter of course by the residents who belonged to the same totem as himself.'[2]

The clans were grouped in two classes or phratries. On the island of Mabuiag these two phratries were respectively known as 'the children or people of the Great Totem' and 'the children or people of the Little Totem.' The former comprised the Crocodile, Cassowary, Snake, and Dog clans (all land animals); the latter the Dugong, Shovel-nosed Skate, Shark, Ray, and Green Turtle clans (all water animals). On this island there is no sufficient evidence that the phratries regulated marriage during recent times; but there is reason to think that they were exogamous on some other of the islands. Members of a clan might not kill or eat the totem; but this did not apply to the Dugong and Turtle clans, for both dugong and turtle were important articles of food on the islands, which are somewhat barren. Members of the clan, however, were not allowed to eat of the first dugong or turtle caught, but might partake of those subsequently caught. They performed ceremonies to entice the animals to the island and ensure a good season. They could, on the other hand, by magical rites with the contrary intention, prevent them from coming. A mystical relation was held to subsist between the totem and the clan. He was said to be 'all same as relation, he belong same family.' The Cassowary, Crocodile, Snake, Shark, and Hammer-headed Shark clans were reputed to be truculent and to like fighting. The peaceable clans were the Shovel-nosed Skate, Ray, and Sucker-fish; while the Dog clan was sometimes peaceable and at other times quarrelsome—all like the totem-animal. Certain of the clans, possibly all, had formulæ which they repeated in going into a fight, and which were either magical or in the nature of invocations to the totem. The prayer is in some stages of civilization near akin to the spell.[1]

4. **Decadence of totemism.**—The foregoing examples will sufficiently indicate the chief characteristics of totemism in the five great areas in which it has been found. It is apparent that in each area totemism was by no means a new phenomenon. It arises in a low condition of savagery and is connected in its typical forms with matrilineal descent. But, even before contact with Europeans, it had begun to assume forms very divergent from what we understand by normal totemism, leading in some cases to degeneration and disintegration.

(*a*) *America.*—Among the divergences found in N. America those of the coast-dwellers of the north-west are the most remarkable. The Tlingit, inhabiting S. Alaska, are divided into two exogamous phratries or classes, called after the raven and the wolf respectively;[2] and these two phratries are again divided into a number of totemic clans. The members of a clan are believed to be related to one another more closely than to those of other clans even of the same phratry. They reckon descent through the mother and as a consequence are not gathered at one place, but distributed as social groups and not geographical. Yet each clan usually derived its origin (and most of them, at the present day, their names) from some village or camp which it once occupied. They seem, however, to have had alternative names (if F. Boas's account is correct) derived from the animal, or one of the animals, which they claimed as a badge. In point of fact the emblems or representations on the north-western coast, generally called totems, are rather badges or crests. The clans of each phratry, indeed, all use the totem of the phratry; they also use a number of other badges, some of which are the special property of the clan, or of some sub-clan, and are guarded with much jealousy. They carve and paint the badge on the so-called totem-poles erected in front of the dwelling-house, or on a grave. These poles are, however, less frequently erected by the Tlingit than by some of their neighbours. The badge is also exhibited on many other articles of property, worn as a mask or hat used as a disguise at dances, potlatches, and funeral ceremonies, and painted

[2] J. R. Swanton, *26 RBEW* [1908], p. 407, suggests that these two phratries may have had a racial origin.

on the faces of the clansmen. It is not now held that the clan or phratry is descended from the totem or animal represented, though it may be suspected that in former times this was believed. At present stories are told by the clan or sub-clan claiming a badge of its acquisition by an ancestor through an adventure with the animal in question, such animal being often conceived as of superhuman power.

As Frazer points out, many of 'these tales have the true totemic ring about them; they point clearly to the former identification of the clanspeople with their totems, which is only another way of saying that the present people are supposed to be descended from the totemic animals.'[1]

To this it may be added that, according to Boas's report, 'the animal and a member of its clan are considered relations. Thus the wolf gens will pray to the wolves, "We are your relations; pray don't hurt us!" But notwithstanding this fact they will hunt wolves without hesitation.'[2]

The truth is that the more or less permanent settlement of all the tribes along the coast—at least from the Tlingit to the Kwakiutl—in villages, and their increasing civilization, have led to the division of the population into ranks or castes and to a continually higher value being set on the crests or badges as marks of rank and wealth, and as symbols, if not guarantees, of descent from a distinguished ancestor. This has resulted in an accumulation of crests, some clans or sub-clans obtaining a larger number than others; and some of the crests were used by more than one clan.

'The great majority of Tlingit personal names referred to some animal, especially that animal whose emblem was particularly valued by the clan to which the bearer belonged.'[3]

Of these names many seem to have been peculiar to one or other of the clans. The solidarity ordinarily subsisting between members of a clan is found, among the Tlingit, rather between the members of a phratry.

'According to the unwritten Tlingit law it was incumbent upon everyone belonging to a phratry to house and feed any other member of that phratry who should visit him, no matter from how great a distance he might come'; and it was a mark of good manners, therefore of high caste, not to abuse such hospitality.[4]

Any serious collision at a potlatch arising out of the rivalry of opposing parties of dancers was averted or stayed by the host's people, who rushed between them bearing the emblem of their phratry or making the call of the animal whose name was that of the phratry. When a man died, the funeral ceremonies were conducted by the opposite phratry, who were afterwards entertained at a mourning feast by the relatives of the deceased. On the whole it may be conjectured that the two phratries represent original totem-clans, out of which the existing clans or groups, whether social or local, have developed. There was also reckoned among the Tlingit population a small group at Sanya, called the Nexádi ('People of Nex,' a creek in the neighbourhood), who stood outside both phratries and might marry into both. They bore the Eagle crest or badge and had personal names having reference to the eagle. They were doubtless a small intrusive population, which Swanton, the latest investigator of the Tlingit, suggests as perhaps of Athapascan derivation.[5]

Coming down from north to south along the coast and islands of Alaska and British Columbia, we find a similar organization, differing however in detail, among the various peoples, with an increasing emphasis laid on rank and the possession of crests, until we reach the Kwakiutl. The Kwakiutl proper (or Southern Kwakiutl, as they are often called to distinguish them from the Heiltsuk, their northern congeners) are organized in 'tribes,' which in turn are subdivided into exogamic groups distinguished not, as a rule, by totemic names but by the collective form of the name claimed as that of an ancestor, by geographical names, or by 'names of honour.' The evidence seems to show that they are neither definitely patrilineal nor matrilineal in descent, but in a state of transition, since a child may belong to any 'clan' or exogamic group to which one of its ancestors belonged at the arbitrary discretion of its parents. Each exogamic group, like the ordinary clan of several of the tribes east of the Rocky Mountains, had a number of personal names appropriated to it; and to assign a child to such a group it was enough to give it one of these names. In this way it appears to have become *ipso facto* a member of the group; it might even belong to more than one at the same time. What was more important in Kwakiutl society was the possession of crests and the privileges that they carried. These were obtained in three several ways: (1) they might be inherited by direct patrilineal descent from an ancestor who acquired them through an adventure in the course of which he obtained the protection and guidance of a *manitu*, or spiritual helper, for himself and his descendants; direct inheritance of this kind, however, was comparatively rare; (2) more usually they were obtained by marriage; the payment of a bride-price secured not only the bride, but also the right of membership in her 'clan' or exogamous group, the crest and privileges of the bride's father, and a good deal of other property; (3) the third method was to obtain them by killing the owner, as in the case of the position and privileges of the King of the Wood of Nemi. The privileges include not only the use of the crest but also the right to the membership of certain societies and the ownership and exclusive right to practise certain dances connected with the ceremonials of the societies. They are, however, not acquired for the benefit of the son-in-law in the case of marriage, but for his successor, whoever he may be. Seeing, moreover, that the number of noblemen is fixed, and there is only one person at a time who personates the ancestor and has his rank and privileges, the person entitled must wait for a vacancy before he can be admitted to them. He may wait in vain; for before a vacancy occurs the owner may change his mind, or even after the person entitled has obtained the privileges he may devest them and confer them upon some other successor.

This is manifestly not totemism, for the societies operate only during the winter, when they dominate the social organization to the exclusion of the kinship and local groups. It may have been influenced by true totemic conceptions, from which it may even have sprung. But its cause must be sought in the increasing power of wealth, the consequent development of rank, and the desire for display.[1]

The transformation that thus seems to have overtaken totemism among the Kwakiutl is in process also among the Pueblo tribes of New Mexico and Arizona. Here the cause is different. In these tribes, originally organized in totemic clans and phratries with matrilineal descent, the struggle for existence in an arid country has evolved a sense of dependence upon the supernatural powers and a religious ritual and elaborate ceremonies, partly religious and partly magical, for the production of rain and maize. At first these ceremonies appear to have been performed by the appropriate clans, as we have found in other areas. In some cases they are so still, as among the Zuñi, but aided and superintended by the priests of the various deities. In other cases,

as among the Hopi, the Snake clan has been superseded for this purpose by an 'order' or society, the members of which were probably at the beginning recruited exclusively from the clan. The rule is now somewhat less strict, embracing others besides members of the clan, though the members of the society are limited.[1] In fact the latest inquiries appear to show that the societies or fraternities have broken away and become quite independent of the clan organization.[2]

(*b*) *Australia.*—Turning to Australia, we find that among the Central tribes the totemic clans have been carried far towards their complete conversion into societies performing magico-religious rites, the object of which is the multiplication of the totemic animal or plant. The Warramunga hold that the totem-clans originated each from a single ancestor, half-beast, or half-plant, from whose body emanated a number of spirit-children; and the descendants of the clan are all animated by these spirit-children. The ceremonies are here performed by the clan in a definite order, representing in dramatic fashion the traditional history of the clan. The Warramunga and the tribes to the north of them are definitely patrilineal with exogamic clans; but the members of the clan in every generation are believed to be continual reincarnations of deceased ancestors. The Arunta, on the other hand, have ceased to regulate their marriages by totemic exogamy and now regulate them solely by class-divisions consisting of the pristine moieties of the tribe, which have been doubly subdivided, so that they are now eight in number. There are various places in the territory of the tribe which are totemic centres believed to be haunted by the spirit-children of the original ancestors. One of these spirit-children is held to have entered the body of every pregnant woman, according to the totemic centre near or at which she first felt herself pregnant. In this way the 'clan' of the child is ascertained, and in no case does it depend upon that of the father or mother. The resulting group passing under a totemic name is clearly no true clan.

'There is no such thing as the members of one totem [-group] being bound together in such a way that they must combine to fight on behalf of a member of the totem [-group] to which they belong.'

Inasmuch as every death is supposed to be due to witchcraft, revenge has to be taken by somebody. Normally this duty would fall on the clansmen of the deceased. But among the Arunta it would seem to be the members of the local group who undertake it.

'In fact,' say Spencer and Gillen, summing up the subject, 'it is perfectly easy to spend a considerable time amongst the Arunta tribe without even being aware that each individual has a totemic name'; but the fact of his belonging to one or other of the divisions governing marriage is soon apparent.

These groups thus passing under totemic names perform under the direction of their respective headmen from time to time, as the headman concerned decides, the ceremonies known as *intichiuma*. These ceremonies are not, like those of the Warramunga, the property of the entire group, but each of them belongs to a specific individual, who alone has the right of performing it or of requesting others to do so. One consequence of this is that they are not performed in a definite series: they are fragments and may be given in any arbitrary order. They have ceased to be a representation of the traditional history of the group; they have become mere magical rites. Further, in the tribes both south and north of the Central group, consisting of the Arunta and their immediate neighbours, a man is forbidden to kill, injure, or eat his totem. In some of the tribes, though patrilineal, the prohibition also applies more or less absolutely to the totem of the clansman's mother—probably a relic of an older matrilineal condition. Among the Arunta, however, there is no such prohibition. Indeed the members of a totem-group are expected to eat of the totem during the ceremonies; and they have liberty to do so at other times, though only sparingly. The conclusion from these and other facts is irresistible that the Central tribes of Australia are finding their way out of normal totemism, and that of these tribes the Arunta and their immediate neighbours to the north (the Kaitish, Unmatjera, and others) are the farthest advanced on the road. Their totemic organization is not merely decadent; it is obsolescent. Such remains of it as persist are preserved only as societies held together for the performance of certain magical or religious rites and as the carriers of certain religious traditions, but no longer as organic social groups.[1]

But decadent totemism often takes another course in its transformation. In most totemic communities it is customary to assemble the growing youths for the purpose of what are generally called the puberty ceremonies. By means of these ceremonies the youths of the tribe are taken from their mothers' care and out of the society of women and children, are submitted to tests of courage and endurance, educated in sexual matters and in the customs and traditions of the tribe, and fitted henceforth to take their part in the life of the tribe as adult and fully admitted members. Such initiation rites are prominent all over Australia. Among the Central tribes they have been developed beyond all others. They have been made very severe, not to say cruel; they have been elaborated into four distinct stages and protracted through years, though not of course continuous during that period. Their performance is everywhere one of the important occasions on which the tribe comes together. The members are summoned by special messengers with traditional formalities. But the actual performance of the greater part of them is secret, in the sense that no one is allowed to witness or take part in it who has not previously been in a similar manner initiated.

(*c*) *Africa.*—There is evidence of the existence of totemism in W. Africa from Senegambia southward in almost all the populations. In many places, however, where it is decadent or obsolete it is replaced by secret societies which dominate or supplement the nominal government. Thus at Old Calabar there is a very powerful society known as Egbo, divided into numerous grades. The king is the head. It has in a rough and ready way the whole administration of the law in its hands.[2] Farther south, in the cataract region of the Lower Congo, is a secret society known as Nkimba. According to the latest researches, it is entered about the age of puberty. The candidates are chosen by the *nganga*, or medicine-man. The ceremonies take place in the forest, where the camp is jealously guarded from all intrusion. There the candidates remain for a period variously stated as from one or two months to five or six years. They are painted white, and a narcotic is administered. They are subjected to a number of tests, such as the imposition of a new name and an oath of secrecy, and to flagellation. They are circumcised, if not already in that condition. They are taught a new language, and it is believed

[1] The various minutely detailed accounts of the Pueblo Indians and their ceremonies have been admirably summarized by Frazer, iii. 195 ff.

by the women and other non-initiated that they are put to death and brought to life again. They are instructed in the religious beliefs and moral rules to which they must in future conform. Various prohibitions are enforced during and after their retirement. If approved for the purpose, they may become fetish-priests or medicine-men; otherwise they become simply adult men, ready to take part in public life. This is obviously little more than the puberty rites of ordinary totemic peoples; but there is reason to think that the Nkimba tends to become more magical in its purview. Those who have passed through it have acquired a character in some degree sacred and mysterious; a special tie is established between them; they regard one another as brethren and render mutual aid. Another society called Ndembo, often confounded with the Nkimba, exists on the Congo. A Ndembo is not held periodically, but one is established whenever the elders of the village direct. It appears to have a specially sexual aim; men and women are admitted, and sexual licence is said to be encouraged in the camp; and to such a length is the comedy of death and resurrection carried that, on returning after the conclusion of the ceremonies, those who have been subjected to them pretend to have lost all remembrance of their previous life, act in the most foolish manner, and are only gradually recalled to ordinary sense and behaviour. The object of the Ndembo appears moreover to be more specialized, more decidedly magical, than that of the Nkimba.[1] It seems probable that all these secret societies have been developed from, or at least deeply influenced by, the initiatory rites of totemic tribes.

The Herero of S.W. Africa, who have been massacred and almost entirely destroyed by the Germans, offer a peculiarly difficult problem, not yet entirely solved. They were divided into clans called *eanda* (plur. *omaanda*) reckoning descent exclusively through the mother. A tradition of their origin is related, deriving it from a pair who emerged from the trunk of an *omborombonga* tree in the far North, whose children were all daughters fructified by contact in some way or other with various objects of the external world. These objects became the totems of their descendants. Among them may be enumerated the sun, rain, the tree, the marmot, the koodoo, the chameleon, besides others the significance of whose names is disputed. The members of an *eanda* called themselves brothers-in-law (not brothers) of the totem. The blood-feud attached to the *eanda*, which moreover, formerly at least, was exogamic. Side by side with the *eanda* stands another organization, apparently of more recent origin, the *oruzo* (plur. *otuzo*). The *oruzo* descends exclusively in the paternal line. It is also totemic; and among the totems appear the chameleon, the sun, the koodoo, rag, necklace of beads. The members of an *oruzo* are distinguished by the mode of dressing their hair, by their food-tabus, and by special sacrificial regulations. The colour and shape of the horns of the cattle which an *oruzo* possesses also differ from those of every other *oruzo*. The institution of the *oruzo* is attributed to the medicine-men; and there can be little doubt that it is specially a religious organization for the maintenance of the sacred fire of the family and the worship of ancestors. All cattle belong to the *oruzo*, for the Herero are a pastoral people, and their wealth consisted of cattle until the Germans deprived them of their stock. The cattle never descended to or through females, at all events if there was a male descendant to inherit them. The food tabus of the Herero are probably not all totemic. The Herero have no totemic badges or signs.[1] The totemism prevalent among them is thus widely divergent from the common type. Its twofold organization is manifestly the result of a conflict between matrilineal and patrilineal institutions. How that conflict originated is obscure; but it is obviously not unconnected with the growth of ancestor-worship and the introduction of herds of cattle among a hunting and perhaps rudely agricultural people, and the consequent changes of mode of life and social arrangements. The country which they now inhabit is steppe, almost desert, and quite unsuitable for agriculture. After the rains there is for a time abundant pasture, which at other seasons must be sought in the deep and sheltered dales with which the land is intersected. The change to a pastoral life may be surmised to have occurred when or shortly before they penetrated to their present possessions, not probably more than five or six centuries ago. The consequent development of their institutions is even yet incomplete.

At the other extremity of the area occupied by the Bantu are found the Baganda, the most highly civilized of the race. They were governed by kings probably descended from a Hamitic stock which conquered the country several centuries ago.

'The Baganda are divided into a large number of totemic clans, the members of which observe the two fundamental canons of normal totemism, since they abstain both from injuring their totem and from marrying a woman of the same clan.' Each clan has a principal and a secondary totem, and takes its name from the former. 'Both totems are sacred to members of the clan, who may neither kill nor destroy them. Other people, however, may kill or destroy them for a reasonable purpose, without hurting the feelings of members of the clan.'[2]

The Baganda trace their lineage in the male line; but a woman's children were taught in infancy to respect her totems and to avoid them. When they grew up, they adopted their father's totems and ceased to regard those of their mother. Yet they were forbidden to marry into their mother's clan. For these and other reasons it seems clear that descent had originally been reckoned in the maternal line, and that, as in the case of the Herero, though on different lines, the transition had been recently and incompletely effected.[3] Like the clans of certain N. American tribes, each clan had special names appropriated to its children; hence the clan to which a man belonged was recognized by his name.[4] The king had a large harem. His children, however, took the totem of their mother; and it was naturally deemed an honour for a clan to give a king to the realm by means of the union of one of its female members with the king. From this honour certain clans were excluded for reasons which are now unknown. To obviate this some of the excluded clans joined more favoured clans, so that their daughters might marry the king and have children who might be in the succession to the throne. Another reason for the union of clans was to better the position of a despised clan. Clans so associated obtained the right to use the totem of the more honourable clan; yet they were so little regarded as relations by the members of the latter that intermarriage between members of the two clans was not forbidden. The Lung-fish clan (the largest of all) also was in an exceptional position in that its members were not subject to the rule of exogamy.[5] The totems are usually some species of animal. A few species of trees and other vegetables are found as totems, besides beads and other articles of human manu-

facture; and 'split-totems' and other anomalous totems (as a tailless or a spotted cow, and rain-water from roofs) are not unknown.[1] Notwithstanding the existence of a system of law and administration of justice, the sense of clan-solidarity remained strong. The blood-covenant was practised and was considered more binding than common oaths.[2] Murder was rare; but cases of murder and manslaughter, when they occurred, were taken up by the clan. The clan of a murdered man might accept and share a fine, instead of insisting on the punishment of death; and, on the other hand, the clan of the wrong-doer contributed to the payment. 'When a member of a clan wished to buy a wife, it was the duty of all the other members to help him to do so'; when a person got into debt, or was fined, the clan combined to assist him to pay the debt or fine.[3] Thus the totemism of the Baganda, while preserving many, if not most, of the essential features normally present, departs widely from more typical totemism. The religious aspect, though not quite absent, has fallen into the background before polytheism and the cult of the dead. The kingship and the organization of the kingdom have been imposed by a non-Bantu conquering people, which brought a military class, imperfectly assimilated by the bulk of the people when the English occupation took place. This people probably introduced domestic animals, some of which have become totems; and its influence is perhaps also to be traced in the 'split-totems.' Secondary totems are met with elsewhere, as we have seen.

Totemism is decadent also among the tribes of the Congo. It there manifests itself chiefly in tabus, though totemic tabus are only a few of the tabus observed. Among the Bangala of the Upper Congo the totem-animal may not be killed or eaten. A woman after marriage observes her husband's totem as well as her own. A child born to them takes the totems of both parents, until a council of both families determines which totem it is to take permanently—usually the father's. The Bangala are patrilineal.[4]

(*d*) *India.*—In continental India the decadence of totemism has been caused chiefly by the spread of Hinduism, and with it the extension of the caste system. The origin of caste has not yet been entirely cleared up. Within the Hindu system it is largely, if not mainly, occupational. As applied to the Dravidian and other races of the peninsula, it is transforming, or has transformed, independent tribes into castes; and by means of legends, some of them doubtless consciously forged to manufacture claims, these tribes have succeeded in gaining reluctant and often strongly contested admission as castes into the Hindu social hierarchy. The Reddi or Kāpu, the largest caste in the Madras Presidency, are probably descended from a Dravidian tribe which in the early centuries of our era was powerful in India. They are now a great caste of cultivators, farmers, and squireens in the Telugu country and rank next to the Brāhmans in Hindu society there. They are divided into a number of sections, for whose names fanciful etymologies have been found, and for some of them legends have been invented. One of these sections, the Panta Kāpus, are again severed into two endogamous divisions. But they are said also to have true totemic septs, of which the following are examples:

(1) Magili (*Pandanus fascicularis*): the women of this sept do not, like those of other castes, adorn themselves with the flower-bracts; and a man of the sept 'has been known to refuse to purchase some bamboo mats, because they were tied with the fibre of this tree'; (2) Ippi (*Bassia longifolia*): this tree and its products must not be touched by members of the sept; (3) Mancham (cot): members of this sept avoid sleeping on cots; (4) Arigala (*Paspalum scrobiculatum*): members of this sept do not use this grain as food; (5) Chintaginjalu (tamarind seeds): these seeds may not be used or touched by members of the sept; (6) Puccha (water-melon): the fruit may not be eaten by members of the sept.

Moreover, the names of various exogamous Kāpu septs are suggestive of totemism, such as the Cow, Grain, Buffalo, Sheep, Fowl, Goat, Elephant, as well as various plant-names, though others, such as Cart, Army, Hut, Harrow, Woman's Skirt, Plough, are more doubtful.[1]

This is not an uncommon type of caste. It suggests that the caste in question is a transformed tribe, and that the divisions of the caste originate from totemic clans, many of which retain their totemic names and some of their tabus, though other subdivisions have forgotten them or originated in a different manner. The Khangārs are a low caste of village watchmen and field-labourers in the Central Provinces, almost certainly of non-Aryan origin. They are divided into numerous exogamous septs, all of which are said to be totemic. 'The members of the sept usually show veneration to the object from which the sept takes its name.' Thus the Barha sept is named from *barāh*, 'pig,' this sept worshipping the pig; the Chirai from *chiriya*, 'bird,' this sept revering sparrows; the Ghurgotia from *ghora*, 'horse,' towards which the members practise certain observances; the Kasgotia from *kāusa*, 'bell-metal,' which is tabued by the sept; the San from *san*, 'hemp,' pieces of which are placed by members of the sept near their family god. The Hanumān sept is so called from the monkey-god, and the Viṣṇu sept from Viṣṇu, the god worshipped by it.[2]

In the United Provinces there are also many tribes and castes, probably of Dravidian origin, among whom totemism is traceable. Such are the Agariya of Mirzāpur, who have seven septs, all exogamous and apparently of totemic origin: the Markām named from the tortoise, which the members will not kill or eat; the Goirār from a certain tree which they will not cut; the Paraswān from a tree (*Butea frondosa*) which they will not cut and whose leaves they will not use for platters; the Sanwān from hemp (*san*), which they will not sow or use; the Baragwār from a tree (*Ficus Indica*) which they will not cut or climb and from the leaves of which they will not eat; the Banjhakwār, said to be named from *beng*, 'frog,' which the members of the sept will not kill or eat; and the Gidhlē, the members of which will not kill or even throw a stone at a vulture (*gidh*). The Agariya are patrilineal; and they have been deeply influenced in other ways by Hinduism. Indeed they call themselves Hindus in religion, though they worship none of the regular Hindu deities. There are, however, traces of a previous matrilineal condition. They practise tatuing, and many of the marks inscribed on their bodies are probably totemic in origin, 'but the real meaning has now been forgotten, and they are at present little more than charms to resist disease and other misfortunes, and for the purpose of mere ornament.'[3] The social and political conditions of India are such that almost the only possible relics of totemism consist in the names of the septs and the prohibitions of marriage within the clan and of eating, killing, or using the totem. Hindu influence leads to the ascription of descent to human beings rather than to animals or plants, concerning which tales are told to account for the totemic name and observances. The organization of the tribe or caste by means of a council and the police regulations render unnecessary the union of members for mutual protection. Hence, and owing to the universal tendency of caste to subdivision, the sense of solidarity is greatly weakened and is daily decreasing in force.[4]

(*e*) *Melanesia.*—There are signs that totemism was developing in the islands of Torres Straits into an anthropomorphic cult. Traditions are found of culture-heroes associated with various clans. Of these Sigai and Maiau on the island of Yam appeared first in the likeness of a hammer-headed shark and a crocodile respectively. For each of them a shrine was erected, the essential feature of which was a turtle-shell model representing either a hammer-headed shark or a crocodile; under each of these was a stone in which the spirit, the so-called *augud* ('totem'), resided.

Uninitiated persons were not allowed to visit these shrines, 'nor did they know what they contained: they were aware of Sigai and Maiau, but they did not know that the former was a hammer-headed shark and the latter a crocodile; this mystery was too sacred to be imparted to uninitiates. When the heroes were addressed it was always by their human names, and not by their animal or totem names.'[1]

Each was associated in his animal form with one of the two phratries or groups of totem-clans. Warriors before going to battle prayed to them. Totem-dances were celebrated and songs were sung, which were believed to have an effect upon the weather, by the shark-men and crocodile-men, dancing separately and wearing feathers coloured white or black according to the party to which they belonged. On Mabuiag and Muralug the hero was Kwoiam, a warrior-hero, who himself was called an *augud*. In the Muralug group of islands he was regarded as the 'big *augud*' and 'the *augud* of every one in the island.'

He is said to have made and worn 'two crescentic objects of turtle-shell, which blazed with light when he wore them at night-time, and he nourished them with the savour of cooked fish. These objects were termed *augud*; . . . and they became the insignia of the two phratries into which the old totem-clans of Mabuiag were grouped.'[2]

'When attacking an enemy the warriors formed into two columns, each of which was led by a head-man who wore the Kwoiam emblems.'[3]

Like Sigai and Maiau, he possessed a sacred shrine. It was situated on the island of Pulu; there his crescentic emblems were kept, and thence they were taken with certain ceremonies to be borne before the appropriate phratry in war.[4]

A similar evolution has been observed in Fiji.

'The people of the interior of the island [of Viti Levu] form a number of independent communities which may probably be regarded as tribes, and each of these has a number of divisions and subdivisions, which in the relatively high development of Fijian society have departed widely from the character of the septs into which a totemic community is usually divided. The animals from which descent is traced, and whose flesh is prohibited as food, are usually associated with the larger groups which seem to correspond to tribes, though the divisions of the tribe often have sacred animals or plants peculiar to themselves in addition to these which are *tabu* to them as members of the tribe.'[5]

Rivers goes on to give examples.

The tabued animal of the people of Cawanisa is an aquatic creature called the *dravidravi*, from which they believe themselves descended; and none of the divisions have restrictions peculiar to themselves. The sacred animal of the Nadrau or Navuta people is the *qiliyago*; some of its divisions have restrictions peculiar to themselves, the Wailevu division eating neither the dog nor a fish called *dabea*, the Kaivuci respecting the snake. Other animals were held sacred in other parts of the island, the people believing in descent sometimes from the tabu animal of the tribe, sometimes from that of the smaller group. Marriage is regulated by kinship alone, and there is no evidence at present of totemic exogamy. It is manifest that this kind of totemism is widely divergent from what is usually reckoned normal totemism. Nor is this to be wondered at, seeing how far Fijian civilization has progressed. Yet it presents 'the three characteristic features of the institution: belief in descent from the totem, prohibition of the totem as an article of food, and the connection of the totem with a definite unit of the social organization.' Rivers discovered evidence among these hill-tribes 'that the sacred animals had become gods, which had, however, retained their animal form definitely.' Certain rules of conduct given to the Nadrau people by the bird *qiliyago* showed an early stage in the evolution of a god from the totem-animal. In the Rewa district in the low country things had gone a step farther. 'Here each village had a deity called *tevoro*, with a name which usually showed no sign of an animal origin, but in many cases these deities had the power of turning into animals, and in such case the people of the village in question were not allowed to eat the animal.' Thus the people of Lasakau, a division of Bau, had a *tevoro* who turned into a bird called *sese*. 'The bird could not be eaten, and here, as in the hills, it was clear that the restriction extended to the whole people and was not limited to either of the two divisions of which the Lasakau people are composed.'[1]

These are not the only cases which he mentions; but they are probably enough to render the evolution plain.

It is almost unnecessary to remark that totemism may decay, especially where it comes under European influence, by simple neglect.

Thus the Winnebago, a Siouan tribe of N. America, tracing their descent from animals who were transformed into human beings and became ancestors of the various clans, treat the totem-animal in no way differently from other animals, hunting it and eating it if edible. Descent is patrilineal, and a child used always to take a name of his father's clan; but this is falling into desuetude. The reckoning of descent has become irregular; and the sacred bundle of the clan occasionally now passes out of clan-possession.[2]

Again, the Diegueno of California were all formerly totemic. Descent is paternal. Clan exogamy is still observed by many of the clans, but not by all. Some, like the Blue Wild-Cat clan, regard the totem-animal as brother. But many of the clan-names have ceased to be totemic, and the clans have become, or are becoming, mere local groups. The clan-name is frequently taken as a personal or family surname under modern conditions.[3]

Such cases may be found elsewhere than in America.

5. **Traces of totemism among non-totemic peoples.**—Over a large area of the globe, embracing Europe, the greater part of Asia, S. America, and Polynesia, the north of Africa, and the extreme north of N. America, inhabited by the Eskimo, totemism is now unknown. But among many of the peoples of these regions certain beliefs and practices have been reported which seem to bear traces of a former prevalence.

(*a*) *Polynesia.*—Rivers' discoveries, just referred to, in Melanesia find their analogies in Tonga and Tikopia.

In the former he learned that 'each family had its *otua* [a Polynesian word, usually written *atua*, meaning "god" or "ancestor"], some of which were animals and some stones, while a man might also be an *otua*. Examples of animal *otua* were the octopus, the flying fox, and the pigeon. . . . An animal was never eaten by those whose *otua* it was, and I was told,' he says, 'that there was definite belief in descent from the animal.' Similarly on the island of Tikopia he found a number of animals called *atua*. 'Some of these animal *atua* belong to the whole community and may be eaten by no one on the island; others belong to one or other of the four sections into which the people are divided.' Thus the octopus is the *atua* of the Kavika; but it is forbidden as food not only to them but also to the whole people. The Taumako may not eat the sea-eel or a bird called *rupe*—prohibitions limited to this division of the people. The Fangalele may not catch an *one* fish. The Tafua may not eat the fresh-water eel, the flying fox, or the turtle, the two latter 'being also prohibited as food to the whole community, though regarded as especially sacred to the Tafua.' There was also evidence that the Kavika were believed to be descended from the octopus, the Taumako from the eel, the Tafua from the flying fox; and it was believed that one man of this division became after death a fresh-water eel, while two men of the Fangalele became, the one an *one* fish, the other a *moko* bird. There are also plant and vegetable *atua*, to which corresponding restrictions attached.[4]

Thus there is reason to think that totemism had at one time existed and had left traces attributable to no other cause. Elsewhere in Polynesia there are relics more or less distinct of the same conditions.

(*b*) *Egypt.*—We are naturally reminded of Egypt. The origin and early development of Egyptian religion are obscure. What we find is that in the earliest period known to us by the

Tribes and Castes of N.W. Provinces and Oudh, passim; and the other works referred to in Crooke's notes to Risley's observations. Cf. also Crooke's observations in *PR*[2] ii. 148–159.

monuments each nome or district had its own peculiar object of adoration in some animal, which was regarded with indifference or, in consequence of local quarrels, with hostility in the adjacent nomes. Moreover (in spite of changes during the country's long history, in spite of the evolution into higher polytheism and of the syncretism which gradually won its way, at all events among the educated classes), the same attitude towards these animals prevailed to the end. One nome venerated the ibis, one the crocodile, one the cat, one the gnat, one the ram, one the *oxyrhynchus* fish, and so on. Some of these are domesticated animals; in the earliest period, however, domesticated animals do not appear. The monarchy seems to have been introduced by a people which invaded Egypt and conquered the aborigines. The invaders carried the standard of a falcon, from the name of which (*heru*) that of Horus, later regarded as the last of the gods who reigned over Egypt, is derived. When the objects of adoration took human form, becoming anthropomorphic gods, these were identified with various animals, and are represented on the monuments with the heads of the appropriate animals. The animals remained sacred, as their numerous mummies attest; and various legends were told to account for their relation to the respective gods. At Bubastis, where the cat was venerated, the goddess Bast had her seat; Ombos, where the crocodile was honoured, was the sacred town of the crocodile-headed god, Sebak; the ram-headed god, Khnūm or Ammon-Rā, was worshipped at Thebes, and there precisely was the place where the sheep was revered. As a result of the unification of the country under the kings, syncretism in theology spread, and the various gods tended to be identified with one another and with the animals honoured in the different towns. At length the myth and worship of the culture-hero, Osiris, prevailed throughout the land; and his myth included a story of how the various gods fled, 'disguised in brutish forms,' from the rage of his enemy Typhon. In short, all sorts of devices are adopted to account for the local gods and animals venerated in the different cities and districts and to unify the religion. These devices were probably known to, or at least accepted by, the educated classes only. All the other classes remained attached to their local deities.[1] The evidence points to the prevalence at one time in the valley of the Nile of a form of totemism, which possibly included various trees and other vegetables (for these, though less prominent than animals, are not unknown in Egyptian religion), and which by a series of steps was slowly merged and elevated into a polytheistic worship tending ever in the minds of the educated more and more to monotheism.[2]

Of the original social organization, however, we know little beyond the fact that it was matrilineal. The woman was mistress of the house; the husband on marriage was received as a guest or went to reside with her. Those men who could afford it kept harems, the members of which were under the governance of the chief wife. It is a probable conjecture from the available information that society was constituted of clans, in later ages directly or indirectly giving birth to trading and other gilds. The custom of the husband going to reside with his wife secured the local concentration of the clan and facilitated the conversion of the clan-settlement into the nome and the dominance of a single animal-totem in each nome. All this was doubtless the result of the agricultural occupations of the people. What were the relations of the members of the clan to one another or to the totem we are not informed.

(*c*) *Greece.*—Scientific controversy has raged over the question whether remains of totemism are discoverable in ancient Greece. Salomon Reinach, Toutain, and Van Gennep have been the protagonists. Andrew Lang pointed out the various remains of animal-worship among the Greek peoples — in Thessaly the Myrmidons claiming descent from the ant and revering ants; in the Troad and the islands the mice sacred to Apollo Smintheus and a tribe referred to by an oracle as mice; the adoration of the wolf at Delphi and Athens and of the sheep on Samos; the descent of Tennes, the hero of Tenedos, from a swan; the invocation of Hecate as a dog and the sacrifice to her of a dog;[1] the Artemis of Arcadia, identified with Callisto, a nymph who is fabled to have been metamorphosed into a she-bear, from which the Arcadians claimed descent; the similar tale of the Brauronian Artemis in Attica, served by girls called bears, dancing with the gait of bears and probably in archaic times wearing bear-skins; and a hundred other such myths, rituals, and metamorphoses.[2] Nor has he been alone in discerning that such cases pointed to a primitive totemism, outgrown and misconstrued before the dawn of authentic history. The social organization of Athens has also been examined. The *γένος* and *φρατρία* have been pronounced parallel in all essentials with the organization of the Australian totemic clan and phratry.[3] There are good reasons for suspecting that originally matrilineal descent was the rule, of which vestiges subsisted down to historical times.[4] Though this view has been challenged,[5] and it is undoubted that agnatic descent prevailed in historical times, the suspicion is not without solid foundation. Probably the pre-historic population of the period called the Mycenæan age was matrilineal and was conquered by a patrilineal military people from the north, who formed the dominant classes in the Homeric age, and under whom Greek society was transformed and reorganized. On the whole we are justified in accepting with L. R. Farnell the theory that various remarkable cults—the Arcadian worship of Zeus Lycæus and of Artemis Calliste, the Attic worship of Zeus Polieus, and perhaps some others—can be explained only by a survival of what is in effect totemism.[6] But, if so, then other cults and myths of which the connecting links have been lost may with the more likelihood be assigned to the same origin.

(*d*) *Ireland.*—Over the rest of Europe the traces of totemism are still more uncertain. They will be found, as in Greece, if at all, on the side of belief and practice which may be called quasi-religious rather than in social observances such as marriage restrictions; for under the dominance of Christianity and the social ideas, Hebrew and Roman, carried with it society has been shaped for two millenniums. In Connemara and the islands off the west coast of Ireland persons bearing the name of Conneely, who are descended from the clan Conneely, an old family of Iar-Connaught, claim 'that they have seal's blood in them, and that is why they are such good swimmers.'

A story is told of some members of the clan who at a distant period were changed into seals. Since then, it is said, no Conneely can kill a seal without afterwards having bad luck.

[6] *CGS*, Oxford, 1896–1901, i. 41, 58, 91, ii. 434, 441 (cf. iv. 116, v. 106; and J. E. Harrison, *Themis*, Cambridge, 1912, *passim*, esp. ch. v.).

Seals are said to be regarded with profound veneration. They are called Conneelys, and are said to be the souls of departed friends. We are told that 'in some places the story has its believers who would no more kill a seal, or eat of a slaughtered one, than they would of a human Conneely.'[1]

Both in Ireland and in the Scottish isles are stories and customs which point to an extinct totemism as the best explanation; and the same explanation has been offered, with more or less probability, of various beliefs and practices in Wales and England as well as in other European countries.[2]

(*e*) *W. China.*—In W. China among the Lolos, an aboriginal mountain people of Szechwan, there is something more than traces of totemism.

Their 'surnames always signify the name of a tree or animal or both tree and animal,' and 'these are considered as the ancestors of the family bearing the name. This name is often archaic. Thus the surname Bu-luh-beh is explained as follows:—Bu-luh is said to be an ancient name for the citron, which is now known as *sa-lu*. The common way of asking a person what his surname is, is to inquire "What is it you don't touch?" and a person of the surname just mentioned would reply "We do not touch the *sa-lu* or citron." People cannot eat or touch in any way the plant or animal, or both, which enters into their surname. The plant or animal is not, however, worshipped in any way.

People of the same surname may marry if there is no obvious relationship. There are, however, groups of two or three surnames amongst whom intermarriage is forbidden; and no explanation of this is given. There are also groups of two or three surnames who are called comrades, and intermarriage amongst them is favoured.'[3]

The Chinese themselves are on a higher plane of civilization, and totemism is unknown. But from sundry prohibitions its existence has been suspected. Among some other peoples of S.W. Asia and various islands of the Indian Archipelago totemism has been either found or suspected. In Madagascar and in the Polynesian islands a number of superstitions have been ascribed with more or less probability to an original totemism no longer forming part of the social organization.

(*f*) *American.*—In Central and S. America also customs and beliefs have been interpreted as traces of totemism. Thus in Peru, where the various clans were localized, each clan worshipped its ancestor, and the tendency seems to have been for such objects of worship to assume the form of an animal, vegetable, or some other natural phenomenon. Each clan, moreover, had a distinctive dress. But our information is too imperfect to permit of a definite opinion on the subject.[4] The Bororo of Brazil claim to be araras (a bird with a red plumage) and believe a neighbouring tribe, the Trumai, to be water-animals, while a certain cannibal tribe is descended from the jaguar.[5] In N. America it was usual for a young man at adolescence, or a man who wished to acquire special powers, to go out into the woods and fast for days in order to acquire a guardian spirit, which usually took the form of an animal. It was revealed to him in a vision in which his austerities culminated; and when it took the form of some animal, a portion or symbol of that animal became his fetish or medicine. Thereafter he obeyed the restrictions and prohibitions believed to have been communicated to him by the vision. There was a tendency among some tribes, particularly in the north-west, for the guardian spirit (*súlia* or *manitu*) to be inherited by his descendants. And some writers have seen in this the origin of totemism.[6] A variety of the practice in Central and S. America is known under the name of nagualism (Quiche *naual*, 'the knowing one' or 'sorcerer'), in which some natural object, commonly an animal, is believed to have a parallel relation with a human being, so that for weal or woe their fates are mutually dependent. The *nagual* is sometimes chosen by divination for an infant at birth, but more often obtained, like a *manitu*, by fasting and prayer.[1] It seems that the *nagual* is a purely personal acquisition and is not inherited like the *súlia*. It should, however, be pointed out that neither the belief of the Bororo nor the *manitu* or *nagual* of other tribes has the marks of true totemism. It has no relation to a clan, nor is it in any way related to the social organization: where the *manitu* descends, it is only to the children or remoter issue of the original possessor, and in such case the descent has only taken place under the influence of patrilineal kinship.

(*g*) *Australia.*—In Australia among the Kurnai and some other tribes of the south-east the two sexes have animals respectively regarded as their protectors, with whom the life of individual members of the sex is supposed to be bound up. Fights between the sexes on behalf of their sex-totems often occurred, as a means, or a preliminary, to marriages.[2] Here again, and for the same reason as in nagualism and the other American beliefs just referred to, the sex-totems are, whatever their origin, entirely unconnected with true totemism.

6. Origin.—The origin of totemism has been the subject of much discussion and speculation among anthropologists. It is only necessary here to refer to a few of the hypotheses offered. That which is identified with the name of Hill-Tout has already been incidentally dealt with. Though accepted by some American anthropologists, it has not generally found favour on either side of the Atlantic. Frazer, having previously adopted the theory that the totemic clan was in its primitive form and purpose a society for the multiplication by magical ceremonies of the totem-animal or vegetable, and so for ensuring a continuance of provision for the food and prosperity of the community, so far as the totem-animals and vegetables were edible or otherwise available for use,[3] has relinquished that hypothesis. Instead, in his latest conjecture he is now inclined to the opinion, suggested by observation on the part of Spencer and Gillen of the peoples of Central Australia, and on the part of Rivers of the Melanesians, that totemism originated in a primitive explanation of conception and childbirth. The latter people hold that their mothers were impregnated by the entrance into their wombs of spirit-animals or spirit-fruits, and that they themselves are severally nothing but the particular animal or fruit which effected a lodgment in the mother and in due time was born into the world as a human being. Hence they partake of the character of the animal or fruit in question and refuse to eat all such animals and fruits. The supposition is that these beliefs become in particular cases hereditary and result in the evolution of clans derived respectively from ancestors who originated from the animals or fruits.[4] Such a theory, however, encounters the same difficulties as the theory which ascribes the origin of totemism to the *manitu* become hereditary.

Earlier than either of these theories Frazer had suggested 'that the key to totemism might be found in the theory of the

external soul, that is, in the belief that living people may deposit their souls for safe keeping outside of themselves in some secure place, where the precious deposit will be less exposed to the risks and vicissitudes of life than while it remained in the body of its owner.'[1] This hypothesis, though founded on a widely spread practice and belief, has not, he frankly admits, been confirmed by further research, inasmuch as 'the evidence which connects this theory of external human souls in animal bodies with totemism appears to be insufficient to justify us in regarding it as the source of the whole institution.'[2]

Andrew Lang, towards the close of his life, was led to emphasize the social aspect of totemism. He advocated a theory similar to that first propounded by Herbert Spencer, and adopted by the German scholar, J. Pikler,[3] that the origin is to be sought in names. According to this theory, bands of men, having been given names from outside, either by way of distinction or as nicknames, accepted these names and came to fancy that they themselves were in a mystical connexion with them, or rather with the things signified by the names, and then the course of social organization, from one cause or another, led first to the preference for wives of another band having a different name, and subsequently to a positive prohibition to marry a woman of the same band and necessarily having the same name—in other words, to clan-exogamy.[4] The influence of names, and the inveterate tendency to regard a name as a real objective existence belonging to and having a mystical connexion with the person or thing signified by it, are practically universal in the lower culture. But why these names were appropriated and accepted by the various bands is left unexplained. Lang apparently agrees with Frazer that the institution of exogamy is distinct from totemism, and that totemism as a matter of fact preceded exogamy.[5] It certainly is a usual, but not quite invariable, accompaniment of it. Lang indeed offers explanations of the origin of exogamy, but it cannot be said that his speculations are more satisfactory than those of previous inquirers.

A. C. Haddon some time ago hazarded a suggestion of the 'possible origin of one aspect of totemism.' It is that there were numerous small human groups in favourable areas, each occupying a restricted range in which a certain animal or plant or group of animals or plants might be specially abundant, and that they consequently utilized these as a food-supply and for other purposes, the superfluity of which could be bartered for the superfluities of other groups.

> Thus 'the group that lived mainly on crabs and occasionally traded in crabs might well be spoken of as "the crab-men" by all the groups with whom they came in direct or indirect contact. The same would hold good for the group that dealt in clams or in turtle, and reciprocally there might be sago-men, bamboo-men, and so forth. It is obvious that the men who persistently collected or hunted a particular group of animals would understand the habits of those animals better than other people, and a personal regard for these animals would naturally arise. Thus from the very beginning there would be a distinct relationship between a group of individuals and a group of animals or plants, a relationship that primitively was based, not on even the most elementary of psychic concepts, but on the most deeply seated and urgent of human claims, hunger.'

Here Haddon agrees with Lang that the name of the group was probably imposed from without and adopted by the group thus named. Once accepted, the name and the regard for the animal, or whatever was the object signified by the name, would result in a mystical connexion being held to exist between the object and the human group, which might issue in the object being tabued instead of used as originally, and, on the other hand, in magic being worked to secure a continuous supply of the object. As part of the tabu, or incident to it, exogamy, originating in a preference for women of contiguous groups, might be developed.[1]

E. Durkheim, envisaging chiefly the Australian evidence, considers totemism as a religious institution. According to him, it is the religion of a sort of anonymous and impersonal force manifested in various animals, men, and emblems, none of which possesses it entire, but all of which participate in it. It is the god adored in all totemic cults; but it is an impersonal god without name or history, immanent in the world, diffused in an innumerable multitude of things. It is, in short, *mana* (*q.v.*) or *orenda*. It is not, however, represented under its abstract form, but is conceived as a species of animal or vegetable—in a word, under a sensible form—each group of men taking for ensign the animal or vegetable diffused most plentifully in the neighbourhood of the place where the group was accustomed to assemble. The totem is really only the material form under which this immaterial substance, this energy diffused through all sorts of heterogeneous beings (which is the sole object of the cult), is represented to the imagination. It is the symbol not only of the impersonal totemic principle or god, but also of the definite society, the clan, of which it is the totem. It is the standard, the emblem, by which each clan distinguishes itself from the others, the visible sign of its personality, the mark borne by every one that makes part of the clan, whether men, beasts, or anything else. All are sacred in varying degrees; but most sacred of all—more even than the totem-animal or other object itself—is the artificial standard or emblem of the clan. Since all who communicate in the same totemic principle are sacred, the totem is the source of the moral life of the clan, and all are morally bound to one another, with definite duties towards one another of help, vendetta, and so forth. The totem is thus not only a material but a moral force, which may easily transform itself into a divinity properly so called. Totemism therefore is bound up with the organization of society. It is practically assumed as the earliest form of religion and of society everywhere.[2] In the striking work of which the main thesis is here imperfectly summarized Durkheim elaborates this thesis with infinite pains and abundance of illustrations. But everything rests on the assumption of primitive universality, which no attempt is made to prove. Large spaces of the world, however, remain in which totemism has never yet been found. More or less probable traces of it may, indeed, be discerned in these areas; or they may hereafter be discovered. Meanwhile Durkheim's theory remains a brilliant conjecture, and nothing more.

In its insistence on an attitude towards nature and on a psychology different from that of civilized mankind it avoids the rock on which most of the hypotheses heretofore considered have split. This was also emphatically laid down, as the condition of success in solving the question of the origin of totemism, by E. Reuterskiöld, a Swedish scholar, in an article which appeared almost contemporaneously with Durkheim's work. This article is an extension of part of a previous essay by the same author published in 1908. He urges that totemism is connected with an impersonal conception of life. A group of men are allied with a group of animals. There is nothing personal, nothing individual, in their union. It is an association peculiar to the primitive mode of thought, which does not compare one thing with another: if it finds likeness between them, it identifies them. For primitive man the individual is nothing; the group or the species is

everything. Man did not picture himself as lord of creation. He did not sever himself in thought from other living creatures; he was only a part of a great community. He felt himself closely united with a kind of animal living in his neighbourhood and coming in touch with him. It was no accident that he associated himself with one or other species. Totemism has its various sides—religious, magical, and social. These were in the origin undistinguished from one another. The distinction between them came later, with the development of individualism and analysis.[1]

In this way Reuterskiöld would explain the origin of totemism. Without saying that he has completely solved the question, the opinion may be expressed that he has realized the conditions of primitive life and thought sufficiently to define at all events some of the conditions to be fulfilled and so lead to a solution. In endeavouring to explain the attitude towards nature of the tribes of Central Brazil Von den Steinen not only says that they draw no strict line of demarcation between man and brute; he uses the emphatic expression that, to understand it, 'we must think the boundary completely away.' There is thus no impediment to their assimilating themselves to one or another animal. Indeed, the Bororo declare, as we have seen, that they are red araras, not that they will become araras after death, nor that they were araras in a previous existence, but that they are araras here and now. From this attitude of mind we can see how it follows that in their stories human modes of life and thought are attributed to the lower animals, and indeed, as frequently in savage tales, it is often impossible to say whether the actors are human or brute; it follows also that marriages between the former and the latter are in the tales contemplated without aversion or are even regarded as natural, and that interchanges of shape are quite ordinary incidents. It is no question of naming. Totemism is founded on something deeper than that. It assumes a community of nature between men and other creatures; and the existence of the individual is ignored, except as a small and subordinate part of a group, thought of as a whole. It was part of the organization of society which is bound up with the general concept of the world indicated above—a concept by no means confined to totemic peoples, but not always issuing in the same type of organization. How or why particular totems were chosen is a difficult question, but, however interesting, relatively unimportant.

In strict acceptation of the term totemism is not a religion. The respect of the clan for its totem arises out of the attitude of mind just explained. The relation of the clan to its totem assumes a mystical aspect and generates an intense feeling of kinship. This frequently is expressed in the belief that they are descended from the totem-species. As civilization evolves, this belief becomes modified into the shape of a story of the adventure of a human ancestor with the totem-species. Although regarded with reverence and looked to for help, the totem is never, where totemism is not decadent, prayed to as a god or a person with powers which we call supernatural. In fact, in that stage of culture totemism usually co-exists with the cult of the dead and often with the worship of other spirits and gods accurately so called.

Its connexion with the social organization, on the other hand, is very intimate. Probably beginning in a more or less inchoate recognition of kinship, it develops the clan-feeling and the clan-organization and by means of clan-exogamy binds the whole tribe together. Whether exogamy actually precedes totemism in point of time or not, there can be no doubt that the interaction of the two strengthens and develops it, until exogamy is seen as an essential element of totemism in its full force. When, in the course of evolving civilization, totemism begins to decay, exogamy may and often does continue to exist independently. And the cases are numerous where the clan-system and exogamy have arisen and existed for long periods without any other element of totemism, so far as we know. So various are the forms of totemism that it has been maintained with plausibility that they are due to a fortuitous concurrence of causes which has united elements originally diverse but tending to converge into a system on the whole marvellously similar wherever it obtains, just as the disintegration, and in many cases the dissolution, of the system have historically been due to a concurrence or a sequence of causes of the opposite kind.

LITERATURE.—The most comprehensive account of totemism is J. G. Frazer, *Totemism and Exogamy*, 4 vols., London, 1910. It is indispensable to every student of the subject, and it includes a reprint of his early work, *Totemism*, Edinburgh, 1887, and of his subsequent artt. in *The Fortnightly Review*, new ser., lxv. [1899] 647 ff., 835 ff., and lxxviii. [1905] 162 ff., 452 ff. Other important works are Andrew Lang, *Social Origins*, London, 1903, *The Secret of the Totem*, do. 1905, and his earlier work, *Myth, Ritual and Religion*, 2 vols., do. 1887; W. Robertson Smith, *The Religion of the Semites*[2], Edinburgh, 1894; F. B. Jevons, *An Introd. to the Hist. of Religion*, London, 1896; four artt. by L. Marillier, on 'La Place du totémisme dans l'évolution religieuse,' in *RHR* xxxvi. [1897] and xxxvii. [1898]; Salomon Reinach, *Cultes, Mythes et Religions*, vols. i. and ii., Paris, 1905–08, Eng. tr., London, 1912, *Orpheus*, Paris, 1909; J. Toutain, 'L'Hist. des religions et le totémisme,' in *RHR* lvii. [1908], and A. van Gennep's reply in *RHR* lviii. [1908]; A. A. Goldenweiser, 'Totemism, an Analytical Study,' in *JAFL* xxiii. [1911], with replies by R. H. Lowie in *American Anthropologist*, new ser., xiii. [1911], by A. Lang, *ib.* xiv. [1912], by W. D Wallis, *ib.* xv. [1913], and the consequent discussions, including an art. by A. A. Goldenweiser, in *ib.* xx. [1918]. Articles bearing on totemism will be found in various volumes of *ASoc*, 1897–1907. Works in German are numerous, but of less importance. The remaining literature in English will be found in the usual anthropological periodicals and other works published in England and America, many of which have been referred to in the text. Other important works have been indicated in the course of the article. E. SIDNEY HARTLAND.

TRACTARIANISM. — See OXFORD MOVEMENT.

TRADE.—See COMMERCE.

TRADE UNIONS.—A trade union has been defined as 'a continuous association of wage-earners for the purpose of maintaining or improving the conditions of their employment.'[1] This definition would not be regarded as an adequate account of the objects of a trade union by many labour leaders of the present time, but it may stand with the proviso that there are large questions of politics and industrial reconstruction which under modern conditions have a direct or indirect bearing upon the 'improvement of conditions.' The underlying basis of the movement is the power of combination, and the progressive realization of this power by the masses of the workers in various countries has gone far to revolutionize the face of civilization. Labour is no longer a suppliant pleading for justice, but a strong man armed, presenting demands which he has the power to enforce. How will that power be used? The time seems appropriate for a consideration of the ethical aspects of the trade union movement.

1. **Historical.**—Trade unionism, like parliamentary government, is the child of the passionate instinct of the British people for civic freedom. It has been transplanted to the colonies, adopted by the working people of every nation in Europe, carried

[1] *ARW* xv. [1912] 12 ff. The author's previous work, to which reference is made, is entitled *Till frågan om uppkomsten af sakramentala måltider med särskild hänsyn till Totemismen*, Upsala, 1908.

[1] Sidney and Beatrice Webb, *History of Trade Unionism*, p. 1.

across the Atlantic to America. It pervades the whole world of intelligent white labour, but England was its cradle.

Attempts have been made to trace its descent from the craft gilds (*q.v.*) of the Middle Ages, but those institutions are to be regarded as associations of masters rather than of men, and there is little or no evidence of the existence of permanent associations of wage-earners before the 18th century. It was then that the differentiation between employer and employed became more and more marked until a great gulf was finally set between them by the transformation of industry effected by the introduction of machinery and the institution of the modern factory system of production on a large scale. The trade union movement was a direct response to the change of conditions.

In the early part of the 18th cent. continuous associations of wage-earners generally took the form of friendly societies, with sick and funeral funds attached; but, as the century wore on, and the effects of the industrial revolution, in divorcing the worker from the instruments of production and degrading his position, became more apparent, they inevitably assumed a different character. The meetings of the clubs afforded opportunities for talk about questions of wages and conditions of labour, and we find Adam Smith writing:

'People of the same trade seldom meet together, even for merriment and discussion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices.'[1]

This was what the early trade unions appeared to be to the governing classes of those days—'a conspiracy against the public'—and they were only taking the same view as had been taken by the governing classes long before. Combinations of workmen were held to constitute a danger to the State, and from early times a series of statutes had been directed against them. The earliest of these appears to have been the statute 33 Edw. I. c. 1 (1305).

It stamped as conspirators 'all who do confeder or bind themselves by oath, covenant or other alliance, as relates or extends to combinations or conspiracies of workmen or other persons to obtain an advance of, or fix the rate of, wages, or to lessen or alter the hours or duration of the time of working, or to decrease the quantity of work, or to regulate or control the mode of carrying on any manufacture, trade, or business, or the management thereof.'

From this it may be seen that labour questions, including the limitation of output, were much the same in the first part of the 14th cent. as they are to-day. The statute goes on to declare 'combinations or conspiracies of masters, manufacturers, or other persons' to be equally illegal; they too were regarded as constituting a danger to the State; and the principle that all combinations, whether of masters or of men, should be suppressed in the interest of the public may be said to underlie most of our earlier industrial legislation. But, as time went on, the tendency was for the laws against labour to be rigidly enforced, while those in its favour were very laxly administered or allowed to fall into oblivion.

The Act of Edward I. was followed by a series of others of the same nature. In the 18th cent. they became more and more frequent with the rise of the new associations. At least fifteen were enacted in the reign of George III. before the year 1800. That year marks an epoch. The whole of the existing Combination Acts were consolidated in a new law which made all associations of workmen (and of employers) illegal, and membership of such an association a criminal offence (39 and 40 Geo. III. c. 106).

The position of the workers now was that, while no attempt was made to extend already existing State regulations as to wages, hours, and conditions of employment so as to apply them to the altered circumstances of the times—and many of them had become practically inoperative—they were debarred by statute from what seemed the only chance of escape, association for mutual protection. But, in spite of this, associations were formed, some of which, as the direct result of this repressive legislation, took the form of secret societies with strange oaths and revolutionary rites, and the next twenty-five years were full of trouble and discontent. Eventually by the Acts 5 Geo. IV. c. 95 (1824) and 6 Geo. IV. c. 129 (1825) the Combination Laws were repealed and association for the purpose of regulating wages or hours of labour was expressly legalized.

The position of the trade unions was now secure. Some forty-five were discovered in 1824 to have managed to maintain a precarious existence in spite of the Combination Laws, but, when the laws were repealed, trade unions sprang into life all over the country. The next few years were a period of great industrial activity, and the work of organization was taken in hand in earnest. It was also a time of great political activity, and soon after the passing of the Reform Act of 1832 we find that the unions had already accumulated members and funds sufficient to make them a distinct power in politics. They threw themselves heartily into the movement initiated by Robert Owen—the membership of his 'Grand National Consolidated Trades Union' in 1834 has been estimated at half a million—but on the whole stood aloof from the Chartist movement which played such an important part in the history of the working classes between 1837 and 1848. Between 1850 and 1860 trade unionism made rapid strides on the old lines, and then there was a marked increase of political interest with the Reform Bill of 1867 as its centre.

The Trade Union Act of 1871 marked another stage. Though the repeal of the Combination Laws had left the workers free to combine, all combinations 'in restraint of trade' were still illegal. The funds of any such society therefore did not enjoy the protection of the law, but were at the mercy of any official who had access to them. As a matter of fact the trust had been very seldom abused, but the position was unsatisfactory, and the Act remedied it, and also strengthened the position of the unions in other respects. In 1875 a further Act recognized employers and workmen (they were no longer called master and servant) as equal parties to a civil contract, and 'peaceful picketing' during a strike was expressly permitted. Thus 'collective bargaining, with all its necessary accompaniments, was after fifty years of legislative struggle finally recognized by the law of the land.'[1]

Ten years later the movement entered upon a new phase. The leading spirits were no longer content to proceed steadily upon the old lines, and John Burns and Tom Mann became the apostles of a more militant and aggressive creed. A 'new unionism' came into existence which was inspired by the doctrines of socialism (*q.v.*). Its spirit was manifested in the labour unrest of 1889–90. This has been in its turn outpaced by the still newer unionism of the 20th cent., which is syndicalist instead of socialist and regards the general strike as its weapon. But, at all events up to the outbreak of the war in 1914, the great bulk of trade unionists seem to have been content, as Joseph Clayton has said,

'to proceed steadily on the old lines—distrusting revolutionary sentiments, favouring the return to Parliament of their officers, of whose abilities and honesty they are well aware, believing that by collective bargaining they can achieve a more comfortable life for themselves and their families and that

[1] *Wealth of Nations*, bk. i. ch. 10.

[1] Webb, *History of Trade Unionism*, p. 275.

legislation of a social character is also needed to improve their position.'[1]

Beyond the outbreak of the war we do not propose to go.

The total number of trade unions in existence at the end of 1913 is given in the *Labour Year Book* as 1135 with a membership of just under four millions—more than double what they had been ten years before.

2. Moral and economic justification of trade unionism.—No one would be likely to deny that trade unions are a necessary feature of modern industrial life, and most people would admit that they are on the whole a salutary feature. Our forefathers may have been sincere in their belief that the State could not afford to allow such associations to exist, that they constituted a real danger to the public; but in those days there was little knowledge of the conditions under which the 'lower classes' lived and little sympathy with the workers themselves. Moreover, the existing order was taken for granted. It was recognized that there were evils which called for alleviation, but the ideas of the most sympathetic did not get farther than palliation; prevention was beyond their scope. Such attempts as were made in early times to regulate industry by legal enactments were crude; and, when the great crisis of the 18th cent. arrived and there was the most urgent need of strong and intelligent control, there was no one who saw the meaning and implications of the change. The industrial revolution went its way unfettered; the old industrial order was swept away and chaos supervened; whole classes of workers became involved in a condition of unparalleled servitude, poverty, and degradation. But the governing classes failed to realize that, if there was a possible element of danger in the existence of combinations of workers, the existence of such a state of things was a far greater danger and in addition an intolerable disgrace to any civilized country. From the fetters riveted upon us in those evil days we as a nation have been for a century endeavouring with infinite struggles and effort to set ourselves free. The conscience of the public was at last aroused, but long before it was aroused the workers had learnt to help themselves; the State at last awoke to some sort of a sense of its responsibilities, but the driving power which lay behind the various enactments was the power of the associations of workers. This is the first and broadest ground of justification of unionism. It has laid the foundations of a new industrial order, and those foundations were laid in the power of two far-reaching ideas—the realization of the power of combination and the conception of the organization of labour.

Another debt which the country owes to trade unionism is the emancipation of large sections of its population from the cold and selfish individualism of past days. It is a debt which is not generally realized and seldom acknowledged; but no one who knows anything of the actual working of trade unions, or is brought much into contact with their members, can fail to see how strong the bonds of fellowship are, how clearly the members realize their dependence upon one another, how ready they are to bear one another's burdens if occasion arises. Trade unionism is full of paradoxes, and none of them is more striking than that action which appears to be hard and selfish is found sometimes upon investigation to be based upon the most unselfish motives, or that practices which intelligent workers themselves admit to be unjustifiable in theory are invested with a strong moral sanction as the only means for the protection of the weak.

[1] *Trade Unions*, London, 1913, p. 27.

On these two broad general grounds—that it has pointed the way to the establishment of a new industrial order, and that it has recalled us to a sense of a forgotten side of our social order—it may be said that the trade union movement has abundantly justified itself. We shall now proceed to consider some of the special manifestations of its activity which have been at different times the subject of criticism.

(*a*) *Strikes.*—The strike (*q.v.*) has always been the trade unionist's most effective weapon. He can do much to protect himself by the method of mutual insurance or collective bargaining, but the strike gives him the power of bringing pressure to bear if he desires to enforce an agreement or to secure an improvement in wages or conditions of labour. The question whether it is a fair weapon is therefore fundamental. At present the right to strike has been practically acknowledged by the law, but the concession has only been gradual. At first all strikes were regarded as conspiracies and illegal; then there came a stage at which the right to strike was tacitly acknowledged, but the courts condemned them on the ground of assumed 'malicious intent'; next attempts were made to discriminate between different kinds of motive; and now the tendency seems to be to uphold the right to strike as such.

The relation between employer and employed has been regarded in law since 1875 as a civil contract between two theoretically free and equal individuals. It is in some cases a contract of very short duration, but it does not differ in nature from longer contracts. A weekly-wage-earner is in this respect in the same position as a highly placed salaried official. He therefore has the right to terminate his contract when he pleases, so long as he does not contravene its terms. But the essence of a strike is that it is the simultaneous termination of many contracts, and it derives its power from the fact that it is inconvenient or even harmful to the employer, and generally meant to be so. Now no one would deny that any worker where wages are inadequate or conditions intolerable has the right to say to an employer, 'I will not work for you for such wages or under such conditions.' Nor will it be denied that many of the workers have a right to say this simultaneously as a joint protest. Finally, it is hard to see how they would be wrong in endeavouring to persuade others to do the same. If these three points are conceded, the right to strike is established in principle.

The strike then, regarded as a protest, is a lawful weapon, but the days are long past when strikes were simply protests. To-day in the majority of cases they are used as weapons of offence. Even as such they are doubtless often justifiable, but weapons of offence are used to threaten or to inflict injury: that is what they are for; and, if it is conceded that the use of such weapons is allowable in industrial warfare, there would seem to be need of some controlling power to see that they are used fairly. A strike may be simply an instrument of tyranny and oppression.

Moreover, the whole question has assumed a new aspect in recent years as the result of closer association between different classes of workers and the enormous increase of power which the strike has derived from their simultaneous action. A strike on a large scale is no longer a mere matter between employers and employed: the whole nation may be affected. An unpleasant feature of some recent strikes has been the frank admission by their promoters that it was their deliberate intention to cause such general inconvenience and even injury as would force a settlement in their favour, simply to put an end to them. Such

action is narrow and selfish and is condemned by public opinion. In no civilized country can any one body of men be allowed to hold the nation to ransom at their pleasure. The State is greater than any of its component parts, and is morally bound to take measures to protect the nation as a whole from exploitation by any section of it.

The question of picketing is closely connected with that of strikes. A strike really is a device to starve an employer out; its efficacy depends upon the completeness with which his supplies of labour can be cut off. It is therefore of the first importance to the strikers to see that no one else takes their place, and that none of the workers continue their work. Hence an elaborate system of sentries and pickets. There is nothing to be urged against 'peaceful persuasion,' but it is obvious that, at a time when strong emotions are aroused, such a practice needs careful watching if the persuasion is not to be allowed to degenerate into intimidation or even violence.

The Act of 1875 rendered liable to a fine or imprisonment 'every person who, with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without legal authority *watches or besets* the house or other place where such other person resides or works'; but declared that attending at or near the house or place 'in order merely to obtain or communicate information' shall not be deemed watching or besetting.

(*b*) *The limitation of output.*—There are some things about trade unionism which will never be understood unless they are regarded as projected against a background of injustice and petty tyranny. The deliberate limitation of output is one of them. It has been, and is still, the practice of some unions not to allow their members to do more than a given amount of work in a given time. A bricklayer, *e.g.*, may not lay more than a given number of bricks in a day. This practice is unjustifiable from the economic point of view, because the object of industry is production and the worker who systematically produces less or worse work than he might is not true to his trade. It is also morally unjustifiable because every one is bound in honour to accomplish to the best of his ability the task which he has taken in hand. And intelligent labour is ready to admit this. On what grounds then is it defended? On the ground that it is the only protection that can be devised for the weak against the lowering of the rate of wages by an unscrupulous employer. It was found that an employer who had already agreed to a certain piece-rate, on finding that the best of his men were earning wages which seemed to him in his short-sightedness preposterous, went back upon his word and proceeded to cut the rate, with the result that the slow or weak among the workers were no longer able to earn the weekly wage which he himself had considered as fair when he fixed the original piece-rate. Labour, in order to remove any such excuse for a lowering of wages, resolved that no member of the trade, whatever his strength or speed, should be allowed to outpace the rest. The best workers were called upon to make a sacrifice, but it was made readily and it rested upon altruistic motives. It is an anomaly, and it is injurious to industry. As the progressive organization of industry proceeds, the need of it will probably disappear. Meanwhile it remains, not without a touch of pathos, as an indication of the dislocation which has invested in the eyes of the workers a practice which they would not really defend with the sanction of self-sacrifice.

(*c*) '*Ca' canny.*'—The policy of limitation of output is sometimes adopted upon less defensible grounds. We do not refer to those cases in which a man does less than he might, or as little as he can contrive, out of personal resentment towards an employer or as a protest against a system which he believes to be unjust. Such cases are not uncommon, but it is doubtful whether any union would deliberately support them with its formal sanction. But many unionists believe that there is only a certain amount of work to be done, and that there will not be enough to go round if the standard of production per man is too high. This 'lump-of-labour' doctrine of the worker is the complement of the old 'wages-fund' theory of the capitalists of the 19th cent., who believed that there was only a certain sum available for wages, and that, if one set of workmen got more, it meant that of necessity another set would get less. Both were equally fallacious. There is neither a fixed amount of work nor a fixed sum available for wages; both are elastic. The way to increased wages lies through increased production, for it is out of the value of the product that wages, like salaries and the cost of raw materials, are paid. To limit production is to lessen the fund out of which wages are paid. There is also a belief that, if the best workmen are allowed to force the pace, the result will be a subtle reduction of the standard of earnings of the average worker—a 'bell-wether' is regarded as an abomination—and the best protection against this danger (which is a real one) is held to be a sort of standardization of output comparable to the standardization of hours and wages in which the workers have found protection and safety. But it seems indisputable that, if the best workers in a trade are circumscribed and shackled, the whole trade must be the worse for it, workers included.

(*d*) It is difficult to estimate the truth of the charges of tyranny, intimidation, and violence which have often been brought against the trade unions. There have doubtless been many cases of such things in the industrial history of the last 150 years. Violence has been used against employers; intimidation and violence have been used against other workers who failed to come into line. What we want to know, and what is very difficult to find out, is to what extent, if at all, the unions have condoned such action. We should be safe, however, in asserting that violence forms no part of the trade union programme, and we may go further and say that with the growth of trade unionism there has been a distinct improvement in the conduct of strikes. Violence and bloodshed are certainly less common now than they were.

(*e*) It has been said that the organization of labour on modern lines is an idea which we owe to the trade unions. Has this organization in some cases been carried too far? Employers often complain that they find themselves fettered and obstructed by trade union regulations which seem to them to be merely meticulous and vexatious. There is probably some truth in this. Trade unionism, on its defensive side, has surrounded itself with an elaborate system of bulwarks against every conceivable possibility of an attack. These regulations are not arbitrary; the initiated know that they are applications in detail of some principle which the workers regard as important. They are born of mistrust, and they will not disappear until employers and employed learn to understand one another better and feel that they are co-partners in the same enterprise. But it should be realized that industry cannot work in chains.

Trade unions are 'an inevitable product of modern economic life.' They are now almost universally recognized, and the recognition is based upon the fact that the conditions of labour are now group conditions and that the worker who forms a simple unit of a large group is powerless

to bargain successfully with an employer. The employer occupies a superior strategic position, and the worker's only hope is in association. It is undeniable that, where large associations of industrial units are formed, there is a danger of tyrannous action, and the larger the association, the greater the danger; but it is equally undeniable that the circumstances of the time seem to call for such associations, and the danger should be confronted. The advantages to be gained are great, and the danger can be met with the assistance of the legislature and the law-courts.

TRADITION.—The word 'tradition' means, etymologically, 'handing over.' The conception of tradition, therefore, implies (*a*) a 'deposit' which is handed over, and (*b*) 'depositaries,' *i.e.* persons who are in possession of the deposit, and are commissioned to preserve it and transmit it to successors. Most religious systems claim to bear within themselves a deposit, consisting of ceremonial, myth, dogma, or ethic, or of some of these elements, revealed by some ultimate divine or quasi-divine authority, and meant to be handed down to posterity by a succession of duly qualified trustees. This article discusses the part which the principle of tradition has played in the history of Christianity.

1. Christ and Jewish tradition.—There is not much uncertainty regarding the attitude of the Founder of Christianity towards the Jewish tradition which He found already in existence. He was Himself a member of the Jewish Church, and disclaimed any idea of being a rebel against it: 'Think not that I came to destroy the law or the prophets: I came not to destroy, but to fulfil' (Mt 5^{17}). It would be generally agreed that His object was, not to abolish the traditional Mosaic deposit or to annihilate the depositary society—the 'congregation of the Lord,' the 'Israel of God'—but rather to develop and expand the then existing Jewish Ecclesia into the 'Kingdom of God' and to reform and purify the deposit by blending it with the gospel, or 'good news,' of a glorious age to come. In regard to the reform of the deposit, He insisted primarily upon its re-moralization. The classical passage for this is, of course, the famous saying about Corban (Mt 15^{1-20}, Mk 7^{9-23}), with the affirmation, which follows, that it is not the things which go into a man, but those which come out of the man, that defile the man. This may appear, at first sight, to challenge in principle the whole conception of the ceremonial deposit and brusquely to deny any spiritual value to outward observances. It certainly claims an infinitely higher place for ethical values as compared with ceremonial precepts; it might be taken, further, to imply that the sole seat of religious authority for a pious Jew lay in the written Word, the *Tôrâh*, and that the oral tradition of the Rabbis was comparatively worthless. An even stronger implication as to the transitory nature of the Rabbinical tradition is contained in the saying about the 'new wine' and the 'old wine-skins' (Mk $2^{21f.}$, Mt $9^{16f.}$), though it is to be noted that Luke (5^{39}) appends a saying which may seem to point in the other direction—'The old (wine) is better.'

It may perhaps be said also that, to a certain extent, Christ demanded the re-intellectualization of the deposit. The authority of tradition is subordinated, not merely to that of the moral law embodied in the written Word, but to that of common sense. This is illustrated by His various sayings on the subject of the Sabbath. The impression which we gain from a review of the teaching of Christ, as recorded in the Synoptic Gospels, is that His attitude towards the Rabbinical tradition was simultaneously both reverential and critical, both conservative and progressive. There are two other pieces of evidence which should be considered in this connexion. Opinions differ as to the amount of historical value which should be assigned to the Fourth Gospel; but it is to be presumed that the exceedingly hostile attitude assumed by the Johannine Christ towards 'the Jews' is at least based upon genuine reminiscences of one side of the teaching of Jesus; and the declaration that the worship of the future was to be conducted neither on Mount Gerizim nor at Jerusalem, but throughout the whole earth, 'in spirit and in truth,' represents an attitude as anti-Rabbinical as it is possible to conceive. On the other hand, sayings recorded by 'Matthew,' the specifically Jewish evangelist, seem to represent Jesus as a whole-hearted supporter of tradition, though a severe critic of the moral shortcomings of its depositaries. 'Not one iota or one vowel-point shall pass away from the law until all be fulfilled' (Mt 5^{18}) is a passage in which the characteristic Jewish doctrine of the eternity of the *Tôrâh* seems to be proclaimed; He adds that, unless the zeal of His converts for the literal observance of the Law exceeds even that of the scribes and Pharisees, they cannot hope to enter into the Messianic Kingdom (5^{20}). The official, as distinct from the personal, authority of the Rabbis appears to be affirmed in the saying, 'The scribes and the Pharisees sit on Moses' seat: all things therefore whatsoever they bid you, these do and observe: but do not ye after their works,' etc. ($23^{2f.}$). Another saying in the same chapter contains the warning that Christ's insistence upon the supreme importance of moral conduct is not meant to imply any contempt for ceremonial minutiæ, in their proper place: 'Ye tithe mint and anise and cummin, and have left undone the weightier matters of the law, judgement, and mercy, and faith: but these ye ought to have done, and not to have left the other undone' (v.^{23}). On the other hand, it is fair to remember that the denunciations of the hypocrisy and quibbling casuistry of the Rabbis recorded by St. Matthew equal in intensity and bitterness the Johannine Christ's most vehement invectives against 'the Jews.' It seems probable that the Rabbinizing utterances in the First Gospel represent ironical sayings of Christ, which the first evangelist has misunderstood and taken literally, in accordance with his Judaistic presuppositions.

We may sum up this section of our inquiry by observing (*a*) that, in the view of the Founder of Christianity, the Jewish Church was in any case destined to be expanded and transformed into the 'Kingdom of God,' and that His attitude towards Jewish tradition must, therefore, have been of an interim and provisional nature, which will not necessarily give us the clue to His attitude towards the whole principle of tradition, as such, in religion; (*b*) that, for the time being, He had no desire to deny the value or divine origin of the main body of the Jewish deposit; it seems that His invectives against the *de facto* depositaries had reference rather to their personal shortcomings than to the official authority which they claimed; (*c*) that He insisted upon the subordination of the existing oral tradition to the authority of Scripture, the moral law, and common sense; and (*d*) that He was a deadly foe to that tendency towards the hypertrophy of ceremonialism, and the evanescence of moral and intellectual content, which is familiar to the historical student as the weakness to which traditional religions are peculiarly liable.

2. Christ and Christian tradition.—We now approach a question on which opinions are, and have been for many centuries, acutely divided. It seems clear that Christ did not, on any showing, contemplate the eternal permanence of the Jewish tradition; but did He Himself mean to found a new one? Did He design to promulgate a new

deposit, a body of dogmatic and ethical truth revealed by Himself for the first time? Did He mean to found a society as the guardian of this deposit and its authorized expounder? Did He institute a class of depositaries within the society, empowered to decide as to its true contents in cases of dispute? Or did He mean to make a complete breach, in theory and principle, with the great religions of the ancient world as they had historically grown up, and to propagate, not so much an organized religion as a philosophical point of view or a mode of emotional feeling? In other words—Is Christianity to be regarded as the perfect traditional religion, the crown and flower of that whole process of traditional evolution which may be traced down the centuries, possessing a deposit of immutable truth and authentic, life-giving sacraments, and preserved by a majestic, supernatural society, a Kingdom which is in this world, yet not of it? Or was Christianity, as designed by its Founder, meant to involve a complete break with the past, and an entirely fresh start upon non-dogmatic, non-sacramental, non-ecclesiastical lines?

3. The 'Catholic' view of tradition.—It is a well-known fact that at the present day three-quarters of Christendom would return an unhesitating affirmative to the question, Did Christ intend to be the Founder of a traditional religion? We may refer to this great majority of Christians as the 'Catholic' part of Christendom—not with the object of begging any controversial questions, but merely in order to have a convenient label for denoting that system of faith and practice which is, in its general outlines, common to the 'pre-Reformation' Churches—*i.e.* to the Roman, Eastern Orthodox, Coptic, Abyssinian, Armenian, Syrian Jacobite, Chaldæan, and Malabarese communions—and which was inherited by them from the ancient undivided Church of the Græco-Roman Empire, of which they are fragments. The 'Catholic' view of tradition maintains that the deposit of faith (*depositum fidei*) was partly taken over by Christ from the existing Jewish Church and partly revealed by Him to His apostles and other hearers during His earthly life and especially during the 'great forty days,' which, according to St. Luke (Ac 1^3), intervened between His resurrection and ascension, and during which He spoke of 'the things pertaining to the Kingdom of God.' He thus committed to them—either by stamping with His own approval certain already existing Jewish beliefs or by Himself revealing fresh truth for the first time—in germ and essence the great doctrines of the orthodox faith and the system of sacraments which He instituted for the salvation of mankind. He told His adherents that they were to consider themselves as being the true Israel, *His* Ecclesia, which, in some sense, He would build upon Peter as a foundation (Mt 16^{18}). With this divinely-founded society He promises to be present all the days, even unto the consummation of the age (28^{20}), and to it He promises to send the Paraclete, who would guide its members into all truth (Jn 16^{13}). These promises are interpreted by 'Catholics' as guaranteeing the 'infallibility' of the Church in the interpretation and definition of the authentic contents of the deposit. It is, further, believed that within the Church the special task of preserving (and, when need should arise, of defining) the deposit was committed by Christ to the twelve apostles and to their successors, the bishops.

According to this view, therefore, all that Christ instituted was (1) a deposit (no doubt embodied at first in a way of life, rather than in an exactly formulated creed, and expressed, so far as it was verbally expressed at all, in pictorial rather than logical or metaphysical terms), and (2) a depositary class, consisting of the twelve men whom He had designated, in apocalyptic language, as the satraps of the future Kingdom. It would be hardly correct to speak of Him as having instituted the depositary body, the Church, inasmuch as this was conceived of as being, not a new society, but the only orthodox remnant of the old Jewish Church. But in these rudimentary beginnings the possibility of a magnificent development was given. The living force of the Christian tradition spontaneously generated the same complex mechanism for its own preservation and perpetuation as may be seen, endeavouring to struggle into existence, in the fields of Zoroastrianism and Buddhism. The first element in this apparatus to appear was the canon of Scripture. At first the only Scriptures which the Christian Church possessed were those of the Jewish Church, or, rather, of the Jewish Church as it existed outside Palestine. The Bible recognized in most parts of the earliest Christian Church was the Septuagint Old Testament, containing the books now called Apocrypha; so that, from the first, the oral tradition, vested in living depositaries (the apostles and their successors), was, to a certain extent, controlled by the existence of written documents, believed to embody some at least of the main constituents of the deposit. The Marcionite controversy of the 2nd cent. compelled the Church to form a collection of apostolic writings for the purpose of demonstrating the identity of the deposit, as she maintained it, with that committed by Christ to the original depositaries, and refuting the Gnostic claim to possess a secret tradition other than, and opposed to, the ecclesiastical tradition. This apostolic collection became canonized as 'the New Testament' of equal authority and inspiration with the original Scriptures, the 'Old Testament' of the Jewish Church.[1] In the 2nd cent., too, we observe the first beginnings of the baptismal creeds, brief formulæ whose threefold structure was derived from the threefold invocation of the Father, Son, and Holy Ghost in the solemn words of baptism, and intended to summarize the essentials of the orthodox faith in a form which could be committed to memory by persons of the weakest intellectual capacity.[2] The canon of Scripture and the baptismal creeds were thus the two great contributions of the 2nd cent. to the organization whereby the Catholic deposit was perpetuated and safeguarded against any essential change of content. The last great development of apparatus for safeguarding the authenticity of the deposit is to be found in the institution of ecumenical councils—the characteristic invention of the 4th century.[3] In the 2nd and 3rd centuries it had been possible for Hippolytus, Irenæus, and Tertullian to appeal to the unbroken succession of the bishops and to point to their unanimous consent as a proof of the authenticity of the ecclesiastical tradition, as against the alleged secret traditions of the various Gnostic sects. But towards the end of the period of persecution it came to be realized that the bishops themselves, the chief depositaries of the faith, might disagree as to its content; and these disagreements could only be resolved, in Christianity as in Buddhism, by the expedient of summoning a council representing, in theory or in fact, the complete body of chief depositaries, *i.e.* the total episcopate of the world. The object of a council was not so much to discover fresh truth as to determine what, as a matter of fact, was the doctrine which had been believed in the Church from the beginning. Hence, though each bishop

[1] See art. BIBLE IN THE CHURCH, I. 1 *f.*
[2] See art. CONFESSIONS, 8.
[3] See art. COUNCILS (Christian: Early, to A.D. 870).

had, in theory, the right to put before the council that version of the faith which he had received from his predecessors and which had been handed down to his local church from its first founder, the greatest weight was naturally attached to the testimony of the great 'apostolic sees.' Complete unanimity in the acceptance of one particular version of the faith would, of course, have stamped it in the minds of Catholic Christians as unquestionably authentic and apostolic; but, if complete unanimity had been possible of attainment, it would probably have been unnecessary to summon councils. The principle was, therefore, arrived at that an overwhelming majority of the depositaries, especially if it included the occupants of one or more of the great apostolic sees, had the same authority as the whole body. This principle is expressed by St. Vincent of Lerins when he says, or implies, that the consensus of 'paene omnes' is as good as that of 'omnes [sacerdotes].'[1] Hence it follows that a small minority of the depositaries, contumaciously refusing to submit to the authority of the majority, necessarily becomes schismatic. Another famous expression of the right of a majority among the depositaries to decide what is the true version of the deposit is to be found in St. Augustine's celebrated aphorism: 'Securus iudicat orbis terrarum, bonos non esse, qui se diuidunt ab orbe terrarum in quacumque parte terrarum.'[2]

It is true that most of the so-called ecumenical councils were not actually representative of the total episcopate of the world. They became ecumenical in virtue of their acceptance, immediate or gradual, by the majority of bishops. We are here concerned solely with theory, and need not go into the question as to how far theological controversies during the first thousand years of Christianity were merely the reflexion of political, national, or racial antagonisms. It is sufficient to note that each of the great decisive doctrinal formulations of the conciliar period was followed by a split between the majority, which accepted, and the minority, which rejected, it. Thus, after Nicæa and Constantinople, a separate, 'non-juring,' Arian Church came into existence among the Goths and other northern barbarians; after Ephesus a 'non-juring' Nestorian Church[3] was constituted in Syria and Persia; after Chalcedon the Monophysite Church,[4] which still includes most of the Christians of Egypt and Armenia, split off from the rest of Christendom. But, whilst shedding, so to speak, these dissentient bodies round its periphery, the 'great Church,' the Church of the majority of the depositaries, the Church of the Græco-Roman Empire, the 'Melkite' or 'Imperial' Church, as it was derisively called by the Eastern schismatics, held together round the imperial throne and the great apostolic see of Rome, maintaining its majestic unity unbroken, with the brief exceptions of the Zenonian and Photian schisms, for a thousand years. In the 'Great' or 'Melkite' Church, as it stood on the eve of the Great Schism of 1054, the fourfold structure of traditionalism, towards which the Buddhist and Zoroastrian faiths had been dimly groping their way, had come into full, explicit, and conscious existence, in the most imposing and magnificent form which has ever existed upon earth. The Church, the hierarchy, the canon of Scripture, and the ecumenical councils are all there, each fulfilling its harmonious part in the task of preserving, elucidating, and defining the apostolic deposit.

4. The Reformation and tradition. — The Reformation (*q.v.*) was, in essence and in its earlier stages, a revolt not so much against the authority of the deposit or of its Founder as against that of the existing depositary class in Western Europe—a revolt occasioned by the corruption and exactions of the pope and the hierarchy. In the first fervour of indignation against the vices of the clergy it seemed necessary to deny the whole principle of a body of men divinely commissioned to safeguard the Christian revelation. The mental outlook and *Weltanschauung* of the earlier Reformers was just as scholastic as that of the mediæval theologians, and demanded, just as imperiously, a clear-cut body of dogmatic theology as an essential element in religion. Hence, only those elements in the deposit were discarded the rejection of which followed immediately from the rejection of the hierarchy; and a new basis of authority had to be found for the Christian tradition. This basis was found in 'the Bible, and the Bible only.' We have seen that, for Catholic Christians, the structure of the orthodox faith was raised upon two pillars—the oral tradition of the Church and the Scriptures. The logical effect of the Reformation was to knock away the first of these pillars, leaving the second standing; and so adamantine was (and is) the cohesion and solidarity of orthodox Christianity that for three hundred years it was able to remain practically intact throughout Protestant Europe, balanced upon the solitary surviving pillar. The last hundred years have witnessed the gradual erosion of this pillar, through the continual dropping of the rains of Biblical criticism, and the consequent collapse in those regions of the superincumbent structure. This result, however, could not then have been foreseen. The great orthodox Protestant theologians of the 16th and 17th centuries only designed to modify the Catholic theory of authority in the following sense:

'We quite agree with the Catholic in holding that there *is* a changeless deposit of eternal truth, and that this was imparted by Christ our Lord to the apostles as depositaries, during His earthly life and the "great forty days"; but we deny that the functions of the apostles as depositaries were meant to be transmitted, or were transmitted, by them to any successors. Their functions as guardians of the truth were purely temporary, and ended at their deaths. They were, however, divinely inspired to write the New Testament, in which, together with the Old Testament, the deposit is fully and sufficiently contained. Thenceforward, the sole authority for the content of revealed truth was and is to be found in the written Word of God; and councils and synods have no authority other than that which may attach to the piety and learning of their members.'

It would, perhaps, be unfair to assert that this doctrine of the Bible, isolated and abstracted from the life of the teaching Church, as the sole fount of religious truth, necessarily presupposes the mechanical theories of 'verbal inspiration' which prevailed during the era of Protestant scholasticism, though it certainly did much to encourage them. Two difficulties, however, at once made themselves felt: (1) 'If the authority of the Church is practically *nil*, how do we know what "the Bible" is, *i.e.* what books ought to be included in the canon and what not? Because, hitherto, it has only been on the authority of the Church that we have believed in the canonicity and inspiration of these particular books.' (2) 'As some parts of the Bible are admittedly written in an obscure style, how are the unlearned to decide what the true meaning is?' The former difficulty, which the Catholic theologians of the counter-Reformation were not slow in pressing upon their opponents, at once raised the question of the canonicity of the Apocrypha, books which were uncongenial to the Reformers because of the passage (2 Mac 12^{43-45}) commending prayers for the dead. A similar difficulty was created for many Protestant Christians by the *prima facie* incompatibility of the Epistle of St. James with Lutheran solifidianism—a fact which caused Luther to describe it as an 'epistle of straw.' The second was emphasized by the fissiparous tendencies which immediately began to manifest themselves in reformed Christendom, converting it into a chaos of sects, which ranged from the high scholastic orthodoxies of Luther and Calvin down to the Arianism of Socinus and the crazy extravagances of the Münster Anabaptists. The patent contradiction between the Protestant theory of the simplicity and obviousness of the meaning of Scripture and the infinite diversity of opinions held by those who professed to accept it as the sole authority for the outlines of the Christian deposit was satirized in the celebrated couplet of Werenfels of Basel:

'Hic liber est in quo quaerit sua dogmata quisque
Invenit et pariter dogmata quisque sua.'

[1] *Commonitorium*, iii. 6.
[2] *C. Epist. Parmen.* III. iv. 24.
[3] See art. NESTORIANISM.
[4] See art. MONOPHYSITISM.

To the former of these objections the Reformers replied by taking the short Palestinian canon of the OT, as now held by the Jewish Church, on the ground that (as Jerome had urged) the Jews must surely themselves know what their own Scriptures were (thus abandoning the primitive Christian tradition which had taken over the longer, Septuagintal canon from the Hellenistic Jew) and by affirming that, so far as the NT Scriptures were concerned, their authority was manifest on the face of them, in virtue of the sublimity and elevation of their style and doctrines. This reply obviously settled nothing as to the disputed case of the Epistle of St. James, inasmuch as the question at issue between Luther and his opponents on the subject of this book was precisely this—Were its doctrines to be called 'sublime' or pernicious? To the second question, also, no very satisfactory reply was ever given. In logic the orthodox Protestant divines were compelled to maintain, and did in fact maintain, that the whole system of Nicene and Chalcedonian doctrine could be deduced with unerring certainty from the text of the NT, given a prayerful and reverent spirit on the part of its readers. But the 'subordinationistic' passages in St. Paul's Epistles (cf. 1 Co 11^3 15^{28} etc.) and those in which the Logos and the Spirit are apparently identified (cf. Ro $8^{9f.}$, 2 Co 3^{17}), together with the patent fact that Socinus and his followers regarded themselves as 'prayerful' and 'reverent,' must have made the orthodox Protestants doubt in their inmost hearts whether the matter really was as simple as this; and hence they sometimes show signs of being, unwillingly, driven back upon the conception of a teaching Church as the authorized interpreter of Holy Writ.[1] The Thirty-Nine Articles characteristically take up a position which may be interpreted as consistent either with the Catholic view of tradition and Scripture as joint authorities for the truth of the deposit or with the Protestant conception of the book of the Scriptures as the sole authority, independent of any living exponent.

So we are told that 'Holy Scripture containeth all things necessary to salvation,'[2] that the three creeds are apparently only to be believed 'because they may be proved by most certain warrants of Holy Scripture,'[3] that 'General Councils may err, and sometime have erred,' and that 'things ordained by them as necessary to salvation have neither strength nor authority, unless it may be declared that they be taken out of Holy Scripture.'[4] On the other hand, 'the Church . . . hath authority in controversies of faith' and is 'a witness and a keeper of Holy Writ.'[5]

So far as a coherent conception of the relations of tradition to Scripture can be wrought out from these statements, it has been attained by Hooker, whose *Ecclesiastical Polity* appears to be based on the now antiquated assumption that the Chalcedonian theology can be deduced from the text of the NT as directly and irresistibly as the movements of the heavenly bodies can be deduced from a set of astronomical tables. A characteristic and explicit expression of the thoroughgoing Catholic view within the Anglican Communion is to be found in Thorndike's declaration that an indispensable mark of the true Church is 'the preaching of that word and that ministering of the sacraments which the *tradition* of the whole Church confineth the sense of the Scriptures to intend.'[6]

It is well known that the new Protestantism of the Continent would go much farther than the old in its attack upon the Catholic tradition, and that it would in fact dispute not merely the authority of the depositaries, but that of the deposit and the Founder Himself. Its contentions may be summed up under two headings, (1) philosophical and (2) historical. (1) *Philosophical.*—Starting from Kant's denial of the validity of the categories of the theoretical understanding within the noumenal sphere, Ritschl (*q.v.*) and his followers would deny the possibility of a deposit of intellectual truth altogether. Owing to the creaturely limitations of man's understanding, intercourse with God is a matter of emotional feeling and right conduct, not of strictly intellectual apprehension. (2) *Historical.*—It is admitted that the essence of the Catholic deposit and of the traditional conception of Christianity can be traced back from the ecumenical councils, through the sub-apostolic writers, into the NT itself; and the modern liberal Protestant finds no difficulty in allowing their natural sense to such passages as 2 Th 2^{15}: 'Stand fast, and hold the *traditions* (τὰς παραδόσεις) which ye were taught, whether by word, or by letter of ours'; 3^6: 'Withdraw yourselves from every brother that walketh disorderly, and not after the *tradition* which they received of us'; and notably to the Pauline, or deutero-Pauline, injunction, τὴν παραθήκην φύλαξον (1 Ti 6^{20}), in which 'the deposit' is expressly mentioned.

It would now be conceded that St. Paul regarded Christianity as a dogmatic, sacramental deposit, of which the 'apostles' were, in a general sense, the depositaries. But it is contended that in this respect there is an absolute gulf between the teaching of Jesus and that of Paul; that Jesus regarded Himself merely as a teacher of ethics, or as the prophet of a new eschatological enthusiasm; that the movement which He initiated was of a purely emotional kind, though fraught with an *Interimsethik* valid only for the very brief period of time which, in His view, remained before the collapse of the existing world-order and the inauguration of the New Kingdom; and that, as Jesus believed in the imminence of this catastrophe, He could have had no idea of promulgating a deposit or constituting a depositary class. On this view it is Paul himself who was the real founder of Catholic Christianity. It was he who transformed the vague and formless apocalyptic enthusiasm of the first Christian generation into a mystery-cult, with wonder-working sacraments; it was he who taught Christendom to identify the Prophet of Nazareth with the Logos of Platonic and Stoic metaphysic, thereby laying the foundations upon which later ages were to build the elaborate structure of Trinitarian and Christological dogma; it was he or his immediate successors who taught primitive Christians to regard themselves as members of a mystic international brotherhood, the new Ecclesia or Congregation of God, thereby institutionalizing Christianity as a Church and a hierarchy. It is obvious that this view, if it can be historically sustained, destroys the whole traditional conception of Christianity by severing the connexion between the deposit, as it stands, and its alleged founder. The history of Christianity then becomes exactly analogous to the history of Mazdæism and of Buddhism. It is the history of the gradual overlaying of the teachings of the founder by dogmatic, sacramental, mystical, and hierarchical integuments derived from other religions: 'Catholicism' is to authentic Christianity what Lāmaism is to primitive Buddhism. The classical expression of this view is still, perhaps, Harnack's great *History of Dogma*, in which the majestic pageant of Church history is exhibited as a gradual working out of that 'acute secularization' of Christianity initiated by the well-meaning, though mistaken, desire of St. Paul to commend the new religious movement to persons who had grown up in the atmosphere of the Hellenic and Anatolian mystery-religions. It follows from this view that the whole of the 'Catholic' deposit, including the great central doctrines of the Trinity, Incarnation, and Atonement, must be discarded, and not merely those comparatively peripheral portions of it which were dropped by the great 16th cent. Reformers; so dogma as an essential element in Christianity will disappear entirely, and institutionalism will be reduced to the minimum consistent with the practical efficiency of religion. Despite the many conscious or unconscious attempts that have been made to becloud the issue, this question, Is the Catholic deposit *in toto* substantially what was promulgated by Christ, or is it a vast mass of Græco-Roman accretion which has nothing whatever to do with His authentic teaching?, is the primary and crucial question that lies before the religious thought of Europe at present, and will probably have to be answered decisively, in one sense or the other, before one hundred years are over.

5. **Recent developments.**—Within the sphere of traditional Christianity three additional developments deserve brief mention. These are all, it may be observed, confined to the Western or Latin Church, as in the East the era of petrifaction, which set in with the death of St. John of Damascus and precludes the possibility of development, still holds sway. (1) The first of these is analogous to what may be noticed in the case of Lāmaism, viz. the tendency to concentrate the functions of the depositary class in the hands of a single chief depositary or supreme pontiff. So, within the Roman Church, the pope was declared by the Vatican Council of 1870 to be endowed, when performing his office of supreme pastor and teacher of Christians, with the same infallibility (*q.v.*) as that which Catholic traditionalism attributes to the Church; and this belief is concisely

[1] Cf. the affirmation of the *Confession of Würtemberg*: 'Credimus et confitemur quod . . . haec ecclesia habeat jus judicandi de omnibus doctrinis,' quoted by E. C. S. Gibson, *The Thirty-Nine Articles*, London, 1896, p. 513.
[2] Art. 6. [3] Art. 8. [4] Art. 21. [5] Art. 20.
[6] *Theological Works*, 10 vols., Oxford, 1844–56, iv. 895.

summed up in the 'I am tradition' of Pius IX.—a remark in which an unfriendly critic might discern a recrudescence of the old priest-king idea. (2) The second development is the tendency, analogous to what we see in Judaism, with its attempts to form 'a hedge around the Law,' to protect the real deposit by surrounding it with a kind of secondary deposit as with an armour. In Judaism this protective armour or integument was supplied by the *dicta* of the Rabbis. In Latin Catholicism the opinions of theologians have, in practice, come to assume the same position. Outside the central nucleus of the deposit, consisting of doctrines which are strictly *de fide*, there is a fringe, or penumbra, of 'pious opinions' which are *proxima fidei*, based, not upon the decrees of ecumenical councils, but upon the *consensus theologorum*. To deny these opinions is not indeed heretical, but may be censured as 'temerarious' or 'offensive to pious ears.' In practice the distinction between the dogmas of the primary deposit and the pious opinions of the secondary does not appear to be very clear; and even local traditions regarding the authenticity and sanctity of particular holy places and objects, which in principle are merely a matter of ordinary human evidence, are sometimes treated with as much respect—and criticism of them is as much resented—as though they belonged to the inner nucleus of the deposit of faith. (3) The third development represents a reaction against the former two, and is popularly called 'Modernism.' In its extreme French and Italian forms, Modernism (*q.v.*) is logically identical with the extreme Ritschlian Protestantism sketched above. It denies that Christ meant to promulgate a deposit, or would have had any authority to do so if He had so meant; and regards Him rather as a religious genius, not exempt from the errors and limitations of His age and country, who merely gave the first impulse to a wave of emotional feeling, which has reverberated down the centuries and is still affecting myriads of human souls. This view is, of course, entirely destructive of Catholic traditionalism as described above. In England, Germany, and America, however, the Modernist movement has taken a more moderate form; and, within the Anglican Church, the corresponding movement has raised a very interesting problem—that of the relation between the spiritual contents of the deposit, which the Anglican Modernist would not deny that Christ promulgated, and the conceptual forms borrowed by the early Fathers and councils from Greek metaphysic to contain it. Whilst the Anglo-Catholic would maintain that the Church was divinely inspired to choose the right conceptual forms, and that these, having received ecumenical sanction, cannot be discarded by the individual believer, the Anglo-Modernist regards the forms as having no more than a purely human authority, and as capable from time to time of variation or even of supersession.[1] The question of the depositary class does not seem to have been directly raised in these discussions, but it is probable that the Anglo-Modernist would regard the whole Church or Christian people, and not any specialized class within it, as being the depositary.

TRAGEDY.—See DRAMA.

TRAINING (Religious).—Religion is an attitude towards God. It expresses itself in acts of appreciation of values by individuals and groups. These actions are rooted in the basal instincts. They may be few and irregular; they may be gross expressions of wild passion; or they may be refined and well-disciplined reactions of the whole personality in the presence of eternal values. The differences are determined chiefly by training the inner life to react consistently to higher ideals and motives, and by training conduct to habitual and adequate expression of appreciation.

There is a broad sense in which religious training is a feature of all forms of religion, from primitive animism with favourite incantations up to the cultured forms of ritual, all transmitted to successive generations by imitation and other educative processes. But this article deals only with the specific types of religious training now practised or proposed in the English-speaking world.

By religious training is meant a systematic effort to preserve, improve, propagate, and transmit religious life, by methods commonly used in education, such as imitation, instruction, discipline, and inspirational and ideal-forming agencies, in correlation with other means of promoting religion. It goes even farther in some minds; and not without justification the claim is made that educational training, no matter how secular or technical, is not complete or adequately motivated unless in its aim and spirit it leads up into that social purpose which is the chief part of religion (Herbart, Coe).

1. **Background.**—The types of religious training which now prevail have arisen by connected development (1) out of a long and diversified history of maladjustment between childhood and the Christian Church, (2) out of numerous artificial theologies and individualistic theories of religion, and (3) out of an utter lack, until recently, of any psychology of religion or of childhood.

(1) The historical background of religious training may be found (*a*) in the stereotyped forms of worship and religious expression handed down to successive generations through church and family life; (*b*) in the catechism and confirmation class, where formal drill and authoritative doctrine and precept have long produced educational results of some importance in religious life. (*c*) A nearer background exists in the modern Sunday schools, first with their memorized Bible lessons, and since 1870 with their uniform lessons taught by rather feeble hortatory methods.

(2) The theoretical background is found in an individualistic theology. The corner-stones of this theology were the natural sinfulness of every man, the impending judgment of punishment therefor, and the miraculous atonement of Jesus Christ, which made possible the repentance and pardon of the individual sinner. The supernatural factor was magnified; the human ways and means were subordinated, and the ethical discrepancies passed unnoticed. The process was conceived as judicial on the basis of a retributive penology now discarded in the best judicial practice. The instruction given was not regarded primarily as educative, but rather as dogmatic, evangelistic, and hortatory. No important significance was attached to the teachings of Jesus about the growth of the spiritual

life or the conditions of the ground into which the seed shall fall.

The social gospel lately found to be so conspicuous in the teaching and life of Jesus was unknown. For lack of it the process of salvation was essentially self-regarding, which is doubtless the main reason why Christianity has been so long and slow in making its way in the world. When the era of modern missions dawned, three significant things happened. (*a*) The individual gospel was proclaimed from social and really Christian motives, and the result was good so far as it went, but incommensurate with the effort expended. (*b*) Actual conditions in mission fields and the emergence of social ideals at home forced an expansion of missionary aims so as to include social service—a gospel which was not always well correlated with the other. (*c*) As soon as this social gospel had time to reveal its character and possibilities, results became overwhelming; and the missionary prayer is no longer for the opening of doors, as it was a half-century ago, but for teachers, doctors, nurses, farmers, and skilled workmen, by hundreds, to carry a full-orbed Christian civilization into all the lands whose Macedonian calls are coming unsolicited.

(3) Until the last quarter of the 19th cent. psychology was a thing remote from religion. It had not then as now stressed the unity of the self, as against a number of more or less independent 'faculties' bearing little relation to religion. Nor had child psychology made known the extent to which the mind is at first rudimentary, and subject to the continuous and slow changes which the long human infancy makes possible.

Psychology and social and educational science have found no place in the theory of religion until the last generation, and even yet there are those in every religious body who shudder at the thought of applying scientific methods to the propagation of religion. But it is out of these diverse conditions ancient and modern that a theory and practice of religious education is now rapidly taking shape.

2. Theory and aim.—There is a type of religious education which perpetuates the theoretical background of intellectualism and individualism. Its propositions are arranged in logical order, and not in the order in which they arise in human experience. They are held to be authoritative, and are taught in dogmatic form. Under this theory the service which education renders to religion is to make these formulæ known, and here the service ends.

Under the other type the service rendered by education to religion is much broader. The knowledge to be imparted is not dogmatic but inspirational; not an end, but a means to spiritual values; not generalized and abstract, but presented concretely and made illuminating to the pupil's present life. This type of religious training includes habits of worship, attitudes towards the natural world, ideals of life, deeds of service, the relations sustained to the smaller and larger groups of one's fellow-men, and, in fact, every form of useful expression which can be given to inner spiritual life.

(1) The theory on which any adequate plan for religious training is based includes the following fundamental ideas as to the development of religion. (*a*) The presence of the religious life is felt not only in worship and in the conventional forms of religious expression, but especially in character and in social purpose, which subordinates all interests to the supreme values of life. (*b*) The religious life is a continuous growth, not a thing produced artificially, or judicially instituted at the moment of a passing experience. (*c*) This growth involves not a special organ or faculty, but the whole personality. It involves even the group of persons, and it tends to realize in them their oneness with the larger whole of society and of the world in God. (*d*) Finally, the growth of the religious life is normal, vigorous, and healthy, in proportion as its true nature is understood, as favourable conditions for its growth are provided, and as consistent work and painstaking devotion are given to its cultivation.[1]

(2) The following educational facts and principles are also involved in the theory of religious training. (*a*) The subject of an educative process is a person with all his inherited equipment of race instincts and family traits, as well as his undeveloped mental, moral, and religious powers. It is the business of education, not to eradicate or supplant any of these, but to develop and cultivate them, and subordinate them to the highest ends. (*b*) Education is more than instruction. It not only builds up many and rich concepts, which shall serve as a basis for judgment and action by a member of society; but it also takes measures to establish desirable habits, and to create ideals of commanding dignity and emotional power. (*c*) Education uses concrete materials for this purpose. It selects for its use those human experiences best fitted in character and grade to accomplish the particular purpose in view. The treasures of the race have become very rich in such material, so that the selection and preparation of it is a task demanding the skill of educational experts.

(3) The thing that is aimed at in religious education is (*a*) to put one as early and as completely as possible in possession of that rich treasure of experience which has come down from the past, and has been gathered from the ends of the earth, especially those parts of it which are richest in their meanings for a man's life in the world with other people and as a worker with God. (*b*) A further aim is to turn the full force of that experience, in the form of socialized ideals and purposes, as a motive power upon conduct and upon the ordering of the programme of life. This is an individual aim, but it is far more. It enlists churches, homes, and communities in this motivation of conduct for the well-being of society at large. (*c*) It is believed that the instruction to be gathered from the parable of the soils (Mk 4^{2-20}) is a lesson of education, in which the minds mellowed by long processes of nurture are those which respond quickly and whole-heartedly to the evangel. Such nurture would seem therefore to be the most direct and effective way of co-operating with the Spirit of God for the evangelization of the world.

3. Content.—Since religion and its promotion are understood to be, to some extent at least, an enterprise in education, it is necessary to choose for such instruction that material which will be most fruitful religiously. Rather vague ideas prevail on this subject, due to lack of critical analysis of the values to be sought, and to incomplete knowledge of how to produce and conserve those values.

The educational reformers of a century ago established the principle of gradation of material—*i.e.*, that the ability of children to understand and master material changes as they grow older. The material must therefore be chosen with reference to this changing ability; *e.g.*, the incident of a boy robbing a bird's nest can be understood and remembered by a five-year-old child, but the moral interpretation of the same incident is better suited for a mind several years older.

The fallacy of catechetical instruction is partly a pedagogical one. It consists in presenting adult abstractions to children—in offering strong meat instead of milk to babes. A similar

[1] George A. Coe, *A Social Theory of Religious Education*, New York, 1917.

fallacy has vitiated much of the Bible teaching in Sunday schools where 'uniform' lessons have been chosen for young and old alike. If the children had a story which they could understand and remember on one Sunday, they must feed on Prophets and Epistles for several weeks before they might expect another children's lesson. Of course adaptations by editors and teachers could do something to overcome the discrepancy in grading, but it is only making the best of a bad case. It is wholly unnecessary for religious instruction to be subjected to these hindrances, now that the principles of grading are understood and have been applied to the materials used in religious training.

There is also a religious fallacy in catechetical instruction, appealing as it does exclusively to the intellect with logical propositions dogmatically conceived and expressed. The emotional and social aspects of the child's religious life are the first to be required for the development of ideals and the motivation of conduct. The intellectual formulations satisfy better the mature religious needs of adults, and the different needs of children should be provided for.

In selecting and grading the materials for religious education there are a number of considerations to be provided for.

(1) The language of religion must be acquired. As in any field of human experience, the language and the thought develop together. Some terms are advanced and technical, but many are elementary. The history and practice of religion, the reading of the Bible, and the social environment offered by a religious community can make familiar to children, nurtured in such an atmosphere, all the elementary concepts of religion, and the words and phrases which express those concepts. They can make known a few of the landmarks of religious history, at least by their names and by some characteristic incidents associated with those names.

A properly graded curriculum therefore provides for young children a selection of simple Bible incidents on subjects within their experience, or a like class of subjects taken from biography, literature, and life. For this purpose one may choose stories about children, animals, natural objects, and the things familiar to childhood, especially those which contain some of the language and forms of religion, but none of the generalizations and abstract principles in which religious teaching is so often couched.

(2) The child inherits certain capacities for a moral and religious life. But each individual must shape his concepts of that life from the examples of other experiences seen and heard by him. His education consists in becoming acquainted with these selected experiences of others, in reading meaning into them, and in shaping his own habits, judgments, and ideals, with reference to the experiences so set before him. This formation of concepts represents a later stage of religious development than the language stage mentioned above, but the later mingles with the earlier stage, and they move forward together. A class of more meaningful experiences is chosen for this purpose, such as the parables of Jesus, tales of moral heroism, events in which service and sacrifice are exemplified, the revealings of motives and of character and of loyalty to persons and to ideals, and the superiority of moral and spiritual values over those values which are chiefly carnal and commercial.

It is therefore the business of religious education to bring into the life of youth an abundance of human incidents rich in moral and religious meaning; to present these experiences with sufficient detail and pedagogical skill to assure them an atmosphere, an emotional vitality, and some permanence; and to give definite guidance to each youth in the construction of his own habits, judgments, and ideals, out of the concrete materials furnished to him. The selection of material for this purpose out of the Bible or from other sources is the most responsible and difficult task of religious education. It is also the point at which failure has been most complete in nearly every curriculum thus far proposed for religious training.

(3) While it belongs to the province of science and general education to develop in youth a conception of the causal connectedness of the world and of its unity, consistency, and organization under natural law, it is a well-known fact that this is not generally done. Such reflexions arise more frequently in connexion with religion than elsewhere, and it is proper that religious education should provide in place of discarded cosmologies a better instruction, which can serve the common people as a credible philosophy of nature. Nothing can do more to disintegrate religious faith and moral integrity than lack of a believable philosophy of the world. Such a philosophy is entirely within the mental compass of enlightened youths; and they have a right to it as a support for their faith and as a part of their education. Indeed they will have it. The only uncertainty is as to how good or how poor a philosophy they shall work out for themselves if wise help is withheld from them.

For the few but important lessons on this subject the creation stories and a few other portions of Scripture will serve as occasion for wise and modern instruction. A few of the great chapters in the history of science are required. These need to be correlated, not only with the names of discoveries and inventors, but with the forward movements in the world's life, and the human values which they have enhanced.

(4) A task of religious education still more important is the interpretation to young minds of the world of human life. We live and act in a world of purpose and meaning, as well as in a world of natural law and causal connexion. It is out of this purposive life that real values arise; and it is with those values that religion is concerned. There is no gain for religion in knowledge of the Scripture, or of the facts of nature, and no benefit in formal covenants and ordinances, unless in the human heart there is an ideal which throws over all these things an emotional glow that enriches them with meaning and value. It is doubtless the same thing that is spoken of as the Spirit of God in the human heart taking the things of Christ and showing them to us.

Religious teachers generally try to do this. Most expository Bible teaching is so intended. So also is the preaching. But the efforts are desultory, and the results are not cumulative. A need is felt for a programme or a definite policy, based on a sound philosophy and on educational principles, to give continuity and cumulative effect to the propagation of religion. It can hardly be claimed that such a programme has yet been proposed, although efforts have been made in that direction, and in some cases with gratifying results.

The choice and arrangement of material awaits a fuller agreement upon Christian ideals and the fundamental philosophy of religion. In this task the interpretation of the world of human life is the chief factor. What is called the social gospel has already gone far to supplement and modify the individualism of the former day. But 'a theology for the social gospel,' as Walter Rauschenbusch calls his book,[1] has not yet formulated itself in popular thinking. In the light of such a theology and philosophy, there is required a re-defining of the virtues and of the unifying principle by which those virtues are correlated in the good man. The new sense of the structural character of society, the place and function of the individual within the structure, and the interactions between the structure and its members must have much weight in determining what the content of a religious education curriculum ought to be, and what educational aims and values ought to be conspicuous in that material.

(5) The great issues over which men and nations have struggled in the world's forward movement need to be made known to young people, and

[1] New York, 1918.

their meanings interpreted. Such issues were drawn in OT times by the prophets against royal and ecclesiastical dignitaries. Jesus defined an issue between the Pharisees and the new religion of the inner life. Every forward step, every reform, every moral and spiritual achievement from that day to this, can be of great service to those whose motives and ideals are forming. They are needed as a background for the tasks and problems of to-day, as a guide in defining present and future issues, and as an inspiration to loyalty in trying situations. Here will appear biographies of men and women who have caught visions of an improved world and have helped to realize those visions. Here also belong the rise and fall of institutions in response to the changing needs of the world. Out of such rich and varied sources are being selected the graded and sifted materials for a curriculum of religious training.

4. Method and organization.—While the history of pedagogy has been progressive, and general education has profited by every improvement, religious training has been slow to take up improved methods. Memoriter catechetical teaching is still common. Hortatory and semi-expository teaching of the Bible is quite general in church schools, the aim being evangelistic and not primarily educative.

There is a marked tendency to reconstruct, not only the curriculum in ways already indicated, but also the method and organization. In method these changes consist in a larger use of direct narrative in connexion with concrete story material used in the lower grades; the immediate oral reproduction by pupils of the narrative so presented;[1] the increased use of pictorial and graphic representation, and the tendency to substitute for the leaflet, pamphlet, or bare Bible specially prepared text-books of a more permanent and attractive character.

But the most important tendency is towards things to be done, as an expression in real life of the moral and religious impulses, as they awaken in childhood and youth. Daily conduct, positions taken on moral questions before associates, missionary work, community betterment, neighbourly and charitable work, and worthy social activities in general, offer a welcome field for religious training in this growing aspect. Out of such activities arise deeper and truer thinking and finer emotional responses than any didactic method can produce.

Modern forms of church organization provide for a department of religious training in the local church. This department is free to adopt methods in harmony with improved educational and religious ideas, and to introduce a curriculum something like that outlined above. Only in those local churches where the broad full meaning of religious education has been discussed and appreciated has the reconstruction taken place. But the number of these churches is increasing; they are profiting by experience; and their results are watched and reported.

In several American communions, notably the Protestant Episcopal, the Congregational, and the Presbyterian, important steps have been taken to reconstruct the denominational machinery on educational lines. Numerous officials are employed to propagate the principles and ideals of religious training in the local churches, and to aid in the installation of better systems. These methods are especially successful in missionary fields, (1) because there the need is more obvious, and (2) because these fields are not bound by tradition to antiquated methods as many of the churches are.

While the prospect for the future of religious education is best in the direction of denominational organization, there is also a distinct movement on foot for community organization disregarding ecclesiastical divisions, or at least bringing them into co-operation.[1] This plan calls for a local board and a superintendent, who shall inaugurate a school system parallel to the other system or systems in the same community. Less time would be required for the religious than for the general and vocational schools; yet the effectiveness of it cannot be estimated by the time spent. In addition to the direct values of such training the material of general education is re-interpreted and given new meaning and dignity from the spiritual aspect. Teachers who have training in the principles of education, as well as personal fitness and inspiring leadership, soon make apparent the large possibilities of religious training, both in its own field and in its effects on the whole structure of society.

In Britain and in some other European countries the schools supported at public expense are expected to furnish some instruction of a religious nature. Recognition is made of denominational preferences, and teachers are assigned to groups with this in mind. In France religious instruction is entirely excluded from all public and private schools of general education, and the members of religious orders are disqualified as teachers. This of course does not prevent the teaching of religion in the churches. In the United States of America religion is excluded by the laws of the States from the public schools; but entire freedom is given for this instruction under church or community supervision. In some States the pupils are released for one session each week from required attendance at a public school on condition of spending that time under approved religious instruction, proportionate credit being given if such work is satisfactorily done.

In general it may be said that the ideals and content of religious education have been reconstructed in accordance with modern ideas. The realization of the better ideals has been achieved in a limited degree, and every year marks distinct gains. But the progress is retarded (1) by conservative traditions among earnest religious people, who have not seen the spiritual values in a religious life conceived developmentally and socially; (2) by inadequate conceptions of and facilities for training in religious activity and self-expression, and (3) by lack of united and trained leadership in the re-organization of religious education in local communities. It seems to be the task of Christian colleges to raise up a generation of men and women who have the religious and educational ideals and the ability and enthusiasm to organize them into the life of our time.

A good central organization for the study of religious education, for the comparison of results, and for the promotion of this large interest in the life and thought of the world exists in the Religious Education Association (Henry F. Cope, Secretary, 1440 East 57th Street, Chicago, Ill.). It was founded in 1903 by representatives of all religious faiths. It has held important annual conventions, mostly in American cities. These conventions have done much to shape thought, guide effort, and stimulate experiment. The volumes of the bi-monthly magazine of the Association entitled *Religious Education* furnish much material in the history and discussion of this subject.

TRANSCENDENTALISM. — The term 'transcendental' plays an important part in Kant's *Critique of the Pure Reason*—'transcendental æsthetic,' 'transcendental analytic,' etc.—and through the influence of the critical philosophy the term has become familiar in modern thinking and even in popular literature. Kant did not originate the term; but he gave it new vigour and a new orientation.

1. Pre-Kantian transcendentalism.—(1) *Use of the term in scholastic logic.*—Before Kant's time 'transcendental' and 'transcendent' were familiar terms in the scholastic logic and were practically equivalent in meaning, although he sharply distinguished between them. To the scholastic logicians these terms were used of those most general notions that could not be subsumed under the ten Aristotelian categories. They rose beyond or transcended them. Spinoza uses 'transcendental' in this sense of the most general notions and gives his view of how psychologically they originate.[1] Strictly speaking, these *transcendentalia* or *transcendentia* belonged to a realm above ordinary categorical logical thinking and as such were beyond the province of logic proper. Various enumerations of these transcendental notions are given. Albertus Magnus gives *ens*, *unum*, *bonum*, and *verum*; and very generally these, along with *res* and *aliquid*, make up the list of the six *transcendentalia*. Their interrelations are stated and various subtleties regarding them introduced by different schoolmen. *Ens* was as a rule regarded as super-transcendental, the rest being passions or modifications of being (*passiones entis*). This category in scholastic philosophy was pretty much what the 'Absolute' is in modern philosophy.[2]

(2) *Use of the term in theology.*—To the schoolmen, however, logic was only the handmaiden of theology, and so we find these terms more or less always moving into the area of theological speculation. These transcendental notions had their reality in the mind of God, who is transcendent *par excellence*. The passage in Augustine[3] where he posits the transcendental ideas in the divine mind became classical and is quoted by all the great mediævalists. It is historically the fusion of Greek thought with Christian experience. Plato speaks of the good (τὸ ἀγαθόν) as transcending being (ἐπέκεινα τῆς οὐσίας),[4] and Plotinus uses the phrase often.[5] Transcendent is simply the Latin equivalent of ἐπέκεινα, 'beyond.' At times this tendency became extreme, as in the case of Erigena and the mystics who speak of God as above all predicates—ὑπεραληθής, ὑπέρσοφος, ὑπεραιώνιος, 'above truth,' 'above wisdom,' 'above eternity.'

Transcendentalism in theology, then, means the position that God's knowledge and character are perfect, absolute as distinct from man's knowledge, which is imperfect, and from man's virtue, which is immature; as such it is part of the very essence of theology and the unmovable conviction of religion. But it may become falsified through overemphasis and dangerous through over-refinement of subtlety. Ordinary living religious experience speaks of the divine in plain speech, ascribing to God organs, actions, passions, movement, change, purposes, and this is done without any feeling of incongruity—even when the divine spirituality is clearly recognized. Transcendentalism becomes over-subtle when it objects to this, and it is usually when religious experience is at a low ebb and beset by foes that this form of transcendentalism gains a hearing. Even in the OT, as Schultz points out,[1] we have the beginning of reflective transcendentalism. It is more evident in the Septuagint translation and in the post-Biblical Jewish literature, and it operates dominantly in Philo until God becomes the Great Unknowable. In the history of Christian theology we find the superimposition of this metaphysical and mystical transcendentalism on the direct religious thought of the NT. Edwin Hatch, in his famous Hibbert Lectures,[2] maintains that the great creeds of Christendom buried religion under this metaphysic; and in his zeal he has overstated the case; for transcendentalism in the sense of God's absoluteness is an integral part of religion and of theology, but, when it makes this a mode of throwing discredit on man's knowledge and of undermining man's notions of right and wrong, when it empties God of feeling, purpose, and initiation, then it becomes false and dangerous.

It is better to deal here with the special forms of transcendentalism in this sense, before discussing the Kantian and post-Kantian usage of the term, as these forms of thinking have their roots in a soil different from that which is specifically and dominantly under the influence of Kant.

2. Extra-Kantian transcendentalism. — Transcendentalism in the theological and philosophical sphere means, in a general way, the recognition of God as exalted in thought and character above man and sensible objects. It is thus contrasted with phenomenalism, naturalism, and materialism, and, one may say, also agnosticism, for, although the agnostic may grant the existence of such a Being, the concession is of no value either for knowledge or for morality. In this sense every religious view of the world is transcendental. When, however, we ask what the relation between man's knowledge and virtue and God's is, the real problem of transcendentalism emerges, and, according to the answer given, thinkers fall into different classes, which for purposes of clearness may be distinguished as follows.

(1) *Extreme transcendentalism.*—Those who hold that God is utterly incomprehensible to us, and that knowledge and virtue in Him are quite different, not only in quantity but also in quality, from what we mean by these terms, are extreme transcendentalists in the sphere of ontology. Modern examples are Hamilton and Mansel, who, borrowing a Kantian distinction, maintained that our predicated knowledge of God is regulative not speculative truth, that it was given, not to satisfy the reason, but to guide the practice of man, not to tell us what God is in His absolute nature, but what He wills us to think of Him in our present conditioned state. This phase of transcendentalism arose as a protest against what Hamilton calls 'the scheme of pantheistic omniscience so prevalent among the sequacious thinkers of the day.'[3] Speculative theologians have always had leanings towards this mode of reasoning regarding the divine, and its influence can be traced in theology from the days of Origen. While the ordinary religious consciousness speaks of God as wise and good, and cannot help so doing, yet these terms in reality do not apply to Him, and are to be understood anthropopathically. He has deigned

to accommodate this revelation to our limited intelligence, but it is, after all, only an accommodation (*συγκατάβασις*), and the true method of theology is to strip away all these predicates and to proceed *via negationis*. The danger here is obvious, viz. forgetting of the truth that man is made in the image of God, and forgetting that thinkers are apt to cut apart God and man, and thereby religion and reason alike become unreal and untrustworthy. Under this impulse religious men fall back on an authority which has no basis in our rational or moral nature, or on some occult faculty apart from reason; and others, strictly adhering to the working of the understanding, leave the transcendental sphere of Being alone. Outside the small circle illuminated by the understanding there may be Something, but to us it is unknown and unknowable. Agnosticism as regards ultimate reality is the result of this attitude.

(2) *Religious transcendentalism.*—Others, again, maintain also God's transcendental character, but they hold that man's knowledge is accurate as far as it goes, that in quality, though not in quantity, it is the same as God's, and that morality in man can not be different in essence from what it is in the divine, that the pathway of true knowledge and moral progress leads to God. God's revelation is certainly an accommodation, but this accommodation itself is an education of man by God, progressing from less to more and conserving in its more perfect stages continuity with the earlier, and besides the process is self-correcting. J. B. Mozley[1] gives a very fair view of this position as regards the OT. God dealt with men as they were, but in such a way as to lead them onwards and upwards. Man makes God in his own image, but it is because God first made man in His image. Augustine, who often speaks of God as incomprehensible—as indeed every religious mind must do, so that Hamilton has no difficulty in compiling a catena of such passages from various writers—yet maintains that our intellectual and moral strivings are but a returning to the Source whence intelligence and goodness spring. The human mind and heart participate in transcendent knowledge and goodness, and the aim of theology is to ascend by this road to God; only to man the grace of the Holy Spirit is necessary to initiate and guide this quest. The method here is not so much that of negation as of eminence (*via eminentiæ*), and it differs from pure philosophical or epistemological transcendentalism both in its insistence on the need of grace and in its proper valuation of other aspects of experience besides the pure intellect. It is this that 'Rabbi' Duncan has in view when he defines transcendentalism as 'the denial of that which renders man's knowledge an inferior kind of knowledge';[2] and it is in this sense that F. D. Maurice is a transcendentalist when in somewhat exaggerated fashion he fathers on Mansel's theory such frightful consequences.

(3) *Epistemological transcendentalism.*—Distinct from this again is what one may call pure epistemological transcendentalism, according to which the highest knowledge in man becomes identical with, and indistinguishable from, the divine knowledge. Thus Boethius:

'Sense judges figure clothed in material substance. Imagination figures alone without matter. Thought transcends this again, and by its contemplation of universals considers the type itself which is contained in the individual. The eye of intelligence is yet more exalted, for overpassing the sphere of the universal it will behold absolute form itself by the pure force of the mind's vision.'[3]

From the plane of intelligence, according to Boethius, all the contradictions of the ordinary experience are reconcilable. Thus to God they harmonize, and to us as far as we look at them from this point of view. No one can fail to notice the similarity between this and the method of modern absolutist transcendentalism, with its solving of contradictions and its transcendental intuition. This school speaks in such a way as to lead the ordinary reader to suppose that the individual can attain by knowledge to the divine point of view—a claim which it is extremely difficult to distinguish from omniscience.

(4) *Moralistic and mystical transcendentalism.*—The term, however, may be applied, and often is applied, to those who are keenly conscious of the limitations of the human mind, and impatient and sceptical regarding its slow ratiocinative processes, but who hold that man's moral nature or his feelings or intuitions can give immediate access to the divine. Typical thinkers of this school are Pascal, Schleiermacher, and Ritschl. They lay stress on the supremacy of the heart—'The heart makes the theologian'—or on the value of feelings or intuitions; and a strong current to-day draws many along the pathway of the subconscious towards God. Thus we have schools of moralistic and mystical transcendentality. They disparage reason and logic, and find refuge in the alogical departments of the soul. The so-called New England transcendentalism[1] combines both mysticism and moralism with a large element of vague eclecticism, but it may, for purposes of classification, be included here.

3. Kantian transcendentalism.—To appreciate modern transcendentalism both in its philosophical and in its more popular application, we must briefly review Kant's view of knowledge.

(1) *The factors in knowledge.*—To Kant knowledge—mathematics and the physical sciences—involved two factors, one due to the activity of the mind, the other due to sense-data. He did not doubt the fact of knowledge itself, nor did he concern himself with its psychological origin. He found in knowledge a synthesis of these two elements. Nothing could form the subject-matter of knowledge but what came from sense-data, but then sense-experience itself was a chaos without the principles supplied by the understanding and the activity of the mind; even perception itself required space and time—mental forms. To him God, the world, and the soul could not become the objects of scientific knowledge and therefore they were transcendent; *i.e.*, they were outside the limits of possible knowledge. There can be no doubt that Kant had a horror of those who spoke familiarly of God, as if He were an object of sense-perception, and that his real anxiety to mark clearly the boundaries of possible knowledge was largely due to fear of intrusion from this quarter. He thus distinguishes clearly between 'immanent principles which apply solely within the limits of possible experience' and transcendent principles 'which are intended to reach beyond these limits.'[2]

Kant did not deny the reality of God, or of the soul, or the ultimate essence of matter, but he did strongly insist that the pure reason got into hopeless difficulties when it tried to apply the principles valid in the sphere of phenomena to these extra-phenomenal entities. To him we owe the very prevalent modern view that science has its own domain—it includes all knowledge, though not all reality—and religion and morality have their domain; that the marches between them should be clearly defined; and that there should be no raids, excursions, or alarums from one side or the other.

(2) *Transcendental principles.* — Having thus excluded transcendent realities from the domain of the understanding, because we can have no scientific knowledge of them, he shows that in knowledge itself there were principles like causality—the categories, in short—which were not due to sense-data. Those principles are transcendental (as distinct from transcendent), which means both that they are not due to sense and that they can be shown to constitute knowledge. Without sense-data they are empty, but sense without them is blind.

Transcendental to Kant then means constitutive

of valid knowledge, and a transcendental inquiry, such as his own critical method, 'concerns itself, not so much with objects, but with the way in which we know objects in so far as this may be possible *a priori*.'[1] What reality in itself may be is not the aim of the critical philosophy to determine, but to find out that element in knowledge which makes it valid and to guard knowledge against the admission of anything which cannot be scientifically known. Kant is not concerned with ontology but with epistemology, and the two to him are not identical. Kant thus sharply distinguishes between transcendent and transcendental. He uses the former term in a disparaging sense, while the latter means constitutive of knowledge—what makes knowledge possible.

'The term *transcendental*,' says R. Adamson, 'probably has, for English ears, an unpleasant ring, and will suggest metaphysical efforts to transcend experience. It must be understood, however, that *transcendental* method is simply the patient and rigorous analysis of experience itself. For any question or theorem which might pass beyond possible experience, Kant reserved the term *transcendent*; and the distinction, if not the mode of expressing it, is accepted by all his successors. Neither in Kant nor in Fichte is there anything in the slightest degree resembling what is commonly called metaphysics.'[2]

David Masson[3] traces through all history two tendencies in regard to the origin of knowledge—one fathering all knowledge on sense-experience (this may be called empiricism), the other maintaining that 'there are elements in knowledge, the origin or reason of which transcends or lies beyond the horizon of historical conditions.' Historically it is the conflict of these two that we find in the controversy between Locke and Leibniz or between Mill and Hamilton. The transcendental position is summed up in the famous phrase: 'Nihil est in intellectu quod non prius fuerit in sensu—nisi ipse intellectus.' There is no doubt that Kant is a transcendentalist in this sense, yet for him transcendental meant something different. He is not interested in innate ideas or intuitions. He is dealing with knowledge as it exists, not as it grows, and he finds in it what sense alone does not explain, but rather what explains sense, unifying forms or principles, supplied by the mind itself, which give receptivity to sense-data and combine them together into adequate knowledge. Ultimately the formal unity of the mind itself is involved in knowledge. Thus he might agree even with the physiological psychologist in his analysis of knowledge and yet maintain the necessity of the unity of the mind.

(3) *Pure and practical reason.*—Although Kant maintained that God, the world, and the soul as noumenal realities could not be objects of knowledge or constitutive of knowledge—that they were not transcendental in his strict sense of the term—yet he allowed that they were present in knowledge regulatively. The mind was constrained to aim at unity, and this striving was due to the regulative influence of these ideas of the reason. It is this part of his system that he himself calls transcendental or critical idealism. As ideas in the mind they were transcendental, though only regulatively so; yet in themselves as realities they are transcendent as far as knowledge goes—they are beyond the bounds of knowledge. Sometimes indeed he speaks of the reality of the material world as the 'transcendental object,' where we might expect him, if he were strict in his own use of terms, to use transcendent. And he speaks of it in such a way as to suggest a *substratum* which is the outward cause of our perceptions, but for the understanding it is simply x, an unknown quantity. His transcendental object is the limit which our understanding can reach in dealing with phenomena from the side of the receptivity of mind, just as 'the transcendental unity of apperception' is the limit on the side of the mind's synthesizing activity. Neither of these is noumena for the understanding, for it knows nothing of noumena.[1] If one were to regard this only as Kantianism, the first review of the *Kritik*—that of Christian Garve of Breslau, in the *Göttingische Gelehrte Anzeigen* of 19th Jan. 1782—might have force:

'This work . . . is a system of the higher or transcendental idealism—an idealism which embraces both mind and matter, transforms the world and ourselves into ideas, and represents the objective world as derived from appearances which the understanding combines in the interdependent whole of experience. . . . The cause of these ideas is to us unknown and unknowable.'[2]

But what pure reason cannot attain to, practical reason can. Morality needs transcendent realities as postulates, and, because the sphere of morality is to Kant more real than, or as real as, the sphere of knowledge, this postulation is necessary and valid. The transcendent of knowledge becomes the transcendental of morality. God, the world, the soul, freedom, and immortality become real here. We cannot prove their existence, it is true, by cognitive methods, but they are imperatively demanded by the facts of the moral life, of which facts he had no doubt.

4. Post-Kantian transcendentalism. — Kant's system was profound in its effects, different thinkers adopting those parts of it which served their turn, so that the complexion of their transcendentalism is determined by their point of contact with his view. His influence touched the English-speaking world at first largely through the works of Coleridge, Carlyle, and Emerson.

(1) *The teaching of Coleridge, Carlyle, and Emerson.*—Coleridge's philosophical function 'may be defined by saying that through him was transmitted an opportune suffusion of Kant and Schelling into England as of light softened through a stained-glass medium, and that into this suffusion he also resumed whatever of Anglo-Platonism had been floating long neglected in the works of old English Divines.'[3] Thus the distinction between the 'reason' and the 'understanding' became familiar, and 'transcendental philosophy' acclimatized in English speech. The reason could overcome the impotence of the understanding and get hold of unseen realities.

'As the elder Romans distinguished their northern provinces into Cis-Alpine and Trans-Alpine, so may we divide all the objects of human knowledge into those on this side, and those on the other side of the spontaneous consciousness; *citra et trans conscientiam communem*. The latter is exclusively the domain of pure philosophy, which is therefore properly entitled *transcendental*, in order to discriminate it at once, both from mere reflection and *re*-presentation on the one hand, and on the other from those flights of lawless speculation which, abandoned by *all* distinct consciousness, because transgressing the bounds and purposes of our intellectual faculties, are justly condemned, as *transcendent*.'[4]

It is clear that Coleridge has no interest in accurately reproducing Kant. To him transcendentalism is just emphasis on the spiritual side of man's nature, and this is the meaning also to Carlyle:

'The grand unparalleled peculiarity of Teufelsdröckh is, that with all this Descendentalism, he combines a Transcendentalism, no less superlative; whereby if on the one hand he degrade man below most animals, except those jacketed Gouda Cows, he, on the other, exalts him beyond the visible Heavens, almost to an equality with the Gods.'[5]

Under the influence of Coleridge and Carlyle, and the general romantic movement of the time,

[5] *Sartor Resartus*, bk. i. ch. 10.

transcendentalism came to mean the recognition of supersensible realities, and the spiritual nature of man—that man was more than 'an omnivorous biped that wears breeches.' A passage from Coleridge shows the influence of this attitude in the sphere of interpretation:

'The intelligible forms of ancient poets,
The fair humanities of old religion,
The power, the beauty, and the majesty
That had their haunt in dale, or piny mountain,
Or forest, by slow stream, or pebbly spring,
Or chasms, and watery depths; all these have vanished;
They live no longer in the faith of reason.
But still the heart doth need a language.'[1]

The faith in 'the light that never was on sea or land,' 'the vision and the faculty divine,' the fight against a crude interpretation of man's spirit as ultimately matter, and the protest against literalism in all its forms, characterize transcendentalism at this stage; and this is still the sense of the word in extra-philosophical literature. In New England Emerson and others, rebelling against an orthodoxy that tended to make men wholly sinful and corrupt and the will of man necessarily in bondage, and impatient of dogmas derived from a revelation confined to one book, initiated a movement that got the name 'transcendentalism' more in derision than in honour, but the term was accepted, and the claim made that all the best in the world's thought was here included. Carlyle, who, in spite of his sympathy with Emerson, saw in this movement an extravagant disregard of facts and an enthusiastic eclecticism, warned Emerson against the dangers ahead:

'You seem to me in danger of dividing yourselves from the Fact of the Universe, in which alone ugly as it is can I find any anchorage.'[2]

James Martineau—himself a transcendentalist in the Carlylean sense, whose intellectual history is a pilgrimage from the bondage of empiricism—does not take Emerson seriously. No doubt New England transcendentalism became extravagant, welcoming the ravings of the Swedenborgian and of the unregulated mystic as possible revelations, yet it never became a system, and its airy optimism is explicable and defensible as a protest and a reaction; yet to its influence is largely due the fact that to many, if not to most, in our day transcendentalism means hopeless and unwarranted idealism — unworkable dreaming. It was not patient enough to be lasting, and, with all its boasted catholicity and insight, it was blind to the facts that gave the old orthodoxy its seriousness and its power of rejuvenescence. On the other hand, it was a refreshing and liberalizing movement.

(2) *Science and transcendentalism.*—Kant's influence was felt in a very different quarter—among those whose interests were devoted to science. Thus Lange, the historian of materialism, interpreting Kant, as he thought, confines man's knowledge of reality to the results of science, but contends for a world above this created by our moral and spiritual needs—an unsubstantial world of ideals, a transcendentalism which is like a painted cloud; and this attitude has more or less existed since, differing according to the amount of reality the individual thinker gives to this beautiful but airy realm. It is found in the historian Buckle, and has been well described as a 'consolatory private transcendentalism.'[3] Herbert Spencer's magnanimous handing over of the Unknowable to religion is an example of this 'private transcendentalism.' It is due to a one-sided exploitation of Kant without regard to Kant's moral certainty. To Kant the moral nature of man planted man in an intelligible real world, although knowledge left him only in the phenomenal, with just a glimmer of the noumenal breaking through, but this transcendentalism which, as in Lange's case, pretends to be its lawful heir finds the phenomenal the real, and the transcendental the vague and the shadowy.

Others more alive to the reality of religion have sought to place this transcendentalism side by side with scientific results, while conscious all the time of the hostility between the two. Thus W. H. Mallock[1] attempts to hold by the results of science and yet to allow the demands of religion validity; and this attitude was prevalent in the past century.

In psychology the theory of psycho-physical parallelism exhibits the same tendency—a species of eirenicon between phenomenalism and transcendentalism. The results of science are accepted; its principles are unquestioned; and then these same facts are explained as if nothing but psychical data were involved. It is a truce born of perplexity—a compact that real issues will not be raised on either side. It is not difficult to see how closely related to Kant these tendencies are, for it may not unfairly be said that he himself adopted without questioning the results of science and also the deliverances of a spiritual philosophy due to religion and held them both without consistently uniting them.

Paulsen, one of Kant's most faithful modern disciples, contends that science will never give up its claim to explain everything mechanically; yet metaphysics must give to this realm of science an idealistic interpretation. One may be the most rigid materialist at one moment, and yet be wholly transcendentalist as a philosopher at another. The scientist will never admit any supernatural agent, and the only way of peace is to admit his claim; yet somehow to transform all into spiritual reality is the task of the philosopher. It is because of this felt dualism that transcendentalism in its pure form as absolutism claims for itself to be the true heir and rightful corrector and interpreter of Kant.

(3) *Absolute transcendentalism.* — 'Transcendentalism' in modern philosophy is used of that world-view known at times as absolutism, objective idealism, neo-Hegelianism, or rationalism. The term 'transcendentalism' traces this system historically to Kant's theory of knowledge. As we saw above,[2] 'transcendental' to Kant meant at least two things. (*a*) Those principles in knowledge which in the nature of the case did not originate in sense-experience are transcendental. In this sense of the term Kantianism allied itself with that tendency in British thought which recognized *a priori* or original data both in knowledge and in morality—what may be generically named intuitionalism. Leibniz's famous revision of the empirical formula may be taken as the watchword of this school: 'Nihil est in intellectu quod non prius fuerit in sensu *nisi ipse intellectus*.' The controversy between Hume and Reid, between Mill and Hamilton, is one between psychological empiricism and psychological transcendentalism, just as the controversy between hedonism and intuitionism is a phase of the same in the sphere of ethics. This was the outstanding question in British philosophy for many a day. Masson in his *Recent British Philosophy* gives a readable account of the state of matters in his time, and 'transcendentalism' is used by him of those systems which recognize in the mind more than sense-data. Spencer considers it one of the merits of evolution that it supplied a means of reconciliation between these opposing views. According to him, what was native to the individual was the residuary deposit of racial experience. Thus evolution reconciled empiricism and transcen-

dentalism. (*b*) But 'transcendental' meant to Kant constitutive of knowledge—those principles which, though not due to experience, yet made experience itself coherent, above all, the unity of the self. All the content of knowledge came from experience, but the active self made knowledge. Besides, reason had as regulative principles the ideas of the self, the world, and God, and in its practical working reason got into touch with these realities. It was this side of Kant's teaching that issued in transcendentalism, as it came to be understood in English-speaking countries in the first half of the 19th century. Hamilton welcomed the Kantian system chiefly because he found it in harmony with the limits of our knowledge as propounded by himself, but others welcomed it because in their view it taught that man by his reason was more than a mere creature of the senses. Thus Carlyle, in his paper on Novalis,[1] points out that German transcendentalism denies the absolute existence of matter, that it makes space and time forms of the understanding; therefore to God 'Time and Space are not laws of His being but only of ours,' and so He is omnipresent and eternal; and 'the black Spectre, Atheism . . . melts into nothingness.' Again the transcendentalists recognize a higher faculty than understanding, viz. reason. Thus the invisible world is brought near us, and we feel in every thought that in God 'we live, and move, and have our being.' It was in this way that transcendentalism also at first became known in America.[2]

The transcendental unity of the self which Kant understood of the individual knower, and which by theoretical reason gave him no substantial subject or soul, was raised by Kant's successors in Germany to the level of a universal principle and an active subject, and thus knowledge was made adequate to grasp all reality. Reality now became subject and object, and epistemology became ontology. The transcendent of Kant vanished completely; it became immanent in knowledge. Fichte laid stress on the creative activity of the self in such a way that the object, the world, was called into being by the subject. Schelling, whose views changed considerably from one stage in his history to another, regarded the Absolute as the background of subject and object alike, but itself a *neutrum* of indifference, and he made intellectual intuition the eye by which intelligence grasped this whole. Hegel tried to do equal justice to both subject and object: 'the real is the rational,' and 'the rational is the real,' and Absolute Spirit is the whole, which becomes conscious of itself through a dialectical process. For some time this mode of thinking, through its novelty and obscurity, was unintelligible and obnoxious to English thinkers,[3] but, when it did take a hold in Britain, it was with such force that it conquered the philosophical chairs in our universities with few exceptions, and exercised an orthodox tyranny against which it was difficult to contend. To Hamilton,[4] who viewed with extreme repugnance the philosophy of the Absolute, must be attributed the revival of philosophical speculation in Britain, and his pupils were able to understand the German philosophy which then was an enigma and a puzzle to others who in Britain interested themselves in speculation.

[1] *Miscellaneous Essays* (People's Edition), London, 1872, ii. 183 ff. The essay was originally published in the *Foreign Review* [no. 7] in 1829.

[4] See his 'Philosophy of the Unconditioned' (*Discussions on Philosophy and Literature*, pp. 1 ff., 605) where he ascribes the theory of Schelling and Hegel to Cardinal de Cusa—a sufficient indication of the value he placed on it.

(4) *Modern developments.*—Ferrier's *Institutes of Metaphysic*[1] was perhaps the first systematic exposition of transcendentalism in our tongue, although others had by that time acquainted themselves at first hand with its varied expositions in Germany—some repelled by it (*e.g.*, John Cairns),[2] others enthusiastic in their advocacy (*e.g.*, Hutchison Stirling, whose *Secret of Hegel* was an elaborate attempt to make Hegel intelligible to English-speaking students). It was, however, through the teaching and writings of Thomas Hill Green (*q.v.*) that transcendentalism became a philosophical force in Britain. Evolutionism, while it attempted to reconcile the older empiricism and transcendentalism, did so from below, by trying to relate man's knowledge and man's morality with animal life and animal activity in general, but the new transcendentalism, while acknowledging that in one sense man is a part of nature, yet explained knowledge and morality from above. Knowledge, according to this view, is explicable as the reproduction in man of the eternal self-consciousness of God, and morality is the realization of the immanent Eternal. The following passage from William James describes the spread of this movement in Britain:

'For many years adherents of this way of thought have deeply interested the British public by their writings. Almost more important than their writings is the fact that they have occupied philosophical chairs in almost every university in the kingdom. . . . It follows from their position of academic authority, were it from nothing else, that idealism exercises an influence not easily measured upon the youth of the nation—upon those, that is, who from the educational opportunities they enjoy may naturally be expected to become the leaders of the nation's thought and practice. . . . Carlyle introduced it, bringing it as far as Chelsea. Then Jowett and Thomas Hill Green, and William Wallace and Lewis Nettleship, and Arnold Toynbee and David Ritchie—to mention only those teachers whose voices are now silent—guided the waters into those upper reaches known locally as the Isis. John and Edward Caird brought them up to the Clyde, Hutchison Stirling up the Firth of Forth. They have passed up the Mersey and up the Severn and Dee and Don. They pollute the bay of St. Andrews and swell the waters of the Cam and have somehow crept overland into Birmingham. The stream of German idealism has been diffused over the academical world of Great Britain. The disaster is universal.'[3]

'Transcendentalism' came to be used of this new movement, although the term was not a favourite one with the idealists themselves. It was used by Henry Sidgwick[4] especially of the teaching of Green; by A. J. Balfour,[5] who contributes a chapter of criticism, and who even then could say:

'In English-speaking countries it is within the narrow circle of professed philosophers, perhaps the dominant mood of thought; while without that circle it is not so much objected to as totally ignored.'[6]

William James used it of all objective idealists, however these may differ among themselves, while Caldwell uses it of Bosanquet's teaching in his *Gifford Lectures*, which he describes as 'the last striking output of British transcendentalism or absolutism.'[7]

(5) *Neo-Hegelianism and Christianity.*—What gave this philosophy its vogue, to begin with at any rate, in Britain was undoubtedly the fact that to many minds it appeared as a *defensor fidei*. It seemed to supply an answer to materialism and empiricism on the one hand, and a vague scepticism and agnosticism on the other. It could be preached, and was preached often, by men who adopted the familiar phrases of sacrosanct religious thinking which were associated in the public mind with Christian values, and thus it came to be regarded

as a type of Christian philosophy. Hutchison Stirling found in Hegelianism a new version of Calvinism. Green used it to demolish the traditional English sensationalism and hedonism, and amidst the scepticism which prevailed regarding the historical elements of Christianity used it to rear a Christianity of ideas and ideals, from which dualism we are still suffering—witness the controversies concerning the historic Jesus and the eternal Christ. John Caird, afraid of the inroads of Spencerian and Manselian scepticism and Huxley's agnosticism, found in Hegel's teaching an ark of refuge and a citadel of defence. It was thus a movement of deliverance, of reform, and of religion. Not a few of its most zealous advocates were men destined for theology who found here a more congenial home. But, as time went on and this system began to be developed, the difficulties, tendencies, and obscurities inherent in it, as well as the dangers, revealed themselves. Just as in Germany Hegel's system allied itself at first with orthodox theology and then, in the hands of Strauss and Feuerbach, swung back to practical atheism and materialism, so also in our own country time has made it plain that this system is no guarantee of Christian faith or morals. Green[1] speaks with philosophic sorrow of those who find in poetry and religion the satisfaction for their ideals and aspirations, though they harbour scientific views which contradict these. He is sorry because such people do not proceed to frame or adopt a coherent philosophical system; forgetting that what gave transcendentalism its interest and vitality among the educated was not its speculative scheme—that was always a puzzle more or less—but the idea that this philosophy conserved spiritual values, and that what is fast loosening its hold on this class to-day is the feeling, rightly or wrongly entertained, that these interests are being betrayed or disregarded in the interests of the coherence of the system itself. To begin with, it is widely felt that transcendentalism speaks too confidently of its own power to present a perfectly explicable view of the world—to exhibit all reality in thought categories. Its manner is apt to strike the observer as being haughty and supercilious, and its language would lead one to think that a claim to something like omniscience is arrogated—a claim so contrary to our broken experience as human beings, and so opposed to that humility which serious thinkers have always regarded as the fitting attitude for all searchers of truth.

(6) *Faith and knowledge.*—No one has done more among our professional philosophers to abate this soaring gnosticism than Campbell Fraser, with his insistence on the function of faith as lying at the very basis of knowledge itself, as accompanying and regulating its advance all along its operations. Reality is richer than thought, nor is it possible to factorize reality into thought terms. The limits of human knowledge are obvious even in the most daring schemes of rationalism, and philosophy has again to face the problem of the relation between faith and reason.

Again, it is felt that transcendentalism does not do justice to the reality of the external world. To it the external world is only an object for a subject, and the tendency of all idealistic schemes is to lapse into solipsism. This solipsism may be of the human individual or of the One Supreme Subject, but in essence it is the same. Sidgwick suggested the term 'mentalism'[2] as a more adequate description of this tendency. Whatever term we use, the tendency itself is undeniable, and the reaction is seen in the movement known as neo-realism,[1] but the tendency is acutely felt by reasonable idealists, as, *e.g.*, by A. S. Pringle-Pattison;[2] yet one wonders if his own view of creation is not just a residuum of this old leaven of mentalism which he cannot purge out of his system. He has no difficulty in regard to the creation of souls, which, if it means anything, means something new, but he cannot admit the creation of matter. Yet, if God existed in His fullness before any person now living existed—if such an assumption is tolerable—why should creation as applied to matter be considered incredible? It is futile to try to explain matter as thought-elements, either in the mind of man or in the mind of God. When a philosopher arrives at such a view, it is surely the sane course for him to examine his reasoning again.

(7) *The problem of personality.*—The personality of man in this system, as we see from its modern developments, becomes insecure, or, if that danger is avoided, it is at the price of God's personality that man's is safeguarded. Thus there are those who, like Bosanquet, lay stress on the Supreme Personality or Individuality, and tend to make men but aspects of this Being's life. Others lay stress on man and make God the totality of men—a college or community of spirits, eternal *a parte ante* as well as *a parte post*. To conceive of God as a perfect personality, above and apart from men and the world, and yet originating and sustaining both, seems an absurdity to this scheme of thinking.

'History is the biography of the Absolute; science the natural history of the Absolute; philosophy the self-consciousness of the Absolute, recalling and arranging its past being in unconsciousness, and discovering thereby the laws of its own thought.'[3]

The outcome is seen in a book like Bradley's *Appearance and Reality*, in which the Absolute is everything—God, men, nature, spirits good and evil—and yet somehow it is all that in the bliss of an absolutely consistent whole. Personal idealism, pragmatism, and, above all, theism, will never take such a theory seriously.

5. **The task of philosophy.**—The modern world is alive to the fact that the intellect alone is not man, and that reality is not to be construed solely by its means. Emphasis is now laid on the will and the emotions as well, with the result that the moral life—the sphere of ideals—is given its own place. When this is recognized, then it becomes clear that reality is not a perfection which the mind has to mirror, but an ideal which has to be achieved. Nothing is more deadening and more untrue than to think of reality from man's point of view as a perfect 'is'; for the moral life at any rate reality is in ideals—'the best is yet to be.' Thus only can man's freedom be saved from the cloudland of illusion, and thus only can evil and sin—the root of all our intellectual as well as of all our moral problems—be faced as our moral nature imperatively calls on us to face them. Our duty in regard to these, unless our whole nature be itself a delusion, is not so much to explain them as to abolish them. To tell us that 'this very presence of ill in the temporal order is the condition of the perfection of the eternal order'[4] is to treat man's moral nature with insincerity. Transcendentalism has no eschatology, because to it the Absolute—*i.e.* all that is—is already perfect and cannot be more so, and yet a philosophy or a religion without an eschatology offers nothing to man's needs, imposes a veto on man's passion for reformation, and does away with

his felt need of redemption. These are some of the difficulties that most modern thinking men feel in regard to modern transcendentalism, and the recognition of them has led to a very general revolt against it in recent years from within the philosophic world itself. Pragmatism, neo-realism, neo-Kantianism, personal idealism, are but some of the phases of this revolt. It cannot be said that these views, any or all of them, are free from difficulties; and at the present moment it is impossible to say what the future may have in store for philosophy. The best we can wish for it is that it free itself from the tyranny of phrases and become intelligible and interesting; that it may have the humility to attempt to solve real problems that perplex men; that it be freed from its disdain regarding men's abiding convictions; that it abstain from any language which would throw doubt on the great ideals and values of life; and that it realize the necessity of satisfying the heart as well as the head. God, nature, man—these are the realities. Transcendentalism tends to forget the second, and to make the first and third coequal; pragmatism forgets the first, and naturalism the first and third. The task of philosophy is concerning these three, and transcendentalism is valuable when the claims of naturalism become exorbitant; but it must not, without becoming false, succumb either to humanism on the one hand or to pantheism on the other.

LITERATURE.—The *OED* gives an idea of the variety of meaning attached to the word 'transcendental,' and R. Eisler, *Wörterbuch der philosoph. Begriffe*[3], 3 vols., Berlin, 1910, gives the philosophical usage. For the pre-Kantian logical usage and the mediæval theological usage the Histories of Philosophy and of Theology must be consulted. For New England transcendentalism see art. EMERSON. Joseph Cook, *Transcendentalism*, Boston, U.S.A., 1877, is a vigorous popular criticism of Emersonianism in the interests of orthodoxy. The literature under artt. COLERIDGE and CARLYLE is instructive for the early influence of German transcendentalism in a popular form in Britain.

A short account of the history of British transcendentalism, or absolutism, is given by Robert Mackintosh, *Hegel and Hegelianism*, Edinburgh, 1903, chs. vi. and vii. O. Pfleiderer, *Religionsphilosophie auf geschichtl. Grundlage*, Berlin, 1878, and *Development of Theology*, Eng. tr., London, 1890, gives the history of post-Kantian idealism from a theological point of view. J. H. Stirling, T. H. Green, John Caird, Edward Caird, J. Watson, H. Jones, W. Wallace, J. Royce, J. Macbride Sterrett, G. S. Morris give a version of Hegelian transcendentalism of a religious character. F. H. Bradley, *Appearance and Reality*[2], London, 1902, is mainly negative. For the revolt against transcendentalism in Germany see H. Vaihinger, *Die Philosophie des Als Ob*, Berlin, 1911. French philosophy since Cousin and Renouvier, down to Bergson, has been more or less generally anti-rationalistic and personalistic. James Seth, *English Philosophers and Schools of Philosophy*, London, 1912, is instructive for English thinking; an older book by D. Masson (quoted above) deals with Mill and Hamilton—the conflict between transcendentalism and intuitionism. The works of A. Campbell Fraser, Henry Sidgwick, and A. J. Balfour lay stress on primitive convictions and are in spirit against Hegelian gnosticism. See the literature under artt. NEO-KANTIANISM, REALISM, and PRAGMATISM. William Caldwell, *Pragmatism and Idealism*, London, 1913, gives ample information as to anti-rationalistic literature in Britain, Germany, France, and America.

TRANSMIGRATION (Introductory and Primitive).—Reincarnation is the passage of the soul from one body to another, usually of the same species, among higher races often with ethical implications, the lot of the soul on earth being determined by its behaviour in a former life. Transmigration, metempsychosis, and other terms are often used in an almost identical sense, but also in a vaguer way, implying at times that the soul itself assumes an animal form, sometimes permanently, sometimes only as a prelude to another reincarnation or to final destruction or absorption. Somewhat different is the creed which may be termed 'alternation of existences'; it involves the belief that man is double, a counterpart in another world corresponding to the earthly body or embodied soul in this world and taking the place of the latter when its turn comes to quit this world. Separate existence, reincarnation, annihilation, and transmigration are the possibilities that present themselves to the primitive mind when it inquires into the fate of the soul. We cannot say why one belief rather than another has been adopted in any specific instance; but it is clear that the resemblance of children to parents (or other relatives) has played some part, especially in W. Africa. The complex of beliefs is therefore to some extent a semi-scientific creed, taking the place of a biological account of heredity, and based on reasoning that we can follow. It seems equally certain that the widespread belief in transformation (or change of bodily form) during life must have had its effect on eschatological doctrine; and here the creed goes back to what must be some of the most archaic elements of human speculation. Those two factors are, however, at times to some extent combined, when a rise or fall in the scale of existence is put down to the merit or demerit of previous births. Both in reincarnation and in transmigration doctrines the life or lives that succeed the human life on earth are sometimes regarded as limited in duration, sometimes as indefinitely prolonged; where some accident interferes with the due course of reincarnation, the lot of the soul may be a kind of third state, neither reincarnation nor annihilation (or absorption), but separate existence (as an evil spirit).

Many widely distributed customs appear to be connected with the belief in reincarnation. Thus, in Africa and America children are buried by the wayside, near the mother, under the eaves, or in other situations that would in the eyes of the natives facilitate reincarnation; in parts of Central Australia and in Africa people are buried in the place of their birth.[1] But it must be recalled that, generally speaking, the common feeling that it is well to be buried with one's own people implies no more than the view that this is necessary to ensure the solidarity of the family in the future life. The custom of killing the first-born[2] has been explained for some areas by the belief that this child is, in special measure, an embodiment of the father or grandfather; and the abdication of a king, as in Tahiti, in favour of an infant son has been put down to the same cause. The belief in transmigration again in certain areas has led to the sacrosanctity of certain species, and the totemism (*q.v.*) of some regions, such as S. Africa and Oceania, has been referred to this origin.

[1] See art. DEATH AND DISPOSAL OF THE DEAD (Introductory and Primitive), § VII. 3 (*e*).
[2] See art. FIRST-BORN (Introductory and Primitive), § 3.

A well-developed scheme of reincarnation or transmigration, if we except the anomalous case of the Central Australian tribes, as to whose real belief there is some doubt, is generally found only among peoples who either have attained a certain stage of culture, as in India, or have almost certainly been in contact with or influenced by a higher culture, as among W. African tribes. The W. African tribes among which a reincarnation creed has been recorded in more or less detail are the Mandingo, Ewe, Edo, and Ibo. The belief is also known among the Yoruba, who lie geographically between the Ewe and the Edo; but details of their ideas on the subject are lacking.

1. **West Africa.**—(*a*) *Mandingo.*—As regards the Mandingo, we have only a summarized account of their beliefs,[1] which differs widely from another account from a portion of the area;[2] a summarized account is always liable to mislead, and, in view of the large divergences recorded in other areas in the transmigration and reincarnation beliefs, it is prudent to await further details from the French territories before classifying the belief as aberrant.

According to Delafosse, every living being and every natural phenomenon depends for its nature on a *niama*, 'dynamic spirit'; the word *nia* is applied to a genius, *niama* to a spirit, which may be that of a genius, a human being, a sacred object, an animal, a rock, etc. The *niama* of a dead man can reside where it likes—in the corpse, in the hut, in a sacred object, or in the body of a living being whose *niama* it absorbs. Certain magicians attribute their powers to the possession of the *niama* of a genius or of a dead man. The *niama* of a man for whom the due rites have not been performed may reincarnate itself in a solitary animal, or in a human being, who goes mad. It is therefore clear that, though the *niama* may be reincarnated, it is by no means invariably the case, and, where reincarnation takes place, it differs in kind from the reincarnation in which the more easterly tribes believe (see below). Side by side with the *niama* we have the *dia*, or breath of life, which passes at death into another being; it is not the object of any cult; it is found only in living beings and passes only into another being of the same species, save on the rare occasions when it animates the body of a totem. This belief is, in form, on all fours with those of other Negro tribes; but it is hardly possible to speak of reincarnation, which implies some degree of identity, some measure of personality.

According to Monteil, the Khassonke believe that *dya* is soul, force, or shadow, while *ni* means breath; if this is correct, the meanings are just the reverse of what they are in the foregoing account of Mandingo beliefs, and it seems clear either that we are in the presence of a far-going disintegration of creed or that, as has probably happened farther east, the belief has come from without and has been worked up by each tribe in its own fashion. In any case it seems improper to give a generalized account of the beliefs of a mass of tribes if such varied views have to be regarded as identical.

(*b*) *Ewe.*—According to the Ewe belief, every man has two souls—a *luwo agbedo*, or life-soul, and a *luwo kuto*, or death-soul; the former is visible when a man casts a short shadow, the latter when he casts a long shadow. The death-soul accompanies a man into the grave and then goes to the land of the dead; the life-soul leaves the body at death and goes sighing mournfully and seeking for a resting-place; each man has also a breath-soul. That the shadow-soul is more than a shadow is clear from the fact that sleep is attributed to the absence of the shadow-soul, waking to its return, and dreams to its activity outside the body.

The land of the dead appears to be the same as Amedzowe, the place of man's origin—a land not on earth, but in heaven, where everything corresponds more or less closely to the things of this life. In Amedzowe are yams, corn, cotton, bush, and all that surrounds a man in this life, not, however, in bodily form, but spiritually, so to speak; and the human inhabitants of Amedzowe live and thrive on these things in their spiritual form. Life in Amedzowe, however, is more than a duplication of this world; for, when a child dies soon after birth, a priest may declare that it was a great king in Amedzowe and has died in order to return to the scene of its former glories. Conversely, the things of this world may influence the course of events in Amedzowe; if a man remains too long away from the other world, he will fall ill, for the dwellers there prepare to break down his hut; and, to save him, his associates in this world must each bring a blade of grass and lay it on the roof of his house, as a symbol of the re-roofing of his spiritual house. In Amedzowe a man has a spiritual aunt (*tasi*) and other relatives; from her he must obtain permission to leave the world of spirits and come to the world of men.[1] Some of those who come to this world are so dearly loved by their spiritual relatives that they have to give a promise, called *gbetsi*, to return after a short time; these are the children who die young; this promise has been personified and is regarded as in some measure an evil genius, for it incites men who break it to evil deeds and especially to suicide or to acts that will bring about a violent death. Generally speaking, the lot of a man in this life and his abilities are determined by the fate announced to him by his *tasi*; but here, as elsewhere, there is a fundamental contradiction in the creed of the Ewe, for, as will be seen below, the *aklama*, or genius, is also held responsible for a man's lot in this life.

Side by side with this curiously untheological creed we find the belief that Mawu, the supreme god, is a dweller in Amedzowe and is the king who sits in judgment on the departing soul before it takes up its abode in this world. Not only so, but we find also the view that the lot of man, or at least his term of life, is determined, if not by Mawu, at any rate by Mawu's intercession with Death, whom he begs to spare one of his earthly children. If, as appears to be the case, the Ewe beliefs are the result of syncretism, there can be no doubt as to which are the older elements in their creed; for the god of death, Ogiuwu, is found also among the Edo, from whom they were separated by the Yoruba influx, and whose views as to reincarnation at the present day come much closer to those of the Ibo, their neighbours on the east.

There is, however, another side to the Ewe beliefs; this is the *aklama*, *kla*, or, in the language of the neighbouring Twi, *okra*; it is often identified with the *luwo*, but an older and more correct conception seems to be that it is a genius or tutelary spirit. Another authority says that *kra* is the collective name for *nunu*, all the spiritual beings that surround a man, whether they be evil or good, human or demonic. Westermann connects the word *aklama* with Efik *akaña*, a promise to return to the other world. If this derivation is correct, the conception of *aklama* as a tutelary spirit has arisen in the same way as that of its counterpart, *gbetsi*, by the personification of a promise, but Efik is a member of a different group of languages and topographically remote; the derivation must therefore be received with caution; it is none the less possible that both words are derived from the same root or form, especially if it should be the case that the reincarnation idea has been introduced from without or fostered in its growth by foreign influence.

Every man has a *kla*, or, perhaps, properly speaking, one or more, for the *aklama* figurines worshipped by a man are often in duplicate, male and female, in any case with only a single arm, as an indication of the identity of *aklama* and human being. Children sometimes carry an *aklama*

[1] Delafosse, *Haut-Sénégal-Niger*, iii. 165.
[2] C. Monteil, *Les Khassonké*, p. 142.

[1] It is perhaps not without significance that the *tasi* is the father's sister; for the Ewe are matrilineal, or at most in a transition stage; and we can hardly suppose that the father's sister has normally such influence in the family; the belief in question therefore either must be young or, more probably, has come to them from without.

figurine on their backs, and, in the case of twins, each carries the figurine of the other; it is not without importance that these twin figurines are found in areas, such as Sierra Leone, where the reincarnation belief is not found, at any rate at the present day. One name for these figurines is *ame we luwo*, 'the soul of a man'—a phrase which makes clear the present deeply-rooted confusion between *luwo* and *aklama*. The *aklama* lives in Mawuwe, probably the same as Amedzowe, till Mawu gives it permission to enter a man, which it does before birth; the child to which it is assigned is known in advance, however; for the priest can interrogate the *aklama* as to the future lot of the unborn child. In some places the *kla* receives offerings annually, probably on the birthday of the child, for the *kla* is named from the day of the birth and is also known as the younger brother of Mawu. The *aklama* seeks only the welfare of his ward, so long as the latter fulfils his obligations; otherwise he may punish him with disease, madness, or other ills, or, more properly, may allow him to fall a victim to them. The obligations just mentioned include abstention from certain foods, generally, or for a period, or on certain days. In some unexplained way the *aklama* is associated with a man by virtue of his being made by Mawu out of certain earth; for, when a thief has a thievish son, it is said that Mawu formed both of the same earth, and hence their *aklama* are alike. A man comes to the world with his character formed once for all, and it seems in reality to be that of his *aklama*; a man's nature (*dzogbe*) is said to leave him at death, and, though it is believed to be conditioned by his *aklama*, it seems difficult to distinguish them.

So far as we have gone, there has been some confusion between *aklama*, *dzogbe*, and *luwo*; after death this confusion is increased. The images of the *aklama* are broken in pieces or thrown away, for their owner needs them no longer. The *aklama* seems now, like the *luwo*, to be termed *ńoli* ('ghost' or 'spirit') and is questioned a few days after death to find out who was responsible for his death. The final destination of the *ńoli* is Tsie or Agume, the place under the earth, the road to which passes through a river; Kutiame is the ferryman, and his fee is twelve cowries. Another account says that the dead man meets Liagbe at the entrance of a town, and she questions him as to his deeds in this life; she has a great wound, which he must lick; and, though this is a detail on which we have no other information, it seems highly probable that Liagbe should be identified with the spiritual aunt (*tasi*).

Native beliefs are rarely so clear and unambiguous as a written account commonly assumes them to be; but it is impossible to study the foregoing summary without feeling that syncretism must be reckoned with as a possible explanation. A knowledge of the beliefs of the peoples to the east of the Ewe can only strengthen the probability of this explanation; for here too we find diverse ideas combined, and some of them agree so closely with the Ewe creed that any possibility of separate origin must be rejected; at the same time, the general balance of the elements of the creed is so different, and the terminology so different (except where the creeds agree, as noted above), that we can hardly accept the theory of a common origin of the whole complex as the explanation of the points of agreement, which are not relatively numerous.

(*c*) *Edo.*—The Ewe language is closely akin to the Edo and forms a member of the group of languages named from the best known member, which is spoken in Benin city and the neighbourhood. It is somewhat surprising that as regards the subject of this article the terminology differs *in toto* from that of the Ewe, as is made clear by the following table:

	Ewe	Edo	Ibo
Genius	*aklama, kla*	*ehi, ekosi, ima*	*čí, eŗí*; cf. *ikeńga*.[1]
Shadow (soul)	*luwo*	*agogo*	*onyinyo, ndò.*
Breath	*gbogbo*	*eti*	*ńdò, ume, uzu.*
Spirit		*orio* (?)	*mwo.*
Ghost	*ńoli*		cf. *akalagoli*.[2]
Ward			*(ńw)ago.*
Other world	Amedzowe	Elimi	Owanwo, Okwa.
Promise	*gbetsi*		*akaña*; cf. *ikeńga.*

Broadly speaking, *ehi* corresponds to our idea of soul, for the *agogo* is said to disappear on the day that a man's body is put into the grave; in the Kukuruku country there are traces of belief in a breath-soul (*eti*), which does not, however, correspond to the *dya*, for *eti* is said to be the breath of *ehi*, which dies in Elimi before it comes to this world. Osa (god) is said to take a man's *eti* to Elimi, where it turns into a man with a body (*i.e. ehi*). Two *ehi* are usually distinguished, *ehinehi* (*ehinowa*) and *ehinoha*, sometimes identified with *ekosi*, sometimes with *ehogai*, the *ehi* of a childless person. Some say that *ehinowa* is in Elimi, while *ehinoha* is on the back of a man's neck; others say that *ehinoha* is a man's shadow in Elimi, or that *ehinowa* is on the top of a man's head; the latter statement was qualified by the addition that there was another *ehi* in Elimi. Some say that *ehinowa* comes to earth when a man dies, thus reproducing the idea of alternation already found among the Ewe, others that *ehinoha* lives in Elimi and comes to earth as *ehinehi* when a man dies. It is also said that *ehinowa* goes at death to Elimi and returns for sacrifices and offerings; in Elimi this *ehi* may lay claim to a woman for whom his earthly counterpart paid bride-price without being able to secure her as a wife. Some say that *ehinowa* is sent by Osa to animate a child already conceived, others that it brings a child to a man, others again that it 'does things for a man,' *i.e.* is his genius. *Ehinoha's* functions are equally a matter of opinion; it is on the back of a man's neck, or is the servant of *ehinowa* and takes sacrifice to him in Elimi, or lives in Elimi and comes to earth when its ward dies, or is a man's shadow in Elimi, where *ehinowa* is also, or corresponds to *ere*—a man's enemies (perhaps, rather, evil spirits), to whom he sacrifices on the road.

We reach a somewhat different cycle of ideas when we find *ehinoha* regarded as a 'bush soul,' injury to which means sickness for the human being. It is also said to be the 'king of the bush' and to be richer than *ehinowa*; when it receives a sacrifice, it is satisfied and turns its back. The prevailing view is undoubtedly that *ehi* brings a child from Elimi but is not identical with it; some say that the dead go to Elimi and are reborn seven times in the same or another family, alternately as male and female. Though there is some confusion between the *ehi*, they seem to be clearly distinguished from the man himself; they are real genii, but so far bound up with their human counterpart that his health is sometimes regarded as dependent on the state of the bush *ehi*. On the whole, the *ehinoha* is a bad genius that leads a man astray, spoils things, and, so far as the identity of man and *ehi* is accepted, refuses to remain in this world. The word *ehi* is found in Kukuruku in the form *ezi*, with which may be compared the Ibo *eŗí*,[3] *eşi*.

(*d*) *Ibo.*—Among the Ibo, who number several millions, there is much diversity of view; but only a small percentage of the tribes have been adequately investigated; the following summary relates to the Awka and Asaba districts. West of the Niger the belief is that an entity known as *čí*, sometimes identified with *eŗí*, sends the new human being into the world; the reincarnated person and the reincarnation are known respectively as *ago* and *ńwago*. The *čí* is normally a dead person, but in some areas may be the father or mother of the child. East of the Niger the *čí* is in the main, like *ikeńga*, a personal protective deity, with only slight traces of a connexion with the reincarnation belief; there is no explicit statement that the *čí* sends a child into the world. The *ikeńga* may perhaps be equated with the Ewe *gbetsi*, especially if, as seems probable, it is etymologically connected with Efik *akaña*, the promise to return to the other world. The Ibo are quite clear in their belief that a person is reincarnated, normally in his (or her) own family, at any rate if he has been buried with his fathers; children of tender years will assure the inquirer with the utmost solemnity

[1] A personal protective spirit. [2] Evil spirit.
[3] ŗ represents a breathed r.

that they are their deceased grandfathers or grandmothers; and the identity of the ancestor is determined by divination. A child that speaks before it opens its eyes is said to be relating what it saw in Owamwo and is at once exposed in the *ajoifia*; it is also asserted that a man who has been unlucky in one existence may decide, on opening his eyes for the first time in a new life, that it is the same world in which he was unhappy before, and resolve to give up the struggle, whereupon the new-born child dies on the spot.

The relation between *či* and *ago*, west of the Niger, may be compared with that of godchild and godparent; the relation sets up a bar to marriage, and a man may not even marry into the *umunna* (sept) of his *či*; two people who have the same *či* may not marry, nor yet may their children, though apparently a man may marry the fellow *ńwago* of his sister. There is a saying that the child who is one's *ago* (*ńwago*) should have been the child of a man's own loins; both must be of the same quarter; if the *či* has no heir of his own, the *ago* inherits the property. Curiously enough, the *onye bi owe*, the reincarnated person, who is sent into the world by the (living) *či*, and who ought by analogy to stand to the child in a closer relation than the *či*, is in point of fact regarded as a comparative stranger; he may come from another *ebo* (quarter) or from a different tribe altogether, and his ritual prohibitions do not concern the child, who has to observe those of his *či*.

There are traces of the view that *či* and *ńwago* form two links in a continuous chain, at any rate where the *či* is not a living person, the *ńwago* of one generation being the *či* of the next; and this affords a satisfactory explanation of the views as to prohibitions. At the same time, it must be remembered that the *či* is properly a personal protective deity, in fact a personal *alose*, and that the facts are, in other directions, best accounted for on this hypothesis; it must not, however, be forgotten that east of the Niger an *alose* may be the *či*, or, according to another account, may itself be reincarnated. East of the Niger also we sometimes find the view that the *ago* goes to the next world with a dead man, while the *oglisi* pegs that represent it are thrown away; so that here the *ago* is regarded as the *či*; it is, at any rate for a time, to some extent represented by the *ndičie*, or ancestral figurines. Curiously enough, the *umunna* (sept) claims to have a collective *ago*, just as it has a collective *ndičie*, though in the nature of things an *ago* which sends to this world a corporation, not individual human beings, is unthinkable.

West of the Niger there is a good deal of confusion between *či* and *eri*, which is properly a genius, and may perhaps originally have been a breath-soul (cf. Kukuruku *eti*, 'breath').[1] If this is the case, *eri* is now none the less distinct from the man, for ceremonies are performed to bring it to the house, and in many cases it is identified with *či*. Perhaps two streams of belief flowing together, one placing *či* in Owamwo, the other locating *eri* in this world, have coalesced, so that ideas associated with *či* came to be attached to *eri*, and *vice versa*.

[1] The following forms may be compared:

Edo	Sobo	Kukuruku	Ibo
ehi, eti	*eri*	*ezi*	*eri.*

Cf. also the undoubtedly related words for 'ear':

aho	*ero*	*ezo*	*nti* (=*eti*).

It has been pointed out that the words *akaňa* and *ikeňga* are in all probability connected etymologically; it is by no means unlikely that *kla* and *aklama* are from the same root; for *la* and *na* may well be alternative forms of a suffix, and the transition from *kala* to *kla* is a well-established phonetic change in W. Africa. There is some reason for supposing that the original idea is that of a promise, though in Ewe the term *gbetsi* is now used in that sense, while *aklama* has become a genius; but further research is needed in other areas before any definite pronouncement can be made. It is tempting to connect the root *ka* with the Egyptian *ka*, which was a double of the man and believed to be after death, with the mummy, a denizen of the tomb;[1] but, though there are clear traces of mummification in W. Africa, probably due to Egyptian influence, and though nothing is more probable than that Egyptian ideas in traversing the continent would have undergone fundamental changes, there is no positive evidence to connect any of the beliefs mentioned above with any article of the Egyptian creed.[2] The possibility of Egyptian influence must, however, be kept in mind, for Egyptologists appear to accept the evidence produced by L. Frobenius[3] as to Egyptian influence in the present Yoruba area in the 6th cent. B.C. That the terms of the Yoruba language show no connexion with those cited above is of no importance, for there can be little doubt that the Yoruba tribe has come down from the north and may not have been in occupation of the area in question, if indeed it existed, at the period in question.

2. South Africa.—In many parts of S. Africa, and sporadically in other parts of Africa, there is a belief that the dead are transformed into certain species of animals, or at any rate that they assume this form to appear to the survivors; it has been maintained, not quite convincingly, that some Bantu tribes[4] suppose themselves to be transformed at death into their totems. This belief is, however, definitely reported from the west coast, among the Siena and the Twi, as well as in the north-east of the Congo Free State. Among the Zulu the transformation is supposed to be into a species of serpent.

3. Madagascar.—In Madagascar the belief in transformation is also found, though here doubtless of Indonesian origin; and we see a different lot in the future state assigned to various social grades; this is of course a common feature of eschatological doctrine not connected with the theory of moral retribution.

4. Central Australia.—According to Spencer and Gillen, the tribes of Central Australia believe that children are reincarnations of their ancestors (totem) and are continually reborn;[5] but the testimony of Strehlow, a witness well acquainted with the language of the Arunta tribe, directly contradicts this;[6] for he maintains that the native belief is that the soul of every man goes at death to the Isle of the Dead, there to be annihilated by a flash of lightning; in certain cases it is believed that a totem-ancestor is himself reborn, but after this reincarnation he does not return.

[1] See art. DEATH AND DISPOSAL OF THE DEAD (Egyptian).

[2] In modern Egyptian folklore the *quarina*, equated by Seligman with the *ka*, is held to be the spiritual counterpart of a man, which has nothing to do with his immortal soul; it plays the part of a good or bad angel. It is of course possible that this resemblance to present-day W. African beliefs is due to convergence; we can hardly assume that both are simple replicas of ancient Egyptian beliefs, nor yet that the course of development has been identical; but there is at least a *prima facie* case for inquiry.

Strehlow's account of Aranda (Arunta) belief is as follows:

The totem-ancestors dropped some of their *churinga*, which were transformed into trees, rocks, etc., from which proceed *ratapa*; these are completely formed boys and girls of reddish colour and have both body and soul; they are invisible to ordinary mortals. When a woman passes a spot (*kuanakala*) where the transformed body of an ancestor is, and where consequently the *ratapa* associated with that ancestor dwell, one of the latter, when it recognizes a suitable (*i.e.* of the correct clan) woman, enters her body and causes various symptoms. The child belongs to the totem of the ancestor associated with the spot.

There is a second method by which an ancestor impregnates a woman, but this does not seem to imply any kind of reincarnation, though the ancestor is called in both cases the *iningukua* of the child. The ancestor is said to come out of the earth and throw a small bull-roarer (*namatuna*) at a suitable woman, in whose body it takes human form.

Both kinds of impregnation are said to be equally frequent, and the difference is recognized in the face of the child, which is narrow in the first, broad in the second kind.

An *iningukua* can also, very rarely, enter a woman's body in person; and a child thus originated has light hair; in such a case the soul goes at death like other souls to the Isle of the Dead, and is annihilated by a flash of lightning. There is therefore no question of repeated reincarnations, and only in the third case can we really speak of an Aranda belief in the doctrine, so far as can be seen from Strehlow's narrative.

This account agrees with much of what is reported by Spencer and Gillen;[1] though these authors speak of reincarnation of ancestors, they really mean an incarnation of spirit-children left behind by the totem-ancestors. And even among the Aranda we hear of the totem-ancestors[2] living in water-holes.

Perhaps it is most probable that large local variations of belief account best for the differences between Strehlow and the English authors. In this connexion the account of R. H. Mathews[3] is of interest, though it must be remembered that he is probably relying on information derived from others. Some of the Chingali believe in repeated reincarnations of ancestors, and a change of sex occurs each time;[4] others say that women are not reincarnated and consequently deny at any rate the change of sex; the northern Chingali deny the reincarnation creed altogether and come very near the doctrine set forth by Strehlow for the Aranda.

5. Other areas.—The totemism of Indonesia[5] and Oceania[6] has been traced both by Wilken and by Rivers to the belief that the sacrosanct animal species is the residence of ancestral souls. Transmigration theories are also found sporadically in New Guinea (*q.v.*) and N. and S. America. The Bororo Indians of Brazil believe that they become *arara* birds after death and in dreams; other tribes say they pass into other birds. The *arara* is kept as a pet and mourned at death, though the wild bird may be killed for its feathers; yet the Bororo say, 'We are *arara*.' According to von den Steinen, the earliest form of the belief was that the native said, 'I have a bird,' not 'I am a bird,' which flies at night and which remains as the natural form of the person when a magician or other evil-disposed being hinders his return to human form (*i.e.* causes his death). But it is only in parts of Australia and W. Africa that these forms of eschatological creed are an element of real importance.

TRANSMIGRATION (Buddhist).—Theoretically Buddhism teaches neither the existence of the soul nor its transmigration, but insists on the revolution, or 'stream' (*saṁsāra*), of existences. In its practical influence on the popular mind, however, this doctrine amounted to much the same as any other doctrine of transmigration. It amalgamated everywhere with the animistic conception of the soul, whether human or other; it inspired the people with the feeling of a certain continuity of life-relationships through various existences; it impressed the popular mind with a degree of fatalism—the belief that every event in one's life was the result of past deeds. The doctrine, when formulated, contained more or less sensuous descriptions of the better lives in the heavens, besides horrifying details of purgatorial existences; and these aspects of the teaching resulted in the growth of a respectable volume of visionary literature during the course of the history of the religion in various countries.[1] Thus, in spite of the higher doctrine of the ideal Buddhist perfection in *nirvāṇa*, and in spite of the psychological and metaphysical formulations of the teaching of *karma* and *chitta*, the Buddhist conception of transmigration may be treated in the same category as other doctrines of the same kind.

According to the regular teaching, the *saṁsāra* consists in an indefinite revolution of renewed existences produced and prolonged according to the qualities of the *karma* (*q.v.*), which is the matrix as well as the *vis a tergo* of the enduring existences. It is said repeatedly:

'No beginning is known of the eternal revolution (*saṁsāra*) of the beings, streaming and flowing to and fro [in the ocean of births and deaths], being covered by ignorance (*avijjā*) and fettered in thirst (*taṇhā*).'[2]

In this vast ocean of renewed births there are innumerable streams of existences, conditioned by their respective deeds and retributions, flowing uninterruptedly not only in the continuity of the individual being but also in the solidarity of a group of existences. Now the groups of existences are classified into five *gatis* ('courses,' 'modes of life') — the heavenly life, the human life, the animal life, the ghostly life, and the purgatorial (or hellish) life; or into six, by adding the *asura* (or furious spirits).[3] Another classification is that of the *bhava* ('being') or *loka* ('realm,' the cosmic installation of beings) into three — the formless heavens, the heavens with forms, and the material worlds with desires and greed.[4] In this connexion it is to be noted that the Buddhist doctrine of transmigration emphasized the affinity and solidarity of the *karma* and all its consequences within a group of existences, whether a specific world in the cosmic system, the local division of the abode, or the class division in social life; in short, any and every link, material, physical, moral, emotional, intellectual, or social, is the cause and a manifestation of the solidarity of existence due to the common *karma*. The principle of the solid-

1 In *Saṁyutta-nikāya*, ii. 254–262, Mahā-Moggallāna, the great disciple of Buddha, well versed in supernormal attainments, narrates to his fellow-monk Lakkhana his visions of beings tortured and purified in the purgatories and the causes of their sufferings. Thence we have a long series of similar narratives, for which see, *e.g.*, the opening of the *Mahāvastu* (ed. E. Sénart, Paris, 1882–97, i.), or B. Nanjio, *A Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883, nos. 561, 677, 679, 706, etc.

arity is the *karma*, and its manifestation is the *bhava* or *dhātu*, the latter of which means the characteristics (common to the beings within a group), the specific circle of existence, community, common destiny.

How the different *dhātus* are produced; what are the reciprocal actions and reactions of the psychical factors and environmental factors in the process of the development of *karma*; what are the conditions of the individual *karma* being attracted to and incorporated into the common *dhātu*—these and associated questions gave rise to varied speculations in the Buddhist schools, the whole forming a web of subtle argument and grotesque fancy, in which are mingled Buddhist cosmology, psychology, ethics, and sociology. This is a subject which awaits further investigation.[1]

The practical effects of the Buddhist doctrine of *saṁsāra* were a deepening and broadening of the feeling of the continuity of life. Though often vulgarized through its amalgamation with animistic beliefs, the effect of the doctrine was to extend affection and attachment in human relationships to the former and coming lives, even to animal and plant life, which was held to be continuous and closely associated with human life, and to elaborate those sentiments through the belief in deeper causes, remoter connexions, and wider aspects of being than those of the present life.

This point can be illustrated from the folk-lore and literature of every Buddhist people, and one of the flowers of romantic literature—the Japanese literature of the 11th cent.—is dominated by this sentiment of continuity. There the delicate yet strong tie of human affection was associated with the idea of its continuity through lives beyond death, as well as with the idea of nature as inspired by physical surroundings and their changes. Unfortunately both W. G. Aston and Karl Florenz, in their histories of Japanese literature, hardly touch this point.

Another point in the effect of the teaching of *saṁsāra* is the belief in the occasional appearance of persons who can remember their former lives. In fact, it seems that Buddha himself regarded this faculty as one of his supernormal attainments (*iddhi*) and one of the criteria of saintliness. Everywhere in Buddhist literature we find mention of the three special faculties (*tevijjā*)—the divine vision, the divine hearing, and the clear recalling of one's former lives (*pubbenivāsa*). This belief gave rise to a rich literature of *Jātaka* (*q.v.*) and the allied literature of *Nidāna* and *Avadāna*, which aimed at supplying that belief with concrete illustrations and impressing believers with the close association of the lives of Buddha and Buddhist saints with those of all other beings, besides inculcating morals by the stories. Thus it was no wonder that some persons claimed to have the same faculty, whether by chance or as a result of training. The folk-lore and legends of Buddhist countries are full of instances, and a noteworthy point in them is that many of those endowed persons are children, whose remembrance of their own former lives is mostly said to lose its vividness as they grow older.[2]

M. ANESAKI.

TRANSMIGRATION (Celtic).—I. There are two passages which clearly assert the belief in metempsychosis among the ancient Celts. Cæsar (*de Bell. Gall.* vi. 14) tells us that the principal point in the teaching of the druids is that the soul does not perish, but, after death, passes from one body into another. Diodorus completes the evidence of Cæsar and states it precisely:

'Among the Galatæ [Gauls or Germans] the doctrine of Pythagoras prevails, namely, that the souls of men are immortal and after a fixed number of years begin to live again, the soul entering into a second body' (v. 28).

But is Diodorus giving the teaching of Pythagoras or that of the Celts? If the former, it would be wise to attach only a relative importance to the precision of his words; if the latter, it must be admitted that, according to the belief of the Celts, the passage of the soul into another body does not follow immediately upon death, and that, while the soul awaits its reincarnation, it continues to live, though under conditions which are not those of the life on earth. This interpretation would make it possible to reconcile the passages in Cæsar and Diodorus with the evidence of ancient writers who have transmitted Celtic conceptions regarding the future life in which the idea of metempsychosis does not occur.

Diodorus goes on to say:

'Therefore, during the funerals of the dead, they throw into the funeral pyre letters written to the dead relatives in the expectation that the dead will read them.'

It seems, therefore, that the man whose body was burned acted as a messenger between the living and the ancestors whom he was about to meet again in the other world. It is the idea of the immortality of the soul and of another world that is emphasized by the Latin writers.

Valerius Maximus (II. vi. 10) tells that there was an ancient custom among the Gauls of lending each other sums which were repayable in the lower world, so firmly were they persuaded of the immortality of the soul. Pomponius Mela (iii. 2), after stating that, according to the druids, the soul is eternal and that there is a second life among the *manes*, adds that they burn and bury along with the dead things which are useful to the living, and that, formerly, they postponed the settlement of business affairs and debts until the time when debtors and creditors would meet in the lower world; there were even people who voluntarily cast themselves into the funeral pyre of their kindred in the expectation that they would rejoin them in the new life. The idea of a new life after death and before reincarnation was thus one of the most cherished and deep-seated beliefs of the ancient Celts. As to where that new life was spent, Valerius Maximus and Pomponius Mela employ the ordinary terms of Roman mythology for the other world (*inferos, manes*); but Lucan is not content with that superficial assimilation:

'You assure us, Druids, that it is not the silent dwellings of Erebus nor the pale kingdoms of Dis who inhabits the depths, at which the souls arrive; the same breath directs their members in another world ['orbe alio'], and, if your songs declare what can be known, death is in the heart of a long life' (*Pharsalia*, i. 449–456).

There has been an endeavour to fix the meaning of 'orbe alio.' In the Latin of the time of Lucan it can mean only 'another region of the earth' and not 'another celestial globe' (see S. Reinach, *RCel* xxii. [1901] 454).

The commentaries on the few and vague Greek and Latin texts which bear upon the ancient Celtic belief in metempsychosis do not lead to any further precision. In particular, we cannot determine whether the teaching of the Celts was borrowed from the Pythagorean school. Such was, however, a tradition of antiquity. The passage from Diodorus quoted above lacks clearness, but as early as the beginning of the 1st cent. B.C. Alexander Polyhistor (frag. 138 [*FHG* iii. 239]) wrote that Pythagoras had the Gauls (Γαλάται) as disciples. Timagenes (*ap.* Ammianus Marcellinus, xv. 9) seems to connect the organization of the druidic corporations with Pythagoras with regard to the doctrine of the immortality of the soul. Valerius Maximus (II. vi.) declares that he would consider the belief in the immortality of the soul a foolish thing if it were not for the fact that the belief of the Gauls on that matter agreed with that of Pythagoras. But the Celtic doctrine, though showing analogies with the Pythagorean doctrine, was not identical with it: it did not distinguish between the fate of the wicked and

that of the just; the other life is neither a punishment nor a recompense, and, in fact, the idea of justice is entirely absent from the Celtic conception.

2. We have another source of information in the legends preserved by Irish epics, which tell of historical personages and seem for the most part to be anterior to Christianity.

In the middle of the 6th cent. of our era St. Finnen met at Mag Bile (Moville, Co. Down) a warrior named Túan Mac Cairill, who lived all alone in his den; at first he would not allow the saint and his disciples to enter his dwelling, but he ended by making them welcome and showing them hospitality. They refused to accept anything from him, however, until he had told them of his adventures, which were by no means ordinary. Túan Mac Cairill had come from Spain to Ireland 312 years after the Flood along with the first inhabitants, Partholon, the son of Sera, and 24 couples. When the number of immigrants had increased to 5000, an epidemic destroyed them one after another, until only one survived to tell the tale, that one being Túan Mac Cairill. For 22 years he was the only inhabitant in Ireland; then Nemed, son of Agnoman, who also came from Spain, landed on the island, after a storm, with four men and four women. On his arrival Túan went into hiding; he fasted for three days, and, having lain down to sleep one night, he awoke in the morning in the form of a stag. He led the herds of deer in Ireland until the extinction of the race of Nemed. Then he became a boar, and remained in that shape as long as the men of Semion, son of Stariat, from whom the Firbolg are descended, were in possession of Ireland. He next became a vulture during the reign of Beothach, son of Iarbonel, an ancestor of the Tuatha Dé Danann; and, once more, a fish, when the sons of Milé conquered Ireland. One day he was caught by a fisherman, brought to the wife of king Cairell, cooked, and eaten by her. At the end of the usual period he was born again as an infant and was called Mac Cairill, *i.e.* son of Cairell. Up to his second birth as a man Túan had lived 320 years: 100 as a man, 80 as a stag, 20 as a boar, 100 as a vulture, and 20 as a fish.

Certain details of this metempsychosis should be noticed: in all his successive shapes Túan preserved the consciousness and recollection of his previous existences, and his human intelligence persisted during his lives in the bodies of animals; his metamorphosis took place only when he had reached the extreme limits of old age and decrepitude; it occurred only in the neighbourhood of the house in which he lived during his first life as a man; and, finally, his change of body took place only after a fast of three days.

There is another Irish legend dealing with metempsychosis, though in a less varied and definite manner than that of Túan—the history of Mongán, son of Fiachna.

One day Mongán had a discussion with his *fili*, Forgoll, as to where king Fothad Airgdech, who was slain by the Fían Caoilte, had fallen. It was agreed that if, in the space of three days, Mongán failed to prove that Fothad had fallen at the river Larne in Ulster, and not at Duffry in Leinster, as Forgoll maintained, his goods and his person should become the property of the *fili*. Mongán's wife broke into lamentations which increased as the time went on, but Mongán waited calmly in the firm belief that a witness would come from a distant country to attest the truth of his statement; for Mongán heard the steps of the mysterious traveller from afar. On the third day, at nightfall, a warrior appeared, who, when brought into the presence of Forgoll, pointed out the exact spot where Fothad had been buried, and even gave the inscription on his tomb. While narrating the death of Fothad, the warrior called Mongán as witness to the truth of his story, and named him by the name of Fionn. The warrior was Caoilte, and Mongán was thus a reincarnation of Fionn, living about three centuries after him. The legend gives us no information about the incarnations of Fionn between the end of his first life and his reincarnation in Mongán, but probably they were similar to those of Túan Mac Cairill.

Other Irish legends allude to cases of metamorphosis, but they do not seem to take place at the end of a life. There are also epic stories presenting beings which have had a second birth, but those beings belong to the world of fairies and have no bearing upon the study of human metempsychosis.

3. The Welsh romances also contain numerous examples of metamorphosis. Perhaps there are traces of metempsychosis in the romance of Taliesin, in which he tells in verse of all the places where he has been since the beginning of the world, and in the poem entitled *Kat Goddeu* ('Battle of Goddeu'), in which the poet enumerates all the shapes which he has taken: sword, star, book, eagle, ship, serpent, etc. But the story of Taliesin is preserved only in MSS of the 17th cent., and the ancient poems attributed to the celebrated bard of the 6th cent. cannot be earlier than the 12th. It is difficult to disentangle the real archaic elements contained in them.

To sum up: it is practically only in the texts of the writers of antiquity that definite evidence is found of a Celtic belief in metempsychosis: among the Irish, metempsychosis is an exceptional phenomenon, a kind of privilege enjoyed by heroes; what we find among the Welsh is a literary tradition rather than the traces of an ancient belief. Whatever may be the ingenuity of modern scholars, it cannot on this subject make up for the lack of documentary evidence.

Meyer, 'With an Essay upon the Irish Vision of the happy Otherworld and the Celtic Doctrine of Rebirth,' by A. Nutt, London, 1895–97.

G. DOTTIN.

TRANSMIGRATION (Egyptian).

There are three different ideas which refer to changes of personality: (1) the union with a god, (2) the transmigration of the soul into an animal for a life-time, (3) the voluntary metamorphosis of the person temporarily into another form for his own benefit.

(1) The *divine union* is often stated in the *Book of the Dead*, as 'I am Ra' or 'I am Thoth'; this was the person entering into such union with the god that he had all the compelling power and safety of the god. Even in the earliest inscriptions, on the cylinders before the 1st dynasty, the dead is *sen*, or brother, to a god; or *sensen*, allied, associated, in touch, or united, with a god.

(2) The question of *transmigration* has been disputed. The Greek authors refer to it as an undoubted belief; but there seems to be no Egyptian text which refers to the idea. Two scenes have been supposed to indicate it; these are judgment scenes (Seti I. sarcophagus and tomb of Rameses III.)[1] showing a pig being driven from the judgment. Yet, as referring to justified men, it cannot be the soul driven away as a pig. In most judgment scenes there is present the devouring monster, a blend of hippopotamus and crocodile, waiting to devour the guilty; but no such monster appears where the pig is, and so it seems likely that the pig is the flesh-eating animal, driven away so as to be quite apart from the justified king. The Greek testimony is so strong that it seems unlikely to have all been derived from the metamorphoses. As all the authors are post-Persian, it is possible that the idea really did blend with Egyptian belief during the Persian occupation, when other Indian ideas came into Egypt, such as asceticism. Transmigration is plainly stated in the *Korĕ Kosmou*, of the Persian period, probably about 500 B.C.[2] After this it is natural that the Greek writers, Herodotus, Plato, Theophrastus, Plutarch, and others, should ascribe the belief to the Egyptians of their times, unconscious that it was a new importation.[3]

(3) The belief in *metamorphosis* (*q.v.*) was general, as a magic process. The earliest Egyptian tale turns on a wax model being transformed into a living crocodile. The *Book of the Dead* has a series of magic chapters (76–89) to give power to the dead person to be transformed into 'whatever form he pleases,' into a golden hawk, a divine hawk, a god, a lily, the god Ptah, a phœnix, a heron, a swallow,

an earth-worm, or a crocodile; and lastly the power of being united to its own body. The following examples are parts of chs. 86, 89, and all of 88:

'I am the Swallow; I am the Swallow. I am the Scorpion-bird (or white bird), the daughter of Rā. . . . And that which I went in order to ascertain, I am come to tell. Come, let me enter and report my mission. And I, entering, and ascertaining who cometh forth through that gate of the Inviolate one, I purify myself at that great stream, where my ills are made to cease, and that which is wrong in me is pardoned, and the spots which were on my body upon earth are effaced. . . . Here am I, and I come that I may overthrow mine adversaries upon earth, though my dead body be buried' (86). 'For I am the Crocodile god in all his terrors. I am the Crocodile god in the form of man. I am he who carrieth off with violence. I am the almighty Fish in Kamurit. I am the Lord to whom one bendeth down in Sechem' (88). 'Oh, thou who bringest; oh, thou runner who dwellest in thy Keep, thou great god; grant that my soul may come to me from whatsoever place wherein it abideth. . . . Let my soul (*ba*) be caught and the spirit (*khu*) which is with it, wheresoever it abideth. Track out among the things in heaven and upon earth that soul of mine, wherever it abideth . . .' (89).

W. M. FLINDERS PETRIE.

TRANSMIGRATION (Greek and Roman).—I. *GREEK.*—The notion of transmigration (παλιγγενεσία),[1] *i.e.* the passage after death of the human or animal soul from the mortal body to a new incarnation in another body of the same or another species, necessarily rests upon a belief that the soul itself is immortal, or at any rate more lasting than the body. Pherecydes,[2] who was born about 600 B.C. and is reputed to have been the teacher of Pythagoras[3]—which does not necessarily mean more than that he was earlier in time—is said to have been the first to introduce the doctrine. On the other hand, Herodotus[4] declared that it was the invention of the Egyptians and was derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of Pherecydes and Pythagoras, who were already dead. It is, however, impossible to accept Herodotus' account, because (1) the best authorities are inclined to doubt whether the Egyptians ever held the doctrine in question,[5] and (2) the Greek evidence indicates that the belief, if not indigenous, goes back to a remote past. Moreover, the notion that Pythagoras was influenced by Indian modes of thought with which he became acquainted in Ionia or elsewhere[6] is altogether unconvincing. The truth seems to be that a belief in the transmigration of human souls into other bodies after death was a relic inherited from the primitive or savage ancestors of the European peoples. It is expressly attributed to the Gauls,[7] and less explicitly to the Thracians and Scythians.[8] In fact it must have developed independently in many parts of the world,[9] without direct transmission from place to place, especially in connexion with the idea that the limited supply of souls necessitates the reappearance of the same soul in various earthly bodies. Thus in popular tales the change of a man into a beast involves the assumption that, though the body is different, the soul remains the same; *e.g.*, in the metamorphosis of Odysseus' companions into swine their intelligence remained unaffected.[10] Not that this popular tradition ever became widely effective: except for one not very clear example,[1] stone inscriptions show no trace of a belief in transmigration, while Euripides refers to a second incarnation as an actual impossibility, whose realization might have been welcome as a divine instrument of discrimination between the good and the bad.[2] But, although there is nothing to show that the belief struck deep, or was cherished outside certain particular circles, it was brought into prominence by the religious upheaval which undoubtedly took place in the 6th cent. and became associated with the worship of Dionysus and the Orphic cults. Thus the notion that the soul is imprisoned in the body as in a dungeon is attributed by Plato and his commentators to the Orphic mystics.[3] Two famous passages in Pindar presuppose the doctrine of transmigration. In one of these Persephone sends the souls back to earth in the ninth year when they have been purified from their ancient sorrow;[4] and in the other those who have thrice made their abode on either side of death are destined at last to reach the islands of the blest.[5] It seems more likely that Pindar derived this doctrine from the Orphic mysteries than indirectly through the Pythagoreans.[6] The prevalence of this mystical belief and its religious potency are illustrated with remarkable clearness in certain inscriptions on golden tablets found in S. Italy, near Rome, and in Crete, which are chiefly attributed to the 4th or 5th centuries B.C. and published as an Appendix to J. E. Harrison's *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, p. 660 ff. One of these contains some words which form part of the appeal of the purified soul: 'I have flown out of the sorrowful weary Wheel; I have passed with eager feet to the Circle desired.' This refers to the mystical Wheel of Fortune which in its revolutions symbolizes the cycle of successive lives necessary to be traversed by the harassed soul before its final release. This specific cycle of progress, as well as the more general conception of a κύκλος in human affairs, is traditionally attributed to the Orphic-Pythagorean sphere of thought.[7] In the Orphic hymns[8] this has so far developed as to include a statement that an exact reproduction of the movements characteristic of the present world-era may be expected when the revolving wheel comes round to the same point again; but it is not easy to reconcile this with the opportunity which, as we have seen, is given to particular souls to obtain their release.[9] Aristotle's reference to the Orphic poems as an authority for the opinion that the soul enters the body from outside in the process of respiration accords well enough with the doctrine now under discussion.[10] Further, the Orphic prohibition of a diet of animal flesh, evidenced by Euripides and Aristophanes,[11] points in the same direction.

In popular estimation[12] transmigration is particularly associated with the name of Pythagoras. Much of what has been established as belonging to the Orphics, the imprisonment of the soul in the body as a retribution for past ill-deeds, the undeviating recurrence of the cycle of existence,[13] the prospect offered of ultimate escape after purification,[14] and the abstinence from a flesh diet—limited, however, by the reservation that it did not apply to the flesh of such animals as are

offered in sacrifice to the Olympian gods[1]—is established for the Pythagoreans by not less convincing testimony. It would seem, therefore, that, when founding his brotherhood, Pythagoras appropriated much that was characteristic of contemporary religious asceticism. Nevertheless the reincarnation of souls in various bodily shapes is so closely associated with the person of Pythagoras that he must be held to have inculcated it with peculiar vigour. There is a good deal of legendary matter relating to him, most of which can be traced to the authority of Heraclides Ponticus.[2]

To this source we owe the famous story that it was permitted to Pythagoras to retain the memory of his previous incarnations, and that he established his credibility on the occasion of a visit to the Heræum at Argos by identifying as his own, before seeing the inscription, the shield of Euphorbus, son of Panthus, which he was bearing when slain by Menelaus before the walls of Troy.[3] Heraclides was also responsible for the statement that Pythagoras claimed to have lived as Æthalides, the son of Hermes and herald of the Argonauts, before he became Euphorbus, that as Æthalides he obtained from his father Hermes the offer of any gift he might choose save immortality, and that thus he received the privilege of remembering his previous fortune while on the earth and in Hades. After Euphorbus died, he became Hermotimus and subsequently Pyrrhus, the Delian fisherman, before his final re-birth as Pythagoras.[4] Further, Pythagoras declared that after the lapse of every 207 years his soul returned to the light of the sun.[5] Accordingly, if the birth of Pythagoras is placed in 572, the date of Euphorbus will be 1193 and of Æthalides 1400.

There is, however, much better evidence than these fables that Pythagoras seriously taught the doctrine in the almost contemporary verses of Xenophanes:[6] they say that once, as he was passing by, he pitied a dog that was being beaten and exclaimed: 'Beat him no more; for his soul is my friend's, as I recognized when I heard his voice.' It was therefore his belief that the same soul could dwell in a beast as in a man, and that there is a universal kinship between all living things.[7] He did not hesitate to ascribe reasonable souls to animals, holding that the activity of their reason was impeded by the unsuitability for its exercise of their physical organs.[8] Aristotle describes the possibility of any soul taken at random passing into any body as a Pythagorean fable.[9] The punishment of souls for their misdeeds by successive incarnations in corporeal dungeons was a theme developed by the Pythagoreans in a manner hardly to be separated from the Orphic,[10] and the results of their joint influence are to be found in the Platonic myths.

Empedocles in his poem entitled 'Purifications' (*καθαρμοί*) took over the doctrine of transmigration from the Orphic-Pythagorean school without making any attempt to combine it with his philosophical system. Indeed it is difficult to see how it was possible for him to advocate the immortality of the soul consistently with his doctrine that the vitality of the soul is the result of an aggregation of corporeal substances. Thought and consciousness are concentrated in the blood which envelops the heart.[11] Aristotle's assertion that, according to Empedocles, the soul is compacted from all the elements[12] is generally discredited as a misconception; and his further remark in the same passage that each of the elements is soul is equally misleading. But, even if the materialism of Empedocles is somewhat less explicit than is sometimes represented, logical justification is still to seek for his pronouncement concerning the punishment of guilty souls in a purgatory lasting for 30,000 years[1] and his personal experience of the wretchedness of the wandering spirit which is harassed by its weary passage through air and sea and earth: 'Ere now have I been a youth and a maiden, a bush and a dumb fish in the sea.'[2] A discrimination of the degrees of transgression is involved in the assignment of the less base souls to the higher forms of animal or plant life: these inhabit the bodies of lions among beasts or appear as bay trees in the world of vegetation.[3] The best of them become prophets, bards, physicians, and chieftains, and at last return as divine beings to the company of the gods.[4] As a consequence of this doctrine Empedocles, like the Pythagoreans, prohibited the eating of flesh and the slaughter of animals, which he stigmatized as the shedding of kindred blood, the murder of a son by his father or of a father by his son.[5]

In several of his dialogues, particularly in the *Phædo*, *Phædrus*, *Republic*, and *Timæus*, Plato associates the doctrines of the immortality and pre-existence of the soul with its transmigration. The variations to be found in his descriptions are not of serious moment and do not admit of being discussed in detail.

According to the *Phædo*,[6] those who in this life have failed to emancipate themselves from the burden of the corporeal element cannot rise to the purer element above, but, being dragged down into the visible world, haunt burial grounds as ghostly apparitions until they are again imprisoned in another body. Of these the sensual become asses or similar animals, the violent and unjust wolves or kites, but those who, though lacking the philosophic impulse to virtue, have lived an ordinary respectable life may become bees or ants, or even men who in their next incarnation prove themselves just and moderate. Only those who have devoted themselves in this life to philosophy are entirely exempt from any further incarnation and pass to the pure ethereal homes destined for them in the upper world.[7] In the *Phædrus*[8] the souls of the dead are punished or otherwise treated according to the measure of their human actions for 1000 years, until the period of reincarnation arrives, when they are allowed a limited area of choice, so that it often happens that the soul of a man comes into life as a beast, and that of a beast which had formerly been human again enters into the body of a man. A much more elaborate account is given in the myth of Er the son of Armenius, how a great variety of choice comprising the lives of every animal and of men in every condition is offered to the allottees whose time for reincarnation has arrived. The order of choice is determined by ballot, but even the soul which drew the last lot had plenty of opportunities for selection left. The narrator of the myth was a witness of the choices made by some of the famous heroes of antiquity; how Orpheus chose to be a swan, Thamyras a nightingale, Ajax a lion, Agamemnon an eagle, and Thersites a monkey, while Odysseus, who drew the last lot, wearied of his former ambition, was delighted to find still available for him the life of an ordinary man free from all anxiety.[9] In the *Timæus*[10] the creator fashions as many souls as there are stars, and distributes one to each star, in order that later, after a period of contemplation, they may be embodied in human form. If during the time of probation the soul lived well, he would return to his ethereal habitation; but, if he failed, he would suffer a new incarnation as a woman; and, if his wickedness continued, he would sink down among the beasts until his corporeal taints had been thoroughly purged away. In the same dialogue Plato explains the evolution of birds and other animals as arising from the deterioration of human souls. Birds, with their feathers taking the place of hair, are developed from men who are harmless but light-minded. The four-footed beasts of the earth were originally men who had never given themselves up to the study of philosophy, since they no longer heeded the revolutions in the head, but followed the impulses of those parts of the soul which are situated in the breast.[11]

Critics have not been entirely agreed as to how far Plato was a serious believer in transmigration,[12] some holding that the entire description was purely a play of fancy, and others that, though he may have credited the successive incarnations

of human souls, he cannot have extended his belief to their passage into animal shapes. It should of course be noticed that all these descriptions, if not actually parts of a myth, have a mythical colouring, and must be read subject to the warning given by the Platonic Socrates in the *Phædo*:[1]

'No sensible man will affirm that these matters took place exactly in the way that I have described. But to hold that either this or something like it is the truth in regard to our souls and their habitations, appears to me, *now that the soul has been shown to be immortal*, to be no unreasonable or unworthy venture.'

So long as this limitation is borne in mind, there is no valid reason for mistrusting Plato's sincerity.

Transmigration does not cohere with the Stoic doctrine of the soul's nature; but there are some grounds for thinking that Posidonius held the pre-existence and immortality of the soul in the limited sense in which it was possible for a Stoic to affirm them consistently with a belief in the ἐκπύρωσις.[2] It was, moreover, natural that a Stoic should speak of a periodic reincarnation[3] as a consequence of the dogma that every conflagration introduces a new era in which the experience of the past will be exactly repeated. But that either Posidonius or any of the Stoics believed in a series of successive incarnations within the limits of the current world-period is, notwithstanding the isolated statements of certain of the doxographical sources,[4] open to very grave doubt.[5]

According to Plotinus, the future destiny of the soul depends on the use it has made of its several functions and capacities during each particular incarnation. Hence we should constantly strive upward, not yielding to the images of sense or carnal cravings.

Thus he who has exercised his human capacities again becomes a man, but those who have lived by sensation alone become animals. If, without yielding to active passion, they have remained immersed in sluggish perversity, they may even become plants.[6] There is always retribution for an ill-spent life: the bad master becomes a slave, the abuser of wealth a poor man; the man who has murdered his mother becomes a woman and is murdered by a son.[7] On the other hand, those souls which are pure and have lost their attraction to the corporeal will cease to be dependent upon body. So detached, they will pass to the region of being and the divinity, which cannot be apprehended by a human vision as if it were akin to the corporeal.[8]

II. *ROMAN.*—There is no evidence among the Romans of an indigenous belief in transmigration, but several of their poets acknowledged the influence of Greek speculation, and of Plato and Pythagoras in particular. Horace mentions[9] the 'Pythagorean dreams' of Ennius, who thought that his soul had once inhabited the body of Homer and earlier that of a peacock.[10] Vergil, in a famous passage,[11] takes more serious notice of Pythagoreanism, when he describes the purification of souls in the under world, and their return to human bodies after the completion of the cycle of 1000 years. Ovid[12] introduces Pythagoras himself making an eloquent appeal against the slaughter of animal life, based upon the identity of the soul-substance which permeates our bodies and theirs.

LITERATURE.—The best sources of information are the works of E. Rohde, T. Gomperz, and E. Zeller mentioned above. For Pythagoras see art. PYTHAGORAS; also A. E. Chaignet, *Pythagore et la philosophie pythagoricienne*, 2 vols., Paris, 1873; and for Plato J. A. Stewart, *Myths of Plato*, Oxford, 1905; and E. S. Thompson's ed. of Plato, *Meno*, London, 1901, pp. 286–297.

A. C. PEARSON.

TRANSMIGRATION (Indian).—The doctrine of the transmigration of souls is in India the presumption which underlies not only Buddhism and Jainism, but also the philosophical systems of the Brāhmans and the whole of Hinduism. In the ancient Vedic period it had as yet no existence. At that time the Indian peoples were still filled with a keen delight in life, and the righteous man looked forward to eternal continuance of existence after death. They believed that good men ascended to heaven to the companionship of the gods, and there led a painless existence, free from all earthly imperfections—a happy life, which was usually depicted as an enjoyment of sensual pleasures, but was yet occasionally conceived in a higher spiritual sense. The necessary consequence of this belief was the view (very rarely expressed in the Veda) that the souls of the wicked sank down into the abyss of hell. This naive representation of the soul's fate after death experienced a real change when, suddenly and without any transitional stages that we can perceive, the Indian people was seized by the oppressive belief in transmigration, which holds it captive to the present day. The conviction that every individual enters again after death upon a new existence, in which he gathers the fruit of merit earlier acquired, and has to endure the consequences of sins previously committed, meets us for the first time in a work belonging to the second period of Indian literature, the *Satapatha Brāhmaṇa*, 'the Brāhmaṇa of the hundred ways.' Since then this thought has been regarded in India as a doctrine that needs no proof, which only the adherents of a crude materialism could doubt. It is a significant fact—to which H. Oldenberg first drew attention—that belief in transmigration at its very first appearance in the literature assumed the form of the harassing thought of a continual recurrence of death. How this belief, which lies at the root of Indian pessimism, could take the place apparently immediately of the innocent joy in life which greets us in the ancient times in the hymns of the Rigveda is an interesting question, but one that can be answered with only a certain measure of probability. Certainly the Indian doctrine of transmigration is not to be derived from one definite source alone; there are undoubtedly several streams of thought, which hardly admit of being definitely traced, but which were distinct in their origin. In order to ascertain the main source, we must have recourse to general folk-lore.

Among peoples in a low stage of civilization in very many parts of the earth there is found the belief that the souls of men after death pass into the trunks of trees or the bodies of animals, but especially into the bodies of birds, reptiles, and insects. Hence a choice is open to us between the following alternatives. We must suppose either that the Aryans of India, when they came into closer contact with the rude aboriginal inhabitants of the Indian peninsula, received from them the idea of the continued existence of men in animals and trees, and appropriated it to themselves; or that this conception had maintained its hold upon the lower strata of the Aryan people themselves from savage times, and then in an age adapted to constructive speculation thoughtful men had set themselves to develop from it the theory of transmigration. The second of these two possibilities is the more probable. Whatever view, however, may be accepted as correct, under any circumstances the primitive belief—whether it be that of the Indian aboriginal tribes or that of the lower strata of the Aryan people—gave merely the first impulse to the formation of the doctrine of transmigration; for no primitive people possesses more than the conception of the immediate prolongation of human existence in animals and trees. the Aryans of India the theory, as it meets us for the first time in the literature, appears already fully formed in the shape of belief in a permanently continued but ever-changing existence. And the different forms under which the individual lives are in their rank, and the measure of happiness or misery which they experience is regarded as dependent on moral conduct. At the basis of the Indian conception of transmigration lies the immovable conviction that there is no unmerited happiness and no unmerited misery, that each man shapes his own fortune down to the smallest details. This conviction has given to the Indian people a power to endure suffering which has often enough excited the wonder of foreign observers.

Since the Indian recognized that no explanation of the apportionment of happiness and misery, of joy and sorrow, by the moral state of the individual was to be found in the present life, he concluded that man's fate is determined by his good and evil deeds in a former existence. A moral qualification, therefore, according to this view, attaches to the soul; and this corresponds exactly to the sum of its good and evil deeds, and demands reward or punishment in the next existence, if not in the present.

Granted, then, that we endure in the present life the consequences of our own behaviour in the past, the conditions must have been precisely the same in the previous existence; the joy and sorrow that we experienced therein were again the consequences of our own actions in a preceding life, and so on without end. For that part of the individual, therefore, which was involved in the cycle of existences no beginning could be assigned. It was thus that quite early in India the theory of the endless pre-existence of the soul was developed; and the doctrine of the soul's eternal duration in the future was inferred according to the law that that which is without beginning is also endless, and in accordance with the ancient popular view of the permanence of personal existence in heaven. The belief in the eternity of soul was followed by belief in the eternal existence of the universe.

Life for the ease-loving Indian was overshadowed by the belief in transmigration. The thought of wandering perpetually through the bodies of men, animals, and plants, of being compelled in each existence to experience more pain than joy, and perpetually to renew the pangs of death, occasionally also to sojourn for a time in hell—this thought must have been dreadful for the Indian. Nor would he be sufficiently compensated by the prospect of being able to gain heaven by his merit, and to raise himself to divine honours. For with the very ascent to divine honours no more than a transitory success has been gained. Even the gods, according to the transmigration theory, are involved in the cycle of existence, the *saṁsāra*, and must again descend to lower forms of life when their time comes round, that is, when the power of former merit is exhausted through the enjoyment of divine position and honours. The popular gods, therefore, have ceased to be eternal and omnipotent beings, as they were in Vedic times.

According to this view, therefore, the wheel of existence rolls on without rest or intermission, and hurries living creatures perpetually to renewed suffering and renewed death. Naturally, then, the question must have been raised whether there is no deliverance, no release, from this constantly renewed existence upon earth.

The hypothesis that once in the course of time the previous deeds of a living being may meet with their complete reward or punishment, and that, therefore, the basis for a re-birth may and will disappear, was not made in India. According to the Indian view, when a living being dies there always remains a remnant of merit and guilt still unrewarded and unpunished, from which is derived the germ of a new existence. Even sacrifice and deeds of piety or asceticism cannot deliver from the necessity of renewed birth and death. In the *Śatapatha Brāhmaṇa* it is said that the powers of death which pursue men from one existence to another may be appeased by sacrificial offerings, and that by such offerings release may be obtained from the return of death. This thought, however, is soon abandoned, and is supplanted by the conviction that no sacrifices can do more than secure temporary happiness in higher forms of existence.

Since, then, in India it had become the supreme aim of spiritual endeavour to find this release, the issue could not fail to be the conviction that success had been attained; not by the way which had been previously followed and which no longer afforded inward satisfaction, but by the way of *knowledge*, which, in fact, might be trodden only by a few. In the knowledge of the essential nature of things, which is veiled from ordinary sight, was found the means of deliverance from the pressure of worldly existence. This saving 'knowledge' removes 'ignorance,' *i.e.* the empirical view of the universe which is natural to man, but is mistaken and perverted. With ignorance disappears also desire, which fetters man to existence, and is the cause of all action; as, on the other hand, successful resistance to the desires of the senses promotes the entrance of knowledge. Saving knowledge has the power—to use the technical Indian expression—of 'consuming the seed of works,' and so making impossible for all future time a continuance of migration.

The entire course of thought as hitherto developed is already contained in substance in the ancient *Upaniṣads* (*q.v.*). For them saving knowledge consists in the recognition of the sole existence of the Brahman, the soul of the universe, of the illusory nature of the phenomenal world, and especially of the identity of the individual soul, the *ātman*, with the Brahman. In what way the saving knowledge is conceived in Buddhism, in the religion of the Jains, and in the philosophical systems of the Brāhmans (Sāṅkhya, Yoga, Mīmāṁsā, Vedānta, Vaiśeṣika, Nyāya), must be ascertained from the respective articles. TRANSMIGRATION (Jewish).—Metempsychosis, or the migration of the soul (Heb. *gilgūl*, 'rotation' or 'cycle'), is a doctrine which forms part of a system of esoteric mysticism tolerated rather than approved or furthered by Judaism. Its beginnings are difficult to trace. Whether they were Egyptian or Indian—probably through Gnostic or Manichæan intermediaries—this doctrine, no doubt, had to accommodate itself to other Jewish conceptions before it could be assimilated and adopted, and it had to undergo such a profound modification as to give to Jewish metempsychosis a character of its own.

The belief in the migration of the soul presupposes the existence of the soul; and a whole esoteric system about the creation of the soul, and the conception of sin and redemption, are the fundamental principles upon which such a doctrine must rest. The relation between spirit and matter, soul and body, must be determined, as must the question of pre-existence as well as that of the finality of soul and body. An attempt will here be made to do justice to these problems, however succinctly. The questions of punishment and reward, of God's

justice and mercy, are also involved. It must be borne in mind that any theory, if it was to be accepted by Jews, had to be subjected to a process of close adaptation to the fundamental principles of Judaism, and must not run counter to the Law. Now, if migration of the soul is to be accepted as a part of philosophic speculation concerning sin and redemption, it has to formulate its theory in accordance with Judaism.

1. **Creation of souls.**—God is the creator of everything; therefore souls are His creation. But does God continue His act of creation? Does He continually create souls as soon as any human being is on the point of being born? The answer of the believer in metempsychosis is that He does not. His creation came to an end with the close of the sixth day. At the beginning the souls were created. The power of God is thus limited to what He had done on that occasion. Before creating Adam, God had finished the creation of all the souls of man, but, His work of creation being overtaken by the end of the sixth day, He did not continue it, and produced only those evil spirits which hover between the pure divine soul and the earthly matter (the *mazziqîm*; see art. MAGIC [Jewish]).

A distinct line of demarcation is not drawn, however, and, as will be seen, a soul can assume the form of a demoniacal spirit. The souls created, then, are of a limited number, as the creation was only a limited act, and had to come to an end at a definite period of time. These souls are God's creation, not any emanation from God. This very essential point should be remembered, for it separates Jewish metempsychosis widely from Buddhist. The souls at the end of the migration are not absorbed into a kind of divine pantheistic fluid; they are conceived as having an individual existence; they live separately and fully conscious of their individuality; they dwell in the heavenly halls or in Paradise in rapt contemplation of the divine glory; thither they are allowed to return at the end of their peregrination through the lower world. The souls of the born and the unborn, of those who have already been in the sublunar world and of those who have not yet been in that world, are dwelling together in the heavenly halls, or in the treasury of God (Dt 32^{34}). No clear distinction is made between these two categories of souls. It is all so vague in this world of theosophic speculations, and contradictions are not seldom found; schools of thought have sometimes blended their teaching without any successful attempt at harmonizing contradictory views. All that comes is readily accepted, so long as it is not diametrically opposed and so long as it comes as an ancient mystical tradition. Thus the pre-existence of all human souls affects the Messianic eschatology. The soul of the pre-existing Messiah is fully conscious of its own individual pre-eminence in this world. Though a spirit, the Messiah dwells among the other souls, and He is fully aware of the tribulations of the people of Israel; He weeps over their sufferings and anxiously asks the angel who is in His company when the time will arrive for His revelation (M. Gaster, *Chron. of Jerahmeel*, London, 1899, xx. 9). Moses in his ascent to heaven sees the souls of the great and pious, of those who have lived upon earth, and of those who are to come to life hereafter—among others David and Aqiba (*ib.*). This view is found also in the book of Enoch and in other Apocalypses, though the theory of migration is not there clearly connected with it.

The one definite outcome is that no new souls are created for each child that is born, the number of souls being limited. Everything created has a specific purport. Even the angels have not been created without purpose. They are God's messengers; they carry out His wishes and commands in the heavens above and on the earth beneath; above all, they are created for the purpose of singing to their Master and of praising Him in angelic choirs. Such, then, is the purpose of the entire creation. The angelic action is typical of the human man, the highest and most perfect creature after the angels. He must by his action approach the divine, and his whole life must be a long-sustained hymn of praise to God. But man, made of the dust of the earth, cannot rise to such perfection unless the divine soul lifts him up and unless the divine Law guides him steadily upwards towards heaven. His life is a constant struggle between the grossly material inclinations inherent in his earthly nature and the high spiritual promptings of his divine soul. According to the way in which he inclines, his soul will become more or less contaminated by the contact with matter; it will lose more and more of its spiritual lustre and purity. For man has absolute free will; he is master over his own actions. This is an axiom; otherwise the whole principle of reward and punishment has to be abandoned. And yet, with that naive inconsistency so characteristic of this mystic philosophy, predestination is not excluded. Nothing happens which has not been pre-ordained, yet no attempt is made to bridge this gulf.

2. **Incarnation of souls.**—The souls have been created for a specific use; they must enter human bodies; but the choice is not left to them, either of the bodies to be selected or of the time of entry and the time and manner of exit. As soon as a woman conceives (see art. BIRTH [Jewish]), an angel appears before God with the sperm, and God decrees the future life of the yet unborn babe. Its whole life is thereby determined—whether it will be rich or poor, high-stationed or lowly, wise or foolish, long-lived or short-lived, good or bad, pious or wicked; even its future helpmeet is proclaimed in heaven to the joy and satisfaction of the heavenly hosts. In order to obviate too glaring a contradiction in a later version of this legend of the 'Creation of the Child' (see Gaster, *Jerahmeel*, ix. 19 f.), the moral qualifications of the future man and woman have been omitted. The soul, which is very reluctant to give up its heavenly abode and enter the human body, especially if the shell is that of a wicked one, is forcibly seized by the angel and carried through the bliss of heaven and the agony of hell, to see the reward for good actions and the punishment for evil deeds. Although the soul forgets it all with entry into this world, yet a dim recollection remains, a subconscious image, which is the guiding principle in elementary recognition of good and evil. Every man has within himself a standard of right and wrong given to his soul in its premundane existence. Another version (*Zôhâr*, ii. 96*b* ff.) describes the incarnation of the soul in the following manner:

> God created all the souls from the beginning, in the very form in which they would afterwards appear in this world. He beheld them and saw that some of them would be wicked. At the time when the soul is to descend, the Lord calls it and says, 'Go to such and such a place.' The soul replies, 'Let me remain here and not be defiled in that other world.' The Lord answers, 'From the beginning thou hast been created for the purpose of getting into this world.' Then the soul submits, and descends against its will. The Law which helps the soul says to it, 'See how the Lord had mercy on you. He has given you His precious pearl (the Law) to help you in this world, so that ye may return pure.' But, if laden with sin, the soul must obtain purification so as not to be delivered to Gehinnom; for two rows of angels and demons are waiting for the soul; the good to lead to Eden and the evil spirits to Gehinnom; and to be saved from punishment the soul migrates from body to body.

3. **Life of the soul on earth; migration; defeat of evil spirits.**—Now the soul begins its course upon earth. It must endeavour to obtain the

absolute mastery over the body and not to become its slave. In the first entry the soul is absolutely pure and without blemish. It is not met by the obstacle of 'original sin.' The principle upheld throughout is that 'each man dieth by his own sin' (Ezk 18[20]). But the weakness inherent in matter soon makes itself felt, and, moreover, there are the temptations placed in its way through the envy and spite of the evil spirits (*mazzîqîm*), who, though they partake of some spiritual character, are imperfect compared with the pure soul, and are anxious to drag it down to their own level.

A still greater cause lies at the root of this attempt of the evil spirits to lead the pure soul away—a desire to frustrate by the means of sin and transgression the divine plan of creation. God has created the world and man in it for His glory. Through trial and trouble man must win the crown of eternal bliss. The finite number of souls forms part of this divine plan. A term is thereby set for man's spiritualization, for an infinite number of souls might make that end impossible of being reached. But, as there is a limited number, it is obvious that the desired consummation would set in as soon as the last soul had passed through the human body, or, rather, had entered the last human body. For then all the souls created would have fulfilled their mission upon earth, and all the human beings through whom they had passed would have reached the highest degree of moral development of which they were capable, so that the progress of mankind and of the world would have attained its ultimate goal, or, to put it in the words of the mystics, the Kingdom of Heaven upon earth would then be established, the time reached for the advent of the Messiah. Already in the Talmud the saying is found, 'The son of David will not come before all the souls in bodies will come to an end.' The power of the evil spirits would then be entirely broken, and only good would reign in the world. The spirits, therefore, try to entice the soul and defile it by all manner of temptation and sin. The result is that the contaminated soul must be kept out of the heavenly bliss, and the divine plan is effectively checked. Like a 'shell' (*qᵉlîfāh*), the evil spirits surround the soul, making the material covering still more impenetrable to light and truth, as they are clinging close to the body like an additional covering. In the later development of this system the evil spirit 'cleaves' to the body of the person whose soul is to be obstructed, and the spirit is then called *dibbūq*. It has entered into a more intimate connexion with the body, and is no longer an outer covering, or *qᵉlîfāh*, originating from the 'other camp,' the *sitrā aḥarāh*.

But the demons strive in vain to impede the steady development and unfolding of God's plan. They may delay its speedy consummation; they cannot indefinitely frustrate it. The soul which has been contaminated can be purified again; the sin committed can be atoned for, and even here the means is given to the soul to achieve its own purification. The soul retains its own consciousness and is sensible to its own failings; it realizes the bitterness of punishment and the tragedy of not being allowed to ascend on high and stand again before God in its pristine purity. For it flits about the world as a disembodied spirit, hovering between heaven and earth, and waiting for the chance of atonement or punishment. This comes to it by being re-embodied, and thus the soul migrates from one being to another. It is not made clear, however, whether the soul in this new incarnation remembers its former existence or whether it realizes it when it is leaving this second body, and continues its migration until all the blemish has been eliminated. This transmigration is thus the means of defeating the work of the evil spirits, of hastening the emptying of the divine treasury of unborn souls, and of bringing about the close of the cycle and the advent of the Messiah.

4. **The justice of God.**—(*a*) *Theories of rewards and punishments.*—The migration of souls is made to serve another and still higher and more direct purpose, the justice of God. The grave problem which has haunted every form of faith has been: how to reconcile the happiness of the sinner and the trials and sufferings of the pious and good with the justice of God. Every religion has endeavoured to form a theodicy. Most of them have relegated the solution of this problem to the life after death, finding the answer in rewards and punishments to be meted out in another world filled with bliss and unutterable torments. Such teaching presupposed the eternity of the soul, and in some form or another a combination of soul and body if the latter is to suffer the torment of hell, unless it was supposed that the souls would continue an individual conscious existence capable of enduring torments as well as rejoicing in heavenly bliss. This is, however, not the place to follow further this extremely complicated problem. It was, after all, a subtle way out of the difficulty, and it was not quite free from a possible reproach of selfishness. The goodness of the soul or the purity of life obtained for that individual soul alone happiness and bliss. No one else was directly benefited by it, except perhaps that such a good and pious man served as an example to others. But the world in general apparently had nothing from him, and his virtuous life led nowhere except to his own exaltation. Not so with the belief in the migration of the soul. Here, upon earth, in the sight of all, the sinner—whosoever he might be—had to expiate his sins. Here he had to suffer for the wrong committed, and here obtain, as it were, the pass for the heavenly regions. By this slow purification and reunion with the other purified souls, moreover, a cycle was completed, at the end of which the Messianic period would begin. By his actions the whole world would benefit, and the general progress and welfare of mankind would be hastened and consummated.

Thus the soul of Adam, because he had sinned, had to begin a period of migration through other bodies and thus pass through David, who, by the sin which he had committed with the wife of Uriah, impeded the complete purification of Adam's soul. But, by its final entry into the last descendant, the Messiah would also bring about the desired result meant by the divine plan when Adam, the first man, was created.

The soul of Abel passed into Moses, or, according to another theory, the soul of Adam passed into Moses, who sinned at the rock, and then into David, who sinned with Uriah's wife, and, finally, into the Messiah, thus linking the first with the last.

There are, as it were, successive incarnations of the same pre-existing soul, and for their sakes the world has been created. There cannot be any doubt that these views are extremely old. Simon Magus raises the claim of former existences, his soul passing through many bodies before it reaches that known as Simon. The Samaritan doctrine of the *taheb* teaches the same doctrine of a pre-existing soul which was given to Adam, but which, through successive 'incarnations' in Seth, Noah, and Abraham, reached Moses, for whom it was originally formed and for whose sake the world had been created. The element which is absent here is that of migration for the purpose of purification. The latter gives to 'migration of souls' a peculiar character. Not only is the world perfected thereby (*tiqqūn*), but the sinner expiates his sin in this world in the new existence in which his soul reappears. It may enter the body of a pious man, and by his good deeds he will cleanse the dross still adhering to the soul and facilitate its ascent

on high. If the pious suffer, it is only and solely for sins committed in a previous existence, and thus suffering is not a punishment for sins now committed, but a 'purgatory' for evil deeds of a former life. The explanation of the prosperous sinner is not quite so clear. Here use had been made of the other doctrine of punishment and reward after death. The sinner benefits from the good deeds that he had performed in a previous existence. He prospers now, so that *all* his reward is eaten up by him in this world, and nothing but punishment and tortures is reserved for him in the life after death. This presupposes that the soul of the wicked is beyond 'redemption' in this world, and is sent to Gehinnom for punishment. This seems to be the view taken by 'the Saba' in the *Zôhār* in the passage quoted above (§ 2). The cycle of the soul is thus broken. It is not made quite clear how it is to be completed; but it seems that, according to some, a soul which has just sunk to this lowest level of contamination, instead of being sent to Gehinnom, becomes an evil spirit in this world, which is anxious to enter living bodies for torment or for that punishment which starts from the lowest rung of the ladder and is to lead up to the highest without recourse to punishments in 'hell.' Such a soul becomes a *dibbûg*. To exorcize it, to free it from this temporary existence as quickly as possible, and thus hasten the new cycle of evolution, is a meritorious deed, a real *tiqqûn*, an 'improvement' and perfection.

No attempt is made to reconcile these two separate systems of punishment and reward; they are often mentioned side by side in the *Zôhār* and other kabbalistic treatises. In the Targum to Ec 8^{5} the suffering of the pious and the happiness of the wicked have already been explained in a somewhat similar manner, inasmuch as the pious suffer for small sins in order to enter afterwards directly into heaven, and the sinner enjoys the fruit of some good deeds here, so that hereafter he is to go straight to torment and punishment.

(*b*) *Kabbalistic theory.*—The kabbalist, however, adds and superimposes the new theory of suffering and happiness, not for sins and good deeds performed in the person's lifetime, but for sins done during previous existences. The punishment was expected to fit the crime. Thus, if a man had sinned by his eyes, he would be reborn blind or suffering with his eyes, and, similarly, every other part of the body would then be affected by the sin committed through that part in the previous existence. Moral sins would have to be expiated in a similar manner; for, according to some of the oldest and most accredited teachers, transmigration is not limited to that from one human body to another human body. The soul of the wicked passes also into animal bodies corresponding with the character of the sin. In later schools the transmigration has been extended also to plants, stones, and metals. As an example of the former it may be stated that the soul of an adulterer passes into the body of a female stork, for it is believed that the storks punish adultery with death.[1] Thus an explanation was found for the prohibition of mixing various kinds of seeds and the cross-breeding of animals, for they disturbed the normal laws of nature and caused great suffering to the souls of such mixed products. Similarly, the peculiar command of marrying the deceased brother's wife (*yibbûm*) has its reason and justification in this doctrine of migration. The soul of the childless man cannot return to its source, for the soul has remained barren and is cut short in its earthly career before it has been able to pass through all the stages of purification. Hence the reason why the child born was to be called 'in the name' of the deceased, though it does not follow that it must bear the same name. In fact, the child of Ruth, which was a 'restorer of souls' to Naomi, did not bear the name of Ruth's dead husband. The new-born babe would receive the soul of the dead and continue his earthly life.

5. Number of migrations.—There is a difference of opinion as to how many times a soul would migrate before it had run its entire course. The majority of kabbalists incline to the opinion that no soul migrates through more than three bodies. The real course is that in which the soul has performed the whole of the 613 commandments of the Law, by which alone perfection is attained. For the shortcomings in one existence the soul is punished in the next, and then also performs some good deeds. Others think that the soul passes through a greater number of changes. It is held that the fate of the soul of the sinner is decided after three migrations, at the end of which a thoroughly wicked soul becomes an evil spirit—a demon—while that of the pious may be reincarnated times without number. In this case the ascent of the soul from the lower to the higher degree of purity and perfection is asserted.

6. Various other theories; purposes of metempsychosis.—It is held that builders of the Tower of Babel were divided into three categories, which were punished in accordance with the degree of wickedness of which they were guilty. The first lost the unity of language, and were dispersed upon the face of the earth. The second—a more daring category—were changed into all kinds of animals, and their souls were sent into animal bodies. The third—the thoroughly wicked section—were changed into demons. The change of the body of Nebuchadrezzar into a wild animal, as told by Daniel (Dn 4^{33}), lent further countenance to the possibility of a human soul dwelling in an animal body. The rules for slaughtering special animals and for the blessing by which the cutting is accompanied rest upon the same principle of thereby possibly saving a penitent soul from dwelling too long in the body of an animal. It is liberated by a religious act which assists it in its further migration. All this forms part of the *tiqqûn*, the improvement and perfection of the world, the preparation for the Messianic rule. The covenant before Mt. Sinai was made by God with *all* the souls which He had created: 'Neither with you only do I make this covenant and this oath; but with him that standeth here with us this day before the Lord our God, and also with him that is *not here with us* this day' (Dt $29^{14f.}$), for He did not speak only to those who were there, but also to those who were not there on that day, in their material form, *i.e.* in human bodies.

By this migration of good souls to good men and contaminated souls to sinners and evil-doers a certain affinity of souls was established, which led to the identification of such souls in the various stages. As mentioned before, the soul of Abel or of Adam was that of Moses, and the souls of the ten brothers of Joseph became the souls of the ten martyrs whom the legend described as contemporaries. In fact, this tendency of recognizing the older souls in more recent bodies developed in the later schools of kabbalistic speculations established by Luria, Vital Calabrese, and others into a regular system. Lists have been drawn up and books have been compiled (*Sêpher hag-Gilgûlîm*, Frankfort, 1684), in which the reincarnations of the good and evil men of the past have been duly recorded. Such spiritual genealogies—if we may use such a term—have found their way even into bibliographical and historical compilations. In

[1] The Heb. name for stork is *ḥâsîdhâh*, which, by a popular etymology, may be explained to mean 'the chaste' or 'the pious.'

addition to the complete reincarnation, there came the newer doctrine of impregnation (*ibbūr*). The soul of a good man is sometimes not strong enough to fight successfully the temptations of the world, and another soul is temporarily grafted upon that which he already possesses, so that it is made almost unassailable. The older teaching runs that the spiritual forces of man are regularly heightened on Sabbath eve by the temporary addition of a new soul, which departs with the close of the Sabbath. In the same manner a soul is grafted temporarily on to the pious man. The object of all this is to hasten the perfection of the world and the advent of the Messiah. By means of migration the soul has fulfilled the object of its creation—to pass through man and to lift man higher and to bring him nearer the divine. This doctrine, being a justification of God's ways with men, is, at the same time, a source of comfort to the pious, and a source of terror to the sinner. It reconciles man to suffering and trials, and at the same time explains the hidden meaning of many a law and ceremony which seem obscure. It is a vindication of the divine character of the Law, for its ultimate result is to be the rule of heaven upon earth.

7. Date and origin.—This doctrine of migration is nowhere to be found systematically developed. Wherever it occurs, it is tacitly assumed as well known, and no explanation is given in detail. It has, therefore, been pieced together and reconstructed by the present writer mostly from the Zoharistic literature, viz. the *Zôhār*, the *Zôhār Ḥādāsh*, and the *Tiqqūnîm*, which represents a more or less homogeneous view on migration, whenever it is referred to. While these are by far the most complete writings, they are by no means the oldest. This brings us to the question of the date and probable origin of this doctrine among the Jews.

All the beginnings of esoteric teachings are lost in the mist of antiquity, and, when such doctrines finally see the light of day, they have, as a rule, a long history behind them. It is, therefore, a fallacy to date the origin of metempsychosis among the Jews from the time when it becomes known publicly in the 9th or 10th century. The masters of the occult science never doubted its Jewish character or its old origin. Was it not part of that heavenly mystery handed down from Adam on through all the great men of the past? With great ingenuity they endeavoured to find proofs for it in the Scriptures by means of an exegesis which was fantastic in the extreme. A few examples will suffice. They are taken at random from the *Zôhār*, and they are found in large numbers in Manasseh ben Israel, *Nishmat Ḥayîm*, bk. iv. chs. 8–10.

'Till thou return unto the ground' (Gn 3^{19}) is interpreted to mean that the body alone returns to the ground; the spirit, however, is reborn.

'Naked shall I return thither' (Job 1^{21}) is interpreted literally as meaning 'to the womb,' *i.e.* being reborn.

'The word which he commanded to a thousand generations' (Ps 105^{8}) is interpreted to mean that it refers to the same soul passing through innumerable generations, for God's command had been given once to all the souls, and these souls are reincarnated over and over again.

'One generation goeth, and another generation cometh' (Ec 1^{4}). The fact that the passing away of the generation is mentioned first is a proof that this must have existed before; otherwise it ought to read 'one generation cometh and another generation goeth.'

'Which are already dead more than the living which are yet alive' (Ec 4^{2}) is interpreted to mean that the living are still uncertain as to the future fate of the migration of their souls.

A proof of 'impregnation,' or the addition of a soul, is also deduced from the following verses: 'Ye shall therefore separate between the clean beast and the unclean,' etc. (Lv 20^{25}), meaning that a clean soul shall be added, not an unclean. 'Shall flocks and herds be slain for them, to suffice them?' etc. (Nu 11^{22}), is taken to mean the addition of souls. 'O God, the God of the spirits of all flesh,' etc. (Nu 16^{22}), means also those that are added to strengthen them 'should one mar sin' whose soul proved too weak, as it had no support. 'Doeth good to his own soul' (Pr 11^{17}) means that a man attaches another soul to himself.

The letters of the name of Ad(a)m have been taken as the initials for *A*dam, *D*avid, *M*oses, and *M*essias; hence it was proved that the soul of Adam passed through all these. The letters of the name M(o)sh(e)h (Moses) are the initials of *M*oses, *S*eth, and *H*abel (Abel); hence the soul of Abel passed through Seth to Moses. The numerical value of the letters of the names of the ten tribes corresponds to the numerical value of the names of the reputed ten sages who suffered martyrdom. These examples could easily be multiplied from later kabbalistic literature, but they all follow the same line of argument. There cannot, however, be the slightest doubt that the doctrine of metempsychosis was borrowed from other religious systems, and is not Jewish at all. It will remain an open question whether the denial of the resurrection of the dead attributed by Josephus (*Ant.* XVIII. i. 4 [16]) to the Sadducees implies denial also of reward and punishment, or whether it extended only to the life beyond the grave, and that they believed in the reward and punishment in this world. His allegation that they believed that the soul died with the body is too strange to be accurate. The vindication of God's justice would most easily be found if it means that the soul migrates from one body to another, as they did not deny the divine origin of the soul. Whatever the remoter origin of it may be, it cannot be gainsaid that the atmosphere of Palestine was saturated with mystical and esoteric teachings of every kind, one among them being that of metempsychosis. The Gnostics and Manichæans held fast to it; Neo-Platonism did not deny its possibility, and thus almost insensibly it crept into Judaism. The Palestinian Targumim show traces of it, inasmuch as in some places they speak of a second death (so Dt 33^{6}), which can only mean at least a life twice repeated upon earth; this is possible only if the soul migrates from one body to another (so also Baḥya, *ad loc.*; cf. also Targum to Is 22^{14}). Saadya Gaon († 942) in the 10th cent. inveighs against such tenets, held, as he says, by a certain Karaite sect, although it was probably rather a mystical heterodox section of Rabbanite Jews who believed also in the migration of souls. A few centuries later Abraham Bedaresi (1280), a rationalist philosopher, in his letter to R. Solomon ben Adreth, no. 8, protested against this doctrine; but they were the only opponents, for the wave of mysticism was rising steadily with the narrowing of the political outlook and the change of social conditions. With the appearance of the *Zôhār* the older kabbalistic literature was pushed into the background, and many an ancient mystical treatise was forgotten, unless it became embedded in the *Zôhār—e.g.*, the treatise by 'the Saba,' 'the venerable' (*i.e.* Rab. Hamnuna), in the form of a commentary on the Biblical section '*Mishpāṭîm*,' Ex 22, which is found now in the *Zôhār* Ex 94^{a}–114^{a}. In older writings, *Qānā* and *Bāhîr*, and in those of Naḥmanides (1263), R. Solomon ben Adreth (*c.* 1300), and Isaac of Akko (*c.* 1330), faint traces of this doctrine can be detected. They show that in these mystic schools echoes of the older theory of metempsychosis had been heard and recorded. Whenever referred to, it is always an ancient tradition. Since the 13th cent. the *Zôhār* has swayed the mind of the larger section of a Jewry despondent and broken by ruthless persecution.

The dark Middle Ages began for the Jews when they came to an end for the other nations in Europe. The writings of Rekanati (14th cent.)

and Baḥya (14th cent.) prepared the way for the development.

Palestine—in a lesser degree the adjoining Babylon—seems to have been throughout the centre of mystical speculations. Thither Naḥmanides had gone, and a great school flourished in Akko for some centuries from the 12th onwards. The flow of the Spanish emigrants at the end of the 16th cent. was also towards Palestine. In Safed there arose the school of Luria (1534–72; commonly known by the initials of his name Ari = *Ḥ*abbi *I*saac *A*shkenazi), Vital Calabrese, Cordovero, Poppers, and others. Among other doctrines, they developed, in the writings *Kavvānôth*, *'Ēṣ Ḥayîm*, etc., much further the tenets of metempsychosis as a punishment for the wicked and an exalted reincarnation for the pious. The *tiqqūn*, or improvement of the world by delivering souls from the chain of migration, became one of the prominent features of this school, which led to that of the Hasidim. Remarkable legends of such deliverance are henceforth told. Every pious and great kabbalist performed them, none, however, so effectively as the master Luria himself. The history of the deliverance of such a soul in Safed is one of the most vivid autobiographies of a 'wandering soul' (first published in the *'Ēmeq ham-Melekh* of Nāphtali Herz, Amsterdam, 1648). The belief that certain persons are the *gilgūl* of other persons who had lived before them is still strongly held by those to whom the *Zôhār* is an inspired book and the teaching of divine revelation. This belief strengthens in them the concept of God's righteousness, and the conviction that, if the time were hastened for all the created souls to pass through the human body, the advent of the Messiah and the Kingdom of God upon earth would be hastened.

LITERATURE.—The books mentioned in the course of this attempt at a synthetical exposition of the doctrine of metempsychosis—the first of its kind—form the only literature that can profitably be mentioned. Manasseh ben Israel, *Nishmat Ḥayîm*, bk. iv., treats it apologetically. A. Franck, *La Kabbale*[3], Paris, 1892; A. Jellinek, *Beitr. zur Gesch. der Kabbala*, Leipzig, 1851–52; D. H. Joël, *Sohar*, Leipzig, 1849, have incidentally, of course, referred briefly also to this apparently unimportant section of kabbalistic Zoharistic speculation. See also literature to art. ḲABBĀLĀ.

M. GASTER.

TRANSMIGRATION (Teutonic).—It is clear that the doctrine of metempsychosis was held by the early Teutonic peoples, though the amount of evidence is limited and for the most part dates from a time when heathen beliefs, if not forgotten, were at least misunderstood. Such evidence as exists is chiefly derived from Scandinavian records. The only reference in early poetry is to be found in *Sigurðarkviþa hinn skamma*, 45, where Hogni refuses to hold Brynhild back from self-destruction:

'Let no man stay her from the long journey, and may she never be born again (*aptrborin*).'

More striking evidence for the belief is furnished by the prose passages contained in *Helgakviþa Hjorvarðssonar* and *Helgakviþa Hundingsbana*, ii. At the end of the former it is said that Helgi and Sváva, the hero and heroine, were born again (*endrborin*); in the latter we are told that the heroine Sigrún was Sváva reincarnate, and later that both she and her husband Helgi Hundingsbani were born again as Kára and Helgi Haddingjaskati. A reference is given to *Káraljóð*, a poem now unfortunately lost, which dealt with the adventures of these persons. Moreover, in the *Gautreks Saga*, c. vii., Starkaðr is reviled as an *endrborinn jotunn*, a 'giant' reincarnate; his grandfather Starkaðr is said to have been a *jotunn* (c. iii.).

With the introduction of Christianity metempsychosis came at last to be regarded as 'an old wives' tale.' For a time it still survived among the half-heathen population: to his horror St. Olaf found himself regarded as the reincarnation of a legendary king, one Olafr Geirstaðarálfr (*Flateyjarbók*, ii. 135).

It is not to be overlooked that in all these cases the men—though not the women—bear the same names in each incarnation. As among certain primitive peoples of the present day, the name is regarded as something more than a mere label; it is intimately connected with the soul of its possessor, so that a child inheriting the name of a dead person necessarily inherits the soul as well. An interesting reference to this belief may be cited from *Flateyjarbók*, i. 255: Thorsteinn Uxafót, a follower of Olafr Tryggvason, is visited in a dream by the ghost of a man called Brynjarr; it bestows a treasure on him and asks in return that one of Thorsteinn's children should be baptized under the name Brynjarr, since it desires a Christian reincarnation for its heathen soul.

In the *Islendinga Sogur* there are no actual references to metempsychosis, though the practice of naming children after lately deceased kinsmen (*Njals Saga*, ch. 89, *Eyrbyggja Saga*, ch. 12, *Laxdœla Saga*, chs. 36, 56) points to the existence of some such belief. But the passage in *Sturlunga Saga*, ix. 42—*þótte þeim nu Kolbeinn aptr kominn ok endrborinn*—is no true instance of this kind, since Thorgils Boðvarsson, referred to here, was born in 1226, nineteen years before the death of Kolbeinn Arnorsson, of whom he seemed to be the reincarnation. To the present day, however, it is believed in Norway and Iceland that, if a ghost appears to a pregnant woman in her sleep, it is seeking a namesake (*gaar efter Navnet*); and accordingly the child is baptized with the name of the dead person (cf. K. Maurer, *Zeitschrift des Vereins für Volkskunde*, v. 99). Sophus Bugge, moreover, states that he had heard *reise upp atte* ('raise up again') used in the west part of Telemarken with reference to the naming of a child after a dead person (*Home of the Eddic Poems*, London, 1899, p. 333).

Among the other Teutonic peoples the evidence for anything in the nature of metempsychosis is very meagre. An Anglo-Saxon charm (T. O. Cockayne, *Leechdoms, Wortcunning, and Starcraft of Early England*, London, 1864–66, iii. 66 ff.; C. W. M. Grein, *Bibliothek der angelsächs. Poesie*, Göttingen, 1857–65, i. 326 ff.) advises a woman who cannot bring forth a child to step thrice over the grave of a dead man, using an incantation for the safe delivery of her offspring. It is a question much in need of investigation whether the same idea can be traced in certain usages said to be practised in connexion with burial-places of the heathen age in various parts of Northern Europe.

It may be mentioned in conclusion that Appian (*Hist. Rom.* iv., 'de Rebus Gallicis,' 3) describes the Germans who followed Ariovistus as 'scorning death because of their hope of rebirth' (*θανάτου καταφρονηταὶ δι' ἐλπίδα ἀναβιώσεως*). In view of what is said of the Gauls by Diodorus, v. 28, and Lucan, *Pharsalia*, i. 454 ff. (with the scholia), it is not unlikely that the reference here is to a belief in metempsychosis, though one cannot deny the possibility that Appian's statement may be due to a misunderstanding of the Valhalla doctrine.

BRUCE DICKINS.

TRANSUBSTANTIATION.—See EUCHARIST.

TRAPPISTS.—Trappists is the popular name for the Reformed Cistercians, or Cistercians of the Strict Observance, now the chief division of the order.

The art. MONASTICISM[1] outlines the successive reforms named after Benedict, Cluny, Cîteaux. By 1600 the Cistercians themselves had yielded to the spirit of luxury, despite the restoration in Spain promoted by Martino de Vargas. Though Richelieu and Mazarin furthered many attempts to recall them to the letter of their vows, and though their centralized constitution might have facilitated this, a general reform was refused. Here and there a few abbeys did return to the ideals of St. Stephen Harding, the Jansenist reform of St. Cyr and of Port Royal being well known. Armand-Jean le Bouthillier de Rancé (1626–1700), abbot *in commendam* of La Trappe from the age of ten, abandoned court life in 1662 and entered one of the reformed abbeys as a novice. Two years later, having again professed, he came to take charge of his own inaccessible Norman abbey. Finding that the few monks had not shared his experience and would not share his ideals, he pensioned them off and colonized the place from other reformed abbeys. The community improved on the original austerities, taking only one vegetarian meal daily, abstaining from literature and from speech except for urgent purposes. The ideals were published by de Rancé in his *Traité de la sainteté et des devoirs de la vie monastique* (1683), and in his posthumous *Règlemens généraux de l'abbaye de la Trappe* (1701); but only a single community of nuns and two Italian monasteries adopted them. For a century they were unimportant, though other Reformed Cistercians undertook missions to Africa which had some temporary success.

The French Revolution broke up the home; the abbey was suppressed, and the premises were converted into a foundry for cannon. This was the real birth of the order. In 1791 Dom Augustine de Lestrange, master of the novices, took a score of monks to Val Sainte, Switzerland, imposing a rule stricter than ever; postulants flocked in; colonies were sent to many lands; a congregation was formed, and Dom Augustine was appointed father abbot. When the Trappists were hunted to Poland, Germany, and Italy, their zeal only increased. A nunnery was formed at Stapehill near Wimborne; a party of monks that wandered through Pennsylvania, Kentucky, Missouri, and Illinois returned to France on the fall of Napoleon, occupying La Trappe and Belle Fontaine; presently five priories were established in France, and a great college at Soligni. Before his death in 1827 Dom Augustine saw abbeys grow up in Belgium and Italy, besides two more in France. One was founded at Coalville in Leicestershire and named after the great Bernard. The cowl of his friend Alberic was taken in 1848 by an expedition from La Meilleraye in Brittany, which settled in Kentucky at an abbey named Gethsemane. Mount Melleray in Ireland sent another colony to Dubuque in Iowa, and both establishments thrive, though all the fathers are aliens. A second Irish abbey arose at Roscrea in Co. Tipperary.

Outward disasters again intensified the spiritual life. La Trappe was destroyed by fire in Aug. 1871; 1450 fathers and brothers were again expelled from France in 1880; but the austere ideals were embraced by nearly all Cistercians outside Austria-Hungary. After two constitutional changes they were formally recognized in 1892 as the Order of Reformed Cistercians, with an abbot-general at Rome; and this success was crowned six years later by the purchase of the original premises of Cîteaux. In 1903 they were expelled from France in common with most other congregations; two communities went to Nova Scotia and New Brunswick, one to Oregon, one to Brazil; two tiny groups have taken refuge near Kingsbridge and Salisbury. Belle Fontaine has endeavoured to uphold the agricultural ideals of St. Benedict, especially by its Canadian offshoots at La Trappe, where the Ottawa joins the St. Lawrence, at Lake St. John, and in Manitoba. No establishment in England offers even to its co-religionists any educational, medical, or philanthropic service. Settlements in Japan, China, Syria, Asia Minor, Algeria, Belgian Congo, and Natal have undertaken mission work, but no impartial observer has anything to say as to results. The finest Protestant tribute is that an abbey is 'an asylum for the poor and helpless, the shipwrecked, the conscience-stricken, and the broken-hearted.'[1]

Attached to each of the 71 monasteries and annexes is a body of brothers who do the rougher field work; in all there are about 2000 of these, and 1600 professed fathers. Twenty-one priories contain 2000 nuns and lay sisters. Three Italian monasteries still follow the rule of de Rancé as once used at La Trappe, but do not belong to the Reformed Cistercians; they have only 50 members.

W. T. WHITLEY.

TRAVANCORE.—Travancore (Malayālam Tiruvitānkūr, 'place where the goddess of prosperity resides'), a native state in the extreme south-west of the Indian peninsula, takes its name from Tiruvankod, 30 miles south of the capital, Trivandrum.

'It has been truly remarked that "it will be difficult to name another land which, within so narrow limits, combines so many, so varied, and such precious natural blessings."'[2]

1. History.—Travancore is said to have formed part of the ancient kingdom of Kerala. During the 11th cent. A.D. it was conquered by the Cholās; in the 13th cent. it was invaded by the Pāndyās of Madura. The present kingdom was founded in the first half of the 18th cent. by Mārtānda Varma, and in 1795 it became a protected state under the British Government. Since then it has enjoyed prosperity under a well-regulated government, and it has been conspicuous for the maintenance of order, religious toleration, and encouragement of education.

2. Area and population.—The area of the state is 7593 sq. miles, and the total population at the census of 1911 was 3,428,975, of whom 93·8% are rural and 6·2% urban. The density of the population is high: 452 per sq. mile for the whole area, and 686 if mountains, lakes, and forests are ex-

[2] *IGI* xxiv 2 f.

cluded. The people are of the usual S. Indian Dravidian type, and they preserve many characteristic usages, in particular the matriarchal forms of the household and system of marriage.

'Among the Marumakkatāyom [Malayālam *maru*, 'next,' 'other,' *makkal*, 'children,' *tāyam*, 'portion'] Hindus the family is matriarchal, *i.e.*, traces its descent from a common ancestress. The Tarwād [Malayālam *taravāṭu*, *tara*, 'village,' *pāṭu*, 'place'], as the family is called, consists of brothers and sisters and the descendants of the latter along the female line. The eldest male member, called the Kāranavan ['originator'], manages the Tarwād. In such a system the wives and children of the male members have no place. It may happen, however, that a Kāranavan may be allowed to bring in his wife and children to live in the Tarwād, but this is not necessary, nor have they any legal status in the family. The male members who are married usually visit their wives in the houses of the latter. When, however, under modern conditions, they feel able and inclined to support themselves, living apart from the Tarwād, they settle with their wives in houses of their own. In this way the putting up of separate homesteads receives a stimulus. But the Tarwād, as such, is split up only when a partition takes place with the consent of all the members. Among Makkatāyom Hindus the joint family does not generally continue single after the lifetime of the parent, especially the male parent. At the death of the father the sons divide and go and live in separate houses with their wives and children, the mother residing with one of the sons in the original household. The unmarried sons, if any, usually live with the mother. In regard to the Nampūtiri Brāhmaṇs, however, the eldest son alone marries, the other sons living with him in the family.'[1]

The chief castes are the Nāyar (*q.v.*] honorific plural of Nāyan; Skr. *nāyaka*, 'leader') numbering 592,655, best known on account of their peculiar marriage customs.[2] The Īzhuvans or Illavans, who take their name from Īzham, the Malayālam name for Ceylon, are immigrants from that island, cultivate coco-nut and palmyra palms, make the drink known as toddy (Skr. *tāla*, 'the palmyra tree'), and distil country spirits; they number 546,265. The Pulayans (*pula*, 'pollution'), numbering 185,314, are agricultural labourers. The Channān or Shānān (Tamil *shāru*, 'toddy') cultivate the palmyra palm and make coarse sugar. Brāhmans number 55,643; among them the most remarkable are the Nambūrī, Nambūtirī, or Nambūdrī (Malayālam *nambu*, 'the Veda'; *othu*, 'to teach'; *tiri*, Skr. *śri*, 'holy'), who aim at following the original Vedic rites and practise elaborate rules of purification, while they allow the younger sons of the family to enter into polyandrous relations with Nāyar women.

3. Religion.—Classified by religion, the population consists of: Hindus, 2,282,617, 66·57%; Christians, 903,868, 26·36%; Muhammadans, 226,617, 6·61%; animists, 15,617, ·46%; Jews, Buddhists, and Jains, 100.

(*a*) *Hindus.*—Of the triad, Brahmā, Viṣṇu, Śiva, the cult of Viṣṇu is most popular; in the form of Ananta Padmanābha ('the endless, from whose navel springs the lotus') he is the patron deity of the state, with a famous temple at the capital Trivandrum, which is visited by crowds of pilgrims. Among the minor deities the following are the chief: Vighneśvara ('obstacle Lord'), the Gaṇeśa or Gaṇapati of other parts of India; Subhramaṇya, Skanda, Kārttikeya, or Velāyudha, like Gaṇeśa a son of Śiva, the guardian who protects the helpless and punishes the wicked—a cult special to the Tamil and Malayālam peoples; Śāsta ('ruler'), Aiyappan or Aiyanār ('honourable father'), the most popular minor deity, chief of the ghosts (*bhūta*), who rides over the land mounted on a horse or elephant, sword in hand, to disperse all obnoxious spirits. Besides these the lower classes worship a host of godlings or minor spirits, male and female, the females attendants of the goddess Bhadrakālī, the males classed as followers of Śiva.

[2] H. H. Risley, *The People of India*[2], London, 1915, p. 206 ff.; L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, London, 1912–13, ii. 22 ff.; V. Nagam Aiya, *Travancore State Manual*, ii. 352 ff.; E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, v. 307 ff.; E. Westermarck, *The Hist. of Human Marriage*, London, 1891, pp. 116 f., 452 f.

(*b*) *Christians.*—These show a notable increase, from 498,542 in 1881 to 903,868 in 1911. The Hindu compiler of the *Travancore Census Report* for 1911 writes:

'It may be remarked here that the degeneration of the socio-economic institution of caste that showed itself in the sequestration and neglect of the labouring classes, the indifference of lay and ecclesiastical Hindu bodies in the matter of the preservation of their faith as a living force in the intellectual and moral life of the people, the atmosphere of unsuspecting toleration one breathes on all sides, the great sympathy and help accorded by the rulers of the State, the status which the religion itself enjoys, and last but not least, the self-sacrificing zeal and devotion of the missionaries as a class and of the pioneers in particular—all these gave vigour to the work and assured the results. While natural increase has been unsteady and irregular, propagandist activity has been such as to make it difficult to reduce to definite proportions the augmentation which it succeeds in bringing about—so rapid and great it has been.'[1]

The following are the details of the Christian population: Syro-Roman, 293,407; Syrian Jacobite, 202,059; Roman Catholic, 173,724; Congregationalist, 81,573; Reformed Syrian, 74,866; Anglican, 56,251; Salvationist, 16,794. The Church Missionary Society commenced work in 1816, the London Missionary Society in 1806, the Salvation Army in 1891.

(*c*) *Muslims.*—Muhammadan missionaries are said to have visited Malabar as early as A.D. 710, and the story of the conversion of the last of the Perumāls suggests that traders from Arabia arrived as early as the 8th cent. A.D.[2] In more recent times, under the rule of Haidar 'Alī and Tīpū Sultān of Mysore (A.D. 1761–99), compulsory proselytism added large numbers to the faith. The present Muhammadans are either indigenous, immigrants from the Coromandel Coast, or recent settlers from Arabia, Sindh, Gujarāt, Kachh, or Bombay, who came for purposes of trade. The first differ little from the Hindu population except in matters of belief. Those who were converted by the Musalmān kings of Mysore are known as Moplah (Malayālam Māppila, probably 'great child,' an honorary title conferred on converts), or Jonaka, Shonaga, a corruption of Yavana, 'Greek.' The Moplahs are notorious fanatics, and in several cases bodies of them have fiercely resisted British troops. The Mettan are descendants of old Musalmān merchants and of their converts. The Tulukkan (Skr. Turashka, 'Turk') belong to the immigrant class.

(*d*) *Animists.*—Animism prevails widely among the hill tribes. Spirits (*chāvu*, *chāvar*, 'death,' 'the dead') are invoked by those afflicted with disease or suffering from starvation, a long string of the names of ancestors being recited. These spirits are of two kinds: (1) those who have met with a violent death from wild animals; (2) those who have died before the age of seven. They are propitiated by animal sacrifice and oblations of spirituous liquor on a platform erected for the purpose. The forest spirits must be propitiated before a tree is cut, and special patches of the forest are left uncut because they are supposed to be inhabited by some spirit. The hill people also worship godlings who possess neither priests nor temples, the oldest member of the family offering sacrifices and oblations to trees in which they are believed to dwell. Totemism has not been recognized among the hill tribes, but they respect the cow and will not kill the elephant, the vehicle and manifestation of Śāsta. In November–December, the harvest season, they worship their weapons and tools, bows, arrows, sickles, and knives

TREASON.—See CRIMES AND PUNISHMENTS.

TREATIES.—1. **Their place in international law and ethics.**—The history of treaties, as formal agreements between nations, ratified by the respective governments, throws some light on the development of international ethics; and the formulæ and ceremonies connected with the sanctions employed at various times, to give validity to the pacts, are of interest to the historian of religion. Throughout the whole of antiquity the gods presided over all treaty-making, and the oath was a predominant factor; the transition from ancient to modern times is marked by a steady decline of this religious element. For the present purpose the juristic aspect of treaties may be ignored. But it is necessary to define their general position in regard to law. They belong to the sphere of what is known as 'international law'; but the rules known as international law 'lie on the extreme frontier of law,'[1] and it is only more convenient, not necessarily more correct, to treat them as a branch of law rather than of morals. The difficulty of regarding them as properly a branch of law lies in the fact that there is no fixed authority (unless it be a universal League of Nations) that can lay down and enforce these rules as between nations, and the rules are liable to be broken with impunity by any nation that has the power and the will to defy them. No pact between two nations can bind a third which was not a consenting party. But treaties, which are one of the most important means by which 'international law' is laid down, are valuable as a record of the development of morality, for the very reason that they 'express national opinion in a peculiarly deliberate and solemn manner.'[2] The history of treaties accordingly illustrates the growing sense of nations—which, by a legal fiction or a bold metaphor, are moral persons[3]—for morality in international relations. It also illustrates the constant struggle to discover some means of enforcing the observance of pacts.

'Upon a scrupulous fidelity in the observation of Treaties, not merely in their letter but in their spirit, obviously depends, under God, the peace of the world. *Pacta sunt servanda* is the pervading maxim of International, as it was of Roman Law.'[4]

In the earliest times of which we have record this fidelity was reinforced by religious ceremonies, calling of the gods to witness, with oaths and imprecations.[5] In modern times these religious appeals, as also the giving of pledges, hostages, and the like, have generally fallen into desuetude except in the case of treaties with savages, and the observance of treaties has been left to the conscience of the parties; but, as this could no more be relied upon than when it required to be fortified by oaths, one of the chief objects of treaties in modern times has been the establishment of a balance of power in one form or other, so as to make the violation of them a risky undertaking. Finally, the impossibility of obtaining permanent equilibrium between groups of nations has raised the question of a universal League of Nations, which, in the form which it has assumed in the Treaty of Versailles of 1919, may be regarded as the highest development that the treaty has so far reached, since, by creating a determinate authority capable of enforcing the rules, it seeks to merge international law and (so far as law can make men moral) international morality in one. Previously to this treaty, little had been done in this direction beyond the general recognition that promises and signatures are futile, and that the only security lies in 'the establishment of a just and stable order.'[1] But how to ensure that the wrongdoer who, feeling himself strong enough, wantonly violates his word and destroys the peace of the world or breaks the laws of war shall be punished has seemed an insoluble problem, since his very act implies an assurance of impunity. W. G. F. Phillimore suggested[2] that each state that is a party to a treaty should contract with each and every other state that is a party, that, in the event of war between it and any other state that is a party to the treaty, it will observe towards the state with which it is at war all the agreed rules of the laws of war; and, if the rules are violated, then any other state party to the treaty may consider it an offence against itself that the law has been violated, such violation being considered an indirect injury, by reason of the lowering of the standard of conduct. The weak point of this arrangement is that interference on the side of law and order is merely permissive; it requires to be made imperative, and its scope extended so as to cover the maintenance of the peace of nations, and not merely the observance of the laws of war.

It is generally agreed that 'international morality—if not international law—calls upon every State to use every means at its disposal, without giving offence—for example, friendly suggestion, moral suasion—to prevent the outbreak of war, or, when it has begun, to help the contending parties to compose their differences. A war between two nations directly or indirectly concerns all nations, members as they are of the international community. There is not and there cannot be any principle of law, of ethics or of religion, prohibiting peaceful States from doing their utmost to bring about a cessation of carnage and devastation.'[3]

The League of Nations converts this negative into a positive injunction to interpose, and removes the offence from the most forcible methods of doing so. For art. 16 of the Covenant of the League declares that any resort to war in breach of its covenants by a member of the League is an act of war against all other members, which is to be met by a complete severance of relations of every kind, personal, financial, and commercial, with the offender, supported by the necessary military force. The provisions of this article may even be extended to cover the case of a state which is not a member of the League and refuses, in the case of a dispute, to adopt the obligations of membership. It is obvious that even this machinery will not suffice to suppress the ambitions of a state that feels itself strong enough to defy the greater part of the world; but it is equally obvious that such a state will be less ready to take the plunge than it would be if no such machinery existed.

Although the experience of the Great War of 1914–18 dashed the high hopes which were entertained as a result of The Hague Conferences of 1899 and 1907, it is unreasonable to regard those proceedings as a mere 'misprint in the world's history.' They were attended by the representatives of nations so numerous and so important that it was possible to say that in the result of their deliberations 'we have what may be regarded as the common judgment of mankind expressed in the most solemn manner in which an international engagement between nations is capable of expression' on such vital questions as the desirability of substituting arbitration for war.[4] For the first time, too, an international court was established

to give effect to the principle agreed upon by the conference. Now it is true that this solemn judgment was abrogated by the wanton action of a single one among the signatories, and the whole fabric of international relations tottered. But the foundation remains, to which The Hague Conferences contributed certain elements of solidity, if only by producing unanimity among a greater number of nations than had ever before been parties to a treaty. Such unanimity was secured again among an even greater number, and, when a fresh start was made in 1919, the problem of securing adequate sanction for the engagements between the nations by means of a League of Nations was attacked with the more insight and chance of success, because it was known wherein the old conferences had failed.

Among the chief reasons for the failure of treaties to preserve the peace are the misconception of their object as the termination of war merely, and not also the establishment of permanent peace, and the lack of elasticity in their terms. If they are drawn merely to settle the questions outstanding at the time, without care being taken not to sow the seeds of fresh conflict by imposing harsh conditions, restraining progress and liberty and ignoring the claims of the peoples concerned, they do little more than temporarily suppress forces which break out with the greater violence at the first opportunity. For the same reason, they should not be so rigidly drawn as to prevent reconsideration in the light of new conditions, and should include the necessary machinery for such reconsideration.[1]

2. Historical development: antiquity.—(*a*) The earliest treaties of which we have any detailed record relate to the two cities of Lagash and Umma, on either side of the Shatt-el-Hai in Babylonia.[2]

Entemena, patesi of Lagash (about 2850 B.C.), records an arbitration of earlier date in the time of Mesilim, king of Akkad. The actual patesis of Lagash and Umma are not named; the dispute is settled by the gods; the god Enlil presides over the conference and invites the parties to make the treaty; the boundary is fixed at his command by Ningirsu, god of Lagash, and by the city-god of Umma; even Mesilim acts only at the command of his goddess Kadi. This is obviously an extreme instance of the religious sanction; the parties are supposed to live and move and have their being entirely in their local gods.

A second treaty between the same two cities was made about 2900 B.C. by Eannatum, patesi and king of Lagash, and Enakalli, patesi of Umma. A great boundary-ditch was dug, and the plain of Gu-edin, which was in dispute, was restored to Ningirsu, god of Lagash. Shrines to Enlil, Ningirsu, and other gods were erected along the new frontier beside the pillars of delimitation, and it was doubtless at the altars of these shrines that the parties took oaths in ratifying the treaty: 'On the men of Umma have I, Eannatum, cast the great net of Enlil. I have sworn the oath, and the men of Umma have sworn the oath to Eannatum.' He invokes the vengeance of Enlil on the men of Umma if they 'alter this word.' He also invokes other gods, to whom he has made suitable offerings, to enforce the treaty.

In the third treaty, the terms of which were imposed on Umma by Entemena of Lagash (about 2850 B.C.), we have a similar imprecation: 'If the men of Umma ever violate the boundary-ditch of Ningirsu or that of Nina, in order to lay violent hands on the territory of Lagash . . . then may Enlil destroy them, and may Ningirsu cast over them his net, and set his hand and foot upon them.' The imprecations recall those which are invoked on the violators of Babylonian boundary-stones; naturally the same means were employed to secure the validity of legal engagements of all kinds.

(*b*) The famous treaty between Rameses II. and Khetasar (Hattusil), prince of the Hittites (*c.* 1300 B.C.), is recorded in three copies, of which two are hieroglyphic, at Karnak and in the Ramesseum, while the third is the Hittite-Babylonian version, or rather fragments of two copies thereof, from Boghaz Keui.[3] Two Hittite envoys brought the text of the treaty written on silver tablets, the design of which is described:

On one side 'a figure in the likeness of Setekh, embracing the likeness of the great chief of the Kheta, surrounded by the words: "The seal of Setekh, the ruler of the heavens; the seal of the treaty which Khetasar . . . made." That which is within the frame of the design is the seal of Setekh, the ruler of the heavens. That which is on its other side is a figure in the likeness of the goddess of Kheta, embracing the figure of the princess of Kheta, surrounded by the following words: "The seal of the Sun-god of the city of Arinna, the lord of the land; the seal of Petkhep, the princess of the land of Kheta, the daughter of the land of Kezweden, the priestess (?) of Ernen, the mistress of the land, the votaress of the goddess." That which is within the frame of the design is the seal of the Sun-god of Arinna, the lord of every land.'

Thus the treaty is reinforced by being placed under the seals of the gods themselves. In addition we find the following invocations, corresponding to similar paragraphs usually attached to other documents which were intended to be permanently valid:

'As for the words of this contract . . . a thousand gods, male gods and female gods, of those of the land of Kheta, together with a thousand gods, male gods and female gods of those of the land of Egypt, they are with me as witnesses to these words: "the Sun-god, lord of the heavens," and various other gods, including those "of the mountains and the rivers of the lands of Kheta and of Egypt, of the heavens, the earth, the great sea, the winds, and the clouds."' These are invoked to desolate the house, the land, and the subjects of the violator of the treaty, and, as for him who keeps it, to preserve his health, and his life, together with his issue, his land, and his subjects.

(*c*) The covenants recorded in the OT are for the most part between single persons; but certain forms and ceremonies were doubtless common to such covenants and international treaties. Such were the setting up of a pillar and a heap of stones as witness, the invocation of the God of Abraham and the God of Nahor, Jacob's oath 'by the fear of his father Isaac,' and the sacrifice and eating of bread in the mountain, in the covenant between Jacob and Laban (Gn 31^{44-54}). The treaty between Isaac and Abimelech (Gn $26^{28ff.}$) is similarly accompanied by feasting and oath-taking. In Joshua's peace with the people of Gibeon the princes of the congregation swore by the Lord God of Israel (Jos $9^{15.\ 19}$). The ceremony of cutting an animal in twain and passing between the halves was used by the Hebrews in covenants between God and man (Gn $15^{7ff.}$, Jer $34^{18ff.}$),[1] as by other nations in connexion with purification and oath-taking; but the derivation of the phrase כרת ברית from this division of a victim is doubtful, to 'cut a covenant' being rather parallel to ὅρκια τάμνειν and *fœdus ferire* or *percutere* or *icere*;[2] whether these phrases refer to the cutting down of the victim, however, seems uncertain.

(*d*) The writers of antiquity give details of a number of more or less picturesque ceremonies accompanying oath-taking in treaties between less civilized nations. Of these the most important is the blood-covenant.[3]

The Scythians mixed wine with their own blood in a bowl, dipped their weapons into it, took oaths and uttered imprecations, and finally pledged each other in the mixture.[4] The Arabians made the incision with a sharp stone, smeared the blood on seven stones, and invoked Orotalt (Dionysos) and Alilat (Urania).[5] The *locus classicus* is Tac. *Ann.* xii. 47 (the Armenians suck each other's blood): 'id foedus arcanum habetur, quasi mutuo cruore sacratum.' It was also in later days a Saracen custom, and it was a reproach to Isaac Angelus that he conformed to it in making peace with that nation.[6] Other ceremonies are collected by Dumont.[7] In China the

blood-covenant was also in use, and treaties were confirmed by oaths and imprecations and accompanied by the sacrifice of an ox. In a treaty of 544 B.C. the formula is: 'May the gods of the hills and the rivers, the spirits of former emperors and dukes, and the ancestors of our seven tribes and twelve States watch over its fulfilment. If any one prove unfaithful may the all-seeing gods smite him, so that his people shall forsake him, his life be lost, and his posterity cut off.'[1]

(*e*) Coming to the Western nations, we find that the international relations depicted in the Homeric poems, though primitive, include the making of truces, with oaths, for the burning of the dead;[2] oaths, invocation of the gods, imprecation on the treaty-breaker, with sacrifice and feasting, also accompany a treaty between Greeks and Trojans.[3] In the historical period in Greece we find certain primitive survivals, as when Aristeides administered the oath to the Greeks and took it himself on behalf of the Athenians, throwing pieces of hot iron (*μύδροι*) into the sea. But as a rule the oaths are the ordinary ones (*νόμιμοι ὅρκοι*) in the name of the chief gods (*ὅρκιοι*); or, as in the alliance between Athens, Argos, Mantineia, and Elis (420 B.C.), the instruction is that each party should swear its most binding national oath over perfect victims (*τὸν ἐπιχώριον ὅρκον τὸν μέγιστον κατὰ ἱερῶν τελείων*). The tendency is to increase the number of gods invoked, in the futile hope of increasing the force of the oath.

In a treaty between Carthage and Philip v.[4] in 216 B.C. the following deities are invoked: Zeus, Hera, Apollo, the Genius (*δαίμων*) of the Carthaginians, Heracles and Iolaos, Ares, Triton, Poseidon, the gods of the army (*θεοὶ οἱ συστρατευόμενοι*), the Sun, Moon, and Earth, the rivers, harbours, and waters, all the gods who rule Carthage, all the gods who rule Macedon and the rest of Greece, all the gods who preside over the campaign (*οἱ κατὰ στρατείαν*). The Magnesians in allying themselves with Smyrna (mid. 3rd cent. B.C.)[5] swear by Zeus, Earth, Sun, Ares, Athene Areia, Artemis Tauropolos, the Sipylene Mother, Apollo *ὁ ἐν Πάνδοις*, all the other gods and goddesses, and the Good Fortune of King Seleucus. The Smyrnæans substitute Aphrodite Stratonikis for Apollo and omit the Good Fortune of the king.

The inscriptions frequently omit the instructions as to the gods in whose names the oaths are to be taken, prescribing merely the nature of the undertaking, as:

'I will fight for the Bottiæans who enter into the pact, and will keep the alliance with them faithfully and without guile, showing all zeal according to the pact; and I will bear no ill-will because of what has happened in the past.'[6]

Formulæ of imprecation frequently accompany the oath; in the simplest form (as in the alliance between Athens and Corcyra in 375 B.C.)[7] it is: 'If I keep the oath, may much good befall me, but if not, the contrary'; but destruction is sometimes invoked on the perjurer and all his house.[8] The inscriptions give some information as to the machinery for administering the oath.[9] The more distinguished the oath-taker, the more solemn was the oath. Frequently the oath was taken *en masse*; thus in the peace with Selymbria (408 B.C.)[10] the Athenian generals, trierarchs, hoplites, and 'any one else who was there' took the oath for Athens, while the whole people of the Selymbrians swore on the other side. Provision was sometimes made to keep the consciences of the parties alive by a periodical renewal of the oath—*e.g.*, at each Olympiad (Eretria and Histiæa)[11] or every year (Athens and Dionysius I.).[12]

The gradual moralization of international relations in the Greek world is well illustrated by the treaties of *asylia*, which have for their object to do away with the rough-and-ready methods of reprisals between individuals or states.[1] The most famous instance is the treaty between Œantheia and Chaleion (5th cent.), restricting seizures to the open sea, imposing fines for breach of the regulations, and prescribing the proper tribunals for trying cases.[2] The Greek attitude to the ethics of treaties does not differ from that of other nations; practice also, as usual, fails to conform to precept, and there is the customary laying of the blame for breach of oath on the other party.

Archidamos before Platæa calls the gods and heroes of the Platæans to witness that it was they and not the Lacedæmonians who first broke their oath.[3] The Athenians took the trouble to record a breach of faith by the Lacedæmonians on the stone on the Acropolis which bore the text of the broken treaty.[4] Again, the Athenians and Ceians inscribed on a stone the names of certain people of Iulis who had broken faith and been condemned to death; these people, however, returning to Ceos, tore up the stone; and, finally, the Athenians again provided for the restoration of the stone with the names of the offenders (363 B.C.).[5]

(*f*) Roman usage shows, as might be expected from the Roman legal genius, a more highly organized conception of international relations. The whole procedure of making treaties was laid down, and carried out by a definite body of officials, the college of *fetiales*, whose function was[6] to be the guardians of good faith in international relations.[7] This religious body represented the Roman people in all public international acts, such as making war and peace. Their origin was early, and was attributed to one or other of the kings; in fact neighbouring communities, such as the Latins and Samnites, had analogous magistrates, so that the institution must have been Italic in origin. The derivation of their name is uncertain. There were twenty in the college, one from each *curia* of the two primitive tribes, Ramnes and Titienses, men of good family, in early days at least of course non-plebeians. Their head was known as the *magister fetialium*. A fetial mission for contracting a peace consisted of at least two, the *pater patratus* and the *verbenarius*. The procedure was as follows, supposing that the peace was to be made outside Rome.

The *verbenarius* inquired whether he and the *pater patratus* were to make peace; if so, he asked leave to take the *verbenæ* (*herba pura*, or *sagmina*), *i.e.* a piece of turf from the soil of the Capitol, which rendered the persons of the mission inviolable (we may compare the legal fiction by which the site of an embassy is now considered to be the territory of the nation it represents). The fetials also carried with them sacred vessels, the sceptre of Jupiter Feretrius, and a flint knife (representing Jupiter Lapis, a primitive touch) from his temple. The *pater patratus* wore priest's clothing, not of linen, and a woollen fillet on his head. The *verbenarius* selected him from his colleagues by touching his head with the *sagmina*. They proceeded to the place selected, and, in presence of the generals and armies, and the fetials of the enemy, the terms of peace were read, and the *pater patratus* swore to them on the sceptre of Jupiter Feretrius, calling to witness Jupiter, Mars, Quirinus, and all present. He then slew a pig[8] with the flint knife, invoking death on the Roman people if they should break the peace. Then he threw away the stone (a detail recalling the throwing away of the axe in the Attic Buphonia) saying: 'If I wittingly violate my oath, may all others prosper, while Jupiter casts me out, even as I cast away this stone.'

The scene of the swine-sacrifice by fetials is represented on Roman coins of the time of Augustus commemorating the ancient treaty between Rome and the Gabines, and an analogous sacrifice by warriors, evidently engaged in making a treaty of some kind, is a common type on other Roman coins, as well as on those of the Italic revolt

1 C. Phillipson, *Internat. Law and Custom of Anc. Greece and Rome*, i. 387 f., who adds that 'amongst the uncivilized races of to-day the formal oath, imprecation, and sacrifice—sometimes of human victims—are the invariable accompaniments of the conclusion of treaties.'

against Rome in 91–88 B.C.[1] When Livy[2] describes a similar ceremonial among the Carthaginians, substituting a lamb for a pig, he is perhaps only attributing Roman customs to them; Polybius[3] is careful to distinguish, saying that the Carthaginians swear by their own gods, while the Romans perform the ceremony evidently regarded as peculiar to themselves. After the ceremony the fetials signed the text and brought it to Rome, and the whole college pledged itself to secure that it should be duly observed. It is hardly too much to say that the account given of the functions of the fetials reveals as highly organized a system, and as dignified a conception of the legal essence of the treaty, as has ever been realized. But it is a mistake to suppose that this organization is the expression of a high ethical standard.[4]

3. Middle Ages and modern times.—(*a*) The *Pax Romana* makes records of treaties during the empire scanty.[5] The swearing of oaths lingers on into the modern period.

In the treaty between Justinian and Chosroes (A.D. 561) the 12th article contains the invocation of God and the prayer that God may be compassionate to him who keeps the peace and may fight on his side, but that he may be the adversary of the deceitful man who seeks to overthrow the pact. The oath taken in the treaty of Andelot between Guntram, king of Burgundy, and Childebert, king of Austrasia (A.D. 587), is 'by the name of Almighty God and the indivisible Trinity, and all things divine, and the awful Day of Judgment.' In 842 Louis II. of Germany and Charles II. of France swear 'per Domini Dei amorem et Christiani Populi et nostram communem conservationem.' A treaty made in the 12th cent. by the city of Spalato[6] contains an imprecation: 'in the name of the Triune God, of the 118 Fathers, the 12 Apostles and all the Saints.' The oath is sometimes taken over relics, but most commonly over the Holy Gospels; *e.g.*, in the peace between Pope Alexander III. and the Emperor Frederick I. (1177) the representatives swear: 'Iuramus in manibus vestris super haec sancta Dei Evangelia quod pacem . . . bona fide servabimus, et absque fraude. Sic Deus nos adiuvet, et haec Sancta Dei Evangelia.'

The formula 'jurer en son âme,' 'jurare in animam suam,' appears frequently in treaties between England and France or the Low Countries.

Excommunication was the logical sequel to violation of a treaty-oath (as specified, *e.g.*, in the truce for the renewal of the Treuga Domini at the Council of Narbonne, 1054). Gradually the oath fades away into the promise.

In the treaty of commerce between Henry VII. and Philip, Duke of Burgundy (1495), the commissioners, in a declaration 'to all faithful Christians . . . Eternal Greeting in the Lord,' *bona fide* promise and oblige themselves, on the pledge and obligation of all their goods present and to come, to procure the observance of the treaty; these obligations are to be delivered to the deputies of each side in the church of the Virgin Mary at Calais. The king's undertaking to ratify the agreements made by his commissioners is given '*bona fide* and on the word of a King,' and the duke promises '*bona fide* and on the word of a Prince.' In the treaty of 1604 between Philip III. of Spain and James I. of England the gradual obsolescence of the oath is markedly visible in the clause: 'They shall make a like promise on the word of a King and Prince, and even swear on the Holy Gospels, if they are thereto required by the other party.'

The most modern example of an oath is said to be that taken in the cathedral of Soleure in the alliance between France and Switzerland in 1777. Thus finally disappeared that element which was, 'in a certain sense, the underlying basis of the whole body of the ancient laws of nations.'[7]

It was not uncommon for a party to a treaty to obtain absolution from his oath.

Thus Maximilian I., a few months before the League of Cambrai (1508), had made a treaty with Venice; one of the articles of the League summoned him by a papal brief to the aid of the Church and gave him reasons for breaking his oath. The pope dispensed François I. from his oath taken in the Treaty of Madrid (1526) and Henri II. from his oath at Vaucelles (1550).

A second clause was sometimes inserted, intended to prevent any party from seeking, or accepting the offer of, dispensation from his oath (*e.g.*, in the cession of the Spanish crown to Charles III. in 1703).[1] But, since release from this second obligation could obviously be obtained in the same way as from the first, it was as futile as an attempt to prevent the repeal of a law by inserting a clause imposing a death-penalty on any one who should propose such repeal. Modern treaty-custom recognizes the vanity of all such artificial supports to good faith.

The most sweeping and perhaps most futile example of absolution from a treaty-oath is provided by the bull of Pope Innocent X. describing numerous articles in the Peace of Westphalia (1648) as 'null, vain, invalid, iniquitous, unjust, condemned, reprobated, frivolous, void of force and effect,' and dispensing anybody who pleased from his oath taken thereto.[2] The explanation of this outburst lies in the fact that this treaty was 'the first fundamental pact of Europe which struck at the root of the foreign temporal authority of the Pope.'[3]

The king in recent treaties merely engages and pronounces upon his royal word that he will sincerely and faithfully perform and observe the terms of the contract.[4] Finally, the parties to the Treaty of Versailles (1919) merely 'agree' to the covenant of the League of Nations and the closing formula is simply: 'In Faith Whereof the abovenamed Plentipotentiaries have signed the present Treaty.'

(*b*) Religious formulæ are also used to a considerable degree as introductory clauses from mediæval times onwards, but in this feature treaties merely fall into line with all important documents. The commonest introductory formulæ are 'In the name of the Most Holy and Undivided Trinity' (*e.g.*, in the treaty between Charles the Simple and Henry I. of Germany, 926, or in the Treaty of Vienna, 9 June 1815) and 'In the name of our Lord Jesus Christ.' A more florid style is naturally observable in the treaty between Frederick II. and Abu-Zakaria-Yahia, king of the Saracens of Tunisia, in 1231.

'In nomine Dei misericordis, miseratoris. Incipimus cum laude Dei maximi et, invocatione illius prelaudata, petimus prosperitatem. Laus Deo, scienti abscondita, futura, extantia, qui est eternus, post finem omnis viventis.'

The importance of the religious sanction made it long a moot point whether nations of different religions could make valid treaties with each other (a point, however, which Grotius decided in the modern sense), or, again, whether it was obligatory on all Christian nations to be leagued together against the infidel. In modern times it is recognized that treaties are governed by natural law alone, and the religious element, either in the content or in the phraseology of treaties, has naturally become much less discernible—to such a degree that the profession of Christian principles in the Holy Alliance (26th Sept. 1815) between Austria, Prussia, and Russia makes a deep and justifiable impression of insincerity.

In this remarkable alliance (the real object of which was anti-revolutionary) the contracting parties 'solemnly declare that the present Act has no other object than to publish in the face of the whole world their fixed resolution, both in the administration of their respective States and in their political relations with every other Government, to take for their sole guide the precepts of the Holy Religion, namely the precepts of Justice, Christian Charity and Peace, which . . . must have an immediate influence on the Councils of Princes and guide all their steps as being the only means of consolidating human institutions and remedying their imperfections.'

It is significant that the pope was not invited to join this alliance, and that Britain was prevented

from doing so 'by the forms of the British constitution.'[1]

(*c*) Apart from professions of this sort, the actual protection of the religious freedom of peoples involved in a settlement by treaty has often formed the subject of special articles.[2]

An early and remarkable instance is in the treaty between Justinian and Chosroes, in A.D. 561, in which a special article provided that Christians in Persia should enjoy freedom of worship, and on their own part should not attempt to make proselytes among the Magi. In modern times the Treaty of Westphalia marked an advance in religious toleration. The Treaty of Paris in 1763, recognizing the conquest of Canada, made special provision for liberty to the new Roman Catholic subjects of the king of Britain to follow their own religious worship. The Treaty of Oliva in 1660 (between Poland and Sweden) protected the co-religionists of either power in the territory of the other. In 1867, when Russia ceded Alaska to the United States, it was provided that the civilized inhabitants should not be interfered with in their religion. And in 1913, by the Treaty of Constantinople, Muslims resident in Bulgarian territory were guaranteed the enjoyment of religious liberty, and the name of the sultan as khalif was to continue to be pronounced in their public prayers. 'It is incumbent on the acquiring sovereign to allow to the inhabitants of the annexed territory the free exercise of their religion when it is not incompatible with good order and the fundamental dictates of morality. The obligation is not, of course, a legal one, but its sanction is rooted more deeply than that of positive enactments.'[3]

Hence the necessity of actual stipulations, such as those enumerated, is not usually felt.

(*d*) Of more importance, as indicating moral progress, than professions relating to religious principles, or even than provisions for religious freedom, is the degree of solicitude shown by the contracting parties for the general interests of the people. W. G. F. Phillimore[4] remarks that, except in the matter of religious toleration, the Treaty of Westphalia paid scant regard to the interests of the people. From 1648 to the recognition of American independence in 1783 the chief consideration in treaties is paid, as in older days, to the rights and interests of sovereigns and reigning families. In the next period, down to 1859, there is increased recognition of the rights of states. Still, by the General Act of the Congress of Vienna, *e.g.*, states and populations were trafficked in, with absolute disregard of the peoples concerned, who might as well have been slaves or cattle.

Since 1859 'little regard is paid to the supposed rights and interests of individual sovereigns or reigning families, and a new principle has arisen, viz. the rights of nationalities.'[5]

4. Conclusion. — Certain moral considerations which arise in connexion with treaty-making and treaty-breaking may be stated, though no solution is necessarily offered of the questions involved.

(*a*) The construing of treaties is a matter of equity. They are covenants *bonæ fidei*, and are not therefore to be technically construed.

'Discrimen actuum bonae fidei et stricti juris, quatenus ex jure est Romano, ad jus gentium non pertinet.'[6] The principle of the *Digest*, 'voluntatem potius quam verba spectari placuit,' applies with especial force.[7] 'There is no place for the refinements of the courts in the rough jurisprudence of nations.'[8]

In antiquity a famous instance of the breach of this principle was the murder of Hippias by Paches.[9] The classical example in modern writers, however, is the action of the French who, having destroyed the fortifications of Dunkirk in accordance with the Treaty of Utrecht, proceeded to construct a still stronger place at Mardick, a few miles away. The principle by which a provision may be 'extended' so as to include a case to which the same reason applies as applied to the case originally envisaged, or may be 'restricted,' so that an ally excludes the application of a provision to a case obviously improper (as when, having promised to aid an ally in all its wars, it is asked to join in an unjust war)—this principle of extensive or restrictive interpretation assists contracting parties in adhering to the spirit rather than the letter of the treaty.[1]

(*b*) Since governments are representatives of justice, morality, and religion, it is assumed[2] that a treaty containing an engagement to do or allow that which is contrary to morality or justice is invalid. 'Pacta, quae turpem causam continent, non sunt observanda.'[3] Since a large number of treaties are forcibly imposed on a conquered by a conquering state, it is obvious that this principle provides innumerable opportunities for dispute and repudiation, under the next heading.

(*c*) How far is a treaty invalidated by the employment of force on the part of one of the parties? To this it is generally agreed to answer that there is no force in the plea that one of the parties consented through fear, or in face of superior force, such as would invalidate a private contract, since such treaties are only a way of terminating war, which is entirely determined by force. 'No inequality of advantage, no lesion, can invalidate a Treaty.'[4] But it is equally clearly held that treachery or duress exerted against the representative of a state amply justifies the repudiation of a treaty. The classical instance is Napoleon's extortion of terms from Ferdinand VII. at Bayonne.

(*d*) Fraud is also clearly held to invalidate a treaty, for then there is no real freedom of consent on the part of the deceived party.[5] The distinction is sometimes a little delicate between positive fraud and *suppressio veri*.

In the negotiations for the Webster-Ashburton Treaty (1842) Webster suppressed a map which was favourable to the British cause. The map could have been found, as Greville admitted, if the British authorities had caused proper search to be made, and Lord Ashburton agrees that he had no legal cause for complaint.[6] Yet it is to such cases as this that the remark of Hall[7] may be applied: 'It is recognized that there is an international morality distinct from law, violation of which gives no formal ground of complaint, however odious the action of the ill-doer may be.'

(*e*) The question of how far a party can liberate itself from obligations has been brought into special prominence by Germany's repudiation of its pledge to Belgium in 1914. To the doctrine that 'necessity, when real and *bona fide*, overrides the obligation of the promise' R. J. Phillimore[8] replies:

'It is manifest that the State, like the Individual, which takes advantage of every change of affairs to disengage itself from the obligations of a solemn covenant, weakens the foundations of that good faith on which the peace of the world depends.'

So too Hall:[9]

'Modern writers, it would seem, are more struck by the impossibility of looking at international contracts as perpetually binding, than by the necessity of insisting upon that good faith between States without which the world has only before it the alternatives of armed suspense or open war, and they too often lay down canons of such perilous looseness, that if their doctrine is to be accepted, an unscrupulous State need never be in want of a plausible excuse for repudiating an inconvenient obligation.'

Pedants such as those on whom Frederick the Great relied to justify his acts are to be found in all ages and countries. The Conference of London (1871) made the declaration:

'It is an essential principle of the law of nations that no Power can liberate itself from the engagements of a treaty, or modify the stipulations thereof, unless with the consent of the contracting Powers by means of an amicable arrangement.'

This declaration, which was signed by all the

leading Powers of Europe, was provoked by Russia's attempt to evade its obligations under the Treaty of Paris of 1856, on the ground that lapse of time had changed the conditions. Although no specific declaration to the same effect appears to be included in the covenant of the League of Nations or in the treaty with Germany, the case seems to be covered by article 16, which provides for the prevention or punishment of breaches of covenant in general.

(*f*) How far does honour demand the intervention of one of the guarantors, in the case of a collective guarantee, when agreement is not reached between all parties?[1] Bluntschli holds that each guarantor is bound to act separately in such a case. Lord Derby (in connexion with the Luxemburg Convention of 1867) held that honour (but not legal obligation) compelled each guarantor, in concert with the others, to maintain the engagements; but that, if concerted action was not obtainable, then a guarantor would have the right, but not necessarily the legal obligation, to act. It is obvious that this difficulty could be avoided by care in drafting, and that, unless Bluntschli's view be accepted, the collective guarantee is not likely to be very valuable until we have reached a higher code of international honour than prevails at the present time. The covenant of the League of Nations meets the case by making joint intervention obligatory on all its members.

G. F. HILL.

TREES AND PLANTS.—1. Introductory.—All plants are sacred. This principle of the followers of Zoroaster lies at the root of all plant-lore, all tree-cults. All plants possess the gifts of immortality and health.[2] The subject enters into every form of religion, and its ramifications are traceable in different aspects and degrees from the tree of life to the May-pole. It rests on the earliest conceptions of the unity of life in nature, in the sense of communion and fellowship with the divine centre and source of life. The oak of Mamre, the ash Yggdrasil, the *ashērāh*, the oak of Dodona, the *Ficus ruminalis*, the Bodhi-trees, the pine-cones, and the seven-branched candlestick, even the modern Christmas-tree with its lights and its fruit and its fillets, are instances of the vast area in folk-lore, tradition, and social custom which has been influenced by early reverence for the sacred tree.

[1] Hall, p. 360. [2] *RGG* ii. 506.

The sacred tree is thus deeply rooted in the primitive religious ideas of the human race. The spring, the rock, the tree are all visible manifestations of the divine spirit. They are found associated in the most ancient sanctuaries as different symbols of life; and this life, in earth or water or tree, is one with human life. The same divine spirit lives and works in all and manifests itself in each and all. The secret of religion is the recognition of this life as divine; its duty is the obligation of fellowship and worship which comes of this recognition.

In the earliest stage the sacred tree is more than a symbol. It is instinct with divine life, aglow with divine light. It is at once the tree of life and the tree of the knowledge of good and evil. This animistic stage is traceable in folk-lore and myth, in traditional survivals in later ritual, and in savage cults in more recent and even modern times. In the history of religious development it lies behind the historic era. The burning bush, living and aglow with the divine voice, gives a conception of this earliest stage.

In the second stage the sacred tree is planted in holy ground. It is representative of the deity. It is the dwelling-place of the deity. The priest-king is its champion, and is himself the embodiment or incarnation of the god.[1] It is as priest-king at Mamre that Abraham arms his trained servants and leads them against the kings of the earth. It is an archaic survival in an archaic fragment (Gn $14^{18f.}$). The champion of the tree-god must be loyal to the cult. A new sanctuary must be consecrated by the planting of the sacred tree, though not always of the same tree. The oak-Zeus of Dodona adopted under certain conditions the white poplar and the plane. Abraham, the champion of the oak or terebinth of Mamre, planted a grove, *i.e.* a tamarisk, at Beersheba. Agamemnon, as guardian of a sacred tree, and himself enjoying the divine title ἄναξ ἀνδρῶν and worshipped as a chthonian Zeus in Laconia, planted a plane-tree at Delphi and another at Caphyæ in Arcadia.[2] These plantings are examples of the second, or representative, stage of tree-worship.

The third is the symbolic stage. The 'grove,' or *ashērāh*, the common adjunct of the Canaanite shrine, is the most familiar example of this stage. It was a wooden pillar, representative like the living tree of the deity, 'the token of the deity's presence or a magnet for attracting it.'[3] There are traces of it in the sanctuaries at Samaria ($2\,K\,13^{6}$), at Bethel (23^{15}), and even in the Temple at Jerusalem (23^{6}).

The differentiation of the one deity into the 'gods many and lords many' of local and national cults led to the iconic representation of the tree-god. The stump takes human shape. The Hermæ, wooden or stone pillars swelling towards the top, were crowned with the head of Hermes. The rude figure of Priapus as protector of gardens was of a similar character. The *caduceus* of Hermes, a wand with a triple shoot, may refer also to his origin as a tree-god.[4] Silvanus is represented in a similar form, with his sacred pine and also with the *caduceus* as a symbol. And in this connexion the statement of Pausanias

and Pliny is significant, that in ancient times the images of the gods were made of wood.[1] And with the differentiation of the deity into the gods of the nations there came the differentiation of the tree into the trees sacred to the several gods. The oak was specially sacred to Zeus. The *Ficus ruminalis* of the Palatine was originally the sacred tree of Rome, though Juppiter was associated with the oak on the Capitoline Hill.[2] The cult, in early times as wide as the world, was narrowed when no sanctuary could be dedicated to Apollo which was unfavourable to the growth of his sacred laurel.[3]

Primitive worship was essentially an act of fellowship and communion with the deity. The vestment of the worshipper was the sheep-skin or the goat-skin specially sacred to the deity worshipped, as the white robe of righteousness is the symbolic vestment of the Christian worshipper. This is generally traceable in theriomorphic cults, as in the Lupercalia. But it is traceable also in tree-worship. The victor in the Olympic games was treated as the human representative of the tree-god. He was decked with olive and crowned with a helmet filleted and crested with the twig of the sacred tree.[4] The English Jack-in-the-Green of the old May-day sports and the Kentish Holly-boy and Ivy-girl of the Shrove-tide revels[5] are reminiscences of this worship.

Sacrament and worship are closely linked together. In the archaic tradition of Abraham (Gn 14^{18}) Melchizedek, king of Salem, brought forth bread and wine; and he was 'priest of the most high God' (El Elyon). Sacramental communion with the deity is the essence of the mysteries, and the mysteries belong to the primitive stages of religion: 'I fasted; I drank the kykeon; I took from the basket.' This was the touching of the *sacra*, the sacramental core of the mysteries of Eleusis. They were rites sacred to Demeter the Earth-Mother.[6] She is the Mountain-Mother (*q.v.*), the mother of the gods, represented with her pillar-shrine, the pillar of her sacred tree. She may be compared not only with Isis, but with Hathor and her sacred sycamore. Hathor nourished the wandering souls in the cemeteries of Egypt with food and drink. The Cretan Demeter in her mysteries nourished her mystics in life. The mysteries of Dionysus belong to the same cycle of ideas. Dionysus combined in himself the rites of the beer-god Sabazios of Thrace and of the mystery-god Zagreus of Crete.[7] The *haoma* of the Persians, the *soma* of the Hindus, the *ambrosia* of the Olympian gods, were all means of sacramental communion, a partaking of the tree of life.[8]

The sacred tree, instinct with the divine life, is vocal with the word and the will of the deity. A prominent feature of the Zeus-cult of Dodona was its oracle. 'And the giving of oracles was a chthonian prerogative.'[9] David is to consult the oracle of the mulberry-trees before he attacks the Philistines (2 S 5^{24}). God called unto Moses from the midst of the bush in Horeb (Ex 3^{1-4}). The sacred tree is alight with the wisdom of God. To partake of the acorns of Zeus was to acquire wisdom and knowledge.[10] The burning bush points to the symbolic meaning of the seven-branched candlestick in the Temple. It is a budding and blossoming almond (Ex 37^{17-24}). The imagery of the rod out of the stem of Jesse, and the Branch growing out of his roots, the setting of the sevenfold gift of wisdom, is another illustration of the same truth (Is 11^{1-3}; cf. LXX). And this again illuminates the meaning of the tree of the knowledge of good and evil (Gn 2^{17}). It is the oracle of the God of righteousness, as the seven lamps are 'the eyes of the Lord . . . beholding the evil and the good' (Ps 15^{3}; cf. Zec 4^{10}, 2 Ch 16^{9}). The tree of knowledge is the oracle of religious and moral wisdom.

2. The animistic stage in tree-worship.—The tracing of this stage in its original simplicity is almost as elusive as animism itself. In prehistoric times it was already being absorbed in higher religious conceptions and revelations, in the higher physical and religious and ethical development of the human race. Jahweh 'finally triumphed over the *bᵉʿālîm*, not by avoiding them, or by destroying them, but by absorbing them.'[1] This is the principle in all religious development. The burning bush was not merely the oracle of Horeb; it was the dwelling-place of Jahweh (Dt 33^{16}). The fable of the trees and the bramble king was spoken 'by the plain [oak or terebinth] of the pillar that was in Shechem' (Jg 9^{6-21}). It is a survival of ancient religious conceptions, an apologue or parable familiar in early tree-worship. The story of the thistle and the cedar is another (2 K 14^{9}).[2]

'Tree-worship pure and simple, where the tree is in all respects treated as a god, is attested for Arabia . . . in the case of the sacred date-palm at Nejrân. It was adored at an annual feast, when it was all hung with fine clothes and women's ornaments.'[3]

The sacred *erica* in the temple of Isis at Byblos was said to have grown round the body of Osiris. It was a stump wrapped in a linen cloth and anointed with myrrh. It represented the dead god. It is suggested that this explains the mystery of the draping of the *ashērāh* (2 K 23^{7}).[4] There are similar survivals in Greek ritual. Incense was burned and the tree was decked with fillets and honoured with burnt offerings. Mrs. Philpot gives[5] an illustration of a fruit-tree dressed as Dionysus—another example of draping as part of this early ritual. Cook in his exhaustive monograph on the cult of the oak-Zeus[6] has traced it through all the earliest sanctuaries of the Mediterranean area, especially in Dodona and Crete, and has given his conclusion as follows:

'Zeus was at each of these cult-centres conceived as a triple divinity (sky-god+water-god+earth-god) dwelling in a sacred oak and served by a priestly-king, who was regarded as an incarnation of Zeus himself and whose duty it was to maintain the sun's heat by magical means.'[7]

The Minotaur, the Ægean horns of consecration, and the axe[8] are also features in this ancient ritual.

This survey of the primitive cult is a key to the early worship of the sacred tree, not only in Celtic folk-lore and Gaulish sculpture, but in the survivals of pagan worship. E. Clodd gives a study of the 'primitive pagans' of S. Nigeria which sums up the animistic conception of tree-worship.

'A recent traveller among the "primitive pagans" of Southern Nigeria reports this speech from a native: "Yes, we say, this is our life—the big tree. When any of us dies his spirit does not go to another country, but into the big tree; and this is why we will not have it cut. When a man is sick, or a woman wants a child, we sacrifice to the big tree, and unless Oso'wo wants the sick man, our request is granted. Oso'wo lives in the sky, and is the Big God. When any of us dies away from this place, his spirit returns to the big tree."'[9]

Among the Hamitic tribes the crude animism has developed into a sort of polytheism with one highest god, Wāq.[10] He is the big god of the big tree of Nigeria.

7 *Ib.* xvii. 403. 8 *Ib.* xviii. 85.
9 *Animism*, London, 1905, p. 74. 10 *ERE* i. 56b.

The tree-cult of the aboriginal Africans is to-day largely associated with ancestor-worship. Trees planted round the graves of their ancestors acquire a sacred character. The great tree on the verandah of a dead man's home becomes the shrine of his spirit. And it is held that the highly-developed tree-cult of the Hereros is a direct offshoot of ancestor-worship. One tree is hailed with the words: 'Holy art thou, our ancestor.'[1] The facts must be accepted, but the inference may be questioned. The polytheism and the ancestor-worship are both to be traced to the more primitive forms of animism represented in Ægean evidence as the cult of the Great Spirit or the oak-Zeus. They are both due to the principle of differentiation in the development of religious conceptions.

'Anthropomorphism is in some cases preceded by theriomorphism, but theriomorphism is never generated out of anthropomorphism.'[2]

All life in primitive ages is one, and in its movement inspires fear, not only the fear of God, but the 'fear' of Isaac (Gn 31^{42}). It is Jacob who 'sware by the fear of his father Isaac' (31^{53}). And Jacob by his wrestling attained the title of Israel (32^{28}). Abraham was the priest-king of Mamre, Melchizedek the priest-king of Salem. At Olympia and probably at Dodona the challenge of the priestly king gave rise to a regular athletic contest.[3] Minos as priest-king of Cnossus had a reign of limited duration. He was king for a period of nine years, when he withdrew to the Idæan cave to hold converse with Zeus.[4] Theseus, by his victory over Minos under the guise of Taurus, succeeded to the sun-king's rights as champion of the oak-Zeus.[5] Is it not evident that, behind and prior to the hero-worship of Theseus and the veneration for Israel, there is the ritual and there are the *sacra* of the deity, whether Zeus or El Elyon or Jahweh, the Great Spirit of primitive animism?

3. The sacred plantation.—The planting of the sacred tree or grove is a farther step in the development of tree-worship. The primitive priest-king does it as champion of the tree-spirit, under the conscious guidance of God. Eden is the most familiar example of a sacred plantation (Gn $2^{8f.}$). The practice of primitive religion colours the language and imagery of poet and prophet (cf. Nu $24^{5f.}$, Ps 104^{16}, Is 61^{3}). The riddle and parable of Ezekiel has new meaning when read in the light of early ritual:

'A great eagle . . . came unto Lebanon, and took the highest branch of the cedar: He cropped off the top of his young twigs, and carried it into a land of traffick; he set it in a city of merchants. He took also of the seed of the land . . .; he placed it by great waters, and set it as a willow tree. And it grew, and became a spreading vine of low stature' (Ezk 17^{3-6}; cf. vv.$^{22-24}$).

In Ægean art the living tree is represented sometimes singly, sometimes in groups of three, or in groves. It is at times close to an altar, or even growing from it; in one case the goddess sits under it. The palm-tree, the fig, and the cypress are most frequent; but the pine, the plane, and the vine also appear.[6] It may even spring from the *bucrania*, or 'horns of consecration,' which themselves represent the sacred bull, the theriomorphic representation of the oak-Zeus.

At Athens the original cult was that of the oak:

'Nondum laurus erat; longoque decentia crine
Tempora cingebat de qualibet arbore Phoebus.'[7]

There are in the Caryatides, or nut-maidens, traces of a nut-grove, the nuts themselves being known as the acorns of Zeus. Later, after this first stage of substitution, 'Zeus took over the olive.'[8] These

ἀθῆναι, or nurses of Zeus, gave their name to the city, and later to the goddess whose cult overshadowed that of Zeus on the Acropolis.[1] In the Academy at Athens there were twelve sacred olives in the precinct of Athene.[2] Demeter had her sacred oaks, and the boy who pronounced the Eleusinian formula at Athenian weddings, *ἔφυγον κακόν, ηὗρον ἄμεινον*, was wreathed with oak and thorn.[3] There was a grove planted for Demeter at Dotium by the Pelasgians before they migrated from Thessaly to Cnidus. And Ovid, telling the story of the judgment on Erysichthon, speaks of the tree of Demeter as an oak, adorned with fillets and tablets by the people.[4]

These plantings are wide-spread, and traceable to the earliest sites. Hercules planted two oaks at Heraclea Pontica in Bithynia.[5] Æneas planted a huge oak-tree, lopped and decked as a trophy, on the tomb of Mezentius the Etruscan. The crown of golden oak-leaves from Vulci implies that the Etruscan kings were representatives or champions of the oak-Zeus. The tree planted by Æneas was itself identified with the king: 'manibusque meis Mezentius hic est.'[6] The identification of tree, god, and king is general. Romulus and Remus were worshipped in the Comitium under a sapling planted from the *Ficus ruminalis* on the Palatine. The Bodhi-tree of Anurādhapura, long the capital of Ceylon, is over 2000 years old. It was planted by Tissa—a branch of the original Bodhi-tree, at Gayā in India.[7] The sanctuary of 'Uzzā at Nahla near Mecca consisted of three trees[8]—another link with the wide-spread cult of a triple tree-god, as sky-god, water-god, and earth-god in one.

The chain of evidence is unbroken from East to West; the triple-headed gods of Gaul, sitting cross-legged on their throne as in India, point to closer contact with the neolithic age than even Greece and Syria. The sacred flint of the temple of Jupiter Feretrius on the Capitoline Hill at Rome, the 'antiquum Jovis signum,' the home of Jupiter Lapis, has been regarded as an unhafted neolithic celt, preserved among the aborigines of Latium from an immemorial past.[9]

The sacred tree, the sacred plantation, was the seat of authority, the seat of judgment. The Romans met for council 'in aesculeto.'[7] The senate of the Galatian Celts met at a place called *Δρυνέμετος*, doubtless sacred to their national cult: *κελτοὶ σέβουσι μὲν Δία, ἄγαλμα δὲ Διὸς κελτικὸν ὑψηλὴ δρῦς*.[10] Deborah the prophetess 'dwelt under the palm tree of Deborah, . . . and the children of Israel came up to her for judgment' (Jg 4^{5}; cf. 1 S 22^{6}, Jg 6^{11}). In 458 B.C. the Roman envoys were sent to complain that the Æqui had broken a treaty concluded in 459. They were bidden to make their complaint to a huge oak on Mount Algidus under the shadow of whose branches the Æquian commander had his quarters.[11] The *prætorium* under the sacred oak is certainly a primitive trait.[12]

A sacred rowan-tree in Ireland derived its origin from the rowan of Dubhros, the Black Forest, in Co. Sligo.

The tree had grown from a quicken-berry dropped by the Tuatha Dé Danann, who had brought it from the Land of Promise. It was guarded by a giant named Searbhan, who could only be slain by three blows from his own club, and had a single broad fiery eye in the middle of his black forehead. He was overcome by Diarmait, the culture-hero of Irish folk-lore.[13] He

[13] Rhys, *Celtic Heathendom*[2], p. 355 ff.

dwelt in a hut among the branches and was so great a magician that he could not be killed by fire, water, or weapons of war.

Here again there is the sacred tree, the fierce-eyed guardian, triply inviolate, the challenge, and the contest so frequently met with in the legends of the sacred grove. And in Danu (the Welsh Don), the goddess-mother of the Tuatha Dé Danann, is there not a link with the Demeter of Greek myth, and in the name itself an echo of the Δάν (acc. Δᾶν) of the oak-Zeus, and of Jana, Diana, Artemis on the slope of the Aventine? She is the earth-goddess, the Dea Dia of the Romans, the Dan of the Dorian Greeks: *οἱ γὰρ Δωριεῖς τὴν γῆν δᾶν λέγουσι καὶ δίαν.*[1]

4. The sacred stump.—The Lion Gate at Mycenæ is one of the earliest aniconic representations of the worship of the sacred tree. The pillar of which the lions are the supporters tapers downwards like the ancient Herm.[2] The subject has been very fully treated in art. POLES AND POSTS; but some further links may be noted.

The pillar-shrine of Cnossus with its sacred doves is recognized by Cook as a 'conventionalised but still aniconic form of a triple tree-Zeus.'[3] The Lydian cult of Zeus *ἀσκραῖος* was connected with the oak. A coin of Halicarnassus represents him 'as a bearded god crowned with rays and standing between two oak-trees, on each of which is a bird.'[4] In the same city there was a cult of Aphrodite *ἀσκραία*. This cult gave its name to the city of Aphrodisias.

The coins of this city 'show the leafless trunk of a tree with three branches. Sometimes the three branches rise separately from an enclosure of trellis-work. Sometimes they spring from a single trunk, on either side of which is a naked man wearing a Phrygian cap: the one on the left wields a double-axe; the one on the right kneels or runs away, turning his back upon the tree [a feature still preserved in folk-lore]. Sometimes . . . the tree is flanked by two lighted altars.'[5]

The priest of the Cappadocian cult of Bellona at Rome is represented with a branch in one hand and the two-headed axe in the other—a further link with the oak-cult of Crete.[6]

Amid the early rites of Etruria and the *sacra* of Rome there are further associations with this cult. Hermes is represented in a fragment of Aristophanes as *τριπέφαλος*; so also is Janus on a coin of Hadrian.[7] Janus is also represented with a spear; and his title Quirinus is understood in reference to the oak-god. The Sabine *curis*, the oaken spear, the Quirites, the men of the oaken spear, are thus related to Janus Quirinus or Jupiter Quirinus.[8] The spear is a variation of the sacred stump. The tree-god is often represented by a post, sceptre, or spear.

The *trixylon* associated with Juno Sororia and Janus Curiatius is a symbol of this triple Janus. It consisted of two vertical beams and a cross-bar, the rude form of a cross. The 'yoke' under which the conquered were forced to march was of three staves or spears, and is also traced to the cult of Janus Quirinus. The door-posts (*januæ*) were sacred to him, as the threshold was to the Earth-Mother.[9]

The sprinkling of the blood on the door-posts in Hebrew ritual (Ex 12^7, Ezk 45^{19}) and the shaking of the threshold in the vision of Isaiah (Is 6^4 RV) are examples of the same cycle of ideas—the sacredness of the posts and the threshold as tokens of the Deity.

The *caduceus* is another variation of the sacred rod. It consisted of a triple shoot, the central shoot forming the handle, the two side shoots being folded back into a double knot. The elder lends itself to this by its opposite shoots, and the tree is tabu in the folk-lore of the West. It is not lucky to burn it. Judas hanged himself from an elder-bush. The *lituus* of the augur is another variation of the sacred rod. So also the mysterious twisted rods used in what is probably a funeral procession in the decoration of Etruscan tombs at Norchia and Tarquinii.[1] In the fresco at Tarquinii, while most of the figures have the twisted rod, 'the symbol of the Etruscan Hades,' one of the leading figures has the *lituus*, and prominent among these is the hammer borne aloft, 'a frequent emblem of supernatural power.'[2] The figure of the god with the hammer is frequently met with on Celtic monuments.[3] The Y cross with its mystic Pythagorean meaning has also some ancient link with these Etruscan rods.[4] A hazel-twig of this shape is in use as the divining-rod for tracing water.

The Etruscan *lucumones*, or kings, were representatives of Jupiter. Their crown was of golden oak-leaves, with acorns, gems, and fillets. They acted as vice-gerents of the oak-god. Their golden *bulla* was the symbol of the sun-god—another link with the oak-Zeus. They used a sceptre with an eagle, and were preceded by the lictor bearing the axe with the bundle of rods. Cook suggests that these may be a conventional substitute for the trees of the tree-god.[5] These were all part of the royal insignia of the ancient king. Is it not possible to trace the origin of the English regalia to the same source?

In the Inventory of 1649 are enumerated the 'large staff with a dove on the top, formerly thought to be all gold, but upon trial . . . found to be the lower part wood within and silver-gilt without'; the 'small staff with a fleure de luce on the top . . . found to be iron within and silver-gilt without'; 'one staff of black and white ivory with a dove on the top'; and the two sceptres, one with the cross, and one with the dove.[6]

These are all symbols of authority, such as are found in the *sacra* of the ancient races of Europe. The sceptre with the cross, the wooden rod with the dove, the rod with the 'fleure de luce' may be compared with the tau-cross, the blossoming stump, and the dove-pillars of the Etruscan and Ægean cults. The rods laid up before the Lord in the tent, 'one for each father's house' (Nu 17^2 RV), 'twelve rods,' and the budding of Aaron's rod (v.[8]) point to similar associations on Semitic soil. And the cross with its *spolia opima* was the most honoured sign of Jupiter Feretrius at Rome. The *feretrum*, from which he took his name, was the lopped trunk of the ancient oak, venerated by the shepherds of old, forming a wooden cross to which votive armour was attached.[7] The cross in the folk-lore of Rome was a sign of the primitive oak-cult—a token of the presence of the oak-king, a shrine for the offering of the trophy of right to the oak-god.[8] Was Pilate altogether unconscious of this when he said: 'What I have written I have written' (Jn 19^{22})? And was St. Paul too in his 'foolishness of preaching,' and in his witness to the power of the Cross and of Christ crucified, unconscious of the other tradition of the power of the cross, when he wrote:

'Unto the Jews a stumblingblock, and unto the Greeks foolishness; But unto them which are called, both Jews and Greeks, Christ the power of God, and the wisdom of God' (1 Co $1^{23f.}$)?

5. Trees many and gods many.—The sacred tree signified universally in primitive ages the presence of the deity. The one tree with its nursery-grove was the shrine of the one God. But east and west, in hill or in valley, in north aspect or in south, the tree varied.[9] And, as the tree varied in species, the god varied in name. Then the tree and the god of the clan grew to be the tree and the god of

the district, and in turn the tree and god of the nation. The parable of the bramble king (Jg $9^{8ff.}$) is true to fact. The olive, the fig, the vine had established their fame and their rule; they would not submit to another; the bramble had ambition to rival even the cedar of Lebanon.

Trees many led on to gods many.[1] The oak-Zeus at Athens took over the olive. Apollo remained true to his sacred laurel. This development is most marked in Greek art and Roman verse:

'Populus Alcidae gratissima, vitis Iaccho,
Formosae myrtus Veneri, sua laurea Phoebo.'[2]

The Semitic nations stand apart from this tendency to assign a particular tree to a particular god,[3] whether from reaction to monotheism or from adherence to the primitive conception of the oneness of the divine spirit. They had sacred trees in great number, but they were all sacred to one god localized in village, clan, or nation. In India each Buddha had his own tree, and Gautama himself, after having passed through 43 incarnations as a tree-spirit, eventually found wisdom under the sacred tree of Brahmā, the *pipal*-tree, or *Ficus religiosa*.[4]

This triumph of the gods over the nations and the consequent interlacing of the tree-cults, sometimes by expansion, sometimes by absorption, resulted in certain cases in the distinction between tree-gods and tree-demons. As the *jinn* or *genii* of the Arabs were gods out of touch with men, outlaws, dehumanized, 'abominations of Moab and Ammon,' so the wood-demons of the German forest or the Polynesian islanders were the foes and the dread of their conquerors—or their neighbours. And in the controversy between the supporters of ancestor-worship and the supporters of animism based on the presence in nature of the divine spirit this wide-spread belief in wood-demons and unlucky trees is in favour of the latter. In an age when 'every valley had its king,'[5] and every hill its shrine and its sacred tree, as in these islands in Celtic times, and when feuds were frequent between clan and clan, the jealousy of the clan would separate between god and god, and between tree and tree, and people the forest-clad hills with every form of terror and danger. The only bond of safety was in the nation's god and in the king as the champion of his rights. All around was danger and death: 'for I the Lord thy God am a jealous God' (Ex 20^5; cf. 2 Co 11^2). This is the language of religion, not the language of ancestor-worship; and it may be traced in tree-worship and demon-lore from earliest times.

A blasted or stricken oak might be the messenger of misfortune:

'De coelo tactas memini praedicere quercus.'[6]

The Abors in Assam regarded the rubber-tree as the abode of two malignant spirits; another haunted the plantain and stinging-nettle.[7] The satyrs and devils of the OT, the *jinn* of the Arabian stories, the centaurs and cyclops, fauns and dryads of Greek and Latin mythology, the wood-maidens, wild-men, and elves, the wild-women of the Tyrol, and the green-ladies of Neufchâtel, in their different degrees of mischief or maliciousness, were haunting terrors of the old world.[8] The Neraides of Macedonian folk-lore are tree-spirits. It is not well to lie down in the shade of a tree, for it is there that the tree-demons appear. At this day the country-folk avoid especially the plane, the poplar, and the fig-tree, for these are favourite haunts of fairies.[9]

[9] G. F. Abbott, *Macedonian Folklore*, Cambridge, 1903, p. 244.

In Ireland ghosts and apparitions haunt isolated thorn-bushes.[1] To call up the Tolcarne troll near Newlyn, an incantation was necessary, and three dried leaves must be held in the hand, 'one of the ash, one of the oak, and one of the thorn.'[2]

'Sing Oak, and Ash, and Thorn, good Sirs,
(All of a Midsummer morn)!
England shall bide till Judgment Tide,
By Oak, and Ash, and Thorn!'[3]

The creation myth of the Tanganarin natives in Australia holds that Punjil fashioned man out of the bark of a tree. Another tree was tabu, and haunted by a bat; the tabu was broken; the tree was violated; the bat flew away, and death came into the world.[4] Daphne is the name both of the laurel and of the spirit within it. The *numen* of a palm-tree is not called Tamar, but Ba'al Tamar. The former conception is Indo-European, the latter Semitic.

'The Indo-European could never free himself from the identification of his gods with nature. . . . The Semite, on the other hand, was accustomed from the earliest times to distinguish between the object and its *ba'al*.'[5]

Among the nymphs were Philyra, the linden, Rhœa, the pomegranate, Helike, the willow, and Daphne, the laurel. Mrs. Philpot notes:

'In later times an attempt was made in some cases [*e.g.*, Daphne in Laurum, Lotis in Lotum, Dryope in Arborem][6] to explain the connection by metamorphosis . . . but it is extremely probable that this was an inversion of the primitive nexus.'[7]

The classic passages for the oak of Dodona are Hom. *Od.* xiv. 327 f., xix. 296 f. In Hom. *Il.* xvi. 233 f. the oracle is mentioned; Vergil refers to it in *Georg.* ii. 15 f. The oak was also sacred to Ceres;[8] before harvest worship must be rendered to her, and the worshipper must be crowned with a wreath of oak.[9] The willow is associated with Hera at Samos, and with Artemis at Sparta. Artemis was the goddess of the nut-tree and the cedar in Arcadia, of the laurel and the myrtle in Laconia.[10] The laurel is sacred to Apollo; the priest-king Anius is guardian of the tree and the shrine.[11] The olive is specially connected with the cult of Athene at Athens. The pine is associated with Pan and Silvanus, the cedar with the Accadian deity Ea, the sycamore with the Egyptian goddess Nuit (Hathor). The cypress was sacred among the Persians, and in the West, together with the poplar, it belongs to the chthonian deities. The vine and the ivy were closely connected with the rites of Dionysus.[12] The ash and the elm appear in Scandinavian mythology as the first man (Ask) and the first woman (Embla), and the ash Yggdrasil is connected with the court of the gods.[13]

Celtic folk-lore has many points of contact with the ancient oak-cult of the Mediterranean area, with variations due to local developments under northern conditions. The δρύτομος of Dodona, the αἰγειροτόμοι, or poplar-fellers, at Athens, the κισσοτόμοι at Phlius,[14] have their representative in the tree-felling god Esus on the Paris monument.[15] The ancient axe-ritual of Dodona, Crete, and Etruria appears in the sculptures of Sucellos and other deities in Celtic lands.[16] On the Trier monument the deity is felling an oak-tree on which are three cranes. The Tarvos trigaranus, the bull, before the oak-tree, with two cranes on the back and one between the horns, is another variation of the Paris altar.[17]

The cult of Cernunnus supplies another link. He is represented in the Cluny Museum with stag's horns, the ring on each horn referring to the sun.[1] In the silver bowl from Gundestrap in Denmark he is cross-legged, Buddha-like, with stag's horns, and on his right a stag and a bull.[2] In a wax tablet at Pesth he is called Jupiter Cernenus; on a Rheims monument he is with a stag and an ox, and at Saintes with several *bucrania*. The presence of the sun-wheel in Paris, and the bull-masks at Saintes, point to his original identity with the Zeus of Crete. In one case he is represented with a chain.[3] His name is almost certainly connected with the horns. In folk-lore he probably survives in Windsor Forest as Herne the Hunter, who walks

> 'round about an oak, with great ragg'd horns;
> And there he blasts the trees, and takes the cattle,
> And makes milch-kine yield blood, and shakes a chain
> In a most hideous and dreadful manner.'[4]

It is not unlikely that the Horn-dancers of Abbots Bromley in Staffordshire commemorate some early pagan rite connected with the oak-cult of Zeus Cernunnus. Bagot's Park is a celebrated oak-forest. The village-games in old times took place round the Beggar's Oak. Though now held early in September, in Robert Plot's time (1641–96) they took place about Christmas. The dancers wore stag-horns (reindeer, kept in the church). It is noteworthy that the Pesth tablet of Jupiter Cernenus has also an echo in a modern dance—a horned figure among the mummers of Mohacs on the Danube.

The oak also entered into the ritual of invoking Zeus as a rain-god. On the Lycæan mountain of Arcadia was a shrine sacred to Zeus, in which was a spring to which the priest went in time of drought. He touched the water with a sprig of oak, when a vapour would rise and spread in fruitful showers over the land. In Brittany the fountain of Barantin in the Forest of Brécilien served the same purpose. Water was thrown on a slab near the spring, and rain would then fall in abundance, accompanied by thunder and lightning. The well was near the fabled shrine of Merlin, one of the Celtic types of the sun-hero, and it was overshadowed by a mighty tree. Rhys suggests that the spring, the tomb, the slab, and the tree 'all belonged to the Celtic Zeus.' There is a similar story connected with the Snowdonian tarn Dulyn, the Black Lake, where the slab was called the Red Altar.[5] There is also in the moorlands of Staffordshire, near Ipstones, a strong spring overshadowed with oak and mountain-ash long known as the Thundering Well. The name alone remains, but it may be grouped among the sites sacred to the Celtic Zeus as rain-god. Within the last few years a Celtic chambered tomb has been discovered within a short distance of the well.

The ash is also among the sacred trees of Ireland. In the parish of Borrisokane, Co. Tipperary, there was in 1833 a huge ash called the Big 'Bell' tree.[6] The name is derived from the word 'Billa,' which occurs in Magbile, 'the plain of the old tree,' the present Moville.[7] This name has been connected by Windisch with *bile* or 'Beli,' king of Hades, the consort of Danu. This Beli represents Cronos in his darker character as Death, and suggests that the Big 'Bell' trees of Irish folk-lore were ash-trees sacred to the Celtic Cronos.[8] The ash was also sacred to the Celtic Silvanus: 'Silvane sacra semicluse fraxino.' He presided over woodlands, clearings, and gardens.[9]

The white-thorn has also its sacred associations. It is unlucky to cut it down. A 'lone thorn' is regarded with special veneration. Christianity took over its sanctity. The Crown of Thorns was said to have been made of white-thorn. An old thorn near Tinahely, Co. Wicklow, is still called 'Skeagh Padrig,' or 'Patrick's book.' In Britain 'the holy thorn' of Glastonbury has similar venerable associations. The hazel appears in Irish romance as the tree of knowledge. The yew among the Druids was a symbol of immortality.[1] Celtic folk-lore has many other traditions of tree-worship. The first man sprang from an alder, the first woman from a mountain-ash. The berries of the rowan are a charm against all disease. There are also trees which were inauguration trees. One, an old sycamore in Coollemoneen in the parish of Killadown, is called 'the honey-tree.' A tree in the parish of Kilmactaign is called 'the fern-tree,' *i.e.* the alder.

6. Tree-offerings and tree-rites.—The cult of the sacred tree had its offerings and its rites. There are even survivals of the offering of the highest sacrifices. The natives of the Vindhyan uplands of India until lately offered human sacrifices to trees.[2] In the animistic worship of the Ainus the worship is vocal.[3] At the close of the bear-festival the head of the bear is set up on a pole, called 'the pole for sending away,' and the skulls of the other animals which are hung up with it are called 'divine preservers' and are at times worshipped.[4] This is a link with the *bucrania* which form so integral a part in the sacrificial tokens of Aryan worship. Plutarch states that Theseus on his return from Crete put in at Delos, and instituted a dance in imitation of the mazes of the labyrinth.

> 'He danced it round the altar Keraton which was built entirely of the left-side horns of beasts.'[5]

This was known as the 'crane dance,' and is certainly in some way associated with the cult of the Celtic tree-god Sucellos or Esus with his three cranes, and with the Tarvos trigaranus of the Paris monument.[6] A note in Langhorne's Plutarch states that the crane commonly flies in the figure of a circle, which together with the *swastika*, or conventional labyrinth sign, is symbolic of the sun-cult. The dance round the May-pole and the Jack-in-the-Green festivities within our own memory in May Fair, London, are survivals of the same rites.

The griffins in Assyria and in Asia, in their attitude of devotion,[7] have their counterpart in the vision of the Temple in Ezekiel:

> 'And it was made with cherubims and palm trees, so that a palm tree was between a cherub and a cherub' (41[18]).

In a Mexican MS the tree breaks into two branches in the shape of a tau-cross, each branch with three blossoms; the tree is surmounted by a parrot, and is supported by two men, standing, each with his right hand raised in the attitude of devotion.[8]

Trees were hung with votive offerings. In India the sacred banyan-tree is represented with six elephants in the act of worship.[9] In Egypt it is the sycamore with jars and fruit, and the worshipper before it has the right hand raised.[10] Elsewhere it is a tree sacred to Artemis, hung with the weapons of the chase.[11] Wreaths were worn and garlands were carried in various Greek rites; and this use of wreaths points to some analogy with tree-worship in the two pillars before the Temple at Jerusalem.[12] Robertson Smith gives a coin from Paphos with similar detached pillars before a temple, each surmounted above the cornice by a dove as in the rude pillar-shrine of Crete. Whether

they were candlesticks or not, they were wreathed in pomegranates.[1] On the eastern gateway of the Buddhist tope at Sānchi the sacred tree is represented with worshippers. It divides into two main branches, like that in Mexico, and there are two smaller trees, one on either side. The central tree is being wreathed in garlands.[2] The Bodhi-tree of Kanakamuni breaks into three branches and is also hung with festoons.[3] This custom still survives in the West. Rhys has collected recent evidence from Glamorganshire of holy wells overshadowed by thorn or other trees, on which rags were fastened.[4] And the present writer some thirty years ago saw a bush hung with red rags in one of the islands of Aran off Galway. It is one of the last relics of the cult of the sacred tree, like the practice of 'touching wood' to avert a change of 'luck,' still in use in this country.

The tree is also a trophy of victory. As late as the 4th cent. of the Christian era a pear-tree at Auxerre was hung with trophies of the chase and venerated as a god.[5] The 'Stock-im-Eisen' in the centre of Vienna is the stump of a sacred larch, now studded and bound in iron, the last remains of trophies with which it was originally hung. The Irmensul had a similar origin.[6] Romulus celebrated his victory over the Cæninenses by his institution of the *spolia opima* in honour of Jupiter Feretrius:

'He cut down a great oak that grew in the camp, and hewed it into the figure of a trophy: to this he fastened Acron's whole suit of armour, disposed in its proper form. Then he put on his own robes, and wearing a crown of laurel on his head, his hair gracefully flowing, he took the trophy erect upon his right shoulder, and so marched on, singing the song of victory before his troops. . . . This procession was the origin and mould of future triumphs.'[7]

The 6th cent. Gallican poet Venantius Fortunatus, author of the *Vexilla regis*, who lived when the honour of the sacred tree was still more familiar to the Gauls than the shame of the Cross, lifts up the old faith in his great hymn of the Passion:

'Pange lingua gloriosi proelium certaminis
Et super crucis tropaeo dic triumphum nobilem,
Qualiter redemptor orbis immolatus vicerit.
. . . . . .
Crux fidelis inter omnes arbor una nobilis
Nulla tamen silva profert fronde, flore, germine:
Dulce lignum dulci clavo dulce pondus sustinens.'[8]

7. The tree of life.—The sacred tree was the source and the sustenance of life. Worship, sacrament, and mystic charm are closely linked together. The *soma*-plant, the Iranian *haoma*, is the sacred food of the gods in Asia, and corresponds to the *ambrosia* of the Greek world.[9] The Vedic *amṛta* or *soma* had in it the principle of life and was withheld from ordinary men: it was, however, to be taken by the initiated.[10]

In Sparta, in early times, the dead were laid upon palm branches and leaves of the olive. In the forest land of northern Europe hollowed oaks were used in the burial of the dead.[11] The practice among the Oddfellows of each member dropping a sprig of sweet herbs on the coffin in the grave is a survival of the same early rites. In Abyssinia the branches and twigs of the ghost-tree are used by the pagan Kunamas as a protection against sorcery and as charms and amulets at childbirth and death.[12] In Babylonia the idea is more strictly defined. The god Nin-gish-zida is 'master of the tree of life.'[13] In time of drought the priest of the Lycæan Zeus let down an oak-branch to the surface of the water.[1] Codrus, when he devoted his life to his country, dressed as a woodman. Cook notes:

'If the last of the Athenian kings on so solemn an occasion appeared as an oak-cutter armed with an axe, we may be sure that this was no mere disguise but the ancient ritual costume of an oak-king.'[2]

The cult of the sacred tree embraces the highest rites in life and in death. The rite of tree-marriage in India in its surviving forms is mainly conventional.[3] The idea of reincarnation may in some cases explain it, but the rites seem to point to other and more primitive ideas. The Agariā, a Dravidian tribe of Chotā Nāgpur, have a special regard for the *sāl*-tree, which is used at their marriages.[4] The *bali*, or totem, system prohibited marriage between those who have the same totem. Among the Marathas the *devaks*, or marriage-guardians, though they no longer form a bar to the union of two worshippers of one *devak*, still have some share in the marriage-rite.

'The *devak* is usually some common tree such as the bel, fig, banyan, or the sami. In its commonest form it is the leaves of five trees, of which one, as the original *devak* of the section, is held specially sacred. It is worshipped chiefly at the time of marriage.'[5]

It has already been suggested that in primitive ages every valley, as Elton says, had its own king. Each king would be the champion and priest of the sacred tree, and this tree as indwelt by the divine spirit would be sacramentally united in all rites of initiation or other social *sacra* with the tribe or clan. The five leaves represent a pentapolis, or group of five states, one or other, as in ancient Rome,[6] choosing the common priest-king of the five, preference therefore being given to the leaf which represented his sacred tree. Similar customs banning all marriage within a totem-clan have been observed among the Bantu tribes of S. Africa. The mushroom totem of the Awemba is an example of a vegetable totem.[7]

Again, it would appear that the root-idea in the animistic cult of the sacred tree is religion rather than totemism or ancestor-worship; these are perhaps only relics of the primitive age—results of anthropomorphic development and differentiation, degenerate conceptions of the earlier animistic principle of the unity of the divine spirit of life.

The mistletoe-bough in the Christmas feast and 'kissing under the mistletoe' are relics not only of the oak-cult of the Druids, but of its connexion with primitive marriage-rites. This cult rests on the authority of Pliny,[8] and the special virtues ascribed to mistletoe are also referred to by him. Cook has some valuable notes on the mistletoe, which give support to Frazer's conjecture 'that the sun's fire was regarded as an emanation of the mistletoe.'[9] Cook bases his argument on the cult of Ἴξιος Ἀπόλλων at Ixiæ in Rhodes, a town named after the mistletoe. The cult is not definitely referred to in connexion with the oak, but 'it is probable, because the Rhodians regarded the oak as the sun-god's tree.' In the story of the punishment of Ixion there is, he suggests, another link between the mistletoe and the sun-cult. Ixion was the father of Peirithoüs, whose constant associate was Dryas.

'The relationship thus established between Ἰξίων the mistletoe and Δρύας the oak is scarcely fortuitous.'

A scholium on Euripides, *Phœn.* 1185, reads:

'Zeus in his anger bound Ixion to a winged wheel and sent it spinning through the air. . . . Others say that Zeus hurled him into Tartarus. Others again, that the wheel was made of fire.'

This flaming spin-wheel has been commonly understood as the sun-god. Cook concludes:

'It has not, however, been hitherto observed though indeed the fact is obvious, that 'Ιξίων is derived from ἰξός and that the mistletoe was on Greek soil thus intimately associated with the sun-god.'[1]

An old Staffordshire custom of keeping the mistletoe-bough throughout the year and then burning it in the fire under the Christmas pudding probably rests on some tradition of the perpetuation of the sacred fire. The mistletoe represented during the winter the 'sap of the oak,'[2] and this formal burning of it, like the feeding of the sacred fire of Vesta from the oak-grove of the Palatine slopes, expresses the principle of life. It has not been customary to use mistletoe in the decoration of churches at Christmas; but W. Stukeley[3] reports a curious custom from York:

'On the Eve of Christmas Day they carry mistletoe to the high Altar of the Cathedral and proclaim a public and universal liberty, pardon, and freedom to all sorts of inferior and even wicked people at the gates of the city, towards the four quarters of Heaven.'[4]

There was in Plutarch's time a shrine of Fortuna Viscata on the Capitol at Rome. This may be the Fortuna Primigenia near the temple of Jupiter, where stood the oak of Jupiter Feretrius.

The *rota Fortunæ* survived till lately at Douai, when about midsummer 'a large wheel called the *roue de fortune* was carried in procession before a wicker-work giant known as *le grand Gayant*, and other figures called *les enfants de Gayant*. These wicker giants were certainly the Druid divinities, whose colossal images of wicker-work are described by Cæsar':[5] 'Alii immani magnitudine simulacra habent; quorum contexta vimi-nibus membra vivis hominibus complent: quibus succensis, circumventi flamma exanimantur homines.'[6]

The mistletoe-bough and the various customs connected with it are all survivals of the solar cult, and, with the wreaths, axes, spears, cranes, and doves, point to the true meaning of the worship of the sacred tree. The mistletoe-bough is made the type of the Golden Bough:

'Quale solet silvis brumali frigore viscum
Fronde virere novâ, quod non sua seminat arbos,
Et croceo fetu teretes circumdare truncos:
Talis erat species auri frondentis opaca
Ilice.'[7]

The yew was also regarded as a symbol of immortality.[8] The name *eburos*, mid-Irish *ibhar* (*Taxus*),[9] enters into place-names and clan-names —*e.g.*, Eburacum (York), Eburodunum (Yverdon), Eburones. The last-named is an instance of a tribe or clan taking its name from a tree-deity.

There was a yew in Belach Mughna in the west of Leinster—'a great sacred tree, and its top was as broad as the whole plain. Thrice a year did it bear fruit: it remained hidden from the time of the Deluge until the night on which Conn of the Hundred Battles was born, and then it was made manifest. Thirty cubits was the girth of that tree, and its height was three hundred cubits. However, Ninine the poet felled that tree.'[10]

Cell-eo in the *Martyrology of Gorman* is the 'church of yews.' And there is an ancient hallowed site in Staffordshire, with only the memory left of its All Saints' dedication, the New Year festival of the Celts, which is now marked by the Hanchurch Yews. The churchyard yew is an ancient symbol of the tree of life.

In the story of Eden the command went forth: 'Of every tree of the garden thou mayest freely eat: But of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die' (Gn $2^{16f.}$).

No ban is put on the tree of life till the command is broken. Was the tree hidden like the yew of Mughna? Could it be found only by those initiated and instructed, as in the quest of the Golden Bough? It stood in the midst of the garden:

'Latet arbore opaca
Aureus et foliis et lento vimine ramus,
Junoni infernae dictus sacer: hunc tegit omnis
Lucus, et obscuris claudunt convallibus umbrae.'[1]

Was it so shut in and shadowed that it could not be found? Is there anything parallel in the imagery to that of the Cretan labyrinth?

It has been suggested that in an earlier version of the Eden story there was but one tree, the tree of life, and it is to be noted that in Gn 3^3 the tree with its forbidden fruit is described as being 'in the midst of the garden,' as is the tree of life in 2^9. And in most of the myths of paradise there is the conception of the one tree.

The Norse Yggdrasil in its complexity is the central tree of the universe: 'The chief and most holy seat of the gods is by the ash Yggdrasil. There the gods meet in council every day. It is the greatest and best of all trees, its branches spread over all the world and reach above heaven.'[2]

The garden reached by the Chinese king in quest of the glories of paradise had 'a wondrous tree in its midst, and a fountain of immortality, from which four rivers, flowing to the four corners of the earth, took their rise.'[3] The central tree with its fruit in the old willow pattern dish is a familiar illustration:

'The Chinese temple, there it stands
And there's the tree of many lands'—

in other words, the universe-tree of China.

Hercules, in the garden of the Hesperides, 'conquered the protecting dragon and secured the golden sun-fruits from the central tree.'[4] The garden of Indra contained five wonderful trees, the chief of which was the *paridjata*, 'the flower of which preserved its freshness throughout the year, contained in itself every scent and flavour, and gave happiness to whoever demanded it. It was, moreover, a test of virtue, losing its splendour in the hands of the sinful, and preserving it for him who followed duty.'[5]

It was but a step in the development of myth to differentiate between the tree of life and the tree of knowledge; and it was a step in the revelation of truth. The tree of life has the promise of immortality and bliss.

The sacred books of the Parsis state that 'the original human pair, Maschia and Maschiana, sprang from a tree in Heden, a delightful spot where grew homa or haoma, the marvellous tree of life whose fruit imparted vigour and immortality. The woman at the instance of Ahriman, the spirit of evil, in the guise of a serpent, gave her husband fruit to eat and so led to their ruin.'[6]

The story of Eden ends in ruin, but it is ruin which has the promise of regeneration (Gn 3^{15}). There is the way of the tree of life, and Christian mysticism found it in the way of the holy Cross. The drama of religion closes with the vision of the holy city, New Jerusalem, and the throne of God and of the Lamb:

'In the midst of the street of it, and on either side of the river, was there the tree of life, which bare twelve manner of fruits, and yielded her fruit every month: and the leaves of the tree were for the healing of the nations' (Rev 22^2).

Ethics and religion have each their part in keeping 'the way of the tree of life' (Gn 3^{24}); they are the supporters of the wheeling sword, the whirling flaming circle of the solar disk, the most sacred symbol of the Sun of Righteousness.

8. The tree of knowledge.—The oracle is an integral part of tree-worship.

Joshua at Shechem 'took a great stone, and set it up there under an oak, that was by the sanctuary of the Lord. And Joshua said unto all the people, Behold, this stone shall be a witness unto us; for it hath heard all the words of the Lord which he spake unto us' (Jos $24^{26f.}$).

It was a witness to the oracle at Shechem. The 'plain of Meonenim' is the 'terebinth of the diviners (Jg 9^{37}). In Africa the trees planted round the ancestral graves were tended by women whose oracles were listened to in times of crisis.[7] Tree-divination was practised by the Ainus.[8] The oracular virtue of the oak of Dodona was assigned to the depths of its root.[9] The oracle was

chthonian. The witch of Endor raised spirits from the earth (1 S 28^{13}).

'Altior ac penitus terrae defigitur arbos;
Aesculus in primis: quae quantum vertice ad auras
Aethereas, tantum radice in tartara tendit.'[1]

At Delphi the sacred laurel of Apollo grew in the cleft of the rock.[2] The chthonian rock-altars on the Areopagus at Athens are carpeted in springtime with asphodel. Did this suggest the phrase, *κατ' ἀσφοδελὸν λειμῶνα*, in Hom. *Od.* xi. 539, xxiv. 13? Both passages are assigned to the very latest or Athenian stratum of the Odyssey.

The rustling in the mulberry-trees (2 S 5^{24}) has its counterpart in the story of Æacus. He consulted an oak, a sapling from Dodona:

'Tu mihi da cives: et inania moenia reple.
Intremuit, ramisque sonum sine flamine motis
Alta dedit quercus.'[3]

The sacred cedar of the Chaldæans was not only the tree of life but 'the revealer of the oracles of earth and heaven.' The name of Ea, the god of wisdom, was supposed to be written on its core.[4]

The hazel appears in Irish romance as the tree of knowledge. The mystical fountain known as Connla's Well was overshadowed by nine mystical hazel-trees. The nuts were of the richest crimson colour and teemed with the knowledge of all that was choicest in literature and art. The nuts fell into the spring, where they were eaten by the salmon which frequented the spring. Therefore the salmon was the wisest of all things. In the story of Kulhwch, in the *Mabinogion*, the salmon of Llyn Llyw is stated to have been the first animal created, and its memory to surpass that of the eagle, the owl, the stag, and the blackbird. The source of its wisdom was the many-melodied hazel of knowledge.[5] The culture-god of the Celtic world has been identified with Mercury, and with the Gaulish deity Ogmios, the god of eloquence and wisdom. His name in Welsh survived in the word *ofydd*, one skilled or versed in anything. In Ireland he appears as Ogma, one of the ancient Goidelic group of the Tuatha Dé Danann. He was in a special sense the diviner or discloser among the gods.[6] The divining-rod is the surviving relic of the tree-oracle, and the hazel is the favourite tree from which it is cut. In France it was the custom to cut it on Wednesday, Mercury's day. This also points to the association of the hazel with the Gaulish Mercury. He was known also as the god 'qui vias et semitas commentus est,' and the custom of beating the bounds with a hazel-switch is another link with ancient rites.

Irish literature represents crimson nuts as forming the food of the gods.[7] The crimson berries of the mountain-ash explain its sanctity. It has been suggested that it is the original counsel-tree of the Northern races.[8] In Ireland the mountain-ash and the birch are still held sacred, and in Staffordshire in the 17th cent. Plot states that it was held dangerous to do wanton damage to the tree.[9] It is still, under the name 'wicky,' a favourite tree in the country districts. Evelyn[10] states that it was held in such veneration in Wales that it was found in every churchyard. It is still found in old burial-grounds in Yorkshire. In Derbyshire a little cross made of the witch-wiggin is held as a protection against witchcraft. The rites observed in cutting it belong to the earliest ages of tree-worship. It was to be cut on St. Helen's Day. It must be cut stealthily from a tree never seen before, and carried home by any way save that by which the wood-cutter had gone on his secret and sacred quest.[1] As the care-tree it has been taken over by the Church in the rhyme:

'Care Sunday, care away,
Palm Sunday, and Easter Day.'

Care Sunday is Passion Sunday, the Sunday before Palm Sunday.[2]

The holly is the Irish *cuilenn*, the Welsh *celynen*, the O.E. *holegn*; it is not a variant of 'holy.' The persistence of its red berries in winter and its Christmas associations give it a high place among the trees of the north. It enters into place-names in Ireland, as in Druimm Cuilinn, now Drumcullen, barony of English, King's County. More noticeable is its occurrence as a personal name, Macc Cuilinn, bishop of Lusk.[3] The effigy of the Holly-boy in the Kentish Shrovetide revels may be regarded as a substitute for the oak with its ancient religious association. At the close of the revels it was burned.[4] The Christmas burning of the Yule-log is another link in the same chain, as the burning of the mistletoe-bough is the evidence of the continuity of the sacred fire.

The Christmas blossoming of the Glastonbury thorn and the Christmas-tree (of late introduction in England), with its lights and flowers and fruits, have been associated with the 'strange blossoming power of nature connected with St. Andrew's Day' (30th Nov.). These were transferred in the Middle Ages to the Christmas festival.[5]

'Christmas-Eve was given to the memory of Adam and Eve, and this led to the Paradise-plays which formed a prelude to the Nativity-plays. The Cross of Christ was held in ancient legend to have been made of "a tree which had sprung from a slip of the Tree of Knowledge." In the Paradise-play this tree was brought in laden with apples and decked with ribbons.'[6]

The lights form an integral part of the earlier ideas of this tree-ritual.

In old Icelandic legend there is the story of a mountain-ash at Mödhrufell which on Christmas Eve was covered with lights that the strongest gale could not extinguish. These lights were its blossoms. In French legend, Perceval comes across a tree illuminated with a thousand candles; and in another story Durmals le Galois twice saw a magnificent tree covered with lights from top to bottom.[7]

In Icelandic folk-lore lights are seen in the rowan-tree, and in Celtic folk-lore the scarlet berries of the rowan-tree are the source of wisdom. Is there not here a link between the light of wisdom and the bright fruit belonging to the tree of knowledge? The flamens wore the scarlet tuft in their caps.[8]

'Simonides tells us that it was not a white sail which Ægeus gave, but a scarlet one, dyed with the juice of the flower of a very flourishing holm-oak, and that this was to be the signal that all was well.'[9]

The story of Ægeus and Theseus has its parallel in the sign of the 'scarlet thread' at Jericho (Jos 2^{18}).

The rod of Aaron was the rod of the priesthood, and the priest's lips were to keep knowledge (Mal 2^{7}).

At the return from Captivity 'the Tirshatha said unto them, that they should not eat of the most holy things, till there stood up a priest with Urim and with Thummim' (Ezr 2^{63}). The breastplate of judgment contained these sacred lots (Ex 28^{30}). The sacred oracles are in the charge of the priest: 'for he is the messenger of the Lord of hosts' (Mal 2?).

The rod was the token of this authority; and the rod of Aaron was a rod of almond. The Hebrew word for 'almond' is *shāḳēdh*, connected with the root 'to watch.' It is the tree of watchfulness, the tree of light. Jeremiah of the priests of Anathoth, in the opening of his prophecies, sees the vision of an almond-rod. It is the token of the watchfulness of God:

[8] Plut. ed. Langhorne, i. 189 n.
[9] *Ib.* p. 51; cf. *EBi.* col. 4316.

'Then said the Lord unto me, Thou hast well seen: for I will hasten my word to perform it' (Jer 1^{12}).

And in the open vision of death it would seem that the blossoming of the almond-tree symbolizes the light of the presence of God (Ec 12^{5}), the light of wisdom and knowledge: 'Because the preacher was wise, he still taught the people knowledge' (12^{9}).

The early cult of the sacred tree among the Jews left its mark in the Temple of Jerusalem. Robertson Smith notes that, as the two pillars Jachin and Boaz, so also the golden candlestick had associations with this ancient cult.[1] The pillars were wreathed with pomegranates; the candlestick was a budding and blossoming almond. If the former witness to the tree of life, the latter witnesses to the tree of knowledge.

Light was the first of the gifts of life; and it is in the light alone that religion can fulfil the duties of life. A Babylonian seal figured by Mrs. Philpot shows the sacred tree with seven branches, three on the right and four on the left, with a fruiting branch drooping on either side. On the right is a figure sitting with outstretched hand, the head crowned with the horns of a bull; on the left is another figure sitting, without the bull-mask, but with a snake behind it.[2] It recalls in some points the story of Eden; but it is also a link in the development of the seven-branched candlestick of the Temple.

The sacred twig, the sacred fire, the priest-king who is guardian and champion of both, and who is also the representative of the majesty of the sun, each and all witness 'at sundry times and in divers manners' to the religious fellowship and communion which man enjoys with the divine spirit. Silent adoration is called for in the presence of the tree of life. The tree of the knowledge of good and evil is vocal in the light of divine wisdom:

'And I turned to see the voice that spake with me. And being turned, I saw seven golden candlesticks; And in the midst of the seven candlesticks one like unto the Son of man . . . and his voice as the sound of many waters' (Rev $1^{12\text{-}15}$).

This voice is the voice of divine wisdom, vocal at Dodona and Cnossus and Delphi, vocal in the burning bush, and vocal to-day in 'the spirit of wisdom and understanding, the spirit of counsel and ghostly strength, the spirit of knowledge and true godliness . . . and the spirit of God's holy fear.'[3] And this fruit of the Holy Spirit is the fruit of the sacred tree:

'And there shall come forth a rod out of the stem of Jesse, and a Branch shall grow out of his roots: And the spirit of the Lord shall rest upon him' (Is $11^{1\text{f.}}$).

It is true to-day, as in the earliest ages of animistic religion, that 'the fear of the Lord is the beginning of wisdom' (Ps 111^{10}).

LITERATURE.—The authorities are quoted in the footnotes.

THOMAS BARNS.

TREE OF KNOWLEDGE, TREE OF LIFE.—See TREES AND PLANTS.

TRIADS.—See TRIMŪRTI, TRINITY.

TRIMŪRTI.—Though the *Rigveda* does not contain the conception of a supreme spirit manifested in three forms (*trimūrti*), which is the Hindu doctrine of the Trinity, it contains elements which have contributed to form that belief. In the first place, Agni as the god of fire has three forms: he is the sun in the sky, lightning in the aerial waters, and fire on earth. On this idea is based much of the mysticism of the Vedic period, and it is reflected in the ritual by the threefold character of the sacrificial fire. Secondly, in prayers such as 'May Sūrya protect us from the sky, Vāta from the air, Agni from the earthly regions,'[1] appears a tendency to reduce all the gods to manifestations of three chief deities, each representative of one of the three divisions, sky, air, and earth. Yāska[2] tells us that his predecessors in Vedic interpretation held that all the gods could be reduced to three, Agni, Vāyu or Indra, and Sūrya, though he himself does not adopt this view. A further step towards the amalgamation of the gods is seen in the *Maitrāyaṇī Saṃhitā*,[3] which holds that Agni, Vāyu, and Sūrya are all sons of Prajāpati, the creator god.

The further development of the doctrine occurs only in the later *Upaniṣads* as the outcome of the adoption of the principle of the absolute (*brahman* or *ātman*). In the *Taittirīya Āraṇyaka*[4] or *Mahānārāyaṇa Upaniṣad* the highest self (*paramātman*) is identified with Brahman (by which Brahmā is probably meant), Śiva, Hari, and Indra; the identification with Hari is probably a later interpolation, as it spoils the metre, but it is doubtless an old change in the text. In the *Maitrāyaṇī Upaniṣad*[5] Brahmā, Rudra, and Viṣṇu appear as forms (*tanavaḥ*) of the absolute, which itself is incorporeal, and again[6] are declared to correspond respectively with the *rajas*, *tamas*, and *sattva* aspects of the absolute. The same triad is found in other texts such as the *Prāṇāgnihotra*, *Brahma*, *Nṛsiṃhottaratāpanīya* and *Rāmottaratāpanīya Upaniṣads*.

The comparative lateness and esoteric character of the doctrine are shown by the almost total absence of the conception from the epics, where it appears definitely only in the statement of the *Mahābhārata*:[7]

'In the form of Brahmā he creates; his human form [*i.e.* Viṣṇu] preserves; in his form as Rudra will he destroy; these are the three states of Prajāpati.'

This is the classical form of the doctrine which is repeated in the *Harivaṃśa*, in Kālidāsa's *Kumārasambhava*, and not rarely in the later literature. The personality of the trinity is varied slightly according to sectarian preferences; thus in the Śaiva view[8] the absolute, which is Śiva, is manifested as Brahmā, Viṣṇu, and Bhava, the last a personal form of Śiva; the Nimbārkas and other sects[9] identify Kṛṣṇa with the absolute, distinguishing him from Viṣṇu as one of the trinity. There is some uncertainty whether the formation of the definite idea of a trinity was preceded by the conception of Viṣṇu and Śiva as merged in a unity, attested by the term Harihara, which appears first in the *Harivaṃśa*; this view, however, is rendered probable by the fact that the epic appears to have identified Viṣṇu and Śiva as equals before it combined Brahmā with them as their peer. A characteristically late idea recognizes a trinity of the Śaktis, or personifications of the power of the three gods: Vāch or Sarasvatī as that of Brahmā; Śrī, Lakṣmī, or Rādhā as that of Viṣṇu; and Umā, Durgā, or Kālī as that of Śiva. For this there is no Vedic parallel, though in the *āprī* hymns of the *Rigveda* a triad of sacrificial goddesses is found in Sarasvatī, Iḍā, and Bhāratī.

Serving as it does to reconcile rival monotheisms with one another and with the philosophic doctrine of the absolute, the theory of the Trimūrti presents no such close similarity to the Christian doctrine of the Trinity as to render derivation from Christian influences either necessary or probable, though chronologically the existence of such influence is

quite possible. It is, however, conceivable that the idea developed under the influence of Mahāyāna Buddhism, which possesses the notable triads of Buddha, Dhyāni-buddha, and Dhyāni-bodhisattva on the one hand, and of the Dharma-, Nirmāna-, and Sambhoga-kāyas of a Buddha on the other. The Buddhist art of Gandhāra, followed by that of Tibet, China, and Japan, is prone to depict groups of three deities, Buddhas, or *bodhisattvas*, and it is to this influence that we may assign the existence of such sculptures as that from the cave of Elephanta, Bombay, which presents the three gods in one statue, and affords the inspiration for the *ekā mūrtis trayo devāḥ* of the *Matsya Purāna*,[1] a passage often wrongly interpreted to mean 'One God and three persons.'

TRINITARIANISM. — See TRINITY, RELIGIOUS ORDERS (Christian).

TRINITY.—1. The term and concept. — (*a*) The term 'Trinity' (from Lat. *trinitas*) appears to have been first used by Tertullian,[2] while the corresponding Greek term 'Triad' (τριάς) appears to have been first used by Theophilus the Christian apologist,[3] an older contemporary of Tertullian. In Tertullian, as in the subsequent usage, the term designates the Christian doctrine of God as Father, Son, and Spirit.

(*b*) Although the notion of a divine Triad or Trinity is characteristic of the Christian religion, it is by no means peculiar to it. In Indian religion, *e.g.*, we meet with the trinitarian group of Brahmā, Śiva, and Viṣṇu; and in Egyptian religion with the trinitarian group of Osiris, Isis, and Horus, constituting a divine family, like the Father, Mother, and Son in mediæval Christian pictures. Nor is it only in historical religions that we find God viewed as a Trinity. One recalls in particular the Neo-Platonic view of the Supreme or Ultimate Reality, which was suggested by Plato in the *Timæus*; *e.g.*, in the philosophy of Plotinus the primary or original Realities (ἀρχικαὶ ὑποστάσεις)[4] are triadically represented as the Good or (in numerical symbol) the One, the Intelligence or the One-Many, and the World-Soul or the One and Many. The religious Trinity associated, if somewhat loosely, with Comte's philosophy might also be cited here: the cultus of humanity as the Great Being, of space as the Great Medium, and of the earth as the Great Fetish.

(*c*) What lends a special character to the Christian doctrine of the Trinity is its close association with the distinctive Christian view of divine incarnation. In other religions and religious philosophies we meet with the idea of divine incarnation, but it may be claimed that nowhere is the union of God and man so concrete and definite, and so universal in its import, as in the Christian religion. As Augustine said,[5] if in the books of the Platonists it was to be found that 'in the beginning was the Word,'[1] it was not found there that 'the Word became flesh and dwelt among us.'[2] It is the very central truth of Christianity that God was historically manifest in Christ, and that He is still revealed in the world as the indwelling Spirit of the Church or community of Christ's founding. This Christian faith in the incarnation of the divine Word (λόγος, *sermo*, *ratio*) in the man Christ Jesus, with whom the believer is united through the fellowship of the Holy Spirit, constitutes the distinctive basis of the Christian doctrine of the Trinity.

2. The development of the doctrine.—The limits of this article preclude any attempt to trace in detail the development of the Trinitarian idea from its beginnings in the Bible to its final formulation in the orthodox creeds. In various articles of this Encyclopædia this ground is traversed, such as the comprehensive art. GOD; the artt. on particular developments of ancient Christian thought like the Alexandrian, Antiochene, and Cappadocian Theologies; the artt. on individual Christian theologians like Athanasius and Augustine; the artt. on heretical phases of Christological and Trinitarian belief like Adoptianism, Arianism, Monophysitism, Nestorianism. It will be convenient, however, to take here a general conspectus of the development in question.

(*a*) The *Old Testament* could hardly be expected to furnish the doctrine of the Trinity, if belief in the Trinity is grounded (as stated above) upon belief in the incarnation of God in Christ and upon the experience of spiritual redemption and renewal through Christ. It is exegesis of a mischievous, if pious, sort that would discover the doctrine in the plural form, 'Elohim,' of the Deity's name, in the recorded appearance of three angels to Abraham, or even in the *ter sanctus* of the prophecies of Isaiah. It may be allowed, however, that the OT ideas of the Word of God and the Wisdom of God are adumbrations of the doctrine, as recognizing the truth of a various self-revealing activity in the one God.

(*b*) In the *New Testament* we do not find the doctrine of the Trinity in anything like its developed form, not even in the Pauline and Johannine theology, although ample witness is borne to the religious experience from which the doctrine springs. None the less Christ is acknowledged as the eternal Son of God and the supreme revelation of the Father, and the quickening Spirit of life is acknowledged to be derived 'from on high.'[3] And so, when the early Christians would describe their conception of God, all the three elements—God, Christ, and the Spirit—enter into the description, and the one God is found to be revealed in a threefold way. This is seen in the baptismal formula,[4] 'In the name of the Father, and of the Son, and of the Holy Ghost,' which at least reflects the usage of the apostolic Church, and in which the members of the Trinity are already all three associated together. It is also to be seen in the familiar words of St. Paul,[5] 'The grace of the Lord Jesus Christ, and the love of God, and the communion of the Holy Ghost.' This last has been called, and justly so, the great Trinitarian text of the NT, as being one of the few NT passages, and the earliest of them, in which the three elements of the Trinity are set alongside of each other in a single sentence. If the passage contains no formulated expression of the Trinity, it is yet of great significance as showing that, less than thirty years after the death of Christ, His name and the name of the Holy Spirit could be employed in conjunction with the name of God Himself. Truly, if the doctrine of the Trinity appeared

somewhat late in theology, it must have lived very early in devotion.

(*c*) The story of the Trinity in *ecclesiastical history* is the story of the transition from the Trinity of experience, in which God is self-revealed as the Father or Creator and Legislator, the Son or Redeemer, and the Spirit or Sanctifier, to the Trinity of dogma, in which the threefold self-disclosure of God is but the reflexion, as it were, of a threefold distinction within the divine Nature itself. With the transition from the Trinity of experience to the Trinity of dogma the theological statement tends to lose touch with the gracious figure of the historical Christ. In the Nicæno-Constantinopolitan Creed, in which the Eastern development of the doctrine of the Trinity culminated, the dogma still retains its connexion with its positive ground and basis in the incarnate life of Christ; but in the Athanasian Creed, which represents the form which the dogma finally assumed in the West, it appears to have lost the connexion altogether, and to move entirely in the transcendent realm.

Five stages in the dogmatic development may be distinguished.[1] (1) The formal identification of the pre-existent Christ (of the Pauline and Johannine theology) with the Logos of Greek philosophy. In the NT the identification is in the practical rather than speculative interest, but in Justin Martyr and the apologists it may be regarded as the first step in the logical process whereby the historical figure of Jesus Christ was caught up into the purely speculative sphere. (2) The doctrine of the eternal generation of the Logos or Son (hitherto regarded primarily as the cosmological principle of revelation and not therefore co-eternal with God). This doctrine, due to Origen, which may be expressed in other words as the eternal Fatherhood of God, entered into the Athanasian theology. Formulated in the interests of the divinity of Christ, it conserved also—as against Sabellian views—the distinction between the Father and the Son. On the other hand, the subordinationism it implied and acknowledged, while countering dyotheistic and tritheistic tendencies, lent support to the Arian conception of the Son as a creature, especially after the Origenist theory of eternal creation (which enabled Origen himself to regard the Son as still primarily a cosmological principle) had been abandoned. (3) The doctrine of the consubstantiality of the Son with the Father. This was affirmed against Arianism at Nicæa, where the concept—if not as yet the actual term—*homoousios* (ὁμοούσιος) as applied to the eternal Son was amply vindicated. As Athanasius taught, in jealous regard for the divineness of the Christian incarnation and redemption, there was an absolute likeness between the Father and the Son, and also a co-inherence or mutual immanence (*περιχώρησις, circumincessio*) of their Persons.[2] (4) The doctrine of eternal distinctions within the divine Nature, according to the formula of 'three Hypostases in one Ousia or Substance' (*τρεῖς ὑποστάσεις, μία οὐσία*). To the Cappadocian theologians (Basil, Gregory of Nazianzus, Gregory of Nyssa) we owe the final settlement, for which this formula stands, of the dogmatic terminology. In distinguishing between *hypostasis* and *ousia*, the former denoting a real principle of distinction within the divine Nature and the latter the divine Substance or Nature (*φύσις*) itself,[3] they sought to lift the orthodox doctrine out of the Sabellian modalism which recognized no distinction in reality between the Father and the Son, so impairing the significance of the historical Christ, and at the same time to vindicate it against the opposite error of heathen polytheism (tritheism), of which it was so often accused. Moreover, the Cappadocians gave to the third member of the Trinity, the Holy Spirit, the definite place and character which He now possesses in the Eastern orthodoxy, as being also a Hypostasis in the Godhead, consubstantial with the Father, and proceeding from the Father through the Son. (5) The doctrine of the double procession from the Father and the Son (the *filioque* clause, added to the Nicæno-Constantinopolitan Creed on canonically indefensible grounds[1]) —a doctrine which represents the difference between Western orthodoxy and Eastern (with its view of procession as from the Father alone, the unitary source of deity[2]); which was conceived, in the interests of the divine unity, as counteractive of the subordinationism contained in the Eastern formulas; and which under Augustine's influence found its way into the Athanasian Creed. Curiously enough, the Athanasian Creed (so called) thus differs theologically from the Nicæno-Constantinopolitan Creed in its original Eastern form on a point on which Athanasius's own sympathies would have lain with the Eastern symbol. The Greek (Athanasian) theology found the divine unity in the Father, the one fountain-head of deity, so leaving room for the conception of the Son and the Spirit as subordinate to the Father. The Roman (Augustinian) theology found the divine unity in the divine Nature or Substance, with the result that, as the distinctions between the three Hypostases or Persons became weakened under the doctrine of the co-inherence, so attractive to the non-metaphysical Westerns,[3] there remained no proper foothold—so to speak—for the doctrine of subordination.

3. **The statement of the doctrine.**—(*a*) The ecclesiastical doctrine whose stages of development have been indicated may be briefly stated as follows, and the form of statement would commend itself as a whole alike to the Western or Roman Catholic and the Protestant Church. For, although the doctrine of the Trinity was the subject of much discussion, dogmatic and speculative, in the Middle Ages and at the Protestant Reformation, and has been since, it has been formulated all along on the lines of the Nicæno-Constantinopolitan and Athanasian Creeds. Both Roman Catholics and Protestants—generally speaking—yield formal adherence to these symbols, and the old orthodoxy remains still the new.

(*b*) There are then (as the statement may run) three Persons (Hypostases) or real distinctions in the unity of the divine Nature or Substance, which is Love. The Persons are co-equal, inasmuch as in each of them the divine Nature is one and undivided, and by each the collective divine attributes are shared. As a 'person' in Trinitarian usage is more than a mere aspect of being, being a real ground of experience and function, each divine Person, while less than a separate individuality, possesses His own hypostatic character or characteristic property (*ἰδιώτης*). The hypostatic characters of the Persons may be viewed from an internal and an external standpoint, *i.e.* with reference to the inner constitution of the Godhead or to the Godhead as related to the cosmos or world of manifestation. Viewed *ab intra*, the hypostatic character of the Father is ingeneration (*ἀγεννησία*), of the Son filiation, of the Spirit procession; wherefore, 'the Father is of none, neither begotten nor proceeding; the Son is

[1] Cf. T. B. Strong, *A Manual of Theology*[2], London, 1903, p. 168 ff.
[2] *μία πηγὴ θεότητος.* [3] Strong, p. 170.

eternally begotten of the Father; the Holy Ghost eternally proceeding from the Father and the Son.'[1] Viewed *ab extra* (for Love functions externally as well as internally, is centrifugal as well as centripetal[2]), the hypostatic character of the Father is made manifest in creation, whereby a world is provided for beings who should be capable of experiencing fellowship with the divine Love; the hypostatic character of the Son in redemption, whereby the alienating power of sin is overcome; and the hypostatic character of the Spirit in sanctification, whereby human nature is quickened and renewed and shaped to the divine likeness. Yet, while this is said, as there is no separation in the unity of the Godhead, so the one God is manifested in the threefold work of creation, redemption, and sanctification; moreover, each of the Persons as sharing the divine attributes is active in the threefold work, if with varying stress of function. Verily the doctrine of the Trinity *exit in mysterium*.

(*c*) It should, perhaps, be emphasized that the Trinitarian statement is never tritheistic, in the sense of affirming three separate self-conscious and self-determining individualities in the Godhead. When it is affirmed that there are three Persons in one God, the word 'person' is used archaically, and not in the modern sense of a centre or core of personality. It was a word employed by Tertullian[3] as on the whole the best word by which to convey the idea of an inner principle of distinction or individuation (ὑπόστασις); and it was a good enough word when it bore a vaguer and more flexible meaning than it bears nowadays in Western Europe. To say that there are three separate personalities in the Godhead would be polytheism. To say that there are three eternal principles of distinction or modes of subsistence in the Godhead is not polytheism—although in the speculative construction of the Trinity it might lead, and has sometimes led, to a theoretical pluralism or polytheism.

4. The speculative construction of the doctrine.—(*a*) Although the Christian Church soon came to look upon the Trinity as an incomprehensible mystery of revelation, which reason might not probe, her theologians have not refrained whether in ancient or in modern times from speculation upon the doctrine. In mediæval times, indeed, the doctrine of the Trinity was 'the high school of logic and dialectic.'[4] Then, as before and since, recourse was often made to the principle of analogy, in order to throw light upon the mysterious notion of tri-personality in the Godhead. It is a principle that has received classical treatment at the hands of Augustine, who employed in particular the analogies of the human self-consciousness and the relationship of love. It is not pretended, however, that by such analogies the doctrine of the Trinity may be rationalized. And, clearly, such analogies fail on one side or the other to satisfy the conception of 'three Persons in one Nature.' On the one hand, the psychological analogy of the self-consciousness does justice to the unity of the Nature, but not to the distinction of the Persons. This is as true, it has been remarked,[5] of Dorner's construction founding upon Hegel's 'being in itself, being for itself, being in and for itself,' as of Augustine's 'memory, understanding, and will'[6] (in each of which he found the whole rational nature expressed), or, as we might add, of his 'mind, self-knowledge, and self-love.'[1] On the other hand, the social analogy of love does justice, more or less, to the distinction of the Persons, but not to the unity of the Nature. In this case the three elements of the analogy are the loving subject, the loved object, and the mutual love which unites them. The subject and the object possess, to be sure, more than sufficient independence for the purpose in view, but it is difficult to see how the love which unites may be accepted as a distinct person, even in the vaguest sense of that term. The application of the psychological analogy may be regarded as an attempt to satisfy the *theoretical* interest attaching to the traditional dogma for which the Logos-conception stands, namely, the explanation of the relations between God and the world. On the assumption that the human individual is a microcosm, bearing traces of the divine Personality upon him, it would seek to make more intelligible the unity in diversity, or more precisely the unity in triplicity, affirmed in the orthodox view of the Godhead. Again, the construction of the Trinity which is founded upon the social analogy may be regarded as an attempt to satisfy the *practical* interest attaching to the traditional dogma, namely, the vindication of the truly divine character of the Person and Work of Jesus Christ. On the assumption that the love-created social unit is the real microcosm, it would make more intelligible the triplicity in unity which is also affirmed in the orthodox view of the Godhead. Perhaps the social analogy has been the more influential of the two. It certainly offers a picture of the inner constitution of the Godhead that corresponds to the Christian Gospel: 'The love of the Eternal Father is for ever satisfied in the Eternal Son; the Father and the Son are for ever bound together in the Holy Spirit, who is the bond of the Divine Love.'[2]

(*b*) In modern constructions of the doctrine of the Trinity there is a tendency to make much of the microcosm of human personality as carrying traces of macrocosmic Reality. God is to be interpreted, it is said, according to the teleological principle of the highest, and human personality is the highest thing we know. The result is that, as C. C. J. Webb[3] has indicated, we hear a good deal nowadays, even in non-Unitarian Christianity, of 'the Personality *of* God,' whereas the historical doctrine is that of 'Personality *in* God.' This raises the question whether the future of Christianity lies in its associating itself with the modern philosophical movement of personalism or in the renewal of its old alliance with Platonism. Into such a question we may not enter, but we would cite a recent instance of a discussion of the Trinity in which human personality figures as the key to the mystery of the Godhead. It is S. A. McDowall's[4] contention that there is more than analogy between human and divine personality, there is also identity in their nature. The Trinity within us is more than suggestive of the truth that in God personality is also triune. If we might borrow the language of Julian of Norwich,[5] the 'made Trinity' actually points to 'the unmade blessed Trinity.' If the Godhead be a Personality, it must indeed be a unity, but the unity—like the unity of human personality—is composed of three persons, which, although not self-existent but completely interpenetrating, are differentiated from each other by the stress of their individual functioning.[6] Personality, whether in God or in

man, could not really exist if it did not thus involve an internal manifold.[1] For the elaboration of these positions reference must be made to the book itself. The discussion is cited here only as illustrating a recent tendency in the application, in Trinitarian speculations, of the principle of analogy.

5. **Economic and essential trinity.**—(*a*) The transition from the Trinity of experience to the Trinity of dogma is describable in other terms as the transition from the economic or dispensational Trinity (*τρόπος ἀποκαλύψεως*) to the essential, immanent, or ontological Trinity (*τρόπος ὑπάρξεως*). At first the Christian faith was not Trinitarian in the strictly ontological reference. It was not so in the apostolic and sub-apostolic ages, as reflected in the NT and other early Christian writings. Nor was it so even in the age of the Christian apologists. And even Tertullian, who founded the nomenclature of the orthodox doctrine, knew as little of an ontological Trinity as did the apologists; his is still the economic or relative conception of the Johannine and Pauline theology. So Harnack holds,[2] and he says further[3] that the whole history of Christological and Trinitarian dogma from Athanasius to Augustine is the history of the displacement of the Logos-conception by that of the Son, of the substitution of the immanent and absolute Trinity for the economic and relative. In any case the orthodox doctrine in its developed form is a Trinity of essence rather than of manifestation, as having to do in the first instance with the subjective rather than the objective Being of God. And, just because these two meanings of the Trinity—the theoretical and the practical, as they might also be described—are being sharply distinguished in modern Christian thought, it might be well if the term 'Trinity' were employed to designate the Trinity of revelation (or the doctrine of the threefold self-manifestation of God), and the term 'Triunity' (cf. Germ. *Dreieinigkeit*) adopted as the designation of the essential Trinity (or the doctrine of the tri-personal nature of God).[4]

(*b*) It should be observed that there is no real cleavage or antithesis between the doctrines of the economic and the essential Trinity, and naturally so. The Triunity represents the effort to think out the Trinity, and so to afford it a reasonable basis. The first Christians had with St. Paul a saving experience of the grace of the Lord Jesus Christ, and of the love of God, and of the communion of the Holy Ghost;[5] and the theologians of the ancient Church sought to set forth the Christian experience in logical terms of reason. In the effort they were led, inevitably, to effect an alliance between the gospel of their salvation and the speculative philosophy, and more especially the Platonism, in which they had been trained, while, in making room for the Christian gospel within the world—not altogether hospitable—of the Greek philosophy, they found themselves translating their empirical knowledge of God—the God and Father of the Lord Jesus Christ—into a doctrine of diversity or multiplicity, as distinguished from merely abstract unity, within the divine Nature itself. In other words, in thinking out the Trinity they arrived at the Triunity. None the less the greatest and most influential of the Christian Fathers, Origen, Athanasius, Basil and the Gregories, Augustine, all acknowledged that, for all the light thrown upon it in the Biblical revelation, the divine Nature remained for them a mystery transcending reason.[6]

(*c*) It is claimed, however, especially by Catholic thinkers, that, logical mystery as the Trinity undoubtedly is, it not only conserves the spiritual values of the Gospel, but may be said to enshrine or encasket them. The Athanasian Creed, *e.g.*, is declared to be in effect a sublime and magnificent hymn of the Christian faith, having a power all its own to stir and uplift the souls of believers with the greatness and mystery of the divine redemption in Jesus Christ. That being so, it may be allowed that there is justice in the contention that acceptance of the Triunity does not commit one to the adoption of obsolete modes of thought, but only to acceptance of the authoritative Christian tradition which the terms of the Greek philosophy served to symbolize, and with whose continued vitality they have become invested.[1]

(*d*) But in consequence of a wide-spread failure, especially within the Protestant Church, to appreciate the symbolism in which the traditional Christian convictions are embodied, and to recognize in the doctrine of the Three in One any more than a sacred mysterious formula, modern Christian theology is thrown back more and more upon the historical revelation in Jesus Christ and the inward experience of Christian believers as the practical ground and basis of Trinitarian doctrine, being less concerned with what God is in Himself than with what He has shown Himself to be—less concerned with the Trinity of essence than with the Trinity of manifestation. It is part of the modern empirical movement in theology, chiefly associated with the names of Schleiermacher and Ritschl. When thus employed practically, as interpretative of Christian experience, rather than theoretically, as a doctrine of reality beyond and even apart from experience, the Trinity may be regarded as summarizing the different ways in which the knowledge of God may be held. (1) He may be thought of as the self-disclosed God and, as such, known to men as the ultimate and absolute Being, whose ways are past finding out. (2) He may be thought of as the self-disclosing God and, as such, known to men in nature and history and, above all, in the character and purposes of Jesus Christ. (3) He may be thought of as the self-imparting or self-communicating God and, as such, known to men as indwelling power. God revealed, God revealing, God abiding—in these three ways God makes Himself known, and they correspond to the elements of the Father, the Son, and the Holy Spirit in the Trinitarian formula. If then, theoretically, the Trinity is 'the affirmation of a full rich life in God as distinct from all abstract and barren conceptions of his Being,' it is, practically, 'the affirmation that the true nature of God must be learned from his historic revelation in Christ, and from the experience which Christ creates.'[2]

(*e*) Doubtless such a statement is liable to the charge of Sabellianism (modalistic Monarchianism), but it may readily be defended against such a charge. In Sabellianism the divine nature is an abstract undifferentiated unity known only in three successive modes or manifestations, none of which is complete or permanent; they are but names,[3] and may not be translated into fundamental factors in the divine experience. Here the elements of the Trinity are acknowledged to be rooted eternally in unseen reality, so that God is always the Father, the Son, and the Spirit, although known through the threefold self-manifestation or not known at all.

(*f*) In the system of Christian theology the

doctrine of the Trinity does not usually fit well into the general doctrine of God, and often bears the character of a doctrine apart. There is much to be said for Schleiermacher's view—in his case reflecting, it may be, a Sabellian attitude—that the Trinity falls to be discussed at the end of the dogmatic system. One could not properly speak, he urged, of the Father, the Son, and the Spirit until one had expounded the Christian faith regarding the Son and the Spirit. None the less, it is quite possible vitally to relate the Trinity, conceived scripturally as a Trinity of manifestation, to the general Christian conception of God.[1] (1) There is no difficulty with the doctrine of the Father, who in the new formula as in the old is God in all His fullness of being and life; from which fullness the Son and the Spirit subtract nothing. (2) The doctrine of the Son is not without difficulty in this connexion. The old formula rested on the assumption that the divinity of Christ (the Christian conviction of which was the experiential ground of the doctrine of the Son) was to be discovered in the metaphysical constitution of His person, and accordingly by the way of analysis, whereas the new formula founds upon the principle that the secrets of personality do not yield themselves to 'searching' but to observation, and that accordingly the divinity of Christ is to be traced and recognized, if anywhere, in the unfoldings of His character and life. Moreover, the old formula also implied that there existed a fundamental difference of nature between God and man, so that the incarnation of the divine Word was nothing if not a stupendous miracle. The new formula, under the ruling modern conception of divine immanence, would imply that the divine-human Christ may be reached along the lines of God's normal working in His world. God is to be conceived as always present and active in the world, manifesting Himself continuously in nature and history, yet manifesting Himself supremely and fully only in the Person and Work of Jesus Christ. In Jesus Christ we have at once true man arising out of humanity and true God coming forth from the Godhead. In other words, Jesus Christ is the perfect expression of the divine Nature in terms of human character and life. With such a new criterion of divinity, and such a new conception of the relationship between the divine and the human, an assured place may be found — it is claimed—for the doctrine of the Son in the modern doctrine of God. (3) The doctrine of the Spirit may also be seen to be fulfilled in the new doctrine of God towards which modern Christian thought appears to be advancing. For the Spirit is but the immanent God Himself, working more freely in the souls of men as righteousness and power because of the new channels of influence He has opened up for Himself through Jesus Christ. In short, God Himself (ὅλος θεὸς) is the Father revealed; God Himself is in Christ revealing; God Himself is the Holy Spirit abiding. The form of the ancient dogmatic conception may be changed, but the substance of it remains. Still as of old we know God in His threefold relationship to men, and in each relationship we have very God Himself. Wherefore we may still unite in ascribing glory to the Father, and to the Son, and to the Holy Spirit, as it was in the beginning, is now, and ever shall be, world without end.

W. FULTON.

TRITHEISM.—1. Definition.—Tritheism (Gr. τρεῖς, 'three,' and θεός, 'God') is the belief in three Gods. As such, it is a form of polytheism, defined as the belief in many Gods or in more Gods than one.

2. Christianity and tritheism.—So far as the present writer is aware, no historical religion may properly be called tritheistic. Where divine triads or trinities are found, they are not distinguished from other divinities as true or real gods from idols. (1) On the other hand, the charge of being tritheistic has often been preferred against the Christian religion, as presented in the doctrine of the Trinity. (2) The Christian Church has, however, expressly dissociated itself from Trinitarian views tending to tritheism. (3) Moreover, liability to the charge of tritheism is regarded as sufficiently damaging also to speculative constructions of the Trinity. In what follows the writer would expound these three statements one by one.

3. The charge of tritheism.—(*a*) The accusation of being tritheistic, which has often been made against Christianity, is in a sense justified. For undoubtedly the doctrine of the Trinity has been, and is still, conceived among simple uneducated Christians in a naively tritheistic way. Sometimes also a naive tritheism is found even in theological statement, as when in so-called transactional theories the Atonement is represented as the result of a bargain between the first and second Persons of the Trinity.

(*b*) But the Christian religion, like other historical religions, must be judged by the affirmations of its best and most representative minds, and not by the crudities of the uninstructed or the aridities of theological pedantry. It is affirmed by the representative minds of Christianity that the accusation of tritheism is unjustified, being largely founded upon misunderstanding of the theological terms in which the Trinity is formulated. They would insist that there is a world of difference between the formula, 'There are three Gods,' or even the formula, 'There are three distinct or separate individuals in the class known as God,' and the formula in which the orthodox doctrine may be summarized, 'There are three Persons in one God.' In fact the Trinity is declared to be at bottom an assertion of the divine unity. If in the light of the Christian revelation we are led to affirm three eternal distinctions in the Godhead, we must still hold fast to the old faith of Israel's prophets and say, 'These three are one.' Admittedly, however, there are ambiguities and associations to mislead in the Trinitarian terminology. In particular, the ambiguity of the word 'person' is allowed to be a source of much misunderstanding. To set forth the true theological meaning of this word should be enough, it would be added, to vindicate the doctrine of the Trinity against a charge so obnoxious as that of tritheism. We are

[1] Cf. W. N. Clarke, *The Christian Doctrine of God*, Edinburgh, 1909.

reminded in this connexion of how the early Christian thinkers abhorred the suggestion even that in affirming the Trinity they were reinstating heathen polytheism.

It should be remembered[1] that there was no word 'person' in the vocabulary of the Greek-speaking theologians, who shaped the doctrine of the Trinity to the authoritative form it assumed in the Nicæno-Constantinopolitan Creed. 'Person' (Lat. *persona*, 'an actor's mask'), as it appears in the Athanasian Creed, was intended to represent the Greek *ὑπόστασις*. Now 'hypostasis' ('sediment' or 'dregs,' lit. 'standing under or below') was used about the beginning of the Christian era to signify a real concrete existence or actuality in contradistinction to a mere appearance having nothing solid or permanent underlying it, such as a comet in comparison with a rainbow. Through Origen's influence it came to be employed in the theological terminology as the designation of a member of the Trinity, as in the Cappadocian formula, 'Three Hypostases in one Nature or Substance' (*φύσις, οὐσία*).[2] 'Hypostasis' then stood for a real independence—a real principle of individuation or distinction—*within* the Being of God, and ceased to be regarded, as in the Stoic use, as theologically equivalent to *οὐσία* or *φύσις*. It may be that the term 'hypostasis' as applied to the members of the divine Trinity suggested an independence or individuality of too complete a sort, as though the Father, Son, and Spirit were as separate in the class God as Peter, James, and John in the class named man;[3] but this suggestion was corrected, at least for speculative minds, by the Logos-Christology deriving from St. John and St. Paul, in which the idea of immanent distinctions in the unity of the Godhead received recognition. On the other hand, the tritheistic suggestion was in a sense accentuated for the Latin-speaking theologians by the selection, due probably to Tertullian,[4] of the word 'person' as the translation of *ὑπόστασις*. Though *persona*, as its original meaning might show, implied only a temporary and superficial kind of individuality (an implication more definitely conveyed by *πρόσωπον*, lit. 'face,' by which *persona* was often rendered in the later Greek theology), it implied also the dignity and worth of a rational nature. A 'person' in the early centuries of the Latin Church was an individual viewed in a legal aspect (the word often meant a litigant or a party to a contract as well as a player) as the subject of rights and duties, if not as yet in the philosophical sense of a self-conscious and self-determining Ego—a sense which has attached itself to the word in modern times. Yet even the ancient legal and relative associations of 'person' would impart ambiguity to its theological use, especially in popular thought, and the ambiguity would tend to increase in European usage as the word approximated more and more to the modern philosophical sense of personality. So it is not surprising that there has been a strong tendency to tritheism in Western theology, especially among the people; and that non-Christian thinkers, notably Jewish and Muhammadan, have so often viewed the doctrine of tri-personality in God as virtual or veiled tritheism.

4. Tritheism as a heresy of dogma.—(*a*) Although aberrations from the orthodox doctrine were in the East towards a modalistic Monarchianism (Sabellianism) rather than tritheism, it was in the East—among the Greek-speaking theologians—that a form of tritheism actually arose to meet with the condemnation of orthodoxy. The movement in question illustrates the reaction of Christological discussion and controversy upon the doctrine of the Trinity. Christology lay in the heart of the Trinitarian dogma, and the development of Christology naturally led to a revision of the dogmatic terms.

(*b*) As a definite phase in the history of Christian thought tritheism appeared *c.* A.D. 550 in Monophysite circles, being associated chiefly with the names of John Askusnages and John Philopon. The latter, an Alexandrian philosopher and a distinguished Aristotelian, of whose work entitled *Διαιτητής* important fragments have been preserved in the writings of John of Damascus,[5] appears to have been the most influential of the school. As a Monophysite John Philopon was opposed to the Chalcedonian description of the Person of Christ as consisting of 'one person in two natures' (*ἓν πρόσωπον* or *μία ὑπόστασις ἐν δύο φύσεσιν*), and contended that Christ's was a single nature compounded of the divine and the human. That is to say, in Christology *φύσις* or *οὐσία* and *ὑπόστασις* were to be viewed as synonymous terms.

(*c*) When this Christological position is applied to the doctrine of the Trinity, the question is at once raised as to whether the orthodox formula of three Hypostases in one Substance can be maintained. If one *οὐσία*, is there not but one *ὑπόστασις*; if three *ὑποστάσεις*, are there not three *οὐσίαι*? The affirmative to the first question leads to a form of Unitarianism, the affirmative to the second to a form of tritheism.

(*d*) John Philopon started from the consideration of the three *ὑποστάσεις* and reached, accordingly, a tritheistic conclusion as to the divine *οὐσία* or *φύσις*: *ἔστω τρεῖς φύσεις λέγειν ἡμᾶς ἐπὶ τῆς ἁγίας τριάδος.*[1] So he and his followers were named by their opponents 'tritheists' (*τριθεῖται*), although we are told[2] that they would not actually have confessed themselves as believers in three Gods. If theirs was a theoretical, it was not also a practical, tritheism, like the Trinitarian notions of the transactional theorists mentioned above (which amply justified the protest of the earlier Unitarians). It appears, however, that John Philopon admitted the notion of a common Nature (*οὐσία κοινή*), if holding it in what might have been named later a nominalist sense; but Damian[3] (578–605), the Monophysite patriarch of Constantinople, held so pronouncedly realistic a view of the one Substance, at the same time apparently regarding the three Persons as true reals or separate individualities, that, like Peter the Lombard in a later day, he was accused of teaching a Quaternity rather than a Trinity, and his followers were labelled 'tetradites' (*τετραδῖται*). The tritheists were definitely opposed in the name of the orthodox dogma by John of Damascus, who in seeking to emphasize as against them the unity of the Godhead gave—as Augustine did—a modalistic flavour to his theological exposition.[4]

5. Tritheism as an error of speculation.—It has been remarked[5] that in the tritheistic movement (so called) and the counter-movements it evoked we may find the roots of the mediæval controversy between nominalism and realism. The remark is illustrated by the case of Roscellin, the best-known representative of the older nominalism. According to Roscellin, universals were not reals, but merely subjective conceptions (*flatus vocis*).[6] And, if this principle holds of the Nature or Substance of God, then the Persons of the Trinitarian formula must be regarded as distinct self-consciousnesses, and the unity of the Godhead as but a nominal and generic unity. Thus on philosophical principles Roscellin reached a theoretical tritheism, which, however, at Anselm's instance, was condemned at Soissons in 1092.[7] And over and over again, from the beginnings of Christian theology down to the present, speculative constructions of the doctrine of the Trinity have had to encounter—sometimes in the irony of things—the damning charge of being tritheistic. In the ancient Church, as Callistus accused Hippolytus of dyotheism, so Dionysius—maintaining the Roman tradition of unspeculative adherence to the

unity of the Godhead—preferred the accusation of tritheism against Origen's teaching.[1] Yet Origen's doctrine of the eternal generation of the Logos or Son entered into the orthodox formulas, and a follower of Origen, Gregory Thaumaturgus, mightily championed the unity of the Godhead against the polytheists (tritheists).[2] Again, in the mediæval Church even Abelard was suspected of tritheism, and yet it was Abelard's aim and endeavour to mediate between the extremes of a tritheism like Roscellin's and pure modalism, and his sympathies lay with modalism rather than tritheism.[3] Once again, if it is not invidious to select so modern an instance, W. Adams Brown comments as follows on W. N. Clarke's constructive presentation of the essential Trinity:

'It is hard to see how these "centres of conscious life and activity" can be distinguished from separate personalities.'[4]

And yet W. N. Clarke[5] so emphasizes the Trinity of manifestation, as distinguished from the Trinity of essence, as to be far away indeed from tritheism. It all illustrates the fact that, while the doctrine of the Trinity, as set forth in the Nicæno-Constantinopolitan and Athanasian Creeds, will have no traffic with tritheism, it is difficult in the theological exposition of the dogma to steer a safe course between tritheism and a Sabellian modalism (in which the Father, Son, and Spirit are merely three modes or aspects of the one God)—which serves to give point to Augustine's famous remark that the alternative to the affirmation of the three Persons is silence: 'dictum est tres personae, non ut illud diceretur, sed ne taceretur.'[6]

LITERATURE.—See art. TRINITY. W. FULTON.

TRUST.—In the wide sense of confidence in a supernatural Power on which man feels himself dependent, trust enters as an element into practically all religions from the lowest up to the highest. Savages rely on their fetish to bring them success in the chase, and other peoples on their national god to give them victory in war. But such trust possesses no ethical quality and need not further detain us. Only when the superior and supernatural Power is conceived in more or less ethical fashion can a trust emerge that has ethical and religious value. Religious trust, in the only sense worth considering, is confidence in and reliance upon the eternal Power on which we hang, as one that is working towards a worthy end and guiding the course of events in wisdom and goodness. It is the trust that comes to expression in Ps 36[5ff.]:

'Thy lovingkindness, O Lord, is in the heavens; thy faithfulness reacheth unto the skies. Thy righteousness is like the mountains of God. . . . And the children of men take refuge under the shadow of thy wings.'

Were the facts of life uniformly of a kind to render the moral purpose and control of God obvious and unmistakable, the exercise of trust would make no particular demand on our energies. Since, however, they are far from being so, the world not seldom seeming to ride roughshod over man and his values, trust always carries with it the idea of a triumph over difficulties. In the Epistle to the Hebrews it is presented in the light of an act of heroism: 'He endured, as seeing him who is invisible' (11[27]).

Trust of this kind is not of course to be looked for in the religion of primitive races or in religions that are merely national. Nor does it emerge with any distinctness in the pantheistic religions of India. The Indian conception of the world-order as governed by the principles of *karma* and *saṁsāra* (transmigration) is not at bottom ethical, and the corresponding piety consists not in submission to that order as something good, but in the desire to escape from it, and in the exercises through which the goal of absorption in Brahman is attained. Bhāgavatism, it is true, acknowledges a single God who is personal and gracious; and in its conception of *bhakti*, or devotional faith, as the way of deliverance from the wheel of birth and rebirth, resignation appears, if not as a constituent, at least as a fruit.[1] But *bhakti* is far less ethical trust than a mystical 'abiding' in the 'Adorable,' and the piety of Bhāgavatism as mirrored in the *Bhāgavad-Gīta*, intense though it is, is for the most part of the usual Indian type.

In the religion of the Greek dramatists, of Plato, and of the later Stoics, trust holds an assured though not a prominent place. Sophocles expresses the conviction that, however things may seem to us in our short-sightedness, if we could only see the purposes of the gods in their totality, we should know them to be good, and that 'nothing to which the gods lead man is base.' Of the just man Plato declares:

'Even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and in death: for the gods have a care for any one whose desire is to become just and to be like God, as far as man can attain the divine likeness, by the pursuit of virtue.'[2]

Even more striking are the words of Epictetus: 'Do with me what thou wilt: my will is thy will: I appeal not against thy judgments.'[3] In the *Epinomis*, a dialogue wrongly ascribed to Plato, it is said: 'Pray to the gods with trust.'[4] And of Socrates Xenophon says that he must have believed in the gods, since he trusted them: πιστεύων δὲ θεοῖς πῶς οὐκ εἶναι θεοὺς ἐνόμιζεν.[5]

But, though in the higher Greek religion trust had a firm basis provided for it and secured a certain amount of recognition, its full significance was far from being realized. Nowhere do we find it put forward as a central element in piety or a spring of strength and goodness. It was in the Hebrew prophets and their spiritual successors that it first really came into its own. Everywhere in the Bible we are met by utterances of fervent and steadfast trust in God. And its religious importance is clearly recognized. Isaiah sees in it the only source of safety: 'If ye will not trust, ye shall not be established' (7[9]). Jeremiah speaks to the same effect: 'Cursed is the man who trusts in man and makes flesh his arm, and whose heart turns aside from Jahweh. . . . Blessed is the man who trusts in Jahweh and whose confidence Jahweh is' (17[5.7]). To trust in Jahweh and do good is presented in Ps 37 as the sum of religion. In the NT the idea of trust, deepened by a new feeling for God's care for the individual, occupies a position of still greater prominence. Outside the Synoptic Gospels, however, it is to a large extent merged in the idea of faith (*q.v.*). It is faith in the sense of belief that is established as the condition of salvation. This change of emphasis—as we shall see, it amounts to nothing more—is intelligible when we remember that the gospel was preached as, in the first place at least, a message to be received. None the less it created for the Church a serious problem and one that had to wait long for a satisfactory solution. The problem has to do with the mutual relations of faith and trust. By St. Paul,[6] and also in the Epistle to the Hebrews, faith

is conceived in a way that makes the two practically identical. But what if its object is thought of as a doctrine which must first be assented to before trust can enter? In that case faith, while including trust, will contain in addition a purely intellectual element, either intellectual submission, if the doctrine is authoritatively given, or intellectual insight, if it is the product of a rational process. Adopting the first alternative, the older Protestant theologians in their analysis of faith established *notitia* and *assensus* as the necessary preliminaries to *fiducia*. The vice of this solution is that it destroys the independence of faith—in other words, of religion—by binding it to an act external to it and without moral quality. The faith described by Paul as trust in God is presented as at bottom subjection to the Church or the Bible as the guarantor of religious truth. And its independence is equally subverted if, adopting the second alternative, we regard it as receiving its object from philosophical reflexion. The true solution of the problem lies in the recognition that in faith itself there is a cognitive element, and that its object is given not in the form of a doctrine, but in the form of an ideal value. Face to face with the great values that are supremely embodied in the life and cross of Jesus and that are summed up in the conception of a kingdom of the good, we affirm them on the ground of their worth as the manifestation of the eternal Power that works at the heart of things, the eternal Reality on which the universe no less than our human life is founded. Faith is nothing else than just this feeling for the ideal and, above all, the moral values and this affirmation of their cosmic significance. So interpreted, it is one and the same thing with trust in God, for what is trust in God but trust in the good as the central might on which we and the whole universe hang? If there is a difference, it is that in the idea of faith the emphasis falls on the cognitive aspect, and in the idea of trust on the volitional.

TSHI-SPEAKING TRIBES.—See NEGROES AND W. AFRICA.

TSIMSHIAN.—The Tsimshian belong to the northern group of coast Indians, but differ markedly from the Haida and Tlingit (*qq.v.*) in language. Their social organization is also somewhat divergent, since instead of two phratries they have four —Eagle, Wolf, Kanhada, and Gyispawaduweda—each embracing many small local groups or clans. There are three chief Tsimshian divisions: the Tsimshian proper, living on the lower Skeena River and the coast to the south, the Niska of Nass River, and the Kitksan of the upper Skeena. The last does not border on the coast and is intermediate between the coast tribes proper and the true interior tribes of Athapascan lineage. Most of the information that we possess regarding Tsimshian religion is from the Niska, but there seems to have been little difference between their beliefs and those of the other divisions.

1. **Cosmological beliefs.**—The earth was believed to be flat and circular. It was supported by a man named Amala ('smoke hole'), who lay on his back and held upon his chest a spoon made of the horn of the mountain-goat. This was filled with grease, and in it stood a pole, on which the earth rested. When he became tired, he lifted the pole, and the earth shook. The pole, with the earth on it, was turning round in the bowl of the spoon, the grease in which served to make it revolve easily. Sun, moon, and stars belonged to the sky and did not turn with the earth. This reference to the turning of the earth seems to point to White influence, but the association of grease with the being under the earth is paralleled by something related of the Haida Atlas, Sacred-one-standing-and-moving, and is probably genuinely aboriginal.

2. **Supernatural beings.** — The supernatural beings, so far as we are acquainted with them, were much the same as those among the Haida (*q.v.*). They had a supreme heaven-god called Laha ('on the air'), a perfect counterpart of the Haida Power-of-the-shining-heavens. From the information regarding him gathered by Boas, however, it seems that he approached much nearer to the monotheistic idea of a supreme being.

'Heaven is the great deity who has a number of mediators called Neqno'q. . . . Heaven rules the destinies of mankind; Heaven taught man to distinguish between good and bad, and gave the religious laws and institutions. Heaven is gratified by the mere existence of man. He is worshipped by offerings and prayer, the smoke rising from fires being especially agreeable to him. Murderers, adulterers, and those who behave foolishly, talking to no purpose, and making noise at night, are especially hateful to him. He loves those who take pity upon the poor, who do not try to become rich by selling at high prices what others want. His messengers, particularly sun and moon, must be treated with respect. Men make themselves agreeable to the deity by cleanliness. Therefore, they must bathe and wash their whole bodies before praying. For the same reason they take a vomitive when they wish to please the deity well. They fast and abstain from touching their wives if they desire their prayers to be successful. They offer everything that is considered valuable—eagle-down, red paint, red cedar bark, good elk-skin lines, etc. The offering is burnt.'[1]

The ethics of this, especially in the matter of acquiring wealth, seems so different from the aboriginal code found elsewhere that it is probable that the native informant's statements were tinged with missionary teaching, and that Heaven, or Laha, was elevated to a position above that which he occupied in earlier days. There can be no doubt, however, as to the existence of a sky-god 'first among equals.'

The Tsimshian prayed less often to their heaven-god than to the minor deities, or 'mediators,' whom they generally asked for food and fair weather. Sometimes they prayed to the supernatural beings collectively. The most important 'mediators' are stated to have been the sun and moon, spirits appearing in the shape of lightning strokes, and animals. The Raven, also called Skämsem, was believed in and had the same functions and general character as among the Tlingit and Haida. They also believed in the sea grizzly bear, or Hagulâk, which may have been originally a Haida conception, since his home was called Helahaidek ('near the Haida country'). In his house he had four kettles called Lukewarm, Warm, Hot, and Boiling. The killer-whales seem to have been his servants, since they were known as 'Hagulâk's men.' There was also a one-legged man similar to the Master-hopper of the Haida.[2]

Besides praying to the deities, a person could force them to grant his desires by rigid fasting. He had to abstain from food and from seeing his wife for seven days, lying in bed motionless all that time. Then he might rise, wash himself, comb the right side of his head, and paint the right side of his face, after which he might look at his wife. A less rigid form of fasting extended over four days only. To make the ceremony very successful, the man's wife must join him, but, if the wife should be untrue to her husband, the effect of the fasting would be destroyed. Whatever twins wished was believed to be fulfilled, and they were appealed to especially to control the

[2] See art. HAIDA, § 19.

weather and bring eulachon and salmon. Numbers of tabus governed hunting and fishing, particularly the fishing of eulachon, which run into the Nass River in great numbers and are, or were, a principal source of wealth to the people. The first of these fish to be caught were roasted on a peculiarly-shaped frame made of elder-berry wood and with special ceremonies, the man who handled it praying meanwhile for an abundance of fish.

3. The dead.—The principal world of the dead was reached by following a trail and crossing a river. According to one story, a man who fainted and passed to the spirit-world was saved by a perforated stone hung round his neck as an amulet, which thwarted the endeavours of four shamans to remove his heart. Whether those who had died by violence or drowning went to regions distinct from the others is not recorded. At least at the mortuary feasts food was put into the fire for the dead.

4. Shamanism.—Nothing is known of Tsimshian shamans which would in any way distinguish them from those of the Tlingit and Haida, except that their bodies, like those of the common people, were cremated.

5. Witchcraft.—The wizard cast his spell by putting some article taken from the victim into a box containing portions of a human body. Strings were fastened inside this box, and, if the wizard wished his victim to die slowly, he fastened the object some distance above the body, but, if he desired him to perish at once, he cut the string, thereby precipitating the object upon the body. Afterwards he had to go round the house in which the person whom he had killed by witchcraft was lying, and later he had to walk round his grave and rub himself, pretending to cry all the time. Unless he observed these rules, he would himself perish. If it was believed that a person had been killed by witchcraft, the Tsimshian would take out his heart and lay a red-hot stone against it, wishing at the same time that the wizard might die. If the heart burst, it was expected that their wish would be fulfilled; if not, it was a sign that their suspicions were unfounded.

LITERATURE.—Nearly all the available Tsimshian material is contained in F. Boas, report v. 'On the North-Western Tribes of Canada,' in *Report of the British Association for the Advancement of Science*, 1889, p. 801 ff., report vi. *ib.* 1890, p. 562 ff., report x. *ib.* 1895, p. 523 ff., in *Bull. 27 BE* [1902], and in *31 RBEW* [1909–1910].

JOHN R. SWANTON.

TUKĀRĀM.—In Tukārām there culminates an important section of the *bhakti* school[1] and his verses have all the authority of a 'Veda' for most of the twenty million Marāṭhī-speaking people of one of India's noblest races, among whom are to be found some of the greatest Indian reformers of the day. Both for his poetic genius and for his unique place in the people's heart he is happily described as 'the Robert Burns of India' who marks 'the era of the efflorescence of Mahārāshtra's people.'[2]

1. Sources.—(*a*) *Biographical.*—Two serious difficulties confront the modern biographer of Tukārām. (1) All the Marāṭhī *Lives* of Tukārām are drawn almost exclusively from a single authority, the poet-saint Mahīpati (1715–90), whose accounts in the *Bhakti Vyāya* (chs. xlviii.–li.) and the *Bhakti Līlāmṛita* (chs. xxv.–xl.) were written in 1762 and 1774 respectively, more than a century after Tukārām's end in 1650, 'long enough for legends to grow.' (2) We have 'no authentic and properly sifted account of his life,' but only 'a mass of legends and traditions that have gathered round Tukārām'[3] and show a distinct 'tendency towards deification.'[4] Yet we have 'at least some facts of historical accuracy to start with,'[5] and Mahīpati's 'detailed legends . . . seem to be in every way as deserving of being critically worked out as those of the early Christian martyrs to which they often bear a strong resemblance.'[6]

A few sources earlier than Mahīpati have been indicated recently by V. L. Bhawe. Besides (1) Tukārām's autobiographical poems (see below) and (2) the *abhaṅgs* of Rāmēshwar Bhaṭṭ, the leading disciple of Tukārām,[1] there are (3) a brief life of Tukārām by his grandson, Gōpāl Buwa, (4) the autobiography of Bahīnābāī, another disciple of Tukārām who dictated her own life-story, giving the names of some of Tukārām's contemporaries who figure prominently both in Mahīpati and in Tukārām's own poems,[2] and (5) a source a century earlier than Mahīpati, a work written by one named Krishnadās Bairāgī on Keśav Chaitanya Sampradāya, which gives the important '*guru*-succession' of Tukārām and helps us to settle important dates in his life, this work being quoted by name and its facts given by one Niranjan.[3] Some would add a sixth source earlier than Mahīpati, in Narahari Mālu, author of *Bhaktikathāmṛita*, but he must be pronounced utterly untrustworthy, though he is followed by a few Maraṭhā authors.[4]

The investigation concerning biographical material has gone far enough to conclude with safety that, despite much unsifted tradition, 'miracle and wonder-working,' Mahīpati's account has a solid substratum of historical accuracy. Moreover, he uses his sources with discrimination, rejecting what he discovers to be unreliable.[5]

(*b*) *Autobiographical.*—The true text of Tukārām's writings has not yet been critically ascertained, and between the several collections there is a wide difference as to the number of poems included, ranging from 4621 in the edition generally accepted[6] to 8841 in one[7] described by R. G. Bhandarkar as 'uncritically made.'[8] Even the former is based on MSS admitted to have been 'corrected,' 'further corrected,' and 'arranged.' The problem remained in abeyance for fifty years until Bhawe in 1919–20 edited and published the first two instalments, numbering about 1300 poems, of what he claims is 'Tukārām's Original Gāthā,' written by one of Tukārām's fourteen disciples, one Santājī the Oilman whose MS[9] bears a date in one place three years earlier than Tukārām's death. All that can be said at present is that scholars are patiently investigating the problem of a critical text of Tukārām's writings. His verses were probably all extempore and were taken down by at least one or two of his immediate disciples. It is almost certain that every collection contains poems which are not really his, and we are also quite unable to fix their chronological order—a serious disadvantage. They are practically our only source of information regarding his teaching.

2. Life.—Penetrating 'a wilderness of surmise and guess,' we are safe in deciding that Tukārām was born the same year as John Milton, in 1608, though later research may push the date farther back. From at least seven generations Tukārām inherited a devotion to the god Viṭhobā of Pandharpūr.[10] It is first as a Śūdra grain-seller in his own native Dēhū, eighteen miles north-west of Poona, that Tukārām comes before us. His father Bōlhōbā, having married off his three sons with lavish outlay, sought to hand over his business to the eldest, whose predilection, however, for an unworldly life led to this responsibility falling on Tukārām at the early age of thirteen. The first four or five years appear to have been prosperous, but they were followed by a succession of disasters in business and home, so that young Tukārām's capital disappeared. Many stories are told illustrating his honesty, simple-mindedness, and spiritual devotion, Viṭhobā being represented as his unfailing helper on all occasions. All these stories probably have a solid basis of fact.

A great famine in 1629, during which his elder wife[11] died crying for bread, was the last in a succession of sorrows which led him to give up all business and worldly attachment. Sitting on the river bank with his younger brother Kānhōbā, he threw into the stream his half of the business papers and handed over the remainder to Kānhōbā, while he dedicated himself wholly to Viṭhobā.

The spirit of poetry came to him in a dream, commanding him to complete the unfinished task

of his great predecessor Nāmdēv, *bhakta* and poet. In another dream he received his all-important *gurū-mantra — Rām - Krishna - Hari*, the secret mystic formula which finally initiated him as a Hindu teacher. This was at the hands of one Bābājī Chaitanya of the line of Rāghav Chaitanya and Keśav Chaitanya—a possible indication that Tukārām had some connexion with the Chaitanya sect of the Vaiṣṇavites. A series of events setting forth his dealings with Brāhmans constitutes the most important part of his life-narrative.

One such story provides an interesting Hindu parallel to the Quaker doctrine of the sacramental significance of every meal. A Chinchwād Brāhman, Chiṁtāmaṇi Dev, had invited Tukārām to dine with him, and, the Śūdra's plate having been laid the usual distance from the Brāhman's, Tukārām made the strange request that two more be laid, one for his own god and another for Gaṇpati, worshipped by his host, his explanation in an autobiographical poem being: 'If you enjoy a meal in faith, God sits down to dine with you.' Another event, one of the most critical in his life, demonstrates Tukārām's reverence for Brāhmans, even at the height of his renown. Rāmēshwar Bhaṭṭ, a Brāhman scholar jealous of the Śūdra's fame, had not only moved the public authorities against him but had personally enjoined silence upon him. 'But what of the poems already written?', asked their docile author. 'Throw them into the river,' was the cruel reply, and into the river the whole bundle went, covered with a stone. It was Tukārām's darkest hour, but, to the astonishment of all, several days later the sheets were seen floating on the river and were taken out unharmed. Rāmēshwar's deep repentance followed, the poet replying in gentle verse: 'If your mind is pure your enemies will be your friends.' And it was true enough in this case, for Rāmēshwar became his lifelong disciple.

Of the many incidents illustrating Tukārām's religious views one is of a Vedāntist Brāhman who persisted in reading to this Vaiṣṇavite *bhakta* a pantheistic treatise, to which Tukārām agreed to listen only on condition that he might be covered with a blanket. When the blanket was lifted after an hour's reading, Tukārām was found seated with his fingers in his ears, his defence being that he could not listen to the Advaita doctrine that God and His worshippers were the same.

The miraculous is found interwoven throughout Tukārām's life-story. His birth is viewed as an incarnation. He performs many miracles to help the poor. Viṭhobā miraculously intervenes at every point to vindicate and deliver his faithful devotee. In this legendary material is to be included, unquestionably, the account of Tukārām's 'ascension' on which Mahīpati has expended all his powers, giving rise to the popular Hindu belief[1] that Tukārām was carried away to Vaikuṇṭha (the Hindu heaven) in the car of Viṣṇu. The probability is, as suggested by P. R. Bhandarkar, that 'he met his death by drowning,' in the holy river of his own village, in 1650, whether by what is called *jalasamādhi*, or prearranged drowning, as in the case of some other Indian *sādhus*, or whether 'the constant expectation of God's coming to fetch him away produced an illusion, and in obeying a fancied call from the opposite bank he ran into the river and was drowned, it is very difficult to say.'[2] The various traditions concerning Tukārām's influence after death must also be regarded as legendary.

3. Autobiography.—Though there is as yet no critical edition of Tukārām's *abhaṅgs*[3] in existence, his autobiographical poems are generally accepted, and his self-revelations give the impression of being sincere and genuine. Of his kindness and unselfish service for others, on which Mahīpati dwells so often, he himself tells us nothing, his autobiographical verses being wholly concerned with the personal and spiritual side of things. 'It is his own religious life that occupies his soul.'[4] The *abhaṅgs* classified as 'autobiography' in the English translations of the poems by J. N. Fraser and K. B. Marāṭhē[5] number over 500, and there are many hundreds more given up to confession, invocation, and aspiration. He tells us but little of his life in the world, though he often dwells on his guilt and misery. The poems of self-accusation, about 300, reveal a sense of sin whose depth is rare in Hindu literature, though his relation to God is personal and pantheistic by turns.

'Fallen of fallen, thrice fallen am I' (343). 'I am a great fallen sinner. . . . My heart is witness to me that I am not redeemed' (126). This conviction of sin is often closely associated with extreme mental depression: 'False is "mine," false is "thine." False is Tukā, false is his faith. He speaks falsehood to the false' (2345). Sorrow, resulting from the death of parents, favourite wife, and eldest son, and from business failures, clearly led him to his self-dedication: 'It is well, O God, that I became a bankrupt, and was crushed by the famine; this is how I repented and turned to thee' (113). And his dedication was complete: 'Rank, race, colour, creed and caste—all are gone' (2790).

Patwardhan has made a 'tentative' effort to depict Tukārām's long inward struggle.[1] That this earnest pilgrim reached some worthy goal would appear from the poems, about 80 in number, under the heading 'Triumphant Happiness' in Fraser and Marāṭhē.

'I have found a sea of love, an inexhaustible flood. I have opened a treasure of spiritual knowledge; it diffuses the lustre of a million suns arisen in thy worshippers' souls' (573).

This, however, is by no means his habitual mood, which is rather one of despising his self-complacency. He has a passionate desire to help and serve those around, and, though he is far too often censorious, sometimes to the point of coarseness, yet he has something to say of constructive worth to his age and people. And it is chiefly as a preacher that he views himself. Though he lays no emphasis on Vedic lore, he has nevertheless a message invested with authority.

'These are not my words: I am a hired servant of Viṭhobā' (1420). Earnest and sincere preachers are badly needed, for there are impostors who eat and drink and who do even worse: 'Their desires are set on shawls and pots and money.' 'Matted hair and ashes are a scandal when the mind has no patience and forbearance' (1199). 'Such people sink themselves and destroy the ship of salvation,' but a true preacher 'rescues others by the sweet perfume of his words.'

4. Experience of bhakti.—To fathom Tukārām's deepest secret we need to explore his experience of *bhakti*, the 'clinging affection of the heart' for a personal God, though the god in Tukārām's case was a village-idol, surrounded by Puranic gross mythology and superstitious animism. The idol he worshipped was even one 'standing for both' Kṛṣṇa and Śiva,[2] but whether Tukārām recognized this plurality of gods at Pandharpūr we cannot say. In this unpromising soil Tukārām's *bhakti* grows, with pantheism and idolatry as twin-stems on the same tree. And, though his *bhakti* is too often a mere emotion, fugitive and fleeting, with more of longing than of satisfaction, it is yet free from those sensual extravagances that have degraded some forms of Indian *bhakti*. In Tukārām we probably see Indian *bhakti* at its best.

If it be asked in what Tukārām's *bhakti* experience consisted, the answer might be given in the words of the *Nārada-bhakti-sūtra*: 'surrendering all actions to God and feeling the greatest misery in forgetting God.'

'Tukā has his home in the Inconceivable' (1578). 'Wheresoever I go, thou art my companion: thou takest me by the hand and guidest me. As I walk along, I lean on thee' (2149).[3] 'No particular time is necessary,' says Tukārām, 'for the contemplation of God, it should be done always.'[4] And again: 'God is ours, certainly ours, and is the soul of all souls. God is near, certainly near, outside and inside.'[5]

His deep sense of sin offered a serious obstacle to the quest of his soul.

5 Bhandarkar's tr., *Vaiṣṇavism*, p. 95.

'The Endless is beyond, and between him and me there are the lofty mountains of desire and anger. I am not able to ascend them, nor do I find any pass.'[1] 'I know my faults, but I cannot control my mind . . . I am a slave of the senses' (1369).

Did 'any pass' over the 'mountains' ever appear on his horizon? He would appear to have had glimpses of one.

'I know not how to cleanse me of sin, so I have seized thy feet. . . . If thou dost take a thing in hand, what is impossible?' (2035). 'Thou hast saved many a humble, many a guilty, many a sinful man. Tukā dwells at thy feet; preserve him, O God' (248). 'What prayer can I put up? . . . Up till now, I felt sure that some of my service had been accepted. Now nothing but the struggle is left me: I see no sign of assurance in him who stands hand on hip'=Viṭhobā (3010). 'Though I made myself ceremonially pure, some impurity would still cling to me' (2968).

Inward purity thus becomes the prime necessity. 'What I delight in is purity of heart' (2632). 'What you need is a clean heart and a spirit at peace' (2309). 'Blessed are the pious, for their heart is pure. . . . Their hearts are filled with devoted love' (894).

The urgent question therefore comes to be: How shall this purity be realized? Ceremonies are unavailing, as are also pilgrimages.[2] Tukārām has full confidence that God can fulfil His child's desire, and to the crucial question how the divine blessing is obtained the answer comes repeatedly: 'It is *bhāva*' (812).

'My single-minded *bhāva* has put an end to pilgrimage to and fro' (2773). 'God comes quickly and stands where he finds *bhāva*' (3671). 'Tis *bhāva* that moves us and is fitly called the means of salvation' (2597). 'Without *bhakti* and *bhāva* everything else is useless trouble.'[3] 'Lay reasoning or learning aside in a bundle, for here *bhāva* is the one great criterion.'[4]

What is *bhāva*? His modern interpreters are not always clear. Bhandarkar says that it is 'faith, love, or the pure heart,'[5] and also that it has different meanings in different contexts.[6] Sometimes *bhāva* is that heart-religion which is guarantee of the vision of God without conscious effort, a parallel being found in the *Śvetāśvatara Upaniṣad* reference to 'those who by the heart know the Supreme Spirit who dwells within.'[7]

Bhakti, therefore, as experienced by Tukārām, seems to have concerned itself chiefly with realizing a change of heart. 'The great precept of religion is to hear God in the heart' (812). And, with a change of heart, he longs for some assurance of the change:

'Whether I am indeed God's child, truly accepted by him, how am I to know? How shall I know of a surety that my heart is purer, my mind less tainted with anger? For if love be not in my heart how has my heart been changed?' 'Fortunate, indeed, are those persons in whose heart dwells forgiveness.'[8]

Three lines of solution appeared to Tukārām: concentrated personal meditation on God and His saints, persistent self-examination that shall root out self-esteem, and such utter self-abandonment to God that no voice shall be desired but His.[9] Deep humility, simple faith in the divine protection, and complete abandonment of self to God comprise another triple secret of *bhakti*.[10] Tukārām had travelled a long rough road in quest of peace. *Yoga* he had found unavailing, as well as *mantras*, austerities, and the five fires. On the summit of *bhakti* he found three graces whose fragrance reaches us in his pages: pity, pardon, peace.

'He who gives to God simple-hearted devotion . . . within his soul there dwell pity, pardon, peace.'[11] 'There is no Saviour of the needy save God alone: in Him are pity, pardon, peace.'[12] 'Where pity, pardon, peace abide there God dwells. Thither He runs and makes His home . . ., and where these graces have free play He tarries.'[13]

5. **Teaching.**—Tukārām is never systematic in his psychology, his theology, or his theodicy. He oscillates between a Dvaitist and an Advaitist view of God and the world, leaning now to a pantheistic scheme of things, now to a distinctly Providential, and he does not harmonize them. He says little or nothing of cosmogony, and, according to him, God realizes Himself in the devotion of His worshippers. Likewise, faith is essential to their realization of Him: 'It is our faith that makes thee a god' (1785), he says boldly to his Viṭhobā. On the other hand, God makes Himself accessible to man's feeble apprehension by means of visibility, the idol thus becoming a proof of divine condescension: 'He has embodied himself in forms to suit our pleasure' (1753). Man is a child of God. Indeed, the figure of childhood is pressed sometimes so far as to sacrifice reverence and dignity, the same applying to Tukārām's view of God as Mother, though in the latter he finds a solution of many perplexities. All this deals with man's 'natural' state, but separation has entered, sin being viewed variously. It is sometimes a mere breaking of caste rules, sometimes a breach of morality, and again, and very often, it is *mīpaṇa*, a word often on his lips and perhaps best rendered by 'self-centredness,' though this is inadequate. We have seen how deep was his sense of sin and what means of salvation were disclosed to him. Brāhmanical or mystic intuition and verbal theology were deprecated as much as austerities. Men should waste no time in argument, but throw themselves at God's feet. Specific hindrances to salvation are found in the above *mīpaṇa*, in indulgence of desire, fear of ridicule, learning, and disputation. What the religious life meant to him we have already seen. Mere renunciation leads to nothing, and indeed everything is worthless save a personal experience of religion. Tukārām's 'good man' must possess humility, peaceableness, kindness, truthfulness, contentment, and simplicity.

He is mostly despondent of his fellow-men: 'I am sick of mankind' (994), and for relief he turns to 'the saints,' about whom he has hundreds of verses, setting forth their calling, character, and service to mankind. At the other end of the scale of creation animals call forth his real sympathy. Whether he held to *ahiṁsā* is not quite clear. Reincarnation he accepts (972), but he is not sure whether to prefer mortal rebirth, for the power of God's name could break his *karma*. Conscious communion on earth was far preferable to being merged in the unconsciousness of Brahman.

Patwardhan has shown that Tukārām's 'doctrine of *bhakti*' comprised a conception of the Divine Motherhood which gave Tukārām a God of love and tenderness, a sense of human insufficiency which led to conflict between faith and 'the flesh,' devotion thus being frustrated by human frailties, and a defective view of life 'that was at best one-sided. His end was individual, the peace and solace and beatific rest of his own restless soul. . . . Tukārām was a pessimist in regard to this world. . . . The *bhakti* of the future ought to be broader based, fuller veined, and larger souled.'[1] A defect sometimes pointed out is that the claim of human need 'is a rare mood and very seldom expressed in his poems'[2] and that 'there are but few traces of the passion of winning others.'[3] It is a 'defect,' however, very largely repaired by his self-forgetting service as set forth in the pages of Mahīpati.

6. **Relation to Hinduism.**—Tukārām acquiesced in the greater part of the conventional Hinduism of his day while himself living on a loftier plane. Often therefore he speaks with two voices. Temple ceremonies he does not condemn, but his heart aspires to something higher. About Viṭhobā, however, there is no kind of ambiguity, for, as an incarnation of Kṛṣṇa or Viṣṇu, Viṭhobā was the bigger half of Tukārām's spiritual life,

[1] *Indian Interpreter*, vii. 19–30.
[2] N. Macnicol, *Psalms of Marāṭhā Saints*, p. 31 f.
[3] Farquhar, *Religious Literature of India*, p. 300.

though again faith was always the channel. Inwardly he experienced the living God, though outwardly it was an idol he worshipped.

'There is scarcely a theological or philosophical system to be found in his writings, but so far as philosophical thinking may be traced, he tends to be a monist.'[1] 'Tukārām was thus a devotee only of Viṭhobā of Paṇḍharpūr and a monotheist in this sense. Though he worshipped the idol at the place, still he had always before his mind's eye the great Lord of the universe.'[2]

In some verses indeed he holds that the stone idol was a mere stone, neither embodying nor symbolizing the divine. The inconsistency of such a position he appears to have realized, but he does not solve it. Hence the millions in the Deccan who follow him in idolatrous practices and the thousands who share his theistic aspirations have both much to support them. Hence too a theistic society like the Prarthanā Samāj[3] so recently as 20th June 1920 failed to pass a resolution that 'any member who performs a domestic or any other ceremony with idolatrous rites or worships any idols while performing such rites will *ipso facto* cease to be a member of the Bombay Prarthanā Samāj.'[4]

A similar ambiguity exists in his references to caste and holy places. Caste was accepted by Tukārām as an institution of the Hindu world, and he did not carry to its logical conclusion his conviction that God does not consider a man's caste, all His worshippers being equally dear to Him (2077). In personal inward religion Tukārām was democratic enough, but he was too much of the 'mild Hindu' to fight the battle of religious rights and privileges.

Tukārām was in no sense a 'reformer,' as the word is commonly understood: he was a sage with lofty principles in a degenerate time, a sage who for lack of courage, conviction, or inspiration allowed his protests to lapse after he had uttered them.

7. Influence.—Tukārām has quite a unique place in the inner life of his own people. Besides the Vārkarīs, a pilgrim sect devoted to him, every member of which visits Paṇḍharpūr not only at the two annual festivals but on other *ēkādaśīs*, or 'monthly-elevenths,' named *vārīs*, and whose preachings of equality and disregard of caste have been 'a valuable counterpoise to Brāhman domineering,'[5] there are some fifteen million Deccan peasants of all castes and creeds who sing his verses in the fields by day and in companies around some flickering lamp at night. His poems form a substantial part of the hymn-book of the Prarthanā Samāj (*q.v.*) of Western India, now in its ninth edition and containing 500 of his *abhaṅgs*. His terms 'Viṭhobā, Pāṇḍuraṅg' etc., being unacceptable to *ēkēśwarīs* (monotheists), the simple term 'God' has been substituted.[6] That Tukārām has exercised a great nationalizing and democratizing influence among the people of the only Indian nation that has ever ruled over any considerable portion of India can hardly be doubted. His moralizing force cannot be said to have been so great, in view of idolatrous conditions in the Deccan to-day. But the Viṭhobā of Tukārām still inspires a phenomenal type of devotion in his devotees. From as far distant as Madras, women have been known to make at Viṭhobā's shrine the hair-offering called *vēnīdān* (*vēnī* = 'braid,' *dān* = 'gift') by having their heads shaved as do Brāhman women at Gaya, and all Paṇḍharpūr pilgrims have such an affection for their god that no *darshan* is complete without the pilgrim's head touching Viṭhobā's feet. No fewer than 140,000 people take this *darshan* at a single festival, at the rate of 12,000 daily. Some of them accomplish the journey by prostrating their form at every step in honour of Viṭhobā, some thus rolling along for more than 40 miles;[1] one case is known of a man rolling like a log from Nāgpur, hundreds of miles away, at the rate of two miles a day, the journey taking two years.[2] Tukārām's moving verse has done not a little to inspire this tragic devotion in men and women alike.

All attempts to classify Tukārām have failed. He was neither an orthodox Hindu nor a Hindu Protestant. He lived according to the rules of a gigantic religious system with much of which he disagreed while enjoying an inward experience transcending the system, for spiritual intercourse with God and His 'saints' was the sum and substance of Tukārām's religion. He belongs therefore to none of the stereotyped forms, and, to be understood and appreciated at his proper worth, he must be approached without any kind of dogmatic prejudice, whether Hindu or Christian. Those who have no definite creed and who follow no organized system find in him a kindred spirit. He cannot be classed as a mystic, for he had no extraordinary visions, and he followed Hindu rules of living. We may regard him as a devoted theist living his own inward life amid idolatrous surroundings.

'You can find much in Tukārām's poetry that runs parallel with the teachings of Christ save its principles and spirit. These latter, eclectics easily read into his words, and when they cannot do so they put them there. Tukārām was one of the greatest saints of India, and as such he has influenced and is still influencing the devotional trend of his own people. In the case of us Christians he is one of the most powerful of sidelights. Only a few weeks ago he threw me into the very arms of my Lord.'[3]

At the close of an examination into 'The Alleged Indebtedness of Indian Theism to Christianity' the conclusion is reached:

'Certainly either Tukārām was actually in contact with Christian teaching, which is by no means improbable, or he was a remarkable instance of a *mens naturaliter Christiana*.'[4]

Of these two alternatives we incline to the second, as there has been no evidence adduced as yet pointing to Tukārām ever having been 'in contact with Christian teaching,' and, while he has much kinship with the NT writers, none of the fundamental doctrines of the Christian Church, with the possible exception of faith, can be traced in his pages.[5] The kinship is indeed so close that a knowledge of his poems, at least in their English translation, should be regarded as an indispensable preparation for missionary work among his people. That nearly three centuries ago Tukārām should have proclaimed so clearly the inefficacy of all merely external rites and should have insisted so constantly on inward experience as the one essential of true religion offers to the Christian evangelist a most useful point of contact with the people of India.

LITERATURE.—This has been indicated in the footnotes. For a fuller treatment of the subject see J. N. Fraser and J. F. Edwards, *Life and Teaching of Tukārām*, Madras, in the press.

J. F. EDWARDS.

TULASĪ-DĀSA.—1. Life.—Little is certainly known about the life of Tulasī-Dāsa (commonly pronounced 'Tulsī Dās'), the greatest poet of mediæval Northern India, beyond two or three dates and a few accidental particulars mentioned in his writings.

A life of the poet is said to have been written by his friend and companion, Vēṇī-mādhava Dāsa. It is referred to by Śiva

Simha, who wrote in the latter half of the 19th cent., but no copy of it is now known to exist. We have two personal documents relating to the poet—a deed of arbitration, and an entire book of the *Rāmacharita-mānasa*, both in his own handw iting.

There are numerous traditions concerning him, some of which may be accepted with considerable confidence. He is said to have been born at Rājāpur, in the present United Provinces of Bāndā, about A.D. 1532, and to have been a Sarwariā Brāhmaṇa of the Parāśara *gōtra*.[1] His father's name was Ātmārāma, and his mother's Hulasī, his own name being Rāma Bōlā. In one of his verses[2] he tells us that he was abandoned by his parents immediately after his birth, and with great probability it is assumed from this that he was one of those unfortunate children known as *abhuktamūla*, born under the beginning of the currency of the asterism Mūla. Such a child is said to be destined to destroy its father, and the only remedy is to abandon it on its birth, or, at best, so to arrange that its parents shall not look upon its face during the first eight years of its existence. He was picked up by a wandering Sādhu, who, in token of the sacred leaf used in the ceremony of purification of the infant, renamed him Tulasī-Dāsa ('Servant of the *tulasī*-plant'), and by this name he was henceforth known. With this Sādhu, who was probably also his *guru*, or spiritual preceptor, Narahari-Dāsa, he wandered all over Northern India. From his *guru* he learnt the story of Rāma,[3] but owing to his ignorance (? of Sanskrit)[4] he could not at first grasp its importance. At length, after frequent hearings, he learnt it so far as his intelligence would allow, and then determined to write it in the vernacular for his own benefit and for that of others similarly situated. When he grew up, he lived as a householder, and married a girl named Ratnāvalī, the daughter of one Dīnabandhu Pāṭhaka, by whom he had a son named Tāraka, who died at an early age. He was devoted to his wife and could not bear to be separated from her. She was a firm Vaiṣṇava, and on one occasion, when she had gone on a visit to her people, she reproached him for following her and for not showing equal affection to Rāma. Struck with remorse, Tulasī at once left her and took to an ascetic life. He is said to have seen her only once again in after years, and then not to have recognized her. With his head-quarters at first in Ayōdhyā and subsequently in Benares, he made long journeys over Northern India preaching the gospel of Rāma. At first he met with considerable opposition, but his holy life and his attractive personality conquered all obstacles, and, even in Benares, the head-quarters of Śiva-worship, he won universal respect. His fame as a poet spread far and wide and gained him many friends and followers, the most famous of whom were Rājā Māna-simha (Mān Singh) of Ambēr († 1614) and the celebrated 'Abdu 'r-Raḥīm Ḫānḫāna (1556–1627). A wealthy landowner of Benares named Ṭōdar Mall (who is to be distinguished from Akbar's finance minister of the same name) was one of his closest friends, and a touching poem which Tulasī-Dāsa wrote on his death has survived among his most cherished verses. After Ṭōdar Mall's death his heirs quarrelled as to the disposal of the property, and referred the matter to Tulasī-Dāsa as arbitrator. The deed of arbitration in his handwriting is still in existence and is dated Sambat 1669 (= A.D. 1612).

[1] No fewer than four places claim the honour of being his birthplace. The claim of Rājāpur is that best established. His caste has been a subject of dispute. According to some authorities, he was a Kānyakubja Brāhmaṇa.

[2] *Vinaya-pattrikā*, 227, 2.

[3] *Rām.* i. 30.

[4] He was never a good Sanskrit scholar, and some of his few verses in that language contain grammatical blunders.

Bubonic plague appeared in India in 1616, and lasted for eight years. The poet seems to have been attacked by it, for one of his minor works, the *Hanumān Bāhuka*, describes his sufferings from some such disease. After temporary relief he had a relapse and died in Benares in A.D. 1623.[1]

2. Works.—More than twenty formal works, besides numerous short poems, have been attributed to Tulasī-Dāsa, but some of these are certainly apocryphal, and others are of doubtful authenticity. The most generally accepted list mentions twelve, viz. six minor and six major. The minor works are the following: (1) *Rāma-lalā-Nahachhū*, (2) *Vairāgya-sandīpinī*, (3) *Barawai Rāmāyaṇa*, (4) *Jānakī-maṅgala*, (5) *Pārvatī-maṅgala*, (6) *Rāmājñā*. The six major works are (7) *Kṛṣṇagītāvalī*, (8) *Vinaya-pattrikā*, (9) *Gītāvalī*, (10) *Kavittāvalī*, (11) *Dōhāvalī*, and (12) *Rāmacharita-mānasa*.

Tulasī-Dāsa was a Smārta Vaiṣṇava; *i.e.*, while a worshipper of Rāmachandra, he also adhered to the tradition (*smṛti*) of ordinary Hinduism and followed the general religious customs of his caste. This involved, among other things, the worship of the god Śiva and the practice of eating his meals apart. In both respects he differed from the more thorough Vairāgī Vaiṣṇavas, who had abandoned tradition, and who worshipped only Viṣṇu in one or other of his incarnations and ate in company. During his stay in Ayōdhyā he associated with these Vairāgī Vaiṣṇavas and there composed the first three cantos of the *Rāmacharita-mānasa*. Subsequently, being unable to agree with them on points of discipline, he migrated to Benares and there completed the poem.

His devotion to Rāmachandra as an incarnation of the Supreme is illustrated by the above list of works. With two exceptions (nos. 5 and 7) they all deal directly or indirectly with that deity. No. 7 is a collection of hymns in praise of Kṛṣṇa, another incarnation of Viṣṇu. No. 5 is a short poem describing Śiva's marriage with Pārvatī, a subject also treated at some length as an episode in the *Rāmacharita-mānasa*. As already stated, Tulasī-Dāsa paid special reverence to Śiva as a great and kindly god, although by no means on a level with Rāmachandra. It was Śiva who, out of love for the world, communicated Rāma's history to Pārvatī and thereby made it known to mortals.

A brief notice of each of the works named above will suffice.

(1) *Rāma-lalā-Nahachhū*.—The genuineness of this is disputed. It is a short poem describing the 'nail-paring' ceremony at the investiture of Rāmachandra with the sacred caste-thread. This ceremony is a village rite still kept up on such occasions and at weddings in Oudh and Bihār, and the whole poem is in rural style and in rural metre.

(2) *Vairāgya-sandīpinī* ('Kindling of Quietism') describes the true nature of holiness. It advocates *vairāgya* (absence of passion), and the description of the perfect peace resulting from absolute self-surrender to the Deity is not without poetic beauty.[2]

(3) The *Barawai Rāmāyaṇa* is a summary of the history of Rāmachandra in the Barawai metre. It is very short and, as we have it, probably incomplete. It is rejected by some authorities.

(4) *Jānakī-maṅgala* and (5) *Pārvatī-maṅgala*.—These are two short works celebrating the marriages of Sītā to Rāmachandra and of Pārvatī to Śiva respectively. The authenticity of both is doubtful. In no. 4 the order of events differs from that given by the poet in his more important works. The

[1] See G. A. Grierson, *Proceedings ASBe*, 1893, p. 147 ff.

[2] The whole has been translated by G. A. Grierson in *IA* xxii. [1893] 198 ff.

Pārvatī-maṅgala is dated Sambat 1643 (= A.D. 1586).

(6) *Rāmājñā.*—This is a collection of verses to be used as omens previous to undertaking a journey or other important task. The contents are in the main a history of Rāmachandra in seven chapters, each of seven septads of verses, or 343 in all. The omen is found by selecting a verse by lot—a kind of *sortes Virgilianæ*. It is dated Sambat 1655 (= A.D. 1598).

(7) The *Kṛṣṇagītāvalī*, the first of the major works, has been already referred to. As its subject demanded, Tulasī-Dāsa wrote it, not in his customary Awadhī, but in the Braj Bhākhā dialect. It is one of the least read of the poet's works, but well repays perusal, as it contains many beautiful passages. He has entirely avoided debasing religion by that association with eroticism which spoils so much of the literature devoted to Kṛṣṇa.

(8) The *Vinaya-pattrikā* ('Petition') is one of the most important works of the poet, in which his most intimate feelings towards the Deity and that Deity's relations to the human soul are displayed with a freedom from reticence and poetic fervour that have rarely been equalled.

An interesting legend accounts for its origin. Tulasi, harassed and terrified by persecution, writes this petition to Rāmachandra—the loving, almighty, God—appealing for His protection. The whole forms a series of prayers, addressed, one by one, to the various minor gods as door-keepers and courtiers of the Supreme, and then, in an outburst of passionate entreaty and self-humiliation, to the Deity Himself. The final verse tells how, as in the case of an earthly monarch, the petition was granted under Rāma's own signature.

The *Vinaya-pattrikā* is one of the most admired works of the poet, but the difficulties of its language have discouraged many readers. The intense fervour of the writer often carries him into an extremity of passion, bursting forth in an elliptical style very different from the limpid beauty of his narrative poems. Again, the very form of the poem militates against its easy comprehension. It is a petition to a sovereign, expressed in a courtly vocabulary full of high-flown words and phrases. These belong to the nature of the case and are here most appropriate, but they do not tend to make the poem comprehensible to any one who is not a Sanskrit scholar. In spite of these surface defects, this admirable work deserves the closest study from any one who would become acquainted with the religious history of India. We have here a man whose influence for good over generations of Indians cannot be exaggerated, laying bare the inmost recesses of his heart, and openly proclaiming that at which other writers with the same experiences have only dared to hint. It is a book of confessions, but the confessions of a pure and faithful soul.

(9) In the *Gītāvalī* Tulasī-Dāsa appears in a new character, that of a *māgadha*, or panegyrist. It is a book of songs intended to increase in his readers their love for a tender, loving God. Again, as elsewhere, the love which he teaches is that of a child to his father. For the songs he has used the Braj Bhākhā dialect as the traditional vehicle of expression, and the dominant tone is not, as in the *Vinaya-pattrikā*, passion, but sweetness and charm. In this way he gives the whole history of Rāmachandra in a delightful style, quite different from that of his formal epic. There is no verse in the book which is not a complete little picture, and most attractive of all are those in the first book, in which he tells of the baby life of his hero and his brothers. It is a true gospel of the infant Rāma.

(10) Different again is the *Kavittāvalī*. Here the poet, in the character of a *vandin*, or bard, tells of the glory of Rāma, so as to encourage the faithful with a picture of the Deity's power. The language is Awadhī mixed with Braj Bhākhā. No work of Tulasī-Dāsa shows his extraordinary mastery of vocabulary so well as this. His subject is heroic, and, without having needless recourse to Sanskrit, he writes in a heroic style. In the battle scenes the words themselves by their very sound echo the clash of arms and the cries of the combatants, and, in the description of the burning of Lankā, the crackling of the flames. The narrative closes with the sixth book. The seventh, which is nearly half of the whole, consists of a number of short poems in the *kavitta* metre written at different times and here collected by their author. They have no direct connexion with the preceding books, and, being full of personal allusions, form a valuable source of information as to the poet's times and experiences. It is here that we learn about his birth and parentage and about the persecutions to which he was subjected, and from one verse we gather that the date of the compilation was somewhere between A.D. 1612 and 1614. A supplement, in the same metre, is the *Hanumān Bāhuka*, already referred to, in which he tells how he was attacked by plague.

(11) *Dōhāvalī.*—The title means a collection of verses in the *dōhā* metre, and it is by no means certain what is meant by it. There is a work of this name (see below), but some authorities maintain that the list alludes to a poem called the *Rām Satsaī* ('Seven hundred verses [also in this metre] in Praise of Rāma'). Many good scholars consider that this was written, not by the poet, but by another author of the same name. It is a rather tasteless production, but, if genuine, is not without importance, as the fifth chapter gives in great detail what purports to be the poet's doctrine regarding works as opposed to faith.[1] The difficulty in the way of accepting the work now called the *Dōhāvalī* as that referred to in the list is that it is largely composed of verses already occurring in the *Rāmacharita-mānasa*, the *Rāmājñā*, and the *Rām Satsaī* itself. Out of a total of 572 verses no fewer than 258 have been so identified, and there are quite possibly more. If genuine, there must have been a nucleus of original verses to which subsequent admirers have added others, so as to compile a kind of anthology of the poet's best *dōhās*. This is the present writer's opinion, and, if it is correct, the final recension must have been sufficiently long after the composition of the *Rām Satsaī* for the latter to have become recognized as the work of our poet.

(12) The *Rāmacharita-mānasa* ('Lake of the Gestes of Rāma') is commonly called the *Tulasī-kṛta Rāmāyaṇa*. This epic, the poet's greatest achievement, and also, in point of time, probably his first, was begun in A.D. 1574, when its author was about 43 years of age, and upon it his fame chiefly rests. It has been described as the Bible of ninety millions of people, and is certainly more familiar to every Hindu of Northern India than our Bible is to the average English peasant. There is not a Hindu of Hindōstān proper, whether prince or cottar, who does not know its most famous verses and whose common talk is not coloured by it. Its similes have entered even into the language of Indian Muslims, some of whose most ordinary idioms, though they know it not, made their first appearance in this work.[2]

The life of Rāmachandra, considered as an incarnation of the Supreme, is here dealt with in a formal epic. The subject is the same as that of the celebrated Sanskrit *Rāmāyaṇa* of Vālmiki, but the epic of Tulasī-Dāsa is in no way a transla-

[1] Tr. G. A. Grierson in *IA* xxii. [1893] 229 ff.

[2] See G. A. Grierson, 'Tulasī Dāsa, Poet and Religious Reformer,' *JRAS*, 1903, p. 447. Much of what follows is condensed from this paper.

tion of that work. We have an independent story, built on the same foundation, but differing from it in the treatment of episodes and in important details.[1] The author himself states that he has taken his account from many different sources, and it has been shown that the principal of these, besides Vālmīki's work, were the *Adhyātmā Rāmāyaṇa* (a section of the *Brahmāṇḍa Purāṇa*), the *Bhuśuṇḍī Rāmāyaṇa*, the *Vasiṣṭha Saṁhitā*, and the *Prasanna-rāghava* attributed to Jayadēva.[2]

As illustrating the estimation in which this poem is held in India, the following very popular legend may be quoted. Rāmachandra denoted his approval of Vālmīki's epic by appending his signature to a copy of it. Thereupon the monkey-god Hanumān, with his nails, wrote another *Rāmāyaṇa* upon a rock, and took it to Rāma. The latter approved of it also, but said that, as he had already signed Vālmīki's copy, he could not sign another; he had better show it to that poet. He did so, and, as Vālmīki saw that it would eclipse his own work, by a stratagem he induced Hanumān to fling it into the sea. Hanumān, in complying, prophesied that in a future age he would himself inspire a Brāhmaṇa named Tulasī, who would recite his (Hanumān's) poem in the tongue of the common people and destroy the fame of Vālmīki's epic.

There can be no doubt that its reputation is well deserved. The *Rāmacharita-mānasa* is one of the great epics. It has its prolixities and its episodes that jar upon European tastes, but, even so, no one can read it without being impressed by its high poetic merit. The various characters are vividly and consistently described, and live and move with all the dignity of a heroic age. The style is most admirably varied. There is the infinite pathos of the passage describing Rāma's farewell to his mother; the rugged, harsh language telling of the horrors of the battlefield; when occasion requires it, a sententious, aphoristic method of dealing with narrative, teeming with similes drawn, not from the traditions of the schools, but from nature herself; and, suffusing all, a life-giving atmosphere of the purest poetry. To us its weakest side is that which, to a Hindu, is its strongest—the character of its hero. To the poet, Rāmachandra is necessarily, as God manifest on earth, a perfect character. Even when the old story shows him performing unknightly deeds, Tulasī must call them virtues and plead that the end justifies the means. Or, again, the foulest treachery, such as that of Vibhīṣaṇa towards his brothers, is extolled because the traitor is accepted and rewarded by the hero.[3] But this is one of the obligations of the story and of the author's view of the divinity of Rāma. The human characters are to our ideas far more sympathetic. There are the impetuous and loving Lakṣmaṇa; Sītā, the ideal of an Indian wife and mother; Bharata, constant and tender, the model of the true *bhakta*; and Rāvaṇa—the Satan of the epic—destined to failure, and fighting with all his demon force against his fate.

One of the most striking features of the poem is the writer's capacity for seeing things. More than any other literature, Indian poetry has its stock similes—the lotus, the water-lily, the bee, the moon, and so on. Even the best Sanskrit poems often give the impression of being largely the work of the closet, not of the open air. Tulasī-Dāsa employed the same old similes—he would not have been Indian if he had avoided them—but thousands of others are his own. Little expressions—the turn of a sentence or an apt epithet—show how he had seen and studied the world for himself.

It would be a great mistake to look upon him merely as an ascetic. He was a man that had lived. He had been a householder—a word of much meaning to an Indian—and had known the pleasures of a wedded life, the joy of clasping an infant son to his bosom, and the sorrow of losing that son ere he had attained his prime. He appealed not to scholars, but to his countrymen as a whole, the people whom he knew. He had mixed with them, begged from them, prayed with them, shared their pleasures and their yearnings, and, on the other hand, had contracted intimate friendships with the greatest men of the emperor's court. All this we find reflected in the pages of his writings.[1]

His works have suffered the fate which has befallen those of other famous Indian authors. Imitators have written poems which they have passed off as his, and numerous *kṣēpakas*, or apocryphal additions, have been inserted in his epic. He has suffered too from the attentions of commentators without end, most of whom have wasted energy in discovering hidden meanings in the simplest passages, while they discreetly avoid the real difficulties. Finally, his epic has actually been translated into Sanskrit, and there are critics who have maintained that the translation is the original, and that the *Rāmacharita-mānasa* is nothing but a barefaced theft of another's poetry.[2]

3. Religious ideas.—The religious ideas of the poet are of great importance in the history of India. Seventh in descent of teacher and pupil from the great Rāmānanda (*q.v.*), he was a thorough Vaiṣṇava and follower of the *Bhakti-Mārga* (*q.v.*). He taught that there is but one Supreme Being, and that man is by nature sinful and unworthy of salvation. Nevertheless the Supreme, in His infinite mercy, became incarnate in the person of Rāmachandra to relieve the world from sin. Rāma has returned to heaven, where, besides being the ineffable Supreme, he is still Rāma, and where, in consequence, we have now a God who is not only infinitely merciful, but who knows by actual experience how great are man's infirmities and temptations, and who, though Himself incapable of sin, is ever ready to extend His help to the sinful being who calls upon Him. On all this follows, as a corollary, the doctrine of the universal brotherhood of man, and the duty which man owes to his neighbour. His definition of sin is that which is contrary to the will of Rāma, and it is only by acknowledging this, and by abandoning himself to utter loving faith in Rāma's power to save him from its thraldom, that a man can escape from the weary round of perpetual transmigration. The doctrine of the fatherhood of God and of the necessity of *bhakti*, or devotional faith, had long been known. In Northern India Rāmānanda had been its great exponent, and Tulasī-Dāsa put forward no novelty. His claim for consideration is that his teaching was successful. His own pure life and the magic of his poetry have done for the *Bhakti-Mārga* what the eloquence of hundreds of other teachers failed to do. The fact that he was a Smārta Vaiṣṇava must not be forgotten. He belonged to no sect, and founded no sect, but was just an ordinary Hindu, accepting all the Hindu mythological machinery. While worshipping Rāma as the Supreme, he paid adoration to Śiva and the other gods. His attitude to them was much the same as that of the official teaching of one branch of the Christian Church: to Rāma alone he offered λατρεία, to the others δουλεία, to Śiva ὑπερδουλεία.

A few words must be devoted to the poet's use of the word *māyā*. Occasionally he refers to it in terms that can only be interpreted as meaning the influence which hides Bráhma from the soul—the *māyā* of the Śiva-worshipping Vēdāntins, to whose doctrines he was strongly opposed. But all his

[1] *E.g.*, the account of the great battle outside Laṅkā is quite different.

[2] See L. P. Tessitori, *Il 'Rāmacaritamānasa e il Rāmāyana*, reprinted from *Giornale della Società Asiatica Italiana*, xxiv. [1911] (reviewed by G. A. Grierson, in *JRAS*, 1912, p. 794 ff.), and Sītā Rām, in *JRAS*, 1914, p. 419 ff.

[3] The authors of the *Hindī Navaratna* (pp. 88, 289) point out that, with one exception, none of the numerous Hindī poets who told the tale of Rāma ever thought of condemning Vibhīṣaṇa's conduct. The exception is Kēśava-dāsa, a court poet who lived amid knightly surroundings. He also has the courage to condemn Rāma's treatment of Sītā.

[1] Cf. *JRAS*, 1903, p. 452.

[2] See G. A. Grierson, in *JRAS*, 1913, p. 133 ff.

uses of the word in this sense are merely cases of similes and the like, and in no way form part of his real teaching. We may attribute this use of the word to his own association with the worship of Śiva. Elsewhere he employs the word in two different senses: in one it means merely 'magic,' and is the evil force used by demons in their combat with Rāma's army; in the other it represents a combination of the Gnostic demiurge and the Christian 'Tempter';[1] it is a personality, a female, subordinate to the Supreme, and, to a certain extent, His agent. In the latter capacity she sets the whole world dancing, yet she herself is set a-dancing, like an actress on the stage, by a movement of the Lord's eyebrows. She sullies every one, even the gods, with her temptations; and the Deity sometimes sends her forth specially to tempt some pious person who begins to show overweening pride.[2] As the world, the flesh, and the Devil in one, she leads mankind to sin, but, if a man has true *bhakti*, he is surely armoured against her, and she cannot approach him.[3]

Above all, Tulasī-Dāsa taught that the Supreme is a personality. While not denying the existence of the *Nirguṇam Brāhma* of the *Upaniṣads*—a being totally devoid of all qualities, of whom the only thing that can be said is 'he is not this or that'—he maintained that the idea of such a being was beyond the comprehension of the human mind, and that the only God whom it was possible to adore was the personal (*saguṇa*) manifestation of the impersonal (*nirguṇa*).[4]

The practical result of the general adoption of Tulasī's religious attitude has been of the greatest importance to Northern India. In the poet's own time the masses of Hindōstān had two alternative religions open to them. One was the crude polytheism of the worship of village godlings, the other was the Kṛṣna-cult. The first still exists, but controlled and thrust into the background by Tulasī's faith. What the Kṛṣna-cult becomes among the uncultivated masses the religious fate of Bengal has shown. It inevitably tends to become a sex-worship, and its text-books teem with the most passionate, most licentious descriptions of the love adventures of Kṛṣna among the herdmaidens. All else is lost, and there gradually develop the unnameable horrors of a Śākta-cult. Upper India has been saved from this by Tulasī-Dāsa.

LITERATURE.—G. A. Grierson, 'Notes on Tul'si Das,' *IA* xxii. [1893] 89, 122, 197, 225, 253 (this is the only complete account in English of the poet's life and works; a few errors in it have been corrected in the preceding pages), 'Tulasī Dāsa, Poet and Religious Reformer,' *JRAS*, 1903, p. 447 ff.; Gaṇēśa-vihārī Miśra, Śyāma-vihārī Miśra, and Śukadēva-vihārī Miśra, *Hindī-Navaratna*, Allahabad, 1910 (an account in Hindī of the nine great writers in that language); cf. the same authors' *Miśrabandhu-vinōda*, Khaṇḍwā, 1913, p. 304 ff. (a general history of Hindī literature in the same language).

Numerous edd. of all the poet's works have been published in India, but few of them possess critical value. Two excellent edd. of the *Rāmacharita-mānasa* have been published, viz. that issued in 1889 by the Khaḍga-vilāsa Press in Bānkipur and that issued in 1903 by the Kāśī Nāgarī-pracāriṇī Sabhā of Benares. Both are critically edited and have elaborate introductions dealing with the poet's life and writings. For those not familiar with the language the writer can recommend a good ed., with a line-for-line Hindī commentary and much general information concerning the poet, by Rāmēśvara Bhaṭṭa, Nirṇaya-sāgara Press, Bombay, 1904. The same editor has issued from the Indian Press, Allahabad, 1913, a similar ed. of the *Vinaya-pattrikā*, which can be recommended to students. It is believed that it is intended to issue all the poet's works in this series.

A good, if somewhat literal, Eng. tr. of the *Rāmacharita-mānasa* has been made by F. S. Growse (1st ed., Allahabad, 1880–81). It has been several times reprinted in India.

TUNGUS.—1. Area, distribution, number, and history.—The name Tungus is usually derived from the word Tung-hung ('Eastern barbarians'), by which these people were known to the ancient Chinese. They call themselves Avankil (sing. Avanki) or Donki. The Tungusic tribes are the most widely distributed of all the native tribes of Siberia; they live in small groups all over Siberia as far west as the river Taz, as far east as the island of Sakhalin, as far north as the Arctic shore, and as far south as the middle of Manchuria. In spite of this distribution, the language and social anthropology of these tribes are the least known of all the Siberian peoples, the Samoyed, Turkic and Mongolic tribes, and Koryak and Chukchi, even the Gilyak and the Ainu, having had more space given to them in anthropological literature than the Tungus. As a reason for this may be cited the fact that the Tungus usually live in the interior of the continent, in places difficult of access and, with the exception of the Lamut, far away from the coast. The total number of Tungus belonging to the various tribes was 76,504 in 1897, while in 1911 there were only 75,204.

The Tungusic tribes are usually divided into Northern Tungusic and Southern Tungusic. Of these the Northern Tungusic group comprises: (1) Samogir, (2) Nigidal, (3) Olchi, (4) Oroki, (5) Manegu, (6) Tungus proper (including Lamut and Orochon). The Southern Tungusic group comprises: (1) Manchu, (2) Daur, (3) Solon, (4) Gold, (5) Orochi.

The Northern Tungus are at the stage of reindeer culture like the Magdalenian man in Europe, though at the same time they know the use of iron, which they brought from their more southern home. They belong to the Neo-Siberian group. The Southern Tungus are horse nomads, cattle-breeders, and fishermen, and in some places also agriculturists, and in the towns artisans. The Siberian Tungus emigrated from Manchuria partly in the seventh and partly in the thirteenth century after the Mongolic conquest, but their armies had probably invaded Siberia frequently even in the pre-Christian era. The first Tungus subdued by the Russian authorities in Mangazei in 1603 were the Tungus of the lower Tunguska. In 1615 a large Tungus force was defeated by the Russians on the Yenisei, and about 1623 all the Tungus of Central Siberia were forced to pay taxes. The Tungus of the Amur country, together with their territory, were made subject to Russia about fifty years ago.

Although the Northern Tungus live now under a very primitive culture, their pedigree goes as far back as that of the Turkic people, and they therefore present a case of degeneration under the influence of environment. Nowhere is this more clearly shown than in their folk-tales, which in comparison with the really primitive tales of the Samoyed are rather sophisticated. The old Chinese chroniclers used to comment on their two powerful neighbours as barbarians of inferior culture, *i.e.* their north-western neighbours in the pre-Christian era, the Turks of the present day, and their north-eastern, the Tungus. But, as both of them appear under a variety of tribal and dynastic names, it is difficult sometimes to know which of these peoples are of Tungus and which of Turkic race. They are more easily classified by their customs and characteristics, while the Mongols, whose name, used in a broad sense, is applied to both these races, seem to have no characteristic cultural features and are probably a mixture of the two races influenced by their steppe environment more than the Turks and Tungus, and brought to prominence through Jenghiz Khan's (himself a Mongol) conquest.

There are several peoples mentioned by the Chinese who can with some probability be considered to be of Tungus race. Such are (1) the Sushen, who lived north of the Liao-Tung peninsula and paid tribute in arrows and arrowheads to the emperors of the Shang dynasty (1766–1154 B.C.); (2) the Sienpi, who occupied an important strategic position in the Korea and north of China before the Great Wall was constructed (221–209 B.C.); these were the peoples who helped to cause the movement of the Hiung-nung westward, who in their turn pushed the Yue-chi (Turks) to Djungaria; in the 2nd cent. A.D. one branch of the Sienpi, the Jwen-Jwen (Zhu-Zhu) rose to power, but they are not heard of after the 6th cent., when the Tu-Kiu (Turks) emancipated themselves from the Jwen-Jwen yoke; (3) the Tlu, who in the 3rd cent. A.D. lived in the forest between the Upper Temen and Yalu rivers; (4) the Moho (Uki), who in the 7th cent. A.D. inhabited the valley of Sungari and who were the founders of the state of Puhai; (5) the Khitans, who in 925 overthrew this dynasty and founded the Liao (Iron) dynasty; (6) the Niu-chi (Yu-chi), who in their turn overthrew the Liao dynasty in A.D. 1125 and lived in the Shan-Alin uplands; their dynasty was called Kiu (Golden); Jenghiz Khan subdued them in 1234, but in the 14th cent. the Niu-chi reasserted themselves and founded the Manchu dynasty, which in 1644 occupied the throne of China after the Ming dynasty and reigned till 1912.

There are certain characteristics and customs common to most of those peoples as well as the modern Tungus. One is the extensive use of the bow and arrows with iron or stone blades. The arrows are of definite type and adaptable for the use of poison. The arrows and skins are also used for the payment of taxes. Other characteristics are the use of richly-adorned aprons, by both sexes, the braiding of the hair into two plaits, also by both sexes, the breeding of pigs, and the exposing of the dead by placing them on high platforms. These habits are not associated with the Turks and were probably imposed on the Chinese by the Tungus. Thus Marco Polo calls the Chinese empire by the tribal Tungus name Khitai (Cathai), and the Russians call it that even now.

2. Linguistics.—Since the time of Castrén the Tungusic tongues have been classed with the Ural-Altaic group, and, as they have not been sufficiently well known, even modern linguists like Tucker call them 'uncultivated,' while the fact is that, although the language of the Tungus (with the exception of the Manchu and Dauri) has not reached the stage of being written language, in grammatical forms, especially in verbal forms, we see a greater variety of simplifications than in many Aryan languages. The Manchu writing is in a modified form of Uiguric, the old Turkic character based again on the Soghdian.

The linguistic division, based on the results of the most recent researches, is into four groups: (1) the well-defined Manchu group, including Sibo, (2) the Gold group, including Olcha, Orochi, and Orok, (3) Tungus proper, including Lamut, Managir, Solon, and Daur, (4) Sanagir and Negda (on the lower Amur). The extent of this group is problematical, as it is possible that it can be united with group (3).[1]

The Northern Tungus dialects are preserved in a purer form than the Southern, which have come under Mongolic and Chinese influence, yet these differences are not very important, and we can use linguistics as the surest means of tracing the existence of Tungusic tribes in any given region. In many places the Tungus use another language as well as their own.

As in language, so also in social anthropology and shamanistic religion, we can see a certain connexion between all the Tungusic tribes. But the preservation of their own language is not necessarily an indication of the preservation of their physical type.

3. Physical type.—As has been said, there has been contact between the Chinese, the Mongols, and the Tungus-Manchu since the 11th cent. B.C. and probably earlier, but it was based chiefly on conquest and on intermarriage among members of the royal families. Migrations *en masse* did not begin, as far as is known, till the 7th cent. and during the time of Jenghiz Khan. It is probable that the Koreans are a Chinese-Tungus mixture and that the Tungus have played a greater rôle than is known in the formation of the modern Japanese nation.

Deniker places the Tungus among the Northern Mongolians, whom he defines as people with oval or round faces and prominent cheek-bones, who inhabit Manchuria, Korea, Northern China, and Mongolia. He places the Kalmuk alongside of the Manchu and the Northern Tungus hunters. Maak, Schrenck, and Mainoff point out the difference in physical type between the Northern and the Southern Tungus. This is also supported by the present writer. Broadly speaking, the difference consists in this, that the Southern type approaches the so-called Mongol type (almost high stature, round and low-headed), while the Northern type approaches the type of the Eastern Palæo-Siberians (low stature, intermediate or long-headed, and average or high-headed). While the mixture of the Southern Tungus with other neighbouring tribes has been going on for so long that it is very difficult to make any record of it, and the Manchu type practically disappeared among the population of north-east China, the Northern Tungus, especially those isolated in the Arctic region, are comparatively unmixed, or in any case it is easy to trace their mixture. This is especially true in the case of the Tungus between the Lena and the Yenisei, who live in thoroughly Tungus or Tungus-Yakut land, while the Tungus between the Lena and the Okhotsk Sea live scattered among the Palæo-Siberians (Koryak, Chukchi, and Yukaghir). The latter were the secondary object of study of the Jesup Expedition of the U.S.A. some ten years ago, while the Tungus between the Yenisei and the Lena were studied by the Oxford-Philadelphian Expedition in 1914–15. The only racial admixture that has to be considered in the case of the Arctic Tungus between the Yenisei and the Lena is with the Yakut.

With the help of the genealogical method in dealing with the social anthropology of the North-Western Tungus (in North Central Siberia) it is possible to distinguish the following grades of Tungus metisation.

(A) The *Tungus*, whose genealogical table, as far back as could be recorded, does not show any foreign admixture; (B) the *Tungus-Yakut*, who call themselves Tungus, and are such linguistically and socially, but who have begun in the last two generations to intermarry with the Yakut; (C) the *Dolgan*, who were Tungus, but who for a long time have intermarried with the Yakut and have created socially, physically, and linguistically a new type; they consider themselves to be a separate nation, their language approaches more nearly to the Yakut, and in physique they look more like the Tungus; (D) the *Tungusized Yakut*, who live in the western part of the Yakutsk territory, and the eastern part of the Turukhansk country, all on the Tungus land; the other Yakut call them Tungus (Tongus); they are in a minority among the Tungus.

The Tungus-Yakut approach in their stature, and head and facial forms, to the Yakut (*q.v.*), who, on the whole, are of a more Mongolic type than the Northern Tungus, while the Dolgan, though they stand further from the pure Tungus than the Tungus-Yakut do, are yet in all these three aspects more like the Tungus than like the Yakut, or, we might say, they return to the physical type of the Tungus.

4. Technique. — Most of the Siberian Tungus are at the stage of reindeer-culture, though they differ from such *pur sang* reindeer-breeders as the Lapps or the Eskimo in that their technique is not so highly specialized and their carvings and drawings on reindeer-bone or mammoth-ivory are not so perfect; very few of them have any knowledge of making half-underground huts, most of them still having fur tents similar in structure to those in their original southern home. In spite of centuries spent in a land where there are no horses, or only the small Siberian ponies which are used for driving but not for riding, they still preserve their old habits of horse-riding, exchanging the horse for the reindeer. In mythology and religion also their southern origin is apparent from time to time. Thus on the grave of a deceased shaman must be placed driftwood figures of a goat, a horse, or a dromedary—animals which have not been known to them for many generations.

The Tungus who do not live in the tundra as reindeer-breeders, but inhabit the steppes and the forest, are mostly hunters, and occasionally horse- and cattle-breeders. Only in the Amur and Baikal region do we find stationary groups.

Among the Northern Tungus iron is much more used than among the Samoyed. Until quite

[1] This table is the result of a verbal communication from W. Kotwicz, the Tungusic scholar of Petrograd University.

recently tatuing was common among the Tungus of the Yenisei, charcoal alone being used as colouring matter, and no bright colours.

One of the most characteristic features of the original Tungus costume is the beautifully decorated apron, which has in some places degenerated into a small covering for the sexual organs. Birch-bark is not so much in use as among the Ostyak, but the typical Tungus canoes are made of birch-bark sewn into shape. The Tungus ornaments are typical of a migratory people. They have no permanent style—we do not see on them either the conventionalized zoological-anatomical figures of the Samoyed or the rich ornamental designs of plant form so often met with among the neighbouring tribe of Yakut. Yet in their mode of life the Tungus exhibit more neatness, more cleanliness, and more reserve than any other tribe of Northern Asia, and probably this was the reason for the classic name that Castrén gave them, however few he saw. He called them 'the gentry of the Siberian aborigines.'

5. **Sociology.** — The original Tungus social division was into clans, named after the clan-ancestor or the river on whose banks they dwelt. At the present time the remnants of the clans are grouped together into local groups, with local river and other names. This arrangement was forced upon them by the Russian Government, but their internal organization and government, as far as it goes, rests with their council of elders and a prince, elected for three years and re-elected as many times as they wish. Langa, a Hukachar prince, and a great shaman of the Llimpiisk Tungus of the Yenisei tundra, has been prince for twenty-five years.

Married people are always known as the 'father of So-and-so,' 'the mother of So-and-so,' even if the Russian Christian name is used—*e.g.*, Ivan's father.

(*a*) *Marriage.*—Marriage restrictions are very numerous. Not only are blood-relations and clan-relations debarred from marrying, but two brothers of one family may not marry two sisters of another family. The exchange of children in marriage is not allowed, except among the Pankagir Tungus. The terminology connected with relationship by marriage is regulated by the age-classes. Thus *kynniv* would be the name used by the husband for the father, elder brother, and other male relatives of his wife, and *anikynniv* for her elder female relatives, while for his wife's younger male relatives he would use the term *kutetiv*, and for her younger female relatives *kukim*. There is a special relationship, called *kalliv*, between two men who have married sisters. The reindeer which plays a part in the marriage ceremony, *i.e.* on which the bride rides to the bridegroom's home, is called Havakin (from the god Havaki) among the Yenisei Tungus and Savakin among the Tungus of the Okhotsk region. This reindeer is never used for any work, and is never searched for if he gets lost. When he grows ill or old, he is killed, but not eaten. He might be called the reindeer of the bride's individual spirit. The most important feature of the match-making is the settlement of the *kalym* (wife-price).

(*b*) *Birth.*—At childbirth the woman is considered unclean, and is obliged to go away from the tent for confinement. After three or four days she returns from her seclusion and is purified by jumping three times through the fire. Hickisch[1] says that the placenta is eaten. Among the Tungus of the Yenisei-Lena region the placenta is usually hung on a tree or a pole in a skin bag. On the whole, a Tungus woman gives birth to her child very easily. If, however, there are any complications, the Tungus and also the Yakut woman is placed in a kneeling posture, with her hands tied to the tent poles, and subjected to a forcible massage with a log of wood by the woman who attends her. To help his wife, the Tungus husband cuts down a tree and drives a wooden wedge into it. If this has no effect, a shaman is summoned.

(*c*) *Burial.*—All the belongings of the dead man are placed near his body. The classical way of burying a man was to sew a reindeer skin round the body and put it in a coffin standing on four high poles or on a high platform,[1] while a woman was buried on the ground and covered over with trees. Among the sea and river tribes the dead were often buried in small canoes. Now the Russian mode of burial in the ground prevails, except where the ground is frozen. The *chum* (tent) where the death occurred is promptly removed to another place. On leaving the place where a dead person had been buried, his relatives used, in olden times, to let fly two or three arrows towards him.

(*d*) *Initiation of a shaman.*—A young shaman (*haman*), who has shown signs of devotion, wisdom, and nervous sensibility, is prepared for his office by an old shaman, who teaches him the secrets of the shaman's assistant spirits. After a year or more of frequent intercourse with the young shaman, the old shaman gives him the shaman's coat and drum. The shaman's chief spirits are: *etigr*, in the form of a long serpent, who has power over epidemics, sickness, and all manner of diseases; *iiniany*, in human form, with eagle's wings, on which he carries the shaman from place to place, who also protects animals from diseases; *arkunga*, a prophet-spirit; and lesser spirits such as *khaniny*, *miryada*, *torunga*.

The shaman's coat (*hamahek*) must be made of wild reindeer hide. His cap (*haarken*) is an iron circlet with representations of wild reindeer antlers. His boots are called *haman unta kupuri*, and his belt *angayaptun*. Hanging from the lower edge of his coat he has a fringe of reindeer- or fox-skin, called *chiurukta*. A fringe at the back, longer than the others and with a bell at the end, is called *irginde*. Projecting from his shoulders are the 'iron elk antlers of the shaman' (*arkalan*). On the *gilde* (iron circles attached near the antlers at the back) hang pieces of iron (*budilar*), which are the shaman's arrows against *hargi* (malicious spirits). In the middle of the back of the shaman's coat are hung representations of the sun and moon. These are considered the most important features of his costume, and the sun is often sewn on a piece of skin taken from the head of a bear. *Gagk*, the swan, is on the back, and *ukang*, the diver, on the front of the coat. *Gieli*, a fish (*taimen*) frequently met with, is also represented there, and so too are *kandi*, 'the shaman's *dakali*' (small birds). On his apron (*haman haalme*) there are also representations of the sun and moon, and the shaman's staff (*haman tyevim*) has a human face (of an ancestor) and bear's feet. Sometimes a human face is found on the sun which is hung on the skin from the bear's head. All these accessaries suggest ancestor-man-bear-worship, as also do the traditions. All the objects used by the shaman have their special names; the shaman's cap, *e.g.*, is designated by a different word from that used for an ordinary cap, and, if a common term is used, the word *haman* is prefixed. The shaman's drum is oval in shape, and the drumstick, *giho*, is long and narrow, with jingles.

6. **Gods and spirits.**—Animism is highly developed in the Tungus religion. The spirits living everywhere in nature have to be propitiated. They are more or less independent of the highest god, Havaki. The mischievous spirits in folk-tales are called *chiulugdy* and *gamondo*. Both these creatures use a special 'bad language,' which occurs in the tales and is understood by the shamans. The malevolent spirits are called *hargi*. The chief *hargi* lives in the virgin forest (*taiga*) of the north. He has enormous eyes placed outside his face and a flat nose, and the black hair on his head and face is like the *taiga* after a storm. He can assume the form of an enormous bear, a wolf, or a bison. The Tungus of the Nerchinsk

[1] *Die Tungusen*, p. 84.

[1] The name given to this old form of coffin is *buni mongin*.

and Yakutsk districts call the *hargi* spirits *buni*; to the *buni* of the water they give the name *garan*, and to the *buni* of the earth that of *dorokdi*. The stronger the influence of Christianity, the worse becomes the character of the *buni*. Then there are other spirits, the spirit-owners of flies, of various animals, and even of thieves, *shuro*.

The chief god, Havaki, is anthropomorphic, but is connected with the sun. Sometimes the sun with the face of a man in it is supposed to represent him. Among the Tungus of the present generation the conception of the highest god is very vague, though the conception of spirits living everywhere in nature has still a strong hold on them all, Christian and non-Christian.

7. Sacrifices. — Private sacrifices of food are offered without any special preparations, but the sacrifices to the spirits connected with fertility are more important and must therefore be performed in the presence of a shaman, who knows the method of procedure. Thus the spirit-owner of wild reindeer is propitiated by an offering of the head of a mountain-sheep. The chief abode of this spirit, according to the Yenisei Tungus, is on the rock Hulgadzyakit, between the Upper Kureika and Lake Chirinda. The spirit-owner of lake-fish inhabits a place near Mount Umtupkan, to the east of Lake Chirinda, and at the beginning of the fishing season ceremonies are held to propitiate him. To ensure success in trapping, the Tungus will use in the construction of the traps at least one piece of wood which has been used by a shaman during his shamanistic performances. But the *turu*, or stick, which is the 'tree on which the shaman climbs to the sky,' is never used for this purpose, being too sacred. It is too *hooma*—a word used to express an idea similar to that of Melanesian *mana*.

8. Animal worship.—The veneration of the bear is especially highly developed. When a bear is killed and brought home, a ceremony called *kuk* is held. The heart and liver of the bear are cut into pieces, cooked, and divided among those present (exclusively males). Each person, before eating his piece, bows before the bear and assures him that it was the Russians who killed him, and not the Avankil (Tungus). Another remnant of a ceremonial bear-dance is *ikandzyedzyem* ('we are singing'). The bones of the bear must be placed just as they are in a bag, and hung on a tree. If one bone is lost, the spirit of the bear will hold the hunter responsible for it.

The eagle is also treated with great veneration, and it is expressly forbidden to kill him. For both these animals the Tungus use that adjective which they also use in speaking of heroes, *i.e. hooma*.

To all other animals which are not especially venerated the Tungus always behave, as they say, 'carefully,' lest the animal should become extinct. When a slit is made in the ear of the reindeer for purposes of identification, the hair that is cut off must not be thrown away, but must be hung on a tree or put in some safe place. The head and feet of the wild reindeer must not be thrown away; a special platform is sometimes erected for their reception, while the teeth of the wild reindeer are kept as *tygak* (amulets). There is a fox custom which drives the procurers of fox-skins to despair. After the fox has been trapped, his muzzle is cut off and carefully preserved. The skin may then be used, but the meat must be placed safely on a platform.

TURKS.—I. *ETHNOLOGY.*—1. Origin of the name.—The terms 'Turk,' 'Turkish,' and 'Turkic' are used in two different senses: to designate either those peoples belonging to the Turkic linguistic family or those peoples from Asia who appear from time to time in military history under leaders of Turkic speech. With the advance of ethnological knowledge, the former use is being abandoned for the wider term 'Turanian,' and the latter practice is falling into disuse. The name 'Turan' is much wider than the term 'Turk' and in any case is not synonymous with it. It must be noted that, while we hear of the Turks under that name in S. Russia even in the 1st cent. A.D., they only established themselves in Turkestan ('Land of the Turks'), the country named after them, in the 4th cent. A.D. Before that the country was known as Iran or Iranistan ('Land of the Iranians'), and stretched farther west into the present Iran. Thus one must be careful not to confuse the archæology of Turkestan relating to the Iranian period with that which can be ascribed to the Turks.

The earliest information about the Turks, to be found in the Chinese annals from 2356 B.C. onwards, alludes to them under the name of Hiung-nung, or slaves of the Hiung, while the name Tu-Kiu, or Turks, becomes prominent in the 6th cent. A.D. only when a prince of the Assena dynasty, Tiumen, rose to power. But we hear of the name Turk in connexion with the Turkish invaders of Europe in the pre-Christian era. Pomponius Mela in the 1st cent. A.D. calls them Turcae and says that they live near the Budini, and Pliny the Elder in the same century uses the name Tyrcae of a people in the neighbourhood of the Don. Though the various Turkic invaders of Eastern and Western Europe were chiefly known by the names of their leaders (Kipchak, Nogai, Seljuk, Osmanli), the name Turk as a generic term for the whole race is that most frequently used up to the present day. The Turks themselves with the exception of some Anatolian Turks call themselves by a dynastic or clan name.

2. Origin of the race.—The Chinese annals refer to the Hiung-nung as their north-western barbarian neighbours, and make a distinction between them and their north-eastern neighbours, the Tung-hung, afterwards the Tungus. The third Central Asiatic race, the Mongols, do not seem to have so long a pedigree, and it is possible that they form a branch of the Tungus or the Turks, or are a combination of both left behind and isolated on the steppes. This may be so, if we assume that the Turks and Tungus are two independent races which entered into the composition of the sub-races of Japan, China, and Tibet. The analysis of the funda-

mental types of both these races shows striking differences, but in comparison with the North and South Asiatic type they may both be called Mongoloid. Even assuming that the Tungus and Turks, as well as the Mongols, are the closest descendants of the original *homo Asiaticus*, yet, when they first appear in history, the two races differ widely in language, physical type, and culture. If the remains of bronze culture in the Upper Yenisei valley with burial masks, some of which are prominently Aryan in character, can be definitely ascribed to the early Turks, who knows whether their Mongoloid type was not after all an acquired character due to their mixture with the Mongoloids?

So much for the anthropological evidence as to the origin of the Turks. Not less important from the point of view of the folklorist is the origin of the race as explained by tradition. Perhaps the most wide-spread is the legend (found also among the Mongols) of a she-wolf, or white she-wolf, who found and reared an abandoned boy, subsequently the founder of the Turkish race. This she-wolf, Ak-biuri, saved the little boy from the bad god Erlik and brought him to Altun-dagh ('Golden Mountains') to an Altun-kii ('Golden Cave'). Two days later the boy began to call her mother, and six days later he began to call her father. De Guignes suggests that this is merely a version of the Roman tradition brought back by the Huns after they returned from their invasion of Europe.[1] But as a matter of fact the story might have travelled in the opposite direction, or the origin might have been independent, for the Chinese describe the shields of the Turks as having representations of a wolf before the approximate date of the Roman story. Then almost as widely spread is the legend of their first ancestor being the eldest son of Japheth, son of Noah. It is hard to ascertain whether the legend relating to still another ancestor, the son of the virgin-widow, Alanqua, has also a Biblical background.

3. Cradle of the race. — There are several hypotheses as to the geographical position of the original home of the Turks. H. H. Howorth seeks it in the southern parts of the Altai (Altun-dagh). Richthofen considers the region of the Amur, Lena, and Selenga their problematic original home. Parker suggests not the Altai Golden Mountains but some other mountains of the same name in the present Chinese province of Kin-Shan.

Recent archæological discoveries in the Altai-Sayan region as well as study of the aborigines of the forest regions of these mountains support Howorth's theory.[2] While it is still difficult to know with certainty to whom to attribute the bronze remains of the Minusinsk, called by the Russians by the vague name of 'Chud' remains (*Chujoi*, 'stranger'), there is no reason not to suppose that the country was inhabited always by the Turks, who were influenced in their bronze culture by some Iranian people from Central Asia, though also by the Chinese. The investigation of the bronze culture in the region of Kuban (N. Caucasus) will probably throw light on this question, if the Kuban culture is found to be more similar to the Minusinsk than to the other bronze stations in E. Russia—*e.g.*, the Ural (Perm). However, the fact that the customs and implements of the pre-bronze era (neolithic and late palæolithic) persist through the bronze period (probably 8th–3rd cent. B.C.) and the iron age and to some extent even till to-day points to the conclusion that the bulk of the population there remained the same, *i.e.* Turkish. The implements referred to are those used in the preparation of food and for agriculture.

The popular explanation that the bronze culture of Minusinsk is the work of a peaceful agricultural people of a higher type than the Turks, afterwards destroyed by the invasion of iron culture nomad people, who were, as no one now doubts, Turks, is not based on historical facts. We do not hear of the destruction of an empire at the stage of bronze culture in the Chinese annals—a fact worth noting—though mention of less significant movements at the beginning of the iron age from Central Asia towards the north-west is fairly frequent. If we assume that the pre-bronze and bronze age inhabitants of the Altai were of Turkic stock and in danger of invasion from the south-east or west, there is no reason why they themselves should not develop warlike industries which the so-called iron age remains represent. The bronze industry survives for some time during the next period, but the arrowheads, spears, daggers, and stirrups are produced in greater quantities than non-military bronze objects. The example of the Great War has shown us how easy it is to divert industrial power from one channel to another.

Most of the graves of the iron age in the Altai-Sayan district are communal, called by the Turks *chaa-tas* (the Russians call them *kurgans*), and are probably war graves. The inscriptions to be found on some of the burial stones all date from the iron age.[1] Those on the Southern Yenisei are earlier (about the 6th and 7th cent. A.D.) than those south of Lake Baikal along the Orkhon. The language of these inscriptions is one of the old Turkish dialects, the Uigur, belonging to a people politically very prominent to whom are attributed the remnants of Karakorum as their capital. Thus the earliest cultural remains of the Turkish race are nearer to Western than Eastern Asia, and the Turks at this early stage of their history, even if we take only the iron age, were living on a higher level of civilization compared with their near neighbours than they do now. It would seem that their subsequent mixture with invaders coming from the East has lowered their standard of culture, though in their subsequent history they several times developed local civilizations, notably under the Timurids in Turkestan and under the Ottomans in Byzantium.

But of course the attribution of cultural remains of the bronze and iron ages to the Turks does not carry them very far back, considering the antiquity of Chinese history. The first mention of the Turks here appears in 2356 B.C., while the bronze remnants of Minusinsk may be dated about 700–300 B.C. This was the time when unknown bronze flourished in the Volga-Kama-Ural district and in Scandinavia around the Baltic, when Greek settlers round the Black Sea and in Scythia were producing wonderful local art, when in Persia Darius and Xerxes were encouraging the development of local civilization which was in turn overturned by Alexander, who set up Hellenistic polities in its place. But Minusinsk was in neither of these circles, and its resemblance to Scythian culture is counterbalanced by its similarity to the Chinese. Then the second culture, that of the iron age, coincides with the rule of the Arabs over the Sasanid Persians and with the empire of the Khazars on the Lower Volga.

The attribution of both bronze and iron periods on the Yenisei to the Turkish race does not necessarily decide the question of the place whence

they sprang. All we know now of the inhabitants of the Iish (Russ. Chern) or Black Forest of the Altai points to this, however, that their present character and customs are results of their environment and are similar to the customs and character of the earliest inhabitants of those regions. The original Turks were not steppe nomads living by warfare and constantly changing their camping places, but cattle-breeders and agriculturists devoted to their fields and forests and knowing the system of slave labour, while so advanced politically as to form confederations. Perhaps the most important proof of the origin of the Turks in the Altai region is the resemblance of the art found in the old picture writings in the region to the art of the most primitive and typical Turks of the present day, whether in the form of cattle brands or rock drawings. Further, the burial customs of these people seem to have been unchanged by time and are now practised as in the place of their origin. There must have been in all ages Turkic tribes living on the outskirts of the empires whose mode of life was more nomadic and who consequently mixed to a greater extent with other nomads. Those tribes were, however, not the true Turks as described in the Orkhon inscriptions, but Kazaks, who correspond to the Russian Cossacks, or frontier half-military guards.

The hypothesis of the Altaian origin of the Turks is in opposition to the theory launched some 50 years ago by Castrén and since uncritically accepted by some Finnish and Russian ethnologists (Otto Donner, Klementz), that the Samoyed originated in the Altai and Sayan Mountains and migrated from there to the north. If, further, the Samoyed are identified with the Finns, as they are by some people, the Finns, who in modern times developed the high culture of the Scandinavians, become the ancestors of the bronze age people of Minusinsk.

The linguistic authority of Castrén seemed sufficient to make people accept his theory without investigation, but his whole hypothesis was based on the supposition of the historian Fischer in the 18th cent. that the inhospitable region of the Arctic could not be the home of the Samoyed on account of its frigid character and poverty. The only support was of a linguistic character, that at the time of Castrén some Tatar clans in S. Siberia (the Kamashints) could speak Samoyed. Moreover, this theory holds that many other Tatars, of Uriankhai and Minusinsk, like the Koibal, Soyon, Beltir, and Karagass, are Turkicized Samoyed, one branch of which was pushed by the advance of the Turks towards the north. Such is Castrén's theory.

That the Samoyed might have originated further south than they are now is possible, but they must have always been fairly far north. All their present culture, which can be called 'reindeer' culture, shows that they are under the influence of a period of Arctic environment too long to trace their origin. The few linguistic observations of the Samoyed tongue in S. Siberia only prove that some of the clans of the Samoyed migrated from the north further south. Neither in physical type nor in customs do either of these doubtful Samoyed resemble the real Samoyed. While an uninterrupted chain of ethnological and, above all, archæological evidence, as well as Chinese and Arab historical mentions, ties the Turks to the Black Forest of the Altai mountains, from which they spread at an early date over the Sayan and Orkhon, no archæological remains can be ascribed to the Samoyed, and no ethnological evidence supports the theory of Castrén.

The relationship between the Samoyed and Finnic races is still an open question, but in any case historical and archæological evidence of early Finnish culture does not go further east than the Ural (Perm). By dismissing, therefore, the Samoyed-Altaian theory, one dismisses also the claim of the Finns to an Altai-Sayan cradle. Possibly further archæological discoveries may reveal still earlier Turkic inscriptions than those of the Yenisei, but they can only be found more to the south, since the inscriptions to the east of the Yenisei, *i.e.* the Orkhon, are one or more hundred years later. The relation between the Minusinsk bronze antiquities and the archæological remains of the steppes of the Black Sea attributed to the Scythians has been recently studied carefully, and a close resemblance was found.[1] Minusinsk was taken in this respect as a centre from which this culture spread towards the Black Sea. This is important as throwing light on the puzzle of the origin of the Scythians, though no one can doubt now the kinship, if not identity, of the Eastern Scythians and the Turks. If the cradle of the Turks is to be sought in the forest of the Altai with its environment which encourages a sedentary and agricultural mode of life—and the steppes and valleys between the Altai and Baikal are full of evidences of the sedentary culture of this people—it is still true that in comparison with the old Chinese, the Turks, especially their eastern branches, must be considered barbarians. Besides, there never has been a uniform culture spread over the various Turkic nations, nor did they ever live in a mass undivided by foreign races. This is why it is difficult to be certain whether some of the clans mentioned first by the Chinese and then by the Arab writers can be considered Turks. It is much easier to make this distinction among the contemporary Turks, even though they appear also under various names of Tatar, Tuba, or Osmanli.

A few words must be said about the name 'Tatar.' R. G. Latham[1] points out that the less we use the term Tatar or Tartar, the sounder will be our ethnology. He also calls attention to the mistake of coupling the Manchu and their dynasty with the Tatars. One of the earliest mentions of the word 'Tatars' is found in the old Turkish inscriptions of the Orkhon ascribed to Bilge-Khan.[2] About this time (8th cent.) the 'Otuz-Tatar' ('Thirty Tatar') lived to the east and south-east of Baikal and were dependent on the Turkish confederacy. Chinese history does not mention them till the 9th century. According to N. A. Aristoff,[3] the Otuz-Tatars were originally Turks, while the Mongolian scholar Bichurin is inclined to call them Mongols. In the same inscription on the Orkhon is a mention of the 'Tokuz-Tatars' ('Nine Tatars').

The term 'Tatar' is closely connected with the term 'Tatan.'[4] The people living in the present Khalka from the 9th cent. were called Tatan. They were divided into many *aimán*, or unions of clans. The strongest of these were the Mongol, Taigut, Kere, and Tatar.[5] These were divided into clans, but all of them used the tribal name of Tatan. The Mongols successfully fought the Niuchi (Tungus) in the middle of the 12th cent., and towards the end of this century the Mongol ruler, Temujin, was elected head of all the Tatans and a great part of China under the name of Jenghiz Khan. The house of the Mongol-Tatan reigned from 1206 to 1638. The Mongol *aimán* of the Tatan confederacy subdued the Tatar *aimán* before they started on their European conquest, but it is doubtful whether all the Tatan accepted the name of this one *aimán*. On the contrary, the name Mongol came into greater prominence than that of Tatan or Tatar through Jenghiz Khan. It is probable, however, that some of the Jenghiz Khan hordes were known to their neighbours as Tatan. When Carpini came as an envoy from the pope to the Khan Kuyuk, he may have made a mistake between Tatan and Tatar, so in the 13th cent. all the geographers named the land between the Caspian and the Chinese Seas Great Tartary. It is perhaps because the Chinese historians often called Tatan 'Tata' (a mistake now corrected by them) that many Asiatic scholars, such as H. J.

von Klaproth,[1] confuse the two names Tatan and Tatar.

The first people to call all Mongols Tatars were probably the Russians, and they gave this name also to the tribes who had settled along the Volga, and who seem not even to have been Tatan but various Turks brought within the Mongol-Tatar army, who after the death of Jenghiz Khan were pleased to regain their independence. At the present day Tatars, whether on the Volga, in the Crimea, the Caucasus, or Siberia, represent a fairly pure strain of Turks. Among the problematic Turks may be placed the Scythians, Parthians (though their descendants, the Turkomans, are among the most representative Turks now), Yue-chi (whose descendants, the Rajputs, are certainly a non-Turkic people), and Ye-tha, or Ephthalites, called also White Huns (these seem to have been different in type and habits from the Huns who migrated westward). All these peoples are variously ascribed to the Tungus or Turks; some others, as the original Bulgars and Avars, are sometimes counted as Turks, sometimes as Finns; and the Nogai, Kipchak, and Usbeg are regarded as either Mongols or Turks. The Dungans are placed between the Chinese and Turks, and the Horsak (Sokra and Horpsa) are the Buddhist Turks of Tibet. Finally, the Usuni (Wusun) are attributed by some to the Turks and by some to 'Aryans' of Central Asia. Some other peoples are without doubt Turks, as the Hiung-nu, Khakas, Kirgis, Uigur, Tukiu (Assena), Seljuk, Khazar, etc.

II. *DIVISION OF THE MODERN TURKS.*—The distribution of the Turks is so wide and their geographical environment so varied that it is difficult to speak of the Turkish type from an ethnological standpoint. Politically, too, what is called Turkish is often only Muhammadan and quite different in nationality. We find that in the pre-war Turkish empire of Asia Minor, N. Africa, and S.E. Europe there were far fewer Turks in an ethnological sense than there were in the pre-war Russian empire.

i. THE SIBERIAN TURKS.—1. Yakut.—See art. YAKUT.

2. Siberian 'Tatars.'—According to religion, the Siberian Tatars can be divided into two groups: Muhammadans and shamanists. The Muhammadans are: (1) the Tobolsk Tatars, in the Tobolsk government, (2) the Barabine (Baraba) Tatars, in the Kainsk district, (3) the Chulim Tatars, in Mariinsk district, (4) the Tomsk-Kuznietsk Tatars, in the Kuznietsk and Barnaulsk districts. The shamanists are: (5) the 'Chern,' or Black Forest Tatars, in the Biisk district, (6) Teleut and Telengit, in Biisk and Kuznietsk districts, (7) Kumandints, in Kuznietsk and Biisk districts, (8) Shorts and Lebedints, in Kuznietsk district, (9) Kyzyl and Kamashints, in Achinsk district, (10) Koibal, Sagai, and Kachints, in Minusinsk district, (11) Karagass, in the forest of Nijne-Udinsk district. The total number of Siberian Tatars in 1911 was about 250,000.

The Tatars of the Tomsk government speak their native Turkic language, and only 30 per cent of them know Russian as well. In the Yeniseisk government only 12 per cent know Russian. The Teleut of the Kuznietsk district are perhaps the most Russified, while the Telengit along the Bia and the Katun are all baptized, and partly Russified, partly Mongolized. The following natives seem to be mixed with the Yenisei-Ostiak and Samoyed, or, as some think, are Tatarized Samoyed: the Kumandints, Shorts, Lebedints, Kyzyl, Kamashints, Koibal, Kachints, and Karagass. The most genuine Turks are those 'Tatars' who inhabit the region of the Altai forests—the 'Chern' Tatars.

ii. CENTRAL ASIATIC TURKS.—The Central Asiatic Turks, all of whom are Muhammadans, can be divided according to their mode of life into (*a*) steppe nomads, and (*b*) village- or town-dwellers. The steppe nomads are: (1) the Kirgis or Kazak, (2) the Kara-Kirgis, (3) the Kara-Kalpak, (4) part of the Turkomans, (5) part of the Usbegs. The village- and town-dwellers are: (6) Sarts, (7) Taranchi, (8) most of the Usbegs (with the Kipchak), (9) most of the Turkomans.

1. Kirgis-Kazak and Kara-Kirgis. — The Kirgis-Kazak live in the northern and eastern part of the Aral-Caspian basin, and in the Orenburg steppes, so they are lowlanders. The Kara-Kirgis live on the slopes of Pamir, Altai, and Tian-Shan. They are mountaineers. There are, however, other Kirgis, to whom this name may be applied historically and ethnologically, who lived from the 6th cent. A.D. in the Yenisei valley and migrated to Semirechie, forced forward by the advances of the Russians in the 18th century. They are often identified with the 'Khakas' (Castrén, Klementz, Kasmin, Radloff), and the inscriptions found in the valley of S. Yenisei are attributed to them. The Kirgis-Kazak call themselves Kazak, *kaz* meaning 'goose,' *zag* meaning 'crow,' *i.e.* the steppe birds, the free birds of the steppe. The Russians call them Kirgis-Kazak to distinguish them from their own Cossacks (Kazak). The Kirgis-Kazak derive themselves from the Usbeg, and they derive the Kara-Kirgis from dogs. But the Kara-Kirgis call themselves brothers of the Kirgis-Kazak, and in fact are probably one of their branches. Out of 4·7 millions of these Kazak only about 400,000 are Kara-Kirgis.

The Kirgis-Kazak were divided into three groups, called *orda*—the southern, or great *orda*, 'Ulu-dschus,' the little *orda*, 'Kishi-dschus,' to the west, towards European Russia, and the middle *orda*, 'Orta-dschus,' in the typical steppe country. But, when they began to mix with one another and to increase in numbers, they divided into clans, and each clan had its own *tamga*, or clan symbol, with which the horses and dromedaries were marked. The heads of the clans were called Sultans, while the nobility was called Tiuri or Ak-suek, 'White Bones.' They trace their ancestry from Jenghiz Khan, notwithstanding that the latter was a Mongol. All the other people were called Kara-Suek, 'Black Bones.' Lately, however, marriage prohibitions between these castes have been withdrawn, and the social division is based on material considerations.

The felt hut of the Kirgis is called *yurta*, and a group of *yurta* is called *aul*. Herds of sheep, horses, and dromedaries are their chief form of property. In sharp contrast to their lightly-built houses are their graves, especially among the Turkestan and Semirechie Kirgis. They look like small towers and are made of bricks and clay. The subjugation of the Kirgis by the Russians began in 1734 and took more than 90 years—even during the Great War some groups of Kirgis considered themselves independent.

2. Kara-Kalpak.—The Kara-Kalpak, or 'Black Caps,' are akin to the Kirgis-Kazak, and live in Turkestan, especially in the Syr-Daria district, where they form half of the population. They number about 134,000 (1911). They seem to be taller than the other Kirgis, and lead half-sedentary lives, part of them being agriculturists. Some 20,000 of them live in Khiva.

3. Sarts.—The Sarts (1,847,000 in 1911) were originally a mixture of the original Iranian inhabitants, the Tajik, with their Turanian conquerors,

[1] *Mémoires relatifs à l'Asie sur les Tatares*, 3 vols., London, 1826-28.

the Usbeg. They busy themselves with commerce, but occasionally take to agriculture and cotton-plant growing, in which they are not as successful as the Tajiks, though they know the use of the *arika*, irrigation canals. All the Sarts speak Turkish, and are Muhammadans (Sunnite); they have many followers of the Ṣūfi order. In physical type they approach nearer to the Iranians.

4. Taranchi.—The Taranchi are very like the Sarts. They also live in winter in villages, *kishlak*, and their summer houses are called *sakla*. They migrated to Russian Turkestan from Kulja at the same time as the Dungan after Kulja passed to China. They number about 83,000 (1911) and live in the Semirechie country, in the Ili basin, and partly in the Transcaspian country. They are agriculturists, especially busying themselves with vegetable gardens, but prefer commerce. They are Muhammadans, but their women do not cover their faces as the Sart women do.

Besides the Taranchi there are various Turkish tribes on the Eastern slopes of the Tian-Shan, in Kashgar, Yarkand, and Khotan, who are the supposed descendants of the Uigur. Their language is sometimes called Turki, and is possibly one of the oldest types of Turkish. They form the most easterly branch of the Central Asiatic Turks, and probably remained behind when the first westward movements began. They ruled in Kashgaria from the 10th to the 12th century. Though in time they became Muhammadans, early Nestorian teaching has left its traces; they still use the Syriac alphabet and possess a book of the 11th cent. in this writing, called *Kudatku Billik*. They are a 'free self-governing people.' Some of them have been to Mecca (800 miles to the Siberian Railway, then through Odessa to Jedda). They consider Stamboul their religious and political capital. The Turks and generally the Muhammadans in Asia are more prosperous than the Buddhists, though the Buddhists are protected by the Chinese Government.

The Kirei of N.W. Mongolia are supposed to have come from the source of the Amur. In the 11th and 12th centuries the Kirei were an important power, and were probably of Nestorian creed. Whether the mythical Prester John (a Christian priest who reigned in some Christian Asiatic kingdom) was their king it is difficult to say. They are not heard of for a long period after the time of Jenghiz Khan. They now differ from the Buddhist Mongols in being Muhammadans. They live on the banks of the Upper or Black Irtish and the greater part of the Western Altai pastures and the Jungaria plains as far as Lake Zaisan. They train hawks, falcons, and golden eagles for hunting such game as gazelles, foxes, and even wolves. Like the Kazak, they claim Jenghiz Khan (a Mongol) as their ancestor.

5. Usbeg.—The Usbeg (about 600,000 in 1911; including Kipchak, about 660,000) form the majority of the inhabitants of the Samarkand district and parts of Ferghana and Syr-Daria districts. In Bokhara and Khiva they are the ruling people, like the Osmanli in Turkey. Their name is probably derived from Usbeg Khan of the Golden Horde (1312–40); in the 16th cent. they founded in Turkestan the Khanates of Khiva and Bokhara. They are a mixture of three elements: Turks, Iranians, and Mongols. The Turkish element is probably predominant, though in the case of the Usbeg of Khiva it is the Iranian type that predominates. Since the Usbeg exchanged their nomad life for a sedentary one, their customary law, *adat*, has lost ground, and is being replaced by written law, *sharī-at*. Father-right is very strong, but the position of women is on the whole better than among the Sarts and Tajiks. Though the Usbeg now imitate the Sarts in making huts covered with clay, and live in small villages encircled by walls like fortresses, here and there the old felt *yurta* is still found.

6. Turkomans of Transcaspia.—The Turkomans live to the number of about 600,000 in the Transcaspian territory and also partly in Persia, Khiva, and Bokhara. Until the Russian occupation of Merv they were nomad horse-breeders. Although some of them were subject to Persia, their boast has been that 'not one Persian could cross their frontier without a string round his neck.' In 1881 the Russians destroyed their power by capturing their principal fortress, Geok-Tepe, and their slave trade has been suppressed. They now live in clay or raw brick houses, and, in some places, in Russian wooden houses. They are Muhammadans, but follow the unwritten customary law. The clan division is still strong, and all migrations are made in clan groups. Endogamy is enforced. As the male population is abundant, the *kalym* for the wife is very high, and in some places the unmarried men form 27 per cent of the population. On the whole they seem to be a democratic people.

The chief clans of the Turkomans are: (*a*) the Chaudors (Chaudur), in the north-west part of Ust-Urt and the Karaboghar Gulf; near (*b*) the Yomuts or Yamuds, extending from Khiva across the Ust-Urt and along the shore of the Caspian to Persia; (*c*) the Goklans or Goklens, settled in the Persian province of Astarabad; they are said to be the most civilized and friendly of all the Turkomans; (*d*) the Tekkes (Taka), who were the most important tribe when the Russians conquered Transcaspia; they are first heard of in the peninsula of Mangishlak, but were driven out by the Kalmuks in 1718 and subsequently occupied the Akhal and Merv oases; the Russians inflicted a crushing defeat on them at Geok-Tepe in 1881; (*e*) the Sakars inhabit the left bank of the Oxus near Charjui; (*f*) the Sarik (Saruk) are found in the neighbourhood of Panjdeh and Yulatan; (*g*) the Salor (Salore), an old and important tribe, suffered much in the course of fights with the Tekkes, and in 1857 migrated to Zarabad in Persian territory near the Harirud; (*h*) the Ersazis (Ersars) are now found chiefly near Khoja Salih; they were once a very important tribe on the upper Oxus.

The Central Asiatic territories, which belong to Russia, have a total population of from five to six millions, of which at least from four to five millions are Turks. Eastern or Chinese Turkestan has a population of about two millions, excluding Kulja and Jungaria. Jungaria has about 600,000 and Kulja 150,000, the overwhelming majority in all these three provinces being Turks. Besides the Turks of the north we find some Mongols, and in the east and south Tibetans.

iii. The Volga 'Tatars.'—The Volga Tatars are those Turks who have been settled on the Lower Volga since the Hunnic invasions, and, since their hold has been strengthened by frequent invasions, they are partly mixed with the Mongols, the Finns, and, since the 13th cent., the Russians. After the break up of Jenghiz Khan's empire they belonged to the great *orda* of Kipchak (Kipchak being mainly a political and not a racial term). After the fall of the Kipchak the Khanates of Kazan and Astrakhan continued to exist. The Khanate of Kazan was conquered by Russia in 1552, the Khanate of Astrakhan in 1557.

1. Kazan Tatars.—The Kazan Tatars number more than a million, and their centre is in the government of Kazan, though they extend on both banks of the Volga as far as the government of Saratov.

2. Astrakhan Tatars.—The Astrakhan Tatars, to the number of some 50,000, live at the mouth of the Volga. Some of the Volga Tatars, such as the Cheremiss, Chuvash, and other middle Volga tribes, and the Bashkir, are supposed to be of Finno-Ugrian origin, but they are now Turks in speech and Muhammadans in creed and social life. Muhammadanism was introduced among the Volga Turks in the 10th century.

3. The Bashkir.—The government of Orenburg

is a great district for the Mordvins and the Bashkir. The latter are also found in Ufa, Perm, Samara, and Vyatka governments. Latham[1] says that the Bashkir are as entirely Turks in language and features as are the Kirgis. They are shepherds, herdsmen, but above all bee-masters. After the battle of 1552, when the power of the Tatars of the Volga was broken, the Bashkir submitted themselves to Russia, against whom they have not ceased to rebel. Their number is about 392,000.

4. **Teptyar.**—A typical mixture of races, something like that of the Chulim Tatars of Siberia, where it is difficult to define which racial element predominates, are the Teptyar. When the Khanate of Kazan fell, a mixed population of Turks, Cheremiss, Votiak, Chuvash, and Mordvins fled to the east of Ural; out of these has arisen a population which the other Turkish tribes call Teptyar; they are partly shamanist, partly Muhammadan.

iv. THE PONTUS OR CRIMEAN AND NOGAI TATARS.—The Khanate of the Crimea, originally Nogai (a political division of Tatars similar to the Kipchak who came there in the 13th cent.), was by the middle of the 16th cent. more or less Osmanli politically. In 1778 they became independent, but in 1784 became subject to Russia. They are known as excellent agriculturists and growers of grapes and tobacco.

The hill tribes of the Crimea who migrated there before the Nogai in the 11th or 12th cent. from Asia Minor, and are probably a branch of the Seljuk, are shepherds. The culture of the Crimean Tatars is more like that of Kazan and Astrakhan Tatars than like that of the Osmanli. Their total number is about 300,000. The same Nogai Tatars are to be found in Lithuania and Rumania to the number of 5000. They are now mostly Christian, and mixed with the local population.

Another branch of the Nogai occupied the country between the Tobol and the Yaik rivers at the beginning of the 17th century. They were transplanted by Peter the Great to the banks of the Kuma and Kuban, but a small group remained behind at the mouth of the Volga and are called Kundur Tatars.

The Nogai are very Mongol in physiognomy. Some people attribute to them the tumuli of the Orenburg government.

v. WESTERN TURKS.—1. **Turks of the Caucasus.**—The Turks of the Caucasus—properly speaking, the Azarbaijan Tatars—are the inhabitants of the province of which Tabriz is the capital. They number about two millions. They seem to be Turks speaking a Yagatai dialect, who invaded Persia during the Seljuk period (11th cent.). They are also called Iliyet, *i.e.* tribes or clans. Each clan has its own *ilkhani*, appointed by the Shah.

Some of these clans are: (*a*) the Kajara, near Astrabad; the present dynasty of Persian Shahs comes from this tribe; (*b*) the Ayshars of Azarbaijan province (a group of these immigrated to Anatolia and live now in Anti-Tawins); (*c*) the Shekakis; (*d*) the Karakoyunlu; (*e*) the Karagazli; (*f*) the Bahalu; (*g*) the Inamlu; (*h*) the Kashkai, who probably arrived at Herat before the Persians.

Azarbaijan Tatars are mixed with the Persians; other Turks of the Caucasus, living in the mountains along the upper parts of the rivers Cheghem, Baksan, and Kuban, are mixed with the natives of the Caucasus and are physically of local type.

2. **Turks of Anatolia.**—(*a*) *Osmanli and Seljuk.*—The term Osmanli or Ottoman, used in a strict sense, means 'descendant of Osman,' a chief who gathered round him a nation at the end of the 13th and beginning of the 14th century. Recent researches have proved[2] that the Osmanli Turks (who until the revival of nationalism in Eastern Europe never called themselves Turks, but always Osmanli) are a tribe of Turks who lived in Persia for a considerable time before they moved to Asia Minor. It was probably as refugees before the advance of the army of Jenghiz Khan that they appeared in the 13th cent. and with the permission of the Seljuks of Konia settled on the Asiatic remnants of the Byzantine empire. As the Osmanli have no written history before the capture of Constantinople, all that we know about their early history is founded on tradition. Their clan is supposed to be descended from Khorasan, but we know more about Ertogul, who was the father of Osman. Osman owned only the small territory of Sugur, and it is not certain (Gibbons) that he and his people were Muhammadans, like the Seljuks, until he married into a Muhammadan family. It was the political unrest in E. Europe that helped the descendants of Osman to conquer all the Balkan Peninsula and Byzantium. The invasion of Asia Minor by Timur at the beginning of the 15th cent. stopped but for a very short time the successes of the Osmanli in Europe. If we consider that the Osmanli were originally only a small clan, and that the Seljuk and other Turks looked down upon them and did not join with them, we must conclude that the bulk of the Osmanli nation was recruited from some race other than the Turkish. Recently the name Osmanli became the term applied to all the subjects of the pre-war Turkish empire.

Many of the Turks of the old Byzantium who belonged to the Osmanli empire were not Osmanli in the strict sense. Thus the supposed remnants of the Seljuks of the 11th cent. are called Koniots. It is interesting to note that Byzantine authors mention a Turkish colony which settled in Macedonia on the river Vardar in the 9th century.

(*b*) *Turkomans.*—The Turkomans of Anatolia are spread all over Anatolia, but are specially numerous in the central part and in E. Taurus. They are more Mongolian in type than the Osmanli or Seljuk. They are nomads, but not to the same extent as the Yuruks. Their summer residences (*yaila*) are close to their winter houses (*kishla*). Some of them are Shi'ahs, others Sunnites. They seem to have been first heard of in Anatolia in the 12th cent. and are mentioned by the historians Nicetas and Anna Comnena as 'Turcomans.'[1] They were opposing both Seljuk and Ottoman rule and probably migrated from C. Asia under their own political régime.

(*c*) *Yuruks.*—The Yuruks live chiefly in the mountains, but also in the plains from Smyrna to the E. Taurus. They are typical nomads.

Old ethnologists sometimes mistook the religious communities of the Muhammadan sects for distinct Turkish nations—*e.g.*, the Kizil-Bash (*q.v.*), or Red Heads, living in the Angora region of Asia Minor, Persia, Afghanistan, and the Caucasus.

III. *RELIGION.*—We shall deal only with the religion of the Turks before they accepted Muhammadanism; it has persisted up till now among some Turks of Central Asia and Siberia. There is evidence (the Buddhist writings in Uigur character) that some of the Central Asiatic Turks were followers of Buddha about the 8th century. Still more has been heard about Christian Nestorian influences. In fact, there is a permanent sign of these in the form of Uigur written characters modelled probably on the Soghdian. The Arabs captured Samarkand in 706, but Muhammadanism in Central Asia was introduced later, and to some extent it is still spreading. The original religion of the Turks is a shamanism of

[1] *Ethnology*, i. 378.

[2] H. A. Gibbons, *The Foundation of the Ottoman Empire*, London, 1916.

[1] W. M. Ramsay, *The Intermixture of Races in Asia Minor* London, 1917.

the Southern type, *i.e.* with a well-marked dualism. Their shamanistic ceremonies and mythology are more highly developed than those among any other shamanistic people. It is this religion that can be called genuinely Turkish.

1. **Gods and spirits.**—The highest good god is Yulgen, while the symbol of evil is Erlik, who lives in the darkness. Another higher being is Kudai, who is a sort of medium between men and the highest beings. The spirit owner of the hearth is called Bel, and was so called by the Turks who were responsible for the old Yenisei inscriptions; several names of the gods appear in them. Then there are seventeen high rulers ruling over various parts of the Turkish lands. The Altai ruler is called Altai-Khan, and lives in the source of the river Katun. Yulgen himself is so good-natured that, when he wants to punish men for failing to give him sacrifice, he asks Erlik to do it. Yulgen is very often identified with the idea of the sky, Tengri, or with light, Yaryk. The sky is generally the home of all good spirits. Ara-neme or Tengri Yulgen lives in the seventh sky. He has a mother, three sons, and twelve daughters. His eldest son is the god of thunder and rain, and his third son, Timur-Khan, is the god of war. One of his peculiarities is that an arrow passed through his throat and since then he stutters. Kun, the sun, is of female sex, while the moon, Ai-ada, is a husband of the sun. All the mountains, forests, lakes, and rivers have their spirit owners, *eelu*, whose functions are not quite clear. They seem rather benevolent if propitiated. The same cannot be said about the spirit assistants of Erlik, called *kara-neme*, who, even if propitiated, may be found harmful. They are known also under the names of *kuremes*, *asa*, *rozyr*. Images of gods and spirits are made of various materials and are called *tyns* or *kurmes*.

The chief office of the shaman is to use his sacred drum (*tiungiur*) and keep off by its sound the malevolent spirits. The shamans themselves are in some tribes of two types, some to ward off the bad powers (black shamans) and some to propitiate the good powers (white shamans, who are very often not professional but merely heads of the families).

The goddess of birth is held in great regard; her name among the Altai Turks is Umai, among the Siberian Tatars and the Yakut, Ayisit.

2. **The soul.**—The Turks of the Altaian Black Mountains (Chern) consider the soul of a man to be composed of several parts or of several independent souls. Each of these performs a special function—*e.g.*, the *tyn*, from *tynip*, 'I breathe.' One can hear the *tyn's* sound when it leaves the body. *Tyn* and another soul, the *suzy*, are man's vitality. The *suzy* (from *su*, 'water,' and *uzak*, 'long,' *i.e.* 'long-lived') can leave the body for a while, but, if it is absent too long, the *tyn* perishes. The *kut* is another kind of vitality (*kutup*, 'I vanish'). Its absence causes disease. The *tula* is a soul implying wisdom which differentiates man from animals, who do not possess it. The *sur* is a man's shadow (*surmet*, 'picture'). After a man's death the *sur* continues to dwell in the house for about forty days, but it keeps its independent existence even when it goes to another place; this soul, and one called the *sune* (*su nep*, 'I advise'), seem to survive man and are ultimately reincarnated.[1]

3. **Ceremonies.**—Sacrifice to the sky is one of the most persistent ceremonies found among the old and modern Turks. It is called *tigir* (*tayi* among the Minusinsk Turks) and is performed every third summer. No women are allowed to assist at the ceremony, which is held on the top of a mountain in a sacred birch spinney. The old fire (*ulug ot*) is made, and after many incantations a new fire is lighted from the old one. It is protected by the shamans lest it should go out, which would mean a catastrophe for the tribe. A he-goat or a ram is sacrificed, but no blood must be shed and no cry heard from the sacrificial animal.

During the sacrifice to Yulgen among the Altaians similiar precautions are taken, and the whole fore-quarters of a horse are boiled on the 'old fire,' while the hind-quarters are boiled on the new fire. During both ceremonies each head of a family attaches a thread of flax to the sacred birches—that is the path for their wishes to go to the high being—and eagle feathers attached to the threads carry them farther up. The meat boiled on the old fire is then taken round in the direction of the sun and burnt on the same fire. If the smoke goes up in a straight line, the sacrifice is accepted. Then only a feast is held, and the choicest meat is offered to the *kam* shaman, or medicine-man. Among the Kirgiz he is called *baksa* if belonging to the same clan, or *duana* if belonging to another clan. The meat prepared on the new fire is consumed, while remnants of the feast together with the implements used are burnt again on the old fire.

The birch plays a very important rôle in all Turkic ceremonies, and, whether the Turks live in steppes or tundras, birches are either brought from the forest regions or are symbolized by driftwood poles. This as well as veneration of forest animals and birds (and not steppe or tundra animals) seems to point again to the forest origin of the race.

The summer sacrifice to Yulgen (called also Bai-Yulgen) lasts for two or more days, and it is usually on the second day that the shamanistic performances are held. The *kam* is preparing for a journey to the various spirits and gods living in the skies above. He ceremonially feels various spirits represented on his drum. While the company eats the offered meat, the *kam* sings:

'Accept this, O Kaira Khan!
Master of the drum with six horns
Draw near with the sound of the bell!
When I cry "Chokk!" make obeisance,
When I cry "Me!" accept this!'

Then he offers a garment to Yulgen with a song:

'Gifts that no horse can carry—
Alas! Alas! Alas!
Gifts that no man can lift—
Alas! Alas! Alas!
Garments with triple collar
Turn them thrice before thine eyes,
Let them be a cover for the steed,
Alas! Alas! Alas!
Prince Yulgen, full of gladness,
Alas! Alas! Alas!'

Then only the shaman summons all the spirit assistants represented on the drum to enter it. He sings and then is silent for a while, and a noise of various birds and animals, whom he is imitating, is heard. Then he begins to beat his drum and to dance round the people, touching them occasionally with his drum or drumstick. The fire is extinct, the shaman's voice becomes weaker, and the sound of the crackling of the birch in the middle of the room indicates that the shaman has fled to the skies. Sometimes the *kam* gives an account of what he sees while he travels, sometimes only after coming back. In the sixth sky he encounters the moon, in the seventh the sun, and from the highest sky he can reach—only a few *kams* reach the ninth sky—he prays to Yulgen:

'Lord, to whom three stairways lead,
Bai-Yulgen, possessor of three flocks,
The blue vault which has appeared,
The blue sky that shows itself,
The blue cloud that whirls along,

[1] V. L. Wierbicki, *The Natives of the Altai*, Tomsk, 1893, pp. 73–78

The blue sky so hard to reach,
Land a year's journey distant from water,
Father Yulgen thrice exalted,
Shunned by the edge of the moon's axe,
Thou who usest the hoof of the horse;
O Yulgen, thou hast created all men
Who are stirring round about us.
Thou, Yulgen, hast bestowed all cattle upon us,
Let us not fall into sorrow!
Grant that we may withstand the evil one!
Let us not behold Kermes,
Deliver us not into his hands.'[1]

TUSHES AND OTHER PAGAN TRIBES OF THE CAUCASUS.

—The Caucasus presents, as is well known, one of the most remarkable ethnological and linguistic regions in the world.[2] The reason is not far to seek: this narrow neck of land between the Black Sea and the Caspian has formed for centuries a bridge between S.E. Europe and Asia Minor. Armenians and Iranians (Tāts) press up from the south; Slavs and Tatars descend from the north; at least one Iranian people, the Ossetes,[3] has forced its way into the very centre of the region. In the midst of these intruders are the Caucasians proper, guarded by the mountain-system of the Caucasus.

The religious history of the Caucasian peoples is analogous to their political and ethnological records; only linguistically and (for the most part) racially have they maintained their independence. Of their ancient paganism but one fragment of any value has been preserved. Regarding the 'Albani,' who occupied the eastern portion of the country between the Terek and the Kura,[4] Strabo writes thus:

'The gods they worship are the Sun, Juppiter, and the Moon, but the Moon above the rest. She has a temple near Iberia. The priest is a person who, next to the king, receives the highest honours. He has the government of the sacred land, which is extensive and populous, and authority over the sacred attendants, many of whom are divinely inspired and prophesy. Whoever of these persons, being violently possessed, wanders alone in the woods, is seized by the priest, who, having bound him with sacred fetters, maintains him sumptuously during that year. Afterward he is brought forth at the sacrifice performed in honour of the goddess, is anointed with fragrant ointment, and is sacrificed together with other victims. The sacrifice is performed in the following manner. A person, having in his hand a sacred lance with which it is the custom to sacrifice human victims, advances from the crowd and pierces the heart through the side, which he does from experience in this office. When the man has fallen, certain prognostications are indicated by the manner of the fall, and these are publicly declared. The body is carried away to a certain spot, and then they all trample upon it, performing this action as a mode of purification of themselves.

The Albanians pay the greatest respect to old age, which is not confined to their parents, but is extended to old persons in general. It is regarded as impious to show any concern for the dead or to mention their names. Their money is buried with them; hence they live in poverty, having no patrimony.'[1]

He also states,[2] on the somewhat dubious authority of Megasthenes, that the Caucasians practised coition in public and ate the corpses of their dead relatives.

The religious history of the Caucasus is as varied as its other records. Central Caucasia was not converted to Christianity until the 4th cent., and the gospel first penetrated E. Transcaucasia after the defeat of Khusrau (Chosroës) I. by Justinian in the middle of the 6th century. Mazdaism, on the other hand, was introduced into E. Caucasia in the Arsacid period (186–265), and in E. Transcaucasia it had superseded Christianity by the time of the rise of Islām in 646. In consequence many Caucasian peoples possessed a religion which was an undigested mass of primitive paganism, Mazdaism, Christianity, and Muhammadanism. Among certain tribes, notably the closely kindred and geographically contiguous Tushes, Pshavs, and Khevsurs, this state of affairs still obtains, as was also the case among the Dadianic Svanetians until their nominal conversion (or, rather, reconversion) to Christianity in 1865.

So far as present conditions are concerned, the religions professed by the Caucasian peoples are as follows:

(1) Georgians (Karthvelians): Lazes, Ajars, Yengiloi, Kabardinians, and Cherkess, Muhammadan (the two latter relatively recent converts from Christianity); Tushes, Pshavs, Khevsurs, Svanetians, and Abkhases, pagan (or semi-pagan); Mingrelians, Imeretians, Gurians, and Grusinians, Georgian Christians.[3]
(2) Eastern Caucasians (Chechens, Avars, Kazikumyks, Kyrins, etc.), Muhammadans.
(3) Turko-Tatars (Kumyks, Kirgis, Kakmyks, etc.), Muhammadans or Lamaists.
(4) Iranians: Tāts, Muhammadans; Ossetes, semi-Christians or semi-Muhammadans, with numerous pagan survivals.
(5) Armenians, Christians.

The present article is restricted to the pagan or semi-pagan peoples of the Caucasus, especially the Khevsurs, with whose religion that of the Pshavs and Tushes is practically identical.[4] These peoples possess an interest greater than their numbers seem to warrant. Like so many Oriental religious systems, such as Manichæism (*q.v.*) and the religions of the Mandæans, Nusairis, Kizil Bash, Yezidis (*qq.v.*), etc., they present a syncretism analogous to late classical developments or to the Græco-Egyptian system.[5]

1. **Tushes, Pshavs, and Khevsurs.**—The Tushes, Pshavs, and Khevsurs are three small, contiguous tribes of Karthvelian stock, numbering, in 1912, 6600, 11,000, and 7700 respectively;[6] and their religious systems are so similar that they need not be discussed separately.

(*a*) *Sanctuaries.*—The *khati*, or place of prayer and sacrifice,[7] is synonymous with the community

[1] M. A. Czaplicka, *Aboriginal Siberia*, London, 1914, pp. 298–303.

[2] The best ethnological maps of this region are by N. von Seidlitz, in *Petermanns Mitteilungen*, xxvi. [1880] Taf. 15; R. von Erckert, *Der Kaukasus und seine Völker*, Leipzig, 1887; *Dorožnaya karta kavkazkago kraya*, Tiflis, 1903; *Etnografičeskaya karta kavkazkago kraya*, Tiflis, 1909 (cf. the review by A. Dirr, in *Petermanns Mitteilungen*, lvii. [1911] pt. 2, p. 94 f.); and, for the Karthvelian region only, by H. Schuchardt, in *Petermanns Mitteilungen*, xliii. [1897] Taf. 6. For the Tushes, Pshavs, and Khevsurs see also the special map by G. Radde, in *Izvěstiya kavkazkago otděla imp. russ. geograf. obščestva*, xi. [1880]. For an ethnographic map in the 1st cent. B.C., see J. de Morgan, *Mission scientifique au Caucase*, ii. pl. xiv., and for the distribution of the various tribes according to the classical authors, see the map by B. Latyshev, in his *Scythica et Caucasica*, ii.

[6] A. Dirr, in *Petermanns Mitteilungen*, lviii. [1912] pt. 1, p. 138.

[7] The word *khati* properly means 'idol,' 'image'; it is also used to denote an 'angel,' or personification of heaven or nature, possibly as being an 'image' of the Supreme God (cf. Merzbacher, *Aus den Hochregionen des Kaukasus*, ii. 75, 90 f.).

itself; and so completely has *khati* lost its primary meaning of 'image' that prayer is made to it quite as earnestly as to its divinity, the *batoni-khati* ('image-lord'). The *khati* usually stands on a hill, in a grove of trees (planes, oaks, etc.) which are considered holy, which no axe may touch, and beneath which no wild animal may be killed. The sanctuary always consists of more than one building, surrounded by a rude stone wall. A small chapel, artlessly constructed of irregular slabs, contains the 'image,' the *drosha* (banner of the clan, borne in battle, and regarded with awe),[1] and the costly silver vessels from which the sacred beer, brewed in the *khati*, is drunk, etc. Near the *khati*, but within a hedge of its own, is a small, dark building to house the brewing apparatus, drinking-cups, and the like; and close by, under the shade of a great tree decked with rags, etc., is an altar, about 1½ m. high, which is adorned with humble offerings, while over it is a bowl with an aspergillum, and behind it frequently stands a stone idol. By the altar is a stone-paved pit into which the blood of the sacrificial victim flows through a quadrangular opening; and feet and bones of sheep, kine, etc., bear witness to the zeal of the worshippers. Near this usually stands another altar-shaped column resting on a square base; and on it are piled horns of wild animals, brought as offerings to the sanctuary. A special hut is erected for brewing the beer, which only the proper servants of the *khati* may prepare; and *darbasi*-dwellings and assembly-places are provided for the ministers of the shrine. The sacred vessels (mostly of silver and often bearing Christian symbols) are jealously guarded against profanation or theft; and at high festivals the worshippers drink from them the sacred beer.[2]

As the terrestrial home of the celestial *khati*, the *khati*, in its aspect of place of prayer and sacrifice, serves as means of communication between heaven and earth, so that in each crisis of life it is visited for prayer to the divinity dwelling there. While almost every village has its own *khati*, three, all dedicated to St. George (see below [*d*]), possess special sanctity—those in the villages of Gudani and Khakhmati, and the *khati* of Karatis-Jvari in Likoki. The two former are the oldest in Khevsuria, and all three enjoy large estates.

The *khati* of Gudani is called 'leader of God's hosts' and contains the chief *drosha* of the Khevsurs. It possesses great power against theft (hence it is invoked when a raid is to be undertaken) and against disease, insanity, and sterility. The *khati* Sameba-Zrolis-Zferi, in the village of Ukan-Khalo, is the special patron of hunters and thieves, and has peculiar power over the clouds. The *khati* of Karatis-Jvari is particularly potent against all evil spirits, which appear in the form of hedgehogs, swine, etc.; and his sacrifice, in case of misfortune, is a goat, which, it should be noted, is offered only to evil spirits. In the village of Atabe is a *khati* dedicated to St. Kvirik, lord of the mainland, whom all angels obey, and who has his throne next to God.

(*b*) *Priests.*—Some uncertainty prevails concerning the various orders of the priesthood. The lowest rank is that of the *shulta*, of whom each *khati* has three, chosen annually from the community by the *khuzi* and the *dekanossi*. The *shulta's* duties are to guard the property of the sanctuary, to supervise and assist the agricultural work on the land belonging to the *khati*, and to see the harvest safely garnered. Like the other ministers of the *khati*, they must lead a blameless life, and for several weeks before each feast intercourse with women is forbidden. They may not enter the *darbasi*, this privilege being reserved for the higher functionaries.

The next in ascending rank are the *dasturi*, chosen by the *khuzi* from the community, either for a definite period or for an individual feast. Their name is of Persian origin (Pahlavi-Pers. *dastūr*), but in the Iranian priesthood the *dastūrs* occupy the highest rank.[1] The duties of the Khevsur *dasturi* are to receive the barley from the *shulta*, prepare the firewood, obtain the wild hops (cultivated hops may not be used), and brew the sacred beer. During this process they must be barefooted, bareheaded, and ungirdled, may not leave the sanctuary, and are forbidden to speak.[2] At the festivals they must prepare and serve the food of the *khuzi* and *dekanossi*, and perform a like service for the attendant worshippers. When the *khuzi* slays the sacrificial offering (*svaraki*), the *dasturi* and *dekanossi* hold its feet, and they sprinkle the sacrificiant and his family with its blood. During four weeks previous to a feast the *dasturi* must refrain from conjugal relations and may not go near a *boseli* (menstruation-hut). While the *shulta* are all equal in rank, there are various degrees among the *dasturi* according to the periods for which they are chosen; and, together with the *shulta*, they administer the finances of the *khati*.

The real priest of the *khati* is the *khuzi*, who is chosen, not by the community, but by the soothsayer (*kadagi*) or seeress (*mkitkhavi*). A future *khuzi* is usually a man of standing, favourably known for shrewdness and eloquence; and the sign by which he is elected is normally illness of himself or of one of his relatives (failure to recover from such illness, however, means that he has been rejected by the *khati*). Once chosen, the *khuzi* cannot be removed against his will; he is deemed holy, and no one dares insult him by word or deed. On the other hand, a man selected by *kadagi* or *mkitkhavi* cannot refuse to accept the dignity of *khuzi*, under penalty of divine anger. The *khuzi's* duties are the performance of religious rites (some of which, in much distorted form, are of Christian origin, as shown by their invocation of the Trinity) and the offering of prayers, which—for material blessings alone—are addressed to the *batoni-khati* (as the mediator of the divine will) rather than to the supreme deity. The *khuzi* also slaughters the *svaraki* by cutting its throat, and he and the *dekanossi* receive its skin and half of its flesh. He performs marriages, conducts festivals for the dead, blesses the people at the great feasts, and foretells the outcome of illness by placing the cap and girdle of the afflicted person under his pillow and dreaming over them.[3] He is likewise the guardian of the sacred *drosha*, before which the people kneel when it is shown them on high festivals; and at such times he solemnly curses any who may possibly prove traitors, holding high a bowl of beer and pouring it on the ground with the words, 'So may the house, the family, the fortune of the faithless be emptied!' Like the *dasturi*, he must observe the utmost purity before festivals, even an erotic dream sufficing to defile him.

The *khuzi* is assisted by several *dekanossi*, likewise chosen by the *kadagi* or *mkitkhavi*, and bound by the same rules as govern him. With the *dasturi* they hold the sacrificial victim while he cuts its throat; with him (or for him, if he is prevented from taking part in the festival) they repeat the prayers and bless the people; and they light the candles in the *khati*.[4]

[1] Cf. art. BANNERS.

[2] The emphasis laid on the sacred beer may be a reminiscence of the Indo-Iranian *soma-haoma* rite (see artt. HAOMA, SOMA), despite the wide-spread custom of drinking intoxicants in connexion with sacred ceremonies (see *ERE* v. 79).

[1] See art. PRIEST, PRIESTHOOD (Iranian).

[2] The prohibition of speech (cf. also below, p. 487) looks very like a survival of Zoroastrianism (see *SBE* v. [1880] 109, 290–292, xviii. [1882] 135, xxiv. [1885] 283 f.); but, on the other hand, to go barefoot and ungirdled are heinous sins in Mazdaism (*SBE* v. 106 f., 287).

[3] Cf. art. INCUBATION, of which this dreaming is really a form.

[4] The *khuzi*, *dekanossi*, *dasturi*, and *shulta* roughly correspond respectively to the fourfold hierarchy of bishop, priest,

A somewhat problematical figure in the hierarchy[1] is the *khevis-beri* ('valley-elder'). It seems, on the whole, that he was originally the political or administrative head of the valley, and as such was the bearer of the *drosha* and the leader of the army. In this manner he naturally became protector of the *khati*, and so developed by degrees into a religious leader, particularly as his older political importance steadily diminished. Traces of this, however, yet remain. He is still the one who uplifts the *drosha* at certain feasts; and, unlike the *khuzi*, *dekanossi*, *dasturi*, and *shulta*, he inherits his dignity; and it is only in the case of extinction of a family in which the office of *khevisberi* is hereditary that he is chosen by the *khuzi*. He is the faithful transmitter of ancient ritual; but his precise relation to the *khuzi* is uncertain.

(*c*) *Sorcerers.*—Among the Khevsurs sorcerers and priests co-operate. The *kadagi* is chosen at New Year by *khuzi* and *dekanossi*. Usually he is neurotic, and he delivers his messages in the characteristic manner of shamans.[2] He is the mouthpiece of the *khati* and is consulted in all important events of life, especially in cases of illness, when he designates the particular offering necessary to propitiate the deity whose anger has caused the affliction. In certain *khatis*, as in Khakhabo, the *kadagi* even has the right to carry the *drosha*. The female counterpart of the *kadagi* is the *mkitkhavi*, who is often a hysteriac. Despite the restrictions imposed on all other Khevsur women, the *mkitkhavi* holds rank equal to that of the *kadagi*. The *mkitkhavis* divine by means of water, grains of corn, etc.; and, if they declare that the cause of an illness is a deity's desire to obtain the person afflicted, the latter is clad in white, and a vow is taken that his hair shall be uncut for three years, etc.

There is another class of sorceresses, the *mesulta*—women and girls who sustain a peculiarly close relation to the supernatural world. To approach the spirits of the departed, the *mesulta* lies upon the ground, grows pale, and falls into deep slumber, often broken by a gentle murmuring, which is regarded as converse with the dead. Since, however, too much speech regarding the other world is dangerous, the *mesulta*, on awakening, uses language which is intentionally obscure. If a child falls ill before reaching the age of two years, the *mesulta* is consulted. She tells from what departed spirit the illness comes; and the child's name is changed to that of the deceased in question (in similar illness of an older child the aid of the *kadagi*, not the *mesulta*, is sought).

(*d*) *Deities.*—Reminiscences of Christianity are so numerous that it is not always easy to say exactly what is essentially the religion of the Khevsurs and kindred tribes. The supreme deity is Morigi, creator and omnipotent, who dwells in the seventh heaven and is the god of the living, whereas Christ is the divinity of the dead.[3] The Trinity, occasionally invoked in prayers, is regarded as three angels; the Blessed Virgin receives honour as one of the chief angels; and SS. Peter and Paul are the angels of wealth and abundance. Morigi leaves the actual administration of the world to his delegates, the *khatis*, each of whom has his special function and is aided by two messengers (*esauls*), one good and the other evil, through whom the *khati* rewards or punishes mankind. The *esauls* united form the heavenly host (*lashkari*; Arab. *laškar*, 'army'), to which the 'sisters' of the *khati* also belong. A special shrine is erected to these 'sisters' in the *khati* of Khakhmati, and there three maidens from Kajeti (the land of the demons) dwell—Ashe, Simen, and Samdsimari—who are represented as children and who, when sent by the *khati*, cause the children of the guilty to fall ill.[1]

The principal deity, for all practical purposes, is the patron saint of the Caucasian region, St. George of Cappadocia, from whom the land of Georgia is popularly supposed to have received its name.[2] The majority of churches in Georgia are dedicated to him, as are the three chief *khatis* of the Khevsurs—Gudani, Khakhmati, and Karatis-Jvari. He not only causes the herds to multiply, but he heals animals and men and protects his worshippers in time of peril. He is, furthermore, a storm-god and solar deity, and his throne is on a lofty mountain,[3] whence he sends upon the fields of the wicked the hail which his servants, the *divs* (Av. *daēva*, 'demon'), bring from the sea at his bidding. To avert his wrath, no work is done in the fields on Mondays, Fridays, and Saturdays from June till harvest, special watchers being appointed to see that this tabu is not violated. Chapels are erected in his honour on hill-tops, to which pilgrimage is made annually; and at Khakhmati sacrifices are made to his dog, a wind-demon, for having once protected the Khevsur herds against a band of devils.

(*e*) *Festivals.*—The chief Khevsur festivals fall about Easter, Ascension Day, and New Year's Day. The most important is celebrated in the *khati* of Gudani, beginning on Good Friday and lasting four days; but in memory of our Saviour's thirst (Jn 19[28]) bread and salt alone are eaten, and only a little beer may be drunk. Twelve weeks later the great national festival, said to commemorate the liberation of the land from foreign invasion, is celebrated at the *khatis* of Khakhmati and Karatis-Jvari, and also throughout Pshavia and Tushetia. At these festivals the number of sacrificial victims is very large, from 500 to 600 sheep and 20 to 40 cattle being offered at Khakhmati alone, and the quota of each family being at least five sheep. The priests receive the skin and half of the flesh, which is salted to keep, the remainder being cooked by the *dasturi* and eaten by the assembly, together with bread and abundant beer. This beer is solemnly blessed by *khuzi* and *dekanossi*, after which the *dasturi* presents it first in the sacred silver vessels to these priests and then to the laity;[4] but it is consumed so generously that the festival frequently degenerates into a drunken revel. Women are not admitted to the feasts and may not pass beyond a certain line in the *khati*,[5] where they receive their share of beer and viands. Near a *khati* on a hill in the village of Arkhoti is a special *nishi* (place where a saint has performed a miracle) for children, and to this are brought loaves baked expressly for them.

deacon, and subdeacon of the Orthodox, Roman, and Anglican Churches, and this may indeed be their origin; it is less likely that they are reminiscences of the *zarathushtrotema*, *andarzpat*, *ratu*, and *mobed* of Zoroastrianism (for whom see art. PRIEST, PRIESTHOOD [Iranian]).

1 Cf. the divergent opinions cited by Merzbacher, ii. 85.

2 See art. SHAMANISM.

3 The seven heavens represent Jewish Talmudic tradition (see *JE* i. 591, vi. 298); for Morigi as god of the living cf. Mt 22[32]; and the concept of Christ as god of the dead is probably borrowed from the doctrine of His descent into Hades (1 P 3[19]).

1 This explains the function of the *mesulta* in healing infants.

2 Stemmer, in Wetzer and Welte, *Kirchenlexikon*[2], Freiburg, 1882–1901, v. 330; cf. also *AS*, April, iii. 101 ff. In reality, however, 'Georgia' is probably derived from Pers. Gurj(istān), the name of the land in question (Adeney, p. 344, note).

3 Cf. the mystic awe associated with the mountains Kasbek in Ossetia (Merzbacher, i. 848–853) and Elburz, the latter being called Orfi Itub ('Abode of the Blest') by the Abkhases, Ashka Makhua ('Mountain of the Gods') or Nash Hamakho ('Holy Height') by the Cherkess, and Jinn Pādišāh ('Lord of Spirits') by the Turkish-speaking tribes (*ib.* i. 599–601); its name is derived from the Persian Albūrz (Av. Hara Berezaiti), itself a famous abode of *divs* (cf. *ERE* viii. 507[a]).

4 Apparently a reminiscence of celebration of the Eucharist.

5 Probably reminiscent of the narthex of early Christian churches.

(*f*) *Status of women.*—Until a daughter-in-law has entered the household, a Khevsur woman's life is one of toil. She not only aids her husband in working in the fields and tending the cattle, but must also mow and thresh, bring wood and water, cook food, make clothing, etc. When her son brings home his bride, however, the mother-in-law becomes the administrative head of the house, and nothing may be done without her approval.

(*g*) *Marriage and divorce.*—Betrothal frequently takes place while the future bride and groom are still children; and in such a case the boy's father is obliged, until the girl reaches maturity, to send annual presents to the bride's father, while at New Year a brother or sister of the groom takes to the bride a 'luck-loaf' (*bedis-kveri*), which she is bound to eat. The marriages are always arranged by a female marriage-broker, who takes some small present from the parents of the groom to the father of the bride. After betrothal the girl may seek no other alliance, and theft of her by another man entails severe consequences on him and her, besides being a deep disgrace to the intended groom and his family. Marriage between persons even remotely akin is strictly forbidden, with the result that, since all the inhabitants of a village belong to a single family, men and women of the same community very seldom wed.

On the marriage day the father of the groom sends to the bride's father, by two men of standing, two sheep, one of which is killed at the *khati*, the other in the bride's house. The girl's mother bakes two large festival loaves (*kada*), and all the maidens of the village escort the bride, with her parents and kinsfolk, to the end of the village, where one of the *kadas* is eaten. The bride's escort now return home, while the bride, with some of her more distant relatives, follows the two men sent by the groom's father, all but the girl being mounted on horseback. During this journey the second *kada* is eaten, and when she reaches the village which is to be her future home the bride is met by all its inhabitants, the distance which they come to greet her being proportionate to the respect shown her. Arrived at the groom's house, the bride is entertained in a separate room by the women of the family, while her escort are feasted. Meanwhile the groom hides till summoned by the feasters; and he then receives the place of honour, but may share in neither banquet, song, nor dance, being permitted to drink only a single glass of brandy. The women likewise are debarred from the men's feast and dance, this being probably a Muhammadan survival, since no such restriction exists among the Christian Karthvelians. This revelry usually lasts three days, during which the groom may not come near his bride; and bride, groom, and escort then return to her home, where a similar feast is given. The groom now goes back to his own village, where he remains an entire year, forbidden to visit even the village of the bride, the only exception being when the groom has no parents, in which case his bride remains with him from the first to manage his household. When the year has expired, the groom sends his nearest kinsmen to fetch the bride, who is again escorted by some of her own relatives. The *dekanossi* and *khevis-beri* are now summoned, and the former sews together the garments of the bridal pair in token of their union, while the girl's mother prepares the nuptial bed, to which she leads the wedded pair. After the first three nights, the groom no longer shares this bed, but seeks his bride only by stealth; and it is not until the birth of their first child that the pair live together openly. The conjugal act involves ritual defilement for three days.

Despite the absence of outward manifestations of affection, and notwithstanding the life of toil imposed upon the married woman, she occupies a position of great respect. Except for very rare instances, she guards her fidelity to her husband with extreme care; and if convicted of adultery, she takes her life. Her symbol of wifehood is her kerchief (*mandili*); and if she throws this between two men who are fighting, they must at once desist from their quarrel.

The older form of wedding among these tribes was marriage by capture, which is still frequent, usually with the connivance of the girl. This is regarded as an insult to the kinsmen of the man to whom she was betrothed, and the robber's relatives must pay them a fine of 16–30 cows and make rich presents to the girl's father. In addition to this, the brothers and cousins of the girl insult the robber by 'jumping on the roof' (*banse shekhtoma*) of his house until he slaughters a sheep and gives them a young ox and a copper kettle. If, however, the girl is carried off against her will, a deadly feud arises between the kinsmen of the robber and those of the intended bride and groom, often resulting in destruction of property and life, while the girl seeks an opportunity to escape to her chosen husband.

Polygamy is permitted, but is rare unless the wife is sickly, ages prematurely, or bears only girls; but if a second wife is taken, the husband must give five cows to the family of the first.

The bride brings a dowry with her, but the groom has no claim upon it, whereas the wife has the right to make herself a new dress annually at her husband's expense. The property of husband and wife is kept separate, and neither may be the other's heir. Sons alone may inherit; if the marriage is childless, or only girls are born, the village is the heir.

Divorce is rare, for, even if a wife is thus dismissed for laziness, barrenness, or sickliness, her husband must pay her 16 cows for the marriage and one cow for her work during each year of wedded life except the first and the last. A divorced wife may marry again, and is still entitled to a new dress each year at her first husband's expense. On the other hand, any children of the first marriage belong to their father; and though a temporary exception is made in the case of an unweaned infant, this child also goes to its father as soon as it is grown. A man is deeply disgraced if his wife leaves him; and in such a case she must promise never to marry another man, a violation of this pledge formerly involving the death both of the woman and of her second husband.

Under no circumstances may a man ill-treat his wife—a rule which is enforced by the entire community. Since the family (*ojakhi*) is strictly subordinated to the community (*tamoba*), so that ostracism involves entire forfeiture of communal protection, rights to communal pasturage, etc., the ruling of the *tamoba* is one of much effect in all departments of life in the individual household.

(*h*) *Death and disposal of the dead.*—Death being believed to defile the house, the moribund are carried into the open air, and there breathe their last, surrounded by the members of their household. Since the corpse is deemed a source of uncleanness, its preparation for its final resting-place is the duty of young, unmarried persons (lads for males, and girls for females) called *narevebi* ('defiled'),[1] who shear the head of the corpse (if it be male), clothe it in a shroud of white and red,[2] and dig for it a long, narrow, shallow, stone-lined grave, in which it is laid uncoffined.[3] Contact with *narevebi* entails defilement; and they may not enter their own homes until (after five or six days) they have taken repeated cleansing baths. For a year the kinsmen of the deceased let their beards grow, wear old clothes turned inside out (thus hiding the usual adornments of dress), and carry no weapons. The departed (unless a child, who is unwept) is formally bewailed, the men lamenting silently, the women aloud; and one of the latter recites or sings laudations of the deceased, the others joining in the refrain. A funeral feast is prepared and blessed by the *khusi*, who also recites an ancient prayer containing reminiscences of the Old and New Testaments.

The corpse is borne to the grave by the *narevebi*, while the kinsmen and other male residents of the community stand weeping softly at the boundary of the village. Of the family only the widow accompanies the body to its final resting-place, and she leads the dead man's completely caparisoned horse,

[1] Cf. the Iranian *nasā-sālārs* (see *ERE* iv. 503 f.).
[2] For minor variations see Merzbacher, ii. 97, note 3.
[3] In certain regions wooden coffins are coming into use.

which bears his clothes and weapons, as well as food and drink for his journey to the other world. Arrived at the grave, she strikes the horse thrice, saying, 'Serve thy master in the future life as faithfully as thou hast served him here below.'[1] The widow is escorted by wailing women, eulogizing the departed, and when the corpse is laid in the ground, one of them falls into ecstasy, describing the arrival of the soul in the abode of the blest. At most only a few loaves are buried with the corpse, or, in the case of a child, some apples or the like. The horse is given to the nearest or dearest kinsman (usually the maternal uncle), and is carefully tended throughout its life. It may carry neither man nor burden, and to sell it is to disgrace its late owner, who still needs it to ride before his departed kinsmen in the other world. If, however, certain specified conditions permit its sale, the purchaser pays only half its actual value, and the seller must provide a substitute; for it is, in reality, the property of the dead.

While burial is now practised by the Caucasian tribes under consideration, the older form of disposal of the dead was to lay them in small house-like structures above ground. The characteristic form of this corpse-house is thus described by M. Kovalevsky:[2]

They are, 'as a rule, situated on the summit of hills. In shape they are like a prolonged quadrangle; they are constructed of stones put together without cement, and have two entrances, one on the southern and one on the northern side.' Within, 'on both sides of a passageway which is left free, stone ledges at a certain level from the earth are to be seen with the mummified bodies of the deceased either sitting or lying on them. Different objects, belonging to everyday life, but no armour, are found in these burial places, where the wind freely enters and birds are likely to come.'[3]

Immediately after the return from the grave, an ox is killed; and the relatives and *narevebi* thrice take a piece of its roasted liver into their mouths and spit it out, this being called 'the re-opening of the mouth' (*sapiris khsno*), since, until this rite is performed, they are denied both meat and milk. Meanwhile the other mourners are entertained with bread and cheese; and on the following day the flesh of the roasted ox is eaten by the relatives and the *narevebi*.

The 'keeping of silence' (*piris abshera*)[4] is likewise a noteworthy mourning rite. On the day of burial the nearest relatives of the deceased choose two men and one woman from his kinsfolk and shut them in a room where a fire is burning. After partaking of a large milk-loaf, they may not utter a word until the '*khuzi* of souls' comes at evening and blesses the loaf, which they turn about themselves thrice. They then go silently home, and each lays a piece of wood at the window of the dead man's house, after which speech is permitted, and they may share the general meal.

A second festival in honour of the deceased is held a few days after his burial; and at this time there is a horse-race[5] in which the victor receives the weapons, etc., of the departed, although they are not actually given him until a year has elapsed. Throughout this year the soul of the dead is supposed to visit his earthly home and to protect it, so that on the second Saturday of Great Lent a special meal (*sulta-kreba*, 'assembly of souls') is prepared for him. Various gifts are laid near loaves of bread placed on the ground, and these become the property of any one who hits them with arrow or bullet; the men then visit the *khati* to drink beer brewed at the expense of the community, while the women, gathered in the house of mourning, lament the dead and drink to the repose of his soul.

The great memorial feast (*tzel taveri*) is held at the expiry of the year. The mourners now cut their hair and beards, don new clothing, and feast so bountifully that excessive potations frequently lead to confusion and quarrels. This feast may also be given by a bachelor or childless widower in his lifetime for the weal of his soul in the future world; but he may not partake of it himself, although, as he hides from the feasters, he may listen to their laudations of him, thus playing the *rôle* of the dead and securing the benefits of the other world which his lack of posterity would otherwise deny him.

(*i*) *Heaven and hell.*—Heaven is a huge fortress, many storeys in height, reaching to the sky. It is illumined by the sun, and on its edge is a great spring, from which the blest drink joyfully.[1] The righteous are graded according to merit as regards the storeys in which they dwell, and each Sunday they receive from God their celestial food, the very sight of which assuages their hunger. Hell, on the contrary, is a dark,[2] square abode to which devils take the damned. Between this world and the next is a perilous bridge, at whose farther end the judges of the dead are seated.[3] Sinners fall into a shoreless river of tar, where they swim in eternal agony, tormented by terrible thirst, while special sins have special punishments, liars and slanderers, *e.g.*, having boiling water poured over them.

(*j*) *Miscellaneous.*—The blood-feud (*q.v.*) flourishes among the Khevsurs, but presents no noteworthy features, although it may be observed that the maternal uncle is especially prominent, either as the avenger of the murdered or as the first to be attacked by the avengers of the slain. Only compensation may be claimed for the murder of women and children; and for non-fatal injuries to men a regular tariff of much minuteness is in force, even murder itself being commutable by a *wergeld*.[4]

In a case of mere suspicion the accused may clear himself by a solemn oath, taken in the *khati* at night. Here an interesting survival of Iranianism is seen in the fact that, while taking oath, the accused holds a live cat, which is deemed the most unclean of all animals,[5] and prays that the corpse of the real murderer, and the corpses of all who might have proved his innocence, but failed to do so, may be followed by a cat in the future world. Or, after food has been placed on the grave of the murdered, one of the latter's kinsmen draws a drop of blood from an ear of the accused and of his kinsmen, cursing the suspected person, if he be guilty, to be the servant of his victim in the life to come. After this both parties share the food, and reconciliation is complete.[6] If, after condemnation, the guilty man refuses to pay the fine imposed upon him, the creditor may demand such payment from some third person whom he chooses without the knowledge of that person. This man, called *mzevali*, may transfer the debt to a fourth, doubling the amount; and the fourth to a fifth, again doubling the sum, and so on, until the debt, enormously enlarged, finally devolves again on the original debtor, who must pay the whole. No one may refuse to be a *mzevali* under penalty of having erected, near his house, a stone image smeared with human excrement, and with a cat or dog[7] hung on a stick thrust into it, the whole being accompanied by a curse. Such disgrace results in ostra-

[1] Formerly the horse was doubtless sacrificed at the grave.

[2] *Archæological Review*, i. [1888] 321.

[3] This form of superterrene disposal of the dead, to which the Avesta distinctly refers (*Vend.* v. 10; cf., further, D. Menant, *Les Parsis*, Paris, 1898, pp. 183 *f.*, 213 *f.*), is fairly wide-spread, being found not only among Tushes, Pshavs, and Khevsurs, but also in Ossetia (Merzbacher, i. 690, 815–818), Seistan (G. P. Tate, *Seistan*, Calcutta, 1910–12, p. 276), Baluchistan (*IGI* vi. 283), and the Hindu-Kush (G. S. Robertson, *The Káfirs of the Hindu-Kush*, London, 1896, p. 641 ff.). A highly developed form is probably to be seen in the so-called 'Tomb of Cyrus' (for a description of which see A. V. W. Jackson, *Persia Past and Present*, New York, 1906, pp. 280–293). A somewhat similar idea is found in the rock-tombs of the Achæmenian kings, the entrances to which imitate the portals of a palace; and these have analogues in Asia Minor (R. Leonhard, *Paphlagonia*, Berlin, 1915, pp. 242–287) and in Judæa (*JE* iii. 436 *f.*, viii. 145 *f.*). In the light of his further studies, the present writer believes that his note on ancient Persian burial rites (*ERE* iv. 505) requires considerable revision; and the connexion between this superterrene disposal and primitive Persian and Caucasian dolmen-burial (J. de Morgan, *Mission scientifique en Perse*, Paris, 1894–1905, iv. 15–58, and *Mission scientifique au Caucase*, i. 41–82), cliff-burial or rock-burial (for examples at Pandrān, in Baluchistan, see *IA* xxxii. [1903] 342 *f.*), and the Zoroastrian *dakhmas* (*ERE* iv. 504) also requires consideration.

[4] Cf. above, p. 484[b], note 2.

[5] The Ossetes have a similar custom (Merzbacher, i. 819).

[1] Evidently a reminiscence of Rev 22[1].

[2] This idea is probably Iranian in origin (cf. *Arta Viraf*, ed. and tr. M. Haug and E. W. West, Bombay, 1872, chs. xviii., liv., and *SBE* v. 114, xviii. 57, 75).

[3] This may be either Iranian or Muhammadan (see *ERE* ii. 852).

[4] For details see Merzbacher, ii. 50–56.

[5] See *SBE* xviii. 419.

[6] For details see Merzbacher, ii. 56–58.

[7] Probably Muhammadan in origin, since Islām, unlike Zoroastrianism, abhors the dog (*ERE* i. 512; T. P. Hughes, *DI*[2], London, 1896, p. 91[a]).

cism of the *mzevali*, who can avert it only by paying the amount demanded, killing a sheep, and sharing it with his opponent and with invited witnesses, after which 'the souls are set free.'

2. Svanetians. — The Svanetians, numbering about 16,500 in 1912, are the modern representatives of the Soanes or Suani of Strabo and Pliny.[1] Their religion is by no means so interesting as that of the Khevsurs, etc., and primitive elements are far less prominent.[2] From Iranianism they retained a sort of prayer to the sun and moon; from Christianity a form of anointing a child by its mother in lieu of baptism, and a veneration for Christ, the Virgin, and St. George; from Judaism a reverence for Elijah; and they still abstain from work on the three Sabbaths—Friday of the Muhammadans, Saturday of the Jews, and Sunday of the Christians. They practise the strictest endogamy, only residents of the same village being permitted to wed—possibly (though by no means certainly) an Iranian survival.[3] Superfluous female children were formerly smothered as soon as born. Burial might take place only in clear weather, rain (in view of the great precipitation) being regarded as ill-omened; and food was laid on the grave for the soul's journey to the other world.

3. Importance of Caucasian religion. — The rather scanty fragments of paganism found in the Caucasus are of more interest than appears on the surface. The Karthvelian stock seems to have had its original home much farther to the south in Asia Minor and to have been driven steadily northward by the invaders who established their empires in Mesopotamia.[4] Thus they found an abode in eastern Cappadocia, Pontus, Armenia, and the Caucasus; but under pressure of Armenians from the west, and of Iranians from the south,[5] they had reached, by the time of Strabo,[6] a territory extending from the lower course of the Kelkid Irmak to that of the Kura, and thence to Lenkoran on the Caspian, the northern boundary being the Caucasus range. The Karthvelian group thus represents the descendants of the ancient Colchidians, Soanes, Iberi, and Albani,[7] the latter corresponding to the Khevsurs, Pshavs, Tushes, and kindred tribes.

If this theory is correct, from the modern paganism of these three Karthvelian tribes we may infer the general character of the religion of a once considerable part of eastern Asia Minor. But perhaps we may go a step farther. We then have a knowledge that in Asia Minor there were at least three zones of religion: one represented by an orgiastic nature-cult, shown by the worship of Cybele and Attis (*qq.v.*) in the west and north; the second exemplified by the developed polytheism of the Hittites (*q.v.*) in the centre and south; and the third characterized by a primitive type of religion, mixed with shamanism, in the east. The enthusiasm of the orgy appealed to the decaying faiths of Greece and Rome; the polytheism, with a high degree of civilization, yielded only slowly to its foes; but the primitive savagery, with a low grade of civilization, was driven by invaders of higher type to the recesses of the Caucasus, where it still lingers, commingled with reminiscences and influences of the nobler religions of Zoroastrianism, Christianity, and Muhammadanism.

LITERATURE.—The principal literature on the paganism of the Caucasian tribes (chiefly in Russian) has been summarized by G. Merzbacher, *Aus den Hochregionen des Kaukasus*, 2 vols., Leipzig, 1901 (esp. ch. xiii. for the Svanetians, and ch. xxvii. for the Khevsurs, Pshavs, and Tushes). Nothing of importance on this subject has appeared since; of earlier literature not specified by Merzbacher, mention may be made of M. Kovalevsky, 'Om dyrkan af förfädren hos de kaukasiska folken,' in *Ymer*, 1888, pp. 111–122. For the scanty classical accounts of the Caucasus and its inhabitants see B. Latyshev, *Scythica et Caucasica e veteribus scriptoribus Græcis et Latinis*, 2 vols., Petrograd, 1893–1906. For ethnology and ancient history see esp. E. Chantre, *Recherches anthropologiques dans le Caucase*, 4 vols., Paris, 1885–87; J. de Morgan, *Mission scientifique au Caucase*, 2 vols., do. 1890; S. Zaborowski, 'Le Caucase et les Caucasiens,' in *Revue anthropologique*, xxiv. [1914] 121–133. LOUIS H. GRAY.

TUTELARY GODS AND SPIRITS.—

The conception of a tutelary guardian genius or guiding spirit believed to protect and watch over certain persons and objects appears to arise as soon as the powers of observation and generalization are sufficiently developed to bring about a systematized scheme by which natural phenomena come to be divided into classes and assigned to particular departmental deities and spirits. In some cases high gods are associated with special functions—*e.g.*, in Mexico, where Tlaloc is regarded as the god of rain and water, and therefore has the special office of fertilizing the earth.[1] But more frequently it is the numerous spirits by which primitive man supposes himself to be surrounded that become the patrons or guardians of individual men. Any extraordinary event that demands the help of an intervening agent provides the impetus to penetrate more deeply into the nature of the supernatural powers and to establish a more intimate alliance with them. Thus, to the primitive mind, the constant motion of water is controlled not by natural law but by some supernatural agency resident within the stream. At first it appears simply as a mystic impersonal force, but, as the mind becomes capable of more definite ideas, the conception of a spiritual being having personality is evolved.

The Trojans, *e.g.*, originally regarded a sacred river as containing *mana* (*q.v.*), and, in consequence, they sacrificed a bull to the stream by throwing the animal into the water whole and entire. 'In later times, when they had reached the animistic stage, an altar was erected by the side of the river on which a bull was offered, the belief being that the spirit in the water came out and consumed the essence of the sacrifice.'[2]

As soon as the notion of a local spirit allied to a natural object is developed, the desire to seek the aid of the supernatural being speedily follows. The Iroquois at their festivals thank the good spirits and every object that ministers to their wants for the assistance rendered by them.[3] In process of time a tutelary guardian genius is assigned to every individual, whose special function it is to guide, protect, and warn the man under his care. This guardian spirit may be acquired in various ways and take different forms. It may reveal itself at birth, or may await the 'crisis' reached at puberty. It may be the spirit of some ancestor or great chief or mighty magician; or it may belong to a deity whose dwelling is not with men. From these spirits the personal name and even the nature of an individual are frequently received, and to them man naturally looks for guidance and protection.

[1] Strabo, xi. ii. 19 (=p. 499 C); Pliny, *HN* vi. 4; see especially de Morgan, ii. 182 *f.*, 188 f.

[2] For a summary see Merzbacher, i. 372–375, and for a description of a Svanetian funeral see *ib.* pp. 447–450. A like statement holds good for the Abkhases, who numbered about 60,000 in 1912 (see especially Žanašvili, in *Izvěstiya kavkazkago otděla imp. russ. geograf. obščestva*, xvi. [1894] 1–64).

[3] Cf. *ERE* viii. 456–458.

[4] For an outline of this history see de Morgan, i. 27 *f.*, 197, ii. 121–129, 274–280.

[5] See de Morgan, ii. pl. xi. ('Les Colonies aryennes dans le Caucase et l'Arménie'), for the course of these migrations. His suggestion (ii. 276; cf. i. 22, ii. 105 *f.*) that the Karthvelian group corresponds to the ancient Vannic is scarcely supported by what little we know of Vannic religion (see art. ARMENIA [Vannic]). It is equally doubtful whether the Hittites (*q.v.*) can be regarded as akin to the modern non-Aryan Caucasians, despite his arguments (i. 23, 26, 197, ii. 64).

[6] De Morgan, ii. pl. xiv. ('Carte ethnographique du Caucase au 1er siècle de notre ère').

1. Forms of guardian spirits.—(*a*) *Placenta.*—Among the Kooboos, a primitive tribe of Sumatra, the navel-string and afterbirth 'are the good spirits, a sort of guardian angels of the man who came into the world with them and who lives on earth; they are said to guard him from all evil. Hence it is that the Kooboo always thinks of his navel-string and afterbirth before he goes to sleep or to work, or undertakes a journey.'[1] If he were not to think of them, he would deprive himself of their care. The Battas, another tribe of Sumatra, believe that each man, in addition to his external soul, has 'two invisible guardian spirits (his *kaka* and *agi*) whose help he invokes in great danger; one is the seed by which he was begotten, the other is the afterbirth, and these he calls respectively his elder and his younger brother.'[2]

Among the northern tribes of Central Australia the navel-string is frequently cut off with a stone knife and, with the afterbirth, hidden in a hole in the ground or some other concealed spot, the belief being that, were it not preserved, the child would die, since it is thought to contain its spirit.[3] Here we find the germ of the belief which, in its more developed form, attributes to the placenta, etc., the function of a tutelary genius.

In Iceland it is an ancient belief that 'the child's guardian spirit or a part of its soul has its seat in the chorion or fœtal membrane, which usually forms part of the afterbirth, but is known as the caul when the child happens to be born with it. Hence the chorion was itself known as the *fylgia* or guardian spirit. It might not be thrown away under the open sky, lest demons should get hold of it and work the child harm thereby.' If it were buried under the threshold where the mother stepped over it when she rose from bed, the child in after life had a guardian spirit in the shape of a bear, eagle, wolf, ox, or boar.[4]

(*b*) *Animals.*—Not infrequently a man's guardian spirit is thought to manifest itself under the form of an animal.

Among the Ibans or Sea Dayaks of Borneo the *ngarong*, or spirit-helper, after having in a dream appeared in human form, makes himself known in the likeness of an animal. 'On the day after such a dream the Iban wanders through the jungle looking for signs by which he may recognize his "Nyarong," and if an animal behaves in a manner at all unusual, if a startled deer stops a moment to gaze at him before bounding away, if a gibbon gambols about persistently in the trees near him, if he comes upon a bright quartz-crystal or a strangely contorted root or creeper, that animal or object is for him full of a mysterious significance and is the abode of his "Nyarong."'[5] It does not, however, follow that every Iban has a *ngarong*. Many a young man goes out to sleep on the grave of some distinguished person or in some wild and lonely spot and lives for some days on a very restricted diet, hoping that a *ngarong* will come to him in his dreams, but only one in 50 or 100 men is fortunate enough to have his wish gratified. When the *ngarong* takes on an animal form, all individuals of that species become objects of special regard to the Iban, and he will not, of course, kill or eat any such animal. Even if the *ngarong* changes its form, he will continue to respect the species in which it first appeared. The cult may spread through the whole family, the children and grandchildren being under an obligation to respect the animal-form to which the *ngarong* belongs.

Among the Omaha Indians an animal as a guardian spirit is assigned to every man at puberty, and so close is the bond uniting them that the man is supposed to acquire the qualities of the creature that is his guardian. If, in the vision which determines his tutelary genius, he sees an eagle, he will have a keen and piercing foresight; if, on the other hand, it is a bear that appears to him, he will be slow and clumsy and therefore likely to be killed in battle.[6] This belief, that a man acquires the nature of the animal that is his guardian, has led the Thompson Indians of British Columbia to perform a mimic battle before setting out on the warpath, in which each man portrays on his body and imitates the sounds of his guardian animal.[7] Similarly in W. Africa, when a man is initiated into a secret society, the animal that he sees in his dream during his 'magic sleep' becomes his guardian spirit or patron.[8]

In Central America nagualism[9] is one of the ancient forms of worship which still flourish. It 'consists in choosing an animal as the tutelary divinity of a child, whose existence will be so closely connected with it, that the life of one depends on that of the other.' The animal is selected in one of three ways—(1) by priestly divination; (2) by the father and friends drawing animal figures on the floor of a hut at the mother's confinement, the figure that remains at the moment of delivery being the guardian; (3) by noticing the bird or beast first seen by the watchers after the confinement.[10] Sometimes a child's *naguat* is discovered by means of a calendar, in which all the names, places, and provinces of beasts, birds, fish, stars, etc., are recorded. Some of these horoscopes have a wheel painted on them; others portray a lake surrounded by the *naguals* in the form of various animals.[1] This method—employing astrological calculations based on a written document—is obviously a later development of nagualism.

Among the Algonquins of N. America the tutelary genius is known as a *manitu*, or supernatural being, associated with streams, cataracts, rocks, mountains, and forests. In nearly every case it manifests itself under the form of a beast, bird, or reptile of uncanny appearance, although occasionally it assumes human proportions. At the age of puberty youths are made to retire to a solitary place to undergo a period of fasting. The first thing that appears in a dream to the novice is regarded as his guardian spirit, to whom he looks in after life for guidance and protection. The man destined to be a warrior will have a vision of an eagle or a bear, a serpent will appear to the future medicine-man, a wolf to the hunter. To complete the bond, a portion of the guardian is worn about the person, which is regarded rather as an embodiment than as a representative of a supernatural power. It therefore seems that the guardian spirit is only one of a large class of spirits to which the common name of *manitu* is given.[2] The same belief is found among the Iroquois and Hurons, the genii being called *okies* or *otkons* instead of *manitu*.

2. Functions of guardian spirits.—(*a*) *The relation of guardian spirits to totems.*—Among some of the Algonquin tribes a man's guardian is identical with his clan totem, but, since the former belongs solely to an individual, while the latter is the inherited possession of every member of the clan, the tutelary genius cannot be explained in terms of totemism.[3] The similarity between the clan totem and the guardian spirit has led several anthropologists to derive the one from the other.[4] On this hypothesis the clan totem is simply the guardian spirit of an ancestor, who acquired it for himself in a dream at puberty, and through his influence and credit succeeded in transmitting it by inheritance to his descendants, who form a clan, and regard as their totem the animal in which the tutelary genius manifested itself.

Thus, in the case of the Iban, Hose and McDougall think that 'it seems difficult to deny the name "individual totem" to the species' comprehended under the name of *Ngarong*. Similarly when 'all the members of a man's family and all his descendants, and, if he be a chief, all the members of the community over which he rules, come to share in the benefits conferred by his *Ngarong*, and in the feeling of respect for it and in the performance of rites in honour of the species of animal in one individual of which it is supposed to reside. In such cases the species approaches very closely the clan-totem in some of its varieties.'[5] Unfortunately, however, for this theory, on the authors' own evidence there are no signs of clan totemism in Borneo.[6]

For support of this view of the origin of totemism (*q.v.*) its advocates are driven to various American theories such as those of F. Boas, who thinks that the totems of the Indians of British Columbia have been developed from the personal *manitu*; and of Alice C. Fletcher, who is led to a similar conclusion by a study of the totems of the Omaha tribe. In this connexion, however, it should be remembered that, while it is perfectly true that guardian spirits are occasionally inherited among certain N. American tribes, and not acquired for each individual separately,[7] and therefore in process of time may become the totems of the clans, yet, since inherited guardian spirits are usually regarded as less powerful than those acquired by individuals,[8] they are hardly likely to be taken over as the protectors of the clan. Moreover, there is no evidence forthcoming that a totemic

clan has actually grown up in this way either in America or elsewhere. Where the original conditions are supposed to be typically manifested—*e.g.*, in the Banks Islands[1]—no trace remains of the existence of clan totemism, except perhaps in a few very doubtful survivals in secret societies. Again, we must not lose sight of the fact that in America and the Pacific, as compared with Australia, we are dealing with a relatively advanced, not to say degenerate, form of totemism,[2] and that this 'American theory,' as we may call it, of the origin of the institution rests entirely upon a few cases derived from the N. American Indians. In Australia, where the custom is seen in a much more primitive form, there is no evidence of guardian spirits becoming clan totems, while in Africa examples are also wanting. We therefore conclude that the theory which seeks the origin of totemism in the personal guardian spirits of individuals is devoid of proof, at any rate in the present state of our knowledge.

(*b*) *Guardian spirits of houses and villages.*—In most of the W. African tribes there is a class of ancestral spirits called 'the well disposed ones,' whose function is to protect and benefit their particular village or family, acting in conjunction with the village or family fetish. It is supposed that the spirit of a man lingers about a house some time after his death, and, although it is able to injure the children and others by embracing them, it performs the office of a guardian to the family by keeping off evil spirits.[3]

The Kenyahs recognize a minor deity called Bali Atap, who 'protects the house against sickness and attack, and is called upon in cases of madness to expel the evil spirit possessing the patient. A rude wooden image of him stands beside the gangway leading to the house from the river's brink; it holds a spear in the right hand, a shield in the left; it carries about its neck a fringed collar made of knotted strips of rattan; the head of each room ties on one such strip, making on it a knot for each member of his roomhold.' Another god, Bali Utong, brings prosperity to the house.[4]

'In Tonquin every village chooses its guardian spirit, often in the form of an animal, as a dog, tiger, cat, or serpent,' although occasionally a human being is selected.[5] The Khonds have tutelary deities of house, village, groves, etc., which survive in the later Hinduism. The *Rigveda* recognizes Vāstoshpati, the 'lord of the house,' to whom the law[6] orders oblations to be made. This Vedic divinity is associated by W. Windisch with Vesta and Hestia, and compared to the Celtic *vassus, vassallus*, originally 'house-man,' and thus associated with the 'king of the house-men.'[7] In Hinduism, however, a female deity, Jara, is assigned to the guardianship of the house. Although she is represented as a demoniac power, she is friendly towards her votaries, provided that she is worshipped with incense, food, flowers, and so forth.

The Ainus have a fetish called Inao, invested with life, whose function is to look after the health and general well-being of the family. His special dwelling-place is in the north-east corner of the hut, at the back of the family heirlooms. Occasionally, in times of trouble, he is brought out from his corner, stuck in the hearth, and there prayed to by the head of the family. He is supposed to have been sent down from heaven to be the husband of the goddess of fire, and to help her to attend to the wants of men, and therefore he is called 'the ancestral governor of the house.'[8]

3. Offerings to guardian spirits.—Since guardian spirits exercise such a powerful influence over the lives and destinies of men, it is not surprising that they are frequently the recipients of offerings to appease their wrath or secure their favour and beneficence.

The Thai of Indo-China, *e.g.*, offer firstfruits of rice at harvest to the guardian spirit of the family before the household partake of the new crop. Besides the firstfruits at harvest, 'the guardian spirit receives some of the parched grain in spring' at the time when the first thunder of the season is heard. 'When all is ready, the rice is served up together with fish, which have been caught for the purpose, on a table set in a corner which is sacred to the guardian spirit. A priest drones out a long invitation to the spirit to come and feast with his children; then the family sits down to the table and consumes the offerings. At the close of the banquet the daughter-in-law of the deceased ancestor [*i.e.* the guardian] hangs up a basket containing rice and fish for his use in the corner, after which she closes the shrine for another year.'[1] The same people believe that large animals of the forest — wild oxen, buffaloes, rhinoceroses, elephants, etc.—have their guardian spirits, and, in consequence, the prudent hunter is careful to exorcize the invisible guardians so that they may not harm him when he eats the flesh of the animals killed in the chase. Spirits are also supposed to guard the clearings to which the deer come by night to drink, and the hunter must sacrifice a fowl to them from time to time in order to secure his prey.[2] A similar custom prevails among the Indian tribes about Green Bay, Lake Michigan. Every creature is regarded as having a particular guardian spirit, and therefore, when a young girl seized a mouse to eat it, her father first fondled it tenderly to appease the *genie* who has charge of mice, in order that his daughter might not suffer from her meal.[3]

Among the Ewe-speaking natives of Togoland (W. Africa), before the new yams are eaten, 'every house-father takes a raw piece of yam and goes with it to his loom (*agbati*) and prays: "May the Artificers take this yam and eat! When they practise their art, may it prosper!" Again he takes a raw yam and goes with it under the house-door and prays: "O my guardian spirit (*aklama*) and all ye gods who pay heed to this house, come and eat yams! When I also eat of them, may I remain healthy and nowhere feel pain. May my housemates all remain healthy!" After he has invoked their protection on his family, he takes a cooked yam, crumbles it on a stone, and mixes it with red oil. With this mixture he goes again to his loom and prays as before.' Again he crumbles a cooked yam and prays first at the entrance of the homestead, then under the house-door: 'He of my guardian gods and he of the watchers of the house who likes not yams mixed with oil, let him come and take the white yam from my hand and eat!'[4]

Among the Kayans of Borneo and several of the African tribes it is customary at sowing a rice-field to reserve a certain portion at the entrance for the guardian spirits, who at harvest are invited to come and take their share. It is supposed that they will content themselves with eating the grain in their private preserves and not poach on the crops destined for the use of man.[5]

'In the Tenimber and Timor-laut Islands, East Indies, the first-fruits of the paddy, along with live fowls and pigs, are offered to the *matmate*,' or spirits of ancestors, 'which are worshipped as guardian spirits or household gods.'[6] The Yorubas of the Slave Coast sacrifice fowls to their guardian spirit (*olori*), which is supposed to dwell in the head, by mixing some of the blood of the animal with palm-oil and rubbing it on the forehead.[7] The *tindalo* in Florida, one of the Solomon Islands, are also approached by sacrifice on certain occasions—*e.g.*, before a planting, a voyage, or a fight.[8] The N. American Indians offer dogs and horses to the 'medicine bag,' to which they look for safety and protection through life.[9]

Among some of the Algonquin tribes, when a man's guardian spirit is identical with his clan totem, should he be compelled to kill the sacrosanct animal, due apology would be paid to it before destroying it, certain portions of the flesh being preserved as an offering to the *man'ido* (guardian).[10] Herein again lies an important distinction between a tutelary genius and a totem, even when the two are inseparable. The former is regarded as so intimately associated with an individual that prayers and sacrifices may with impunity be offered to it, but the latter is more closely concerned with the food group or clan and therefore is seldom the recipient of offerings from individuals. Apart from the evidence of Carl Strehlow, that the hymn which is sung at the *intichiuma* of the kangaroo describes the offering of a morsel of kangaroo fat to make the fat of the kangaroos increase,[11] the act of oblation can hardly be said to form a part of the totemic rites in Australia—the home of the most elementary form of totemism.[12] We therefore conclude that tutelary gods and spirits have arisen out of animistic and theistic conceptions rather than from ideas connected with totemism, although it is undoubtedly

true that in America the doctrine of the clan totem has developed side by side with that of the guardian spirit conceived as an animal. Elsewhere, however, the patron spirit is much more closely allied to animism and theism. Wherever animistic conceptions prevail, there the notion of a tutelary genius will be found in some form or other. As spirits give place to gods, the spiritual guide and protector of individual men has his place in the pantheon, till in the Christian Church the doctrine of a guardian angel watching over, succouring, and defending the faithful on earth is raised to a higher and more spiritual level. 'Are they not all ministering spirits, sent forth to do service for the sake of them that shall inherit salvation?' (He 1^{14}). This is the function of the guardian angels in the NT; they are to lead men safely to the kingdom of heaven by helping them to attain salvation.

It is not the Biblical conception that angels are the personification of nature powers, or merely the means of securing the favour and help of supernatural beings. They are consistently represented as a body of created spiritual beings intermediate between God and man (Ps 8^5), whose function it is to act as messengers to mankind or attendants upon God's throne (Dn $7^{9f.}$, Ps 91^{11} 103^{20}, Is 6, Gn 16, Jg 13, Lk $1^{11.\ 26}$). Jerome thinks that every individual, whether baptized or not, has from his birth an angel commissioned to guard him,[1] while Chrysostom[2] and Basil hold that only the baptized enjoy the privileges of having a tutelary angel. Thomas Aquinas teaches that only the lowest orders of angels are sent to men, and therefore they alone are guardians.[3] No doubt the Biblical account of the ministry of angels was inherited from the world-wide doctrine of tutelary gods and spirits, and to an extent influenced by it, but at the same time it is evident that the line of development has been on a higher and more spiritual level.

LITERATURE.—The authorities are quoted in the footnotes.

E. O. JAMES.

TUTIORISM.—See RIGORISM, PROBABILISM.

TWINS.—The birth of twins in the human species is an event so unusual that it has almost everywhere drawn popular attention and evoked expressions of emotion, varying from extreme terror through the whole gamut of fear, repugnance, suspicion, anxiety, perplexity, hope, and joy. The first impulse seems to be to regard twins as unnatural and monstrous, and therefore as portending evil. The unfortunate babes and their mother have been looked upon as guilty of a serious crime—a crime calculated to call down the vengeance of the higher powers. Accordingly they must be at once put to death, and the offence repudiated and cleared from the land. Or their birth has been taken to be a message from the divinity conveying a warning of impending evil, only to be thrust aside by their immediate slaughter or by a variety of superstitious observances, intended by abstinence and humiliation to avert the threatened calamity.

1. Tabu of twins: its mitigation, ceremonies, and superstitions.—Among the peoples by whom this view of the birth of twins has been taken are those of Australia, the East Indian Archipelago, nearly the whole of Africa, the greater part of the aboriginal population of America, the population of the north-east of Asia, the non-Aryan tribes of India, and the backward classes and populations of Europe. In ancient times similar beliefs are reported of the Assyrians and Babylonians, the Aryan population of India, and the Egyptians. Where the superstition has the fullest power both mother and children are at once put to death.

A typical illustration of this proceeding is found among the Negro population of the Niger Delta. Even when the mother is allowed to live, she becomes an outcast and must pass the rest of her days in the forest. If she ventures near a town or village, any paths that she may use will be defiled and unfit for the inhabitants. 'She must not drink from the same spring or water-supply as her own people; she must not touch anything belonging to them. The consequence is that the mothers of twins simply die from hunger and exposure, or they take their own lives.' A slave-woman is the professional killer of twins She takes each child by the feet and the neck and breaks its back across her knees. 'The bodies are then placed in an earthen pot and taken into a dense part of the bush and there left to be devoured by wild animals and insects. In some parts of this district the children are not killed, but simply thrown into the bush to be devoured.' It is no wonder that 'May you become the mother of twins!' is reckoned a frightful curse, and quarrelling women do not need to utter it in words: it is sufficient to hold up the fist, raising the index and middle finger in a V form, and the gesture is understood.[1]

The Negro peoples of W. Africa are very severe against the offence of giving birth to twins.

Among the Ibo such an event defiles the whole quarter, the inhabitants of which 'are obliged to throw away all the half-burnt firewood, the food cooked and the water brought in the previous night—everything, in a word, in the shape of nourishment, solid or liquid.'[2]

Mitigation of the law has, however, taken place. The mother is not always put to death or driven into the forest to die of hunger and exposure. At Arebo in Benin, if her husband be a man of wealth, he may redeem her with another victim.[3] More generally there are provided 'twin-towns'—cities of refuge, to which these unfortunate women may escape, or to which they can go when expelled from their own homes. There they must reside for a time to undergo purification. The period is stated by Mrs. D. Amaury Talbot,[4] speaking of the Ibibios, near the mouth of the Cross River, to be twelve moons. This, we may be sure, is the least penance that can be imposed on them.

Leonard writes that 'the women, looked on as unclean for the rest of their lives, are obliged to reside in villages, which are known as Twin-towns, or the habitations of defiled women, appointed for that particular purpose. From this time forth the husband, whether he be head of the house or not, is obliged to maintain a wife who has been so defiled; although at the same time he is strictly forbidden to cohabit or to have any dealings with her, being, as he is in every religious and personal sense, human and spiritual, divorced from her. But in spite of the fact that to him, as well as to all the members of his or her community, the woman is unclean and therefore tabu, the penalty of death being inflicted on both in the event of their breaking the law in this direction, she is allowed to form connections, but on no account to marry with strangers, or men belonging to outside communities, and the offspring resulting from such intercourse becomes, as a matter of course, the property of her husband, or the head of the house. . . . But in the event of the defiled woman herself bearing twins again, these must be destroyed unknown to any one. For, if known, the probabilities are that the death of the mother would be demanded by the household and the community as well. Or if not killed, she would be driven into the bush and left to die, although, if discovered by a stranger, he is at liberty to claim her as his own property,—that is at least if he feels inclined to run the risk of a venture so truly provocative of offence.'[5]

In Ibani, westward of the Ibibio country, the mother was, and perhaps is still, quarantined in an out-of-the-way hut for sixteen days, after which she went through a ceremony of purification by the priests. The father, or head of the house, was required to offer certain sacrifices. The threatened evils were thus averted, and the purified mother was then received back into the family circle.[6] Among the Ibibios, however, if the mother die in childbirth of twins, she may not be carried to burial by the ordinary door of the hut or along the ordinary paths of the village; she is borne through a hole broken for the purpose in the wall of the hut and along a path specially cut through the bush.[7]

The lot of the children in Nigeria and adjacent countries has also been mitigated, to the extent that one only of them is now in most places put to death.

The Bassari of Togoland, *e.g.*, preserve the boy if the twins are of different sexes, or the stronger of the two if of the same sex, and bury the other alive in a big pot. A fowl is offered and cut in two. Half of it is buried with the condemned twin as a reminder to the latter of its close relationship with the surviving twin, so that the spirit of the buried child may not avenge itself on the survivor. Subsequently-born twins are both buried alive. Women who have borne twins, though apparently not driven away, are not allowed to take part in the agricultural labour (a woman's special work) of sowing and harvest, until the dead twin has reappeared as a subsequent child.[1]

A similar modification of the children's fate is found among the Bantu tribes. On the Lower Congo one of the twins is often neglected and starved to death. The reason given for this is that the mother does not like the extra trouble involved in caring for the two; but it is doubtful whether this is a sufficient explanation. When a twin dies, or is thus starved, it is buried at cross-roads, like a suicide or a man struck by lightning. A piece of wood is carved into an image of a child and put with the live twin, that the latter may not be lonely; and if the second child die, the image is buried with it.[2] The custom of giving the survivor a wooden figure in place of the twin that dies is also found among the Negro Yorubas and other W. African tribes, both Negroes and Bantu. It is said to keep the survivor from pining for the deceased, and to give the spirit of the deceased a habitation.[3] This arises from the special sympathy alleged to exist between twins, of which we shall find illustrations elsewhere.

Twins are regarded by the Kafirs of the south-west as scarcely human, and their mother is taunted with the disgrace. Yet, until Chaka stopped the custom, a twin was specially sought out, as being fearless and wild, to lead an attacking army in war. Among the Zulus twins are not counted in the number of children. One of the twins is always killed, remaining of course nameless. Nor is the survivor given a name until he is about sixteen years old, but before he is circumcised. If the survivor die, he is not allowed to be mourned, for fear of angering the *amatongo* (the ancestral spirits). If both twins are hidden, and so preserved, it is deemed they are united by sympathy as one flesh; and, if one die afterwards, he must not be mourned, lest the other should suffer.[4] To the Basukuma, or Bagwi, south of Lake Victoria Nyanza, the birth of twins is a great calamity, foretelling as it does a prolonged drought and great suffering among men and cattle. Consequently, when other means fail to produce rain, twins, if they can be found, are put to death.[5]

In British E. Africa the Akikuyu and the Akamba also regard the birth of twins as very unlucky; and the babes are, or perhaps one of them is, killed and thrown into the bush. Among the Akikuyu, however, the ban is limited to a first parturition; in such a case the twins are believed to prevent their mother from bearing again. But, among both the Akikuyu and their ethnically allied neighbours the Akamba, the birth of twins to a cow is deemed still more disastrous. Accordingly the calves are, or at least one of them is, always slaughtered, and among the Akamba the cow also, while the Akikuyu content themselves with putting a necklace of cowries, doubtless by way of amulet, round her neck. What is no doubt a modern alleviation permits one of the twin children to be given to a family of a different clan, becoming thus the child of that family, all relationship with its natural parents being severed. Another alternative among the Akamba, as likewise among the Nilotic Negro Dinkas, prescribes the substitution of goats for the sacrifice of the babes.[6]

The neighbouring Nandi, a Nilotic Negro tribe, look upon the birth of twins as an inauspicious event, and the mother is unclean for the rest of her life. Doubtless in earlier days she was put to death or expelled from the community. Even now her life must be a burden to her. 'She is given her own cow, and may not touch the milk or blood of any other animal. She may enter nobody's house until she has sprinkled a calabashful of water on the ground; and she may never cross the threshold of a cattle kraal again.' Special names, as is often the case, are given to the children.[7] The El Konyi, a branch of the Nandi, in the Elgon district, have rendered her lot a little less intolerable. But even there she is shut up for a while in the hut, and elaborate purificatory ceremonies must be performed with a medicine-man's assistance before she is released. Even if a cow produce twin calves, ceremonies are performed, and they are redeemed with the slaughter of a sheep.[1]

In both N. and S. America the custom of putting twins, or at least one of them, to death seems to have been universal.

The aborigines of the northern part of the upper basin of the River Amazons allege a curious reason for their dislike of twins. To give birth to twins is to descend to the level of the beasts—a thing to be avoided at all costs. The unfortunate mother therefore will leave the second child (or, if of different sexes, the girl) in the lonely spot in the bush whither she has, in accordance with custom, retired alone to be delivered.[2] The Salivas on the Orinoco call the mother nicknames, saying she is a rodent. Their objections, however, seem to go deeper than this; for the Saliva husband believes that the second twin is the offspring of adultery. A chief has in fact been known to give one of his wives a whipping in public for having dared to bring forth twins, and to threaten the others with similar consequences if they did the same.[3] From a pastoral letter by the archbishop of Lima in the year 1649, quoted by von Tschudi, it appears that the Peruvians of that date offered twins and children born feet first to some *huaca*, or supernatural being, and preserved their bodies or buried them in their houses.[4] Other records show that the birth of twins was regarded as unnatural and unlucky and demanding sacrifices and ceremonies lasting many days.[5] The North-Eastern Maidu of California who inhabited the foothills and western slopes of the sierra regarded the birth of twins as an exceptionally bad omen. The mother, it is said, was often killed and the newly-born children were either buried alive with her body or burned.[6] Among the Seri of the Californian Gulf 'triplets are deemed evil monsters and their production a capital crime.'[7]

In Australia the usual reason assigned for killing one or both twins is the economic reason that the mother has not enough milk for them, and moreover cannot rear them and also get her food. This is of a piece with the prevalent custom of infanticide, even of a single child, when the mother already has one dependent upon her. But among some tribes at least it does not appear to be the only reason.

Among the Euahlayi the husband suspects his wife of infidelity. Among the Arunta, where twins are reported as of extremely rare occurrence, they are attributed to two spirit-individuals entering the mother's body at one and the same time. By the northern tribes they are destroyed as something uncanny.[8]

On the island of Nias twins are universally disliked and dreaded.

In the province of West Nias it is believed that they will grow up evil doers; if a boy and girl, they are specially evil, the one will become a murderer and the other a poisoner. Formerly the younger used to be hung on a tree in a sack, there miserably to perish. The Dutch government and missionaries, it seems, have put an end to this cruelty. But the natives are still shy even of the parents. The father gets a priest to make a magical image of a board roughly cut in human shape, which is put up in the house as an amulet to prevent a second such misfortune. Until it is ready, the parents dare not speak to any other persons, lest they make them sick and give them jaundice; nor will their neighbours of the same *kampong* enter the house where the birth has taken place until the image is put up. At Lolowua in East Nias both children are thrust alive into a sack, taken far from the *kampong* and hung up in the bush, together with the afterbirth. The house in which they have been born is avoided by other women, lest they incur the same misfortune. At Lahewa in North Nias the birth of twins is feared because it is held that, if they are allowed to live, some other members of the family must die. It is thus a matter of self-defence to put them to death. Their birth is moreover a sign of evil, such as failure of harvest, fire, epidemics, cattle-disease, and the like, threatening the whole *kampong*.[9]

Among the Kayan of Borneo, the motive alleged for exposing one of the twins in the jungle is to preserve the life of the other; for it is believed that a sympathetic bond exists between twins 'which renders each of them liable to all the ills and misfortunes that befall the other.'[1]

In Madagascar also twins were put to death.

Among the Antambahoaka the excuse for this treatment was that they would in any case die, or if not they would go mad or would sooner or later attempt the life of their parents. In the province of Imerina it was apparently the custom formerly to kill the twins. More recently, though this custom was abandoned, the parents were required to hand one of them over to a relative; and, if a woman belonging to the royal family gave birth to twins, both they and the mother were sent away and lost their rank.[2]

Exposure or murder by violence is in fact a common fate of one or both twins—a fate they share with other children deemed unlucky, such as misshapen babes or, as in Madagascar, those born on certain days which are subject to tabu.[3] Gradually, however, this untoward fate has, among many peoples, been lightened. The twins are still regarded as uncanny or even dangerous, but ceremonies are performed to ward off the evil.

The Ewe of Togoland, W. African Negroes, hold them to be fetish-children: in that capacity they must not be put to death, but they will not live long; they will die and go back to the fetish. Meanwhile, as a mark of distinction they wear special beads; and their parents set up in the corner of the house a fetish of a pair of buffalo-horns and in some districts a carved wooden doll or puppet. If any of their kin fall sick, presents are brought to the twins or to the fetish, and the twins propitiate the fetish. In the former German administrative district of Anecho the birth of twins is the occasion for a feast of eggs and beans boiled with the leaves of certain shrubs to all women who have already borne twins—a feast repeated every year afterwards. In the same district the twin-fetish is also invoked at a funeral feast on setting up two posts with a dog's skull bound upon them as a 'medicine.' At Great Be in the district of Lome-land, on the day when twins are born, an old woman who has herself borne twins comes and leads the father and mother out of the door, the one to the right, the other to the left in reverse directions round the house and then back into the house, in order that the twins may not die. Four months later the twins are taken, preceded by two young people playing on the flute, to the so-called twin-market, where some women who have already borne twins are found offering goods for sale (though this is not a regular market); and an old woman formally buys a few things for the twins. The object of this ceremony is to be able to say that the twins have been to market, for, until this is accomplished, the mother cannot leave the house. On their return they receive their names, and the father prepares the name-giving feast for the relatives, and also for those women of the village who have borne twins. Sometimes an unborn child is promised as wife to a man conditionally on its proving a girl. If one of the twins be a girl thus betrothed before her birth, the wooer performs a curious ceremony. On the day of the birth, after the circumambulation of the hut by the parents, he performs the same march seven times with some grass in his mouth, a hat of palm-bast, and leaves on his arm. Many spectators witness this ceremony by which he ratifies the compact and expresses his intention of marrying the girl. But he must take care not to laugh, otherwise he will go out of his mind. It is deemed more favourable that both children should be of the same sex. It is said that, if one of the twins die, the survivor carries about for the rest of his life a small wooden figure as a memento of his dead twin.[4] In another district, among the Konkomba, it is reported that a wedding gives occasion for no feast, except when a twin marries; then a great feast takes place, because twins are fetish-children.[5] The various peoples of Togoland, indeed, attach much importance to the birth of twins. Among the Ho, a tribe of Ewe, when twins, a boy and girl, are born, neither of the parents may eat or speak until an elaborate series of purificatory ceremonies, accompanied by feasting and the drinking of palm-wine, has been performed over them by others who are also parents of twins and who are paid for the rites. If these customs were omitted, the twins would become cripples. To the twins and their parents the flesh of hussar-apes and rats is forbidden. If any one shoot a hussar-ape, the parents of twins are expected to beat him with a stick.[6] The exact relation between the hussar-ape and twins is difficult to determine. It has been claimed that the hussar-ape and the long-tailed monkey (*Meerkatze*, a species of *cercopithecus*) are 'individual totems' of twins, and that twins may never kill or eat the latter, whereas they may kill, but may not eat, the former. Twins while asleep are said to go in the shape of these animals into the fields to eat maize; and if one such creature be killed, the corresponding twin will die. When the parents cultivate land, they sow a patch with maize for the special behoof of the twins thus changed, that they may be able to eat the grain; and the patch in question is never harvested. When one of the twins dies, a long-tailed monkey is sought in the forest and called by the name of the deceased child into a calabash, which is closed as if it were within and brought home to be honoured.[1] These are not exactly totemic superstitions; but they disclose a belief in the identity of, or at least an intimate personal connexion between, twins and these apes, such as we shall find in British Columbia between twins and salmon.

The Akoviewe, another Ewe tribe, have somewhat similar superstitions. The father of twins is forbidden to eat the flesh of hussar-apes; nor may he eat the remains of fruits eaten by these creatures. When the midwife sees that twins are about to be born, she relinquishes her place as soon as one is born lest she be afflicted with consumption, or at least a cough which will last the rest of her life. Certain vegetables and fruits are laid in the water wherewith the mother and children are bathed. A special feast with drinking of palm-wine is provided for the people of the surrounding villages. No presents must be made to one of the twins only, but both must be treated alike.[2] Among another tribe, the Kpenoe, neither parent must leave the house until the twin-customs have been performed. These consist, as among the Akoviewe, in the drinking of palm-wine, which is provided for all who give the twins cowries, and in a feast for all who come together from the outlying villages. The parents of twins already born come together to perform the customs and to dance, and the twins are carried on the neck that every one may see that the customs are carried out for them. These customs are very expensive. Twins must be clad alike so long as they are children.[3] They must eat yams a month earlier than other people, otherwise they will die.[4]

Notwithstanding the practices and beliefs just mentioned, the Ewe are said to look upon twins with favour.

For the Ho the birth of twins is a very great joy; it is regarded as better than riches. Among the Fo, another tribe of Ewe, such births are frequent. The children are regarded as children of Ohoho, a supernatural being with whom indeed they seem to be identified. Not only twins, but three children at a birth are favoured. A prayer for twins and triplets is even offered on certain occasions. The last-born is looked upon as the highest in rank. Special names are appropriated to children thus born. Special customs even in eating are prescribed to the mother. A woman who has borne twins wears round the neck a chain or string of beads as evidence of the honourable fact. Whatever the relation of Ohoho to the twins, he receives a cult, and in case of their danger or serious illness sacrifices are offered. A bank of clay is made just outside the entrance of the hut, where the cult is performed. If one of the twins is a girl, and she dies before the other, a wooden figure is made and stuck beside the clay-bank, to prevent the death of the boy—a custom disregarded if the boy happens to die first.[5]

It must be obvious, from these elaborate regulations, that, if the Ewe and their immediate neighbours favour the birth of twins and triplets, their joy is not without trembling. Such births are not in the order of nature; they are uncanny, equivocal; and, though they may be a blessing, if the proper precautions be not strictly observed they may be quite the reverse. Twins are credited with special connexions with the spirit-world: they are fetish-children; they are more or less identified with a supernatural being, or with certain of the lower animals whose shape they have power to take. Another observer in fact says that every unusual or remarkable event places the Ewe in an extraordinary situation with regard to his divinities, so that he must seek by special performances to re-enter into harmony with the upper world; consequently the birth of twins, as one such event, is not a joyous fact, but an evil omen.

The parents, he says, are kept in the hut for twenty-five days or longer, that they may not look on the heavens before the twin-customs have been carried out, else either in parents or in the children an unnatural change would take place: they would become like iron bars—possibly by the act of the lightning-god, whose badge or emblem is an iron bar. The account he gives of the customs is not identical in all particulars with those already mentioned; but their effect appears to be the same, and he notes that the details vary from district to district.[6]

Turning from the Negroes to the Bantu, we find that the ambiguous position of twins is well exemplified by the Thonga.

Among them the customs vary, as among the Ewe, in different districts. Formerly one at least of twins was put to death. In some places this custom continues; elsewhere their advent is a cause of rejoicing, and women even wish for twins and beg from the happy mothers a portion of the fat wherewith they smeared their bodies, in the hope by the same means to obtain a similar result. Yet in some groups (tribes or 'clans') which do not put twins to death their birth is considered a special defilement. The mother is at once removed from the hut, which is burnt together with its contents. She is placed in a shelter behind the village. All the women assemble and start out in all directions to draw water in old calabashes from all the wells and pools of the neighbourhood. As they go, they sing an invocation to the rain, and on returning they throw the water over the mother and babes, who are further purified by the medicine-man with a drug which he has prepared. The details of their purification vary to some extent; but, until it is accomplished, no one in the village is allowed to eat, and the following day work in the fields is forbidden, for it would prevent the fall of rain. The mother in her shelter outside the village is allowed no communication with the other inhabitants, except possibly one girl who helps her in nursing the twins. To remove the defilement, she must pass it on, like that of a widow, by means of incomplete sexual intercourse, to four men successively. The first three of these victims at least will die in consequence. After each sexual act the medicine-man prepares a vapour-bath for her. When all four acts are accomplished, she returns to her parents' house, and there entertains a lover whose relations with her result in another child. She thus completes her purification, and her husband fetches her home. But in some places she is not admitted through the doorway: she crawls through a hole made in the back of the wall; and the husband is subjected to certain rites. The twins themselves are treated in many respects differently from ordinary children. Usual ceremonies are omitted; they are weaned earlier; and there is a general antipathy to them. Special precautions to protect them and their mother are also taken on the occasion of a ceremonial mourning visit.[1]

On the other side of S. Africa, in what was German territory, the Herero consider the birth of twins as 'the greatest and most fortunate event which can happen to a mortal Omuherero.'

Both father and children are specially privileged. Yet the parents are immediately placed under a tabu; they may not speak or be spoken to, nor have any contact or intercourse with any one except those who wait on them, who are known, as well as the children and their parents, by the epithet of 'twins' (*epaha*); they are ejected from the village; all clothes and ornaments are taken off them; and they receive in exchange a few old worthless skins. Messengers call together the whole 'tribe,' and every one must appear with all his cattle, else he will be bewitched and die. The father goes to meet his guests and is received, as if he were an enemy, with all sorts of missiles, while the women raise a terrible lamentation. This, however, is only ceremonial. He with the other *epaha* meets them at the village, where each of the visitors brings him an offering, and, if male, is 'consecrated' in return by him, if female, by the mother. A hut is then built for the parents, and an ox is slaughtered, which all the people must taste, beginning with the parents, and a small piece of the meat is held to the toes of both twins. The remaining meat is taken to the parents' newly-built hut, of which they then take possession. During the following days the father goes in procession round the village, visiting two or three houses each day. At every house the ceremonies are repeated: the offerings are made to him, the 'consecration' by him, the slaughter of an ox, the cooking and ritual tasting of its flesh are repeated, and the remainder is carried to his house. When he has finished the circuit of his own village, he commences that of the neighbouring villages. If the meat becomes too plentiful, he asks for living cattle instead of slaughtered, and adds them to his own herd. No one will dare to refuse him. Every father of twins has the right to represent the chief of the village, when the latter is absent, in his priestly functions. A twin boy also possesses all the priestly privileges: for him there is no meat, no milk forbidden, and nobody would dare to curse him. When the chief of the village dies, he inherits the priestly dignity associated with the chieftainship.[2]

It would seem, therefore, that the tabu encircles the twins and their parents not as accursed but as sacred; the curse rests on the community, and the offerings made to the father and the 'consecration' he bestows are intended to avert it and restore and redintegrate the ordinary life.

The Baganda regarded twins as due to the direct intervention of Mukasa, the god of Lake Victoria Nyanza, who was said to show his esteem for certain women in this manner; and great care and numbers of tabus were necessary to retain his favour. The position was evidently one of great delicacy; for any mistake on the part of the parents, or any sickness that befell the twins, was looked upon as the result of the god's anger, which might extend to the whole clan. The word 'twins' might not be mentioned until the rites were at an end. The persons of the parents were sacred. They wore a distinctive dress, and no one might touch them. The mother could not go out of doors by day without covering her head. No one was allowed to enter the house except the husband and wife, and a few relatives. The men and the women were required to enter through a separate opening cut for each sex in the back of the house. The doorway was blocked up. The nails and hair of both parents were not cut until the ceremonies had all been completed, save that at one point in the rites the father's hair was shaved in a particular fashion. The ceremonies were lengthy. They included the beating of special drums, a round of visits to the father's and mother's parents and to the members of both clans, at which there were feasts and dancing, a curious rite referred to below, and a final ceremonial dance by women. The father during the ceremonies wears on his ankles a number of small bells, to give notice of his coming and prevent molestation. He is privileged to enter any one's garden and take what produce he pleases to feast his guests. In fact, being under the god's protection, he may do almost anything he likes. When the ceremonies are completed, his tabu is not yet over. For this he must wait until he has taken part in the next war. He must then take the bundle of hair and nails of which he has been shorn in his purification and cram it into the mouth, or tie it round the neck, of the first enemy he kills. It is only after this that he ceases to wear a distinctive dress and returns to ordinary life. The twins themselves remain sacred all their lives. A special ceremony was performed when a twin went to war for the first time and killed a man. If twins died in infancy, their deaths were announced with a euphemism and they were embalmed, placed in a new cooking pot, and buried in waste land. Women avoided their graves lest the ghost should enter them and be born again of them. There was no mourning for them, but, if the ceremonies were incomplete, they were continued as though they were still alive.[1] The neighbours of the Baganda, the Bahima or Banyankole, possess a Twin totem-clan. Yet among them, even in the Twin clan, twins are the subject of tabu. They must not, however, be spoken of disparagingly, lest an ancestral ghost overhear and be angry.[2]

It is needless to detail the ceremonies to which the birth of twins gives occasion among other Bantu peoples. Though differing among the various tribes, they are all founded upon the feeling that the birth is an uncanny event, often expressly ascribed to divine intervention. Fortunate it may be for the parents; to the community in general it is a source of peril and ill omen, which must be bought off by gifts and ceremonies; and, until those ceremonies are completed, the twins and their parents are as a rule secluded from intercourse with the world. Sometimes, but rarely, as among the Bushongo of the Upper Congo, the birth of twins is frankly welcomed as a very happy occurrence.[3] Even where general rejoicing takes place, it is a joy with trembling. The tabu is enforced; and special rites must be performed to restore the normal relations of the people.

Among the Masai, a Hamitic tribe of E. Africa, the birth of twins, which is not very rare, causes the greatest pleasure, especially if both be boys.

To mark their parents' pride, a thong of leather adorned with cowries is hung round the neck of each; and, while the elder is retained by the mother, the younger is often nursed by one of her fellow-wives. No tabu and no ceremonies are reported.[4]

It may be noted here that, wherever the birth of twins, as among the Masai, is stated to be comparatively frequent, they are received with more or less favour.

The Lattuka, a Nilotic Negro tribe of the Sudan, among whom twins are rare, while apparently not regarding them per-

of other Negro peoples (L. Desplagnes, *Le Plateau central nigérien*, Paris, 1907, p. 233; *Journ. Afr. Soc.* ix. [1910] 179, x. [1911] 31, xvi. [1917] 43; *ZVRW* xxx. 95; Leonard, *Lower Niger*, p. 462; *L'Anthropologie*, xiv. [1903] 90).

sonally with disfavour, hold that they threaten misfortune to their father. If he went hunting buffaloes, he would be killed or wounded; and, if he wounded an antelope, it would escape him. He therefore takes precautions by not leaving the village until the spell is broken by another woman bearing twins, or his wife another child.[1]

In India and adjacent countries twins are generally held to be inauspicious, though there are differences in this respect. All the peoples, however, seem to be agreed that the birth of twins of different sexes is serious. It is held that their connexion in the womb has been too close: it has been sinful, amounting to prenatal incest.[2]

Among the inhabitants of the Siamese Malay States, while twins (a rare occurrence there) are considered lucky, it is otherwise with triplets: they are accursed.[3] In any case, it is considered by the Kurmi and Kawar of the Central Provinces that the sympathy between twins is dangerously close, and various rites are adopted to break their connexion, else, if misfortune or death happens to the one, the other also will suffer or die.[4] The Tang Khul Nagas of Assam are divided in opinion. Some villages welcome twins; others object to having among them a woman who gives birth to more than one child at a time, looking (like some of the S. American tribes) upon her as a lower animal. At Ukhrul, if both are boys, their father is regarded as a descendant of some cannibal line like the tigers, and he ought to be carefully watched. It is interesting to note that the villages where they are welcomed connect them with fruitfulness of the crops.[5]

On the island of Celebes it is held by the Macassars and Buginese that one of twins is often a crocodile. The same curious belief is found in Java, where it is said that on such occasions a double offering is brought to the croocodile for his 'humanity'; and at Windesi, New Guinea, a story is told of a woman who gave birth to twins, one of them an iguana.[6] The Balinese, at least among the highest castes, call twins of different sexes 'betrothed'—a practice which Wilken traces to an origin from a time when no forbidden degrees were yet in existence, and when such twins at marriageable age used to be made to marry one another.[7] The idea, persisting into a later stage, might account for the imputations of prenatal incest just referred to. In some of the Moluccas twins are not regarded with favour. In these they are often attributed to superfetation; and in the Babar Archipelago one of them is sent to another village—in earlier days death was probably its doom.[8] In other islands, on the contrary, they are desired, and are looked upon as the gift of the sky-god or male principle,[9] though they are even then in some islands handed over to kinsmen to be brought up.[10] In the Aaru Archipelago, where they are much desired, they are looked upon as an omen of a good tripang and pearl harvest.[11] The Melanesian peoples of Eastern New Guinea regard twins with disfavour; among the Southern Massim the mother was formerly permitted to put one to death, while among the Northern Massim she is ridiculed as a pig.[12] Their kinsmen of the Banks Islands, on the other hand, favour them; but, if boy and girl, they are regarded as man and wife. Rivers thinks that in former days such twins were probably killed—an opinion supported by the practice and belief of the natives of the Duke of York Islands and New Britain.[13] On the whole, in the neighbouring Solomon Islands twins are liked; in Florida Island only there is said to be a suspicion of double paternity; while in Lepers' Island they are conjectured to be the gift of a certain supernatural being named Tagaro.[14] It may be further mentioned, to illustrate the opposite opinions that may be held by even the same race, that in New Ireland, since to bespell a woman might cause her to bear twins, it is to be inferred that they were not there desired.[1] On the Micronesian island of Yap, an outlier of the Pelew Archipelago, one of twins was given to a relative, else they would both die—an obvious attempt, as in the Moluccas and the Central Provinces of India, to break the connexion between them.[2] The Igorots of the Philippine Islands assign a different reason for the same custom: it is to avert the evil omen of their birth.[3] The Ainus allege that one of them would die.[4]

To the Gilyaks of the island of Sakhalin twins are a source of disquiet, if not of fear. Such births are said to be relatively common, and usually either both boys or both girls. One of the pair is believed to be offspring of the Mountain-man, a supernatural being haunting mountain and forest, with whom the people are careful to keep on good terms. This child ought to be returned to his formidable parent as soon as possible; but, since there is no means of identifying him with certainty, both twins must be treated alike. In consequence of this origin, twins after death are not cremated as other corpses are, for fear that the Mountain-man will punish all who take part in the funeral by loss of their eyesight. Even the parents have by the birth become related to the Mountain-man and must be buried also. Twins are believed to be endowed with superhuman powers, and are, so long as they live, regarded with terror. But those who die early are chiefly feared, for, having returned to the supernatural world before they had time to become accustomed to men and to feel themselves as their likes, they have special power to harm them. Their family therefore place a small model of a Gilyak *yurte* either inside or outside the dwelling and put into it a carved wooden figure representing the deceased. To this figure they bring offerings every day of portions of their own food; and the practice is continued for three generations. At last the great-grandchildren take the figure from the dwelling to a neighbouring mountain with great ceremony and there leave it, and with it a final offering of food. Then for the first time the community feels safe in neglecting any further observances. On account of this fear of twins, women and girls are strictly forbidden to listen to tales of twins, nor may women even accept gifts of small household furniture from acquaintances who have given birth to twins, lest the misfortune of twins should in either case be communicated, though this liability does not attach so seriously to gifts of objects of metal. The names of twins once bestowed are retained; no other children are allowed to have the same; nor does a twin ever take the name of a deceased elder of the family, according to the usual custom.[5]

The ancient Assyrians held the birth of twins to be a calamity, except in the royal family.[6] Modern Syrians, on the contrary, if the evidence of refugees at Boston may be trusted, regard it as bringing good luck.[7] According to modern Egyptians about Karnak, one of twins may be a wild cat, whose soul goes out at night on the prowl, when the owner is asleep.[8] To the Bulgarians twins are a misfortune, to avert which the mothers of bride and bridegroom at the wedding simultaneously drink brandy.[9] Even in the north-east of Scotland twins are so far regarded as unlucky that one of them, even though married, will be childless.[10]

On the American continent also twins were regarded as mysterious.

The Shuswap, who occupy part of the Fraser River and Columbia River basins in British Columbia, expressly hold them to be 'great mystery.' Though the mother's husband is deemed to be their real father, the black bear generally, but sometimes the grisly bear, or the deer, is believed to have influenced their birth. Whichever animal it was, it appeared to the mother in dreams and became the *manitu*, or spirit-protector, of the children throughout their lives. They are deemed lucky on this account; but it does not prevent their tabu. At their birth their parents shift camp to the woods, even in midwinter; and they are not allowed near other people for four years. During this time the father or, if he dies, the mother washes and scours them every day with fir-branches—a common method of cleansing from pollution.[11] The southerly neighbours of the Shuswap, the Ntlakapamux of the lower Fraser River and Thompson River basins, say that the mother is usually apprised beforehand by the repeated appearance of the grisly bear in her dreams. The children are accordingly treated differently from other children, and are called 'grisly-bear-children' or 'hairy feet.' The grisly bear is their *manitu*. Their parents are under tabus like those of the Shuswap. Special ceremonies are performed at their birth, and they are during the first four years washed like Shuswap twins. It was held that a birth (especially of twins) immediately changes the weather.[12] Farther inland the Déné treat the bear when caught

with the greatest consideration and respect, and propitiate it. Among their observances neither a dog nor a menstruating woman nor the father of twins, as long as both twins are alive, is allowed to touch it. The reason is that these are all legally impure, and it is feared that the fellows of the victim will be so irritated by unclean contact that they will henceforth stubbornly avoid the traps or snares of those guilty of such a slight. The father of twins is required to offer gifts to the community 'to wash out his shame.'[1] The Nez Percés in the north-west of the United States, on the other hand, welcome twins as lucky both to the family and to themselves.[2]

The Nutka of Vancouver Island and the Kwakiutl, who inhabit the northern end of the island and the opposite shore of the mainland, connect twins with salmon. The former, though not exactly identifying them with salmon, believe them to be in some way related to them. Hence the parents, whose banishment from the village extends only to two years, among their various tabus and rites, must avoid fresh food, particularly salmon. Wooden images and masks representing birds and fish are exhibited round the hut and near the adjacent river by way of invitation to birds and fish to visit the twins and be friendly to them; the father moreover sings certain songs with the same intention. It is believed that the salmon accordingly throng to see them, and the birth of twins is an omen of a good salmon year. If the omen be not fulfilled, it is a presage of their early death.[3] The Kwakiutl regard twins as having in their previous existence been actually salmon. They therefore warn them against going near the water, lest they be retransformed into salmon. A stricter tabu than those of the tribes mentioned above rests on the parents; for they must separate for sixteen months and each pretend to be married to a log, with which they lie down every night. During this period they are required to perform certain ceremonies and conform to certain observances. Among others the father may not catch salmon, the mother may not dig clams, else both salmon and clams will disappear; and the parents may not borrow canoes or paddles, or their owners would have twins. The birth of twins causes permanent backache to the parents; to avert this each parent procures for intercourse with the other a person of the opposite sex, who will, it is believed, be attacked by the backache instead. On the other hand, young women who desire to bear children squat and lean over the pit above which twins have been born. At the death of a twin no one is allowed to wail for him; and among the observances the surviving twin is washed in the water used to wash the corpse.[4] Traces of a similar belief to that of the Kwakiutl are found among the Skqomic, a Salishan tribe farther south, with reference to another kind of fish called *tsai anŭk*; and, as everywhere else in British Columbia, the parents are subject to a strict tabu and purification.[5] In Mexico the Tlaxcalans call twins snakes; and they are believed able to cure bites of serpents and other animals, as well as pain or inflammation of the tendons, especially of the feet and ankles. Triplets will be kings.[6] It is believed by the Yuchi, formerly of Georgia and Alabama, that twins and deformed or abnormal children are sent by 'the supernatural beings to be guides to the people,' and they are accordingly taken great care of.[7] There is some evidence that among the Cheyenne twins were a subject of tabu.[8]

2. Origin, parentage.—Many peoples entertain the belief that a human father can beget only one child at a time. This has led to the suspicion, as among the Saliva of the Orinoco and the Euahlayi of New South Wales already noted, that the second child is due to the mother's infidelity. The same belief is attributed to the Chibchas and to the Hottentots.[9] It is held also by the peoples of the Warri District of Nigeria.[10] It was formerly entertained in Europe. The father had the right of deciding on the birth of a child whether it should be brought up or destroyed; and, if he had any suspicion as to his wife's loyalty, the child was often put to death. On this ground definitely it was held excusable to expose or put to death twins and triplets. A number of mediæval legends among the Germans and other Teutonic peoples are elaborations of this theme.[11] The belief in superfetation is almost a necessary corollary to the belief that the twins are due to two fathers. Hence also the second-born child is commonly held to be the elder or higher in rank, as among the Negroes.

But there is another, and perhaps older, view, more widely held, that they are the result of divine impregnation.

In W. Africa we have seen that they are called 'fetish-children.' To the Fo of Togoland they are the children of Ohoho. The Efiks of Calabar, the Ikwes of the Upper Cross River, and the Ibibio pronounce one of them to be the offspring of an evil spirit.[1] So the Warundi of E. Africa attribute them to an 'incubus,' and regard their birth as a favour, which the jealous spirit is likely to recall, or to take the mother or her husband in payment for it. To obviate this, the important event is celebrated by a variety of ceremonies, including songs, dances, and gifts to the parents (nominally oblations for the spirit), which have a way of disappearing as by enchantment. Two entirely black sheep are bought for the twins; they must preserve and care for them as long as they live. The sheep in turn are said to be the children's guardians, the receptacle and symbol of their spirits, their fetish.[2] In Indonesia likewise the birth of twins is ascribed to a demon. One of them, according to belief in the island of Nias, is due to superfetation caused by such a being, as is also the birth of an albino. Other causes are recognized in the eastern province of the island, as roughness or anger on the mother's part towards her parents or sister, continued cohabitation during pregnancy, or the eating of a double fruit. To the last we shall recur. Like the Warundi, the North Niasese fear that some other members of the family will die if the twins are allowed to live; and they are therefore put to death. They are also held to be an omen of various kinds of calamity.[3] The Bakaua of New Guinea think that 'evil spirits have had a hand in the game,' wherefore one of the twins is killed.[4] According to the Bontoc Igorot of Luzon, one of the twins is the offspring of an *anito* (ghost of the dead). The quieter one, therefore, or the larger, is put in a pot and buried alive.[5] The Buck of Demerara also regard twins as the offspring of an evil spirit named Pernowhari.[6] In Essequibo a British commissioner reports that a native medicine-man not many years ago ascribed an outbreak of sickness to one of twins who had just been born. He said it was the child of a *kenaima*, a wizard or person of supernatural powers, because 'a woman could not naturally produce two children at a birth'; and the unfortunate child at his instigation was burnt alive.[7] The Melanesians of Lepers' Island hold that twins may be the gift of a spirit called Tagaro; in Florida Island there is a suspicion of the mother's infidelity to her husband, but it is generally accepted that she has trespassed on the sacred place of a ghost 'whose power lies that way.'[8] In the Moluccas twins are attributed to the sky-god, Upulero, probably as father.[9] This belief may be compared with that of the Thonga tribes of S.E. Africa, who call twins 'children of heaven' and in this capacity ascribe to them special powers; and the mother is called Tilo, 'heaven.'[10] The ancient Peruvians held that one of twins was the son of the lightning, to which they prayed as the lord and creator of rain, and the earthly parents were made to undergo divers tabus and ceremonies. There is some evidence that they offered the twins, probably to the lightning; at any rate, if they died young, the bodies were enclosed in pots and kept in the dwelling-house as sacred things.[11]

As among the Gilyaks one of twins is taken to be the offspring of the Mountain-man, so their neighbours the Ainus of Sakhalin believe one of them to be that of a supernatural being, on the ground that one man can beget only one child at a time. This is a perpetual shame to the mother; and there is reason for believing that one is destroyed at birth, as indeed the oldest account expressly affirms. At all events the Ainus state that only one survives, and that one of human paternity. It is also said that, like the Japanese, they hold that, when twins are born, the younger is bold, strong, and lucky, while nothing distinguishes the elder from ordinary men. They, however, seek by means of sacrifice, prayer, and talismans to prevent such births. They avoid women who have given birth to twins; but, contrary to the Gilyaks, they hold that nothing is so likely to convey the infection as objects of metal.[12] Farther

north, on the mainland of Asia, the Kamchatkan tribes ascribe twins to 'the wolf in the forest.' The birth of twins is consequently not only a misfortune but also a sin (intensified if both are girls); every one promptly runs out of the house, leaving the mother and children alone. To prevent such an event, the Itälmens (one of the tribes) set up a figure of a wolf, made of grass, pretending that it is the husband of the young women, and renewing it year by year.[1]

The somewhat indefinite ascription by the various tribes of the north-western coasts of N. America to grisly bears and other land animals, or to salmon or other fish, indicates rather a belief that twins are a reincarnation of such creatures than that they are directly generated by them upon the mother, though these beliefs are by no means far apart.

The Lillooet considered that the twins were the real offspring of the grisly bear; but some held that he 'acted through' the husband. Twins were by many said to be 'grisly bears in human form,' and, when a twin died, his soul went back to the grisly bears and became one of them. When a twin died, his body was deposited in a fir-tree far from graves and human habitations, and the grisly bear was supposed to take it away.[2]

The belief in reincarnation is very wide-spread; it has been discussed by the present writer in his *Primitive Paternity*.[3]

The Semang, a Negrito tribe of Perak, hold that certain birds are the souls of human beings; they are born as children in consequence of being eaten by women; and, when a woman eats a soul-bird with its egg, the result is twins.[4]

Pregnancy caused by various kinds of food is a wide-spread superstition discussed in *Primitive Paternity*, ch. ii. Twins are attributed by many peoples to the eating of double fruits and similar things.

The belief on the island of Nias has already been referred to. It is shared in the E. Indies by the Malay populations of Sumatra, the Tagalas of the Philippines, and the Malagasy; in S. America by the Arawaks and the aborigines of Paraguay; in W. Africa by the Ibibio, in Europe by the Germans, the Magyars, and the French of Poitou.[5] There is even a trace of it in England around Malvern, where it is said that nuts are a presage of the number of children to be born in the year, and 'double nuts presage a considerable number of twins.'[6] Among the Zulus, it is said, other objects in pairs are not eaten, nor are two articles at once received from the hand of another, lest the birth of twins result.[7] The Euahlayi, an Australian tribe, think that babies hang on trees ready to enter into any passing woman; and twins are attributed, as among the Arunta, mentioned above, to two baby-spirits hanging on one branch and dropping on the same woman. But it seems that the woman's husband is reluctant to acknowledge more than one of them.[8] This points to the superstition of double paternity discussed above. On Mabuiag, in Torres Straits, twins are ascribed to the act of a magician, or to the mother when pregnant touching or breaking a parasitic plant.[9] Among the Maidu of California it was thought that, if the father wore two caps at the time of conception, twins would be produced.[10] In some of the Molucca Islands the same result was caused by the mother lying on her back at the time of conception.[11]

3. Powers.—Twins are believed to possess extraordinary powers.

An account is given in a Chinese narrative dating from the 14th cent. of a magician who procured the fœtus from a woman pregnant of twins to use it for the purpose of divining; and it is remarked that special 'spiritual power' was attributed to the fœtus of twins.[12] Among the Iroquois twins are believed able to foretell future events and perform other remarkable things; but they are said to lose the power if a menstruating woman prepares their food.[13] So the Golahs of Liberia hold that twins have the privilege of learning things by means of dreams. They are thus able to see and identify bush-goats in which, according to native belief, human beings are reincarnated. They lose the privilege, however, if they eat of animals which they have so identified, for they would be eating men.[1] This power appears to extend into adult life. Twins among the Igarra of S. Nigeria are able to prognosticate with regard to the offspring of a pregnant woman, but only while children. They are ascribed to good spirits and looked upon with favour as among some other peoples. The younger of the two is regarded as the elder; but both must be treated exactly alike: any favouritism will lead to the death of one of them. They cannot be poisoned, for no poison will have any evil effect on them.[2] The Thonga about Delagoa Bay, who regard twins with hostility, utilize a twin girl, when the caterpillars of a beetle called *nunu* swarm in December or January, to lead the procession of women who have been employed in collecting the insects from the bean-stalks to throw them into a neighbouring lake with a spell to get rid of the plague.[3] On the occasion of the cattle-plague at Dobischwald, in Austrian Silesia, a bonfire is made to drive the cattle through; and twin brothers are necessary to fell the tree of which the fire is made.[4] The Polish peasant, as a spell against 'the pest' (probably the cattle-plague), causes a furrow to be drawn around his field by a pair of twin oxen led by twin brothers.[5] Twins are credited in Lower Nubia and Egypt with the power of shape-shifting, to the extent at least of becoming cats at night and stealing milk and food and eating chickens. This can be prevented only if the father, immediately after their birth, puts them in a cold oven for a short time.[6] The Hausa suppose twins to have a special power of picking up scorpions without injury.[7] The belief of the Tlaxcalans of Mexico in the curative powers of twins has been mentioned above. The Kwakiutl also attribute to them powers of curing disease. The British Columbian and other tribes of the north-west attribute to twins a variety of extraordinary powers. They influence, or at least prognosticate, success in hunting, and the plentiful supply of salmon and other fish, though among some tribes they may not themselves catch salmon. On the other hand, they are exposed to danger of various kinds and must be carefully protected by ceremonies and otherwise.[8] Among the Negroes of the Sherbro in the colony of Sierra Leone there is a practice of resorting to twins for dealing with various complaints, most usually by women. 'Twin-houses,' or *sabo*, each consisting of a small rude framework covered with a thatch of grass, form a sort of shrine. Upon a wooden grid beneath the thatch is spread a white cloth, on which are put lumps of concretion from an ant-hill; and a white streamer floats from a rough pole in front of the structure. This little shrine is set up *ad hoc*, and is served by two persons who are of twin birth, but not necessarily of the same mother. Under their direction and to their profit, the two twin-houses are erected and a ceremonial dance is arranged. A fowl is then sacrificed and the patient is washed all over by these two priests of the *sabo* in medicine provided by them.[9]

The powers of twins are sometimes extended to their parents.

To cure a sprain, the mother of twins is in Ceylon made to trample the limb every evening for a couple of days.[10] Among the Brahuis of Baluchistan, to cure the tertian fever, a twin is called on to knot a blue thread five or seven times, and this is hung round the patient's neck and is believed to drive the fever away.[11] In Maryland it is asserted that the mother of twins has power to drive whooping-cough from a child by giving it a piece of bread and butter.[12] Among the Baganda a ceremony apparently intended to communicate fertility to the plantains is performed by the father and mother, and an effigy of each child is made, partly consisting of a plantain-flower.[13] Among the Basoga, on the north-east of Lake Victoria Nyanza, the birth of twins is a joyous event, though both the twins and their parents are subjected to tabu and ceremonies to render them innocuous. In the north-western district the persons of both father and mother are sacred; the former goes on a round of visits, and is believed to carry blessing wherever he goes. In the central district the children are held to be of divine origin. Their mother must sow her seed before any woman of her clan. The twins must be brought to the field of any clanswoman who is about to sow; and the sowing is performed in their presence.[14] The Bateso, a Nilotic tribe bordering on Lake Kyoga, welcome the birth of twins, though they and their mother are secluded, as among the

Basoga, while the father pays visits to members of his own and his wife's clans, communicating the blessing of increase wherever he is received.[1]

In fact, it is chiefly in the control of the weather and the promotion of fertility—two results closely connected with one another—that the powers possessed by twins are generally held to lie.

Power over the elements, especially over rain and snow, is almost universally attributed to them by the natives of British Columbia. The Shuswap hold that, if a twin bathe in a lake or stream, it will rain.[2] The Tsimshian think that whatever twins wish for is fulfilled—among other things the weather. Therefore they pray to wind and rain, 'Calm down, breath of the twins!'[3] Among the Kwakiutl by swinging a ceremonial rattle they can cure disease and procure favourable winds and weather.[4] Nutka twins produce rain by painting their faces black and then washing them, or by merely shaking their heads.[5] In the Central Provinces of India one of twins will prevent injuries to crops from excessive rainfall or hailstorm by painting his right buttock black and the left any other colour and standing in the direction of the wind; at harvest-time husbandmen (apparently not necessarily twins) adopt this course for the abatement of a gale.[6] In S. Africa twins are said to be able to foretell the weather by their feelings; this seems to be a relic of a belief in control of the weather, control having faded into prediction.[7] A little farther north, the Bathonga, in case of drought, employ a ceremony to cause rain. The women, stripped or covered at most with a grass petticoat, go in procession led by a mother of twins to the grave of twins, or of an abortion, buried in a dry place, and pour water on it, or dig up the remains and bury them again in the mud near the water.[8] Among the Wanyamwesi of what was German E. Africa a twin about to cross a river, stream, or lake, or in a storm on a lake over which he is sailing, fills his mouth with water and spurts it out, saying, 'I am a twin.' The object of this ceremony is to prevent harm befalling him or his companions.[9] At Upoto on the Upper Congo, where rain is usually abundant, a twin is called in to make excessive rain cease. He puts some rain-saturated earth on the fire, and calls upon the rain to cease and the earth to dry up. Here twins also are credited with occult power which enables them by blessing or cursing to cause the success or failure of a hunting or fishing expedition.[10] In Gabun, French Congo, the images of twins, preserved after ceremonies performed over them, are apparently held to ensure the continued fertility of their mothers.[11] From a consideration of the traditional disappearance of Romulus, the first of the legendary kings of Rome, who, it will be remembered, was one of twins, J. G. Frazer has made the ingenious conjecture that the ancient Romans 'shared the widespread superstition that twins have power over the weather in general and over rain and wind in particular.'[12] The superhuman powers of Gilyak twins and the posthumous cult of such as die have already been referred to.

4. Cult of divine twins.—So far, abundant reason has been given for the conclusion that twins, being out of the ordinary course of nature, are held by many peoples to be children of extraordinary powers, or of portentous and even dangerous birth, and consequently that they, or at least one of them, must be at once exposed or put to death, and, where this practice is abandoned or has not arisen, they and their mother (frequently their father also) must be surrounded with tabus; and they are invoked for various purposes, chiefly for rain and fertility. Rendel Harris, who has investigated the subject, has in a series of works established the existence, from a remote antiquity, in Mediterranean countries of a cult of divine twins, some indications of which are also found elsewhere. The twins of Greek legend, Castor and Polydeuces (called by the Romans Pollux), have of course long been known, and other twins of less renown have been recognized. But the wide range of the cult, and the number of cases in which twins have been worshipped, had not previously been understood. Castor and Polydeuces with their sister Helen were traditionally the children of Leda, born, in some versions, out of an egg. Tyndareus, king of Sparta, the husband of Leda, though regarded by Homer as their father, was credited in some accounts with the paternity of Castor only, the other two being the children of Zeus. It has been mentioned above that this belief in a divided paternity of a multiple birth is not unusual among the lower races; it is therefore one of the marks of the archaic origin of the cult of Castor and Pollux. The former, being the son of a mortal father, was himself mortal. Pollux, however, obtained from Zeus the boon of sharing his immortality with his brother and living with him alternately a day under the earth and a day with the gods. Their legend attributed to them a number of adventures; and they were worshipped as *θεοὶ σωτῆρες*, protectors of travellers by water, and thence of travellers in general, the guardians of hospitality and of oaths, and were represented as riding on magnificent white steeds. As twins they were connected with the sky, with thunder and storms; hence probably not only their patronage of travellers by sea, but also their character as Dioscuri, sons of Zeus, and their reputation as divine spearmen. By virtue of their descent from Tyndareus, they were special patrons of the kings of Sparta.[1] Other twins were also known in Greece—Herakles and Iphikles, Amphion and Zethus, and others male and female. Rendel Harris has also made out a good case for the existence of twin-sanctuaries in the peninsula and adjacent islands, leading to the inference that the twin superstition in Greece was not different from that found in other quarters of the globe.

The worship of the Dioscuri early passed to Italy, where it is attested on the coins of Magna Græcia and the mirrors of the Etruscans. It became firmly established at Rome after the well-known didymophany at the battle of Lake Regillus.[2] But from the very beginnings of the city the twin superstition seems to have been accepted. The tale of Romulus and Remus is conclusive on the point. They built Rome, as Amphion and Zethus built Thebes, one brother slew the other—neither of these incidents is by any means strange in legends of twins—and the surviving twin disappeared in a thunderstorm, doubtless another way of expressing his relation to the sky and the storm-cloud.

The Aśvins, perhaps originally divine horses before they became charioteers, are well-known figures in the *Rigveda*. They are rain-makers, probably connected with the lightning—certainly with the sky; they grant fertility to men as well as to the earth, and they aid the sailor and the traveller. In Asia Minor and Palestine the cult of the Twins appears from a very ancient date. Esau and Jacob and other twins found in the Hebrew Scriptures are personages whose pristine form and attributes it is no longer possible to recover from the attrition of time and the erasive energies successfully wielded by generations of pious editors. Traces, however, of the twin-cult linger in the names of various places, like Ibn Alraq, near Jaffa, which has been identified with a place called in the book of Joshua Bne Baraq, 'sons of lightning'; and the account in the second book of Maccabees of the defeat by Judas Maccabæus of Timotheus almost certainly contains a Dioscuric tradition. Barca in N. Africa, a colony of Cyrene, seems to be connected with lightning; and the *silphium* plant, which was sacred to the Twins, is the emblem of Cyrene upon its coins. The Pharos at Alexandria was dedicated to the saviour-gods. There is reason for suspecting legends, and perhaps the cult, of divine twins among both the Phœnicians and the Arabs.

Farther north it is quite clear that Edessa was from ancient times a seat of the Twin-cult. The Twins were there known as Monim and Aziz. When Christianity superseded the old paganism, Jesus Christ and the apostle Thomas took their place. The Syriac *Acts of Thomas* shows that Thomas, or Judas Thomas, as he is called, was regarded as the twin of Christ. With his Lord's assistance he performs in the legend a number of deeds which are beyond doubt Dioscuric. Among the apostles James and John seem also to have been regarded as twins: whence probably their *sobriquet* Boanerges, 'sons of thunder.' In various countries of Europe there are vestiges of Dioscuric cult in historical writers like Tacitus and in popular tales. A pagan altar has been found at Notre Dame, Paris, with a dedication by the boatmen of the Seine to certain Celtic divinities, and among them the Heavenly Twins. The ancient gods all over Europe and the Christian East have been succeeded by saints who perform similar functions and are often called by similar names. Many of these are in pairs or triads, and some of them are explicitly reputed to be twins or triplets, not merely in Christian profession and martyrdom, but by birth. They have frequently assonant names, or names which are variants of one another, according to a wide-spread custom of calling twins by names specifically given to twins, or names which are echoes of each other. A few of these may be mentioned from Rendel Harris's list.

Such are Speusippus, Eleosippus and Meleosippus, martyrs, of Langres, whose cult spread westwards from Cappadocia; Florus and Laurus, builders (in Russia, patron saints of horses) and martyrs; Protasius and Gervasius, martyrs, whose relics Ambrose opportunely found at Milan for the confusion of the Arians; Cosmas and Damian, physicians and martyrs, whose cult seems to have been known from the Euphrates to Kent. Others might easily be enumerated.

The electrical phenomenon sometimes appearing on the masts and yards of vessels during a storm in the Mediterranean was anciently held to be a manifestation of Castor and Pollux; and it was a good omen when the light was double.[1] This same phenomenon is now credited to St. Elmo, a patron saint of sailors, whose name occurs in a variety of forms, and of whom nothing whatever is known. Rendel Harris has shown reason for believing that in some of its forms the name is connected with Remus, who with Romulus was commemorated at San Remo on the coast of Italy. Romulus and Remus preceded Castor and Pollux in the veneration of the Romans. They were exposed, according to the legend, in a rude boat on the Tiber; and from floating on the river they probably made their way, like other figures of the Twins, to sea as the patrons and protectors of seamen and voyagers.

Several pairs of mythical twins are found on the western continent. Of these the best known are the twins of Iroquoian tradition, Ioskeha and Tawiscara.

According to their legend, a woman named Ataensic fell down through a rift in the sky upon the primeval waters, for there was no land as yet. By the advice of the turtle the animals dived, brought up soil, put it on the turtle's back, and so formed the earth to receive the falling heroine, who was pregnant and promptly gave birth to a daughter. The daughter became in her turn pregnant of two boys, Ioskeha and Tawiscara. The latter was evil of nature: he refused to be born in the natural manner, and, breaking his way out through his mother's side or armpit, ended her life with his own birth. The brothers grew up. Ioskeha went about providing the earth, until that time arid, with water. But the evil twin attempted to foil him by creating a gigantic frog to swallow all the water. A quarrel ensued, as in the case of Romulus and Remus and other twins in the Old World. Ioskeha, using the horns of a deer, vanquished Tawiscara, whose weapon was only a branch of the wild rose, and drove him away to the extreme west, his blood gushing from him at every step and turning into flint as it fell. The victor then established his lodge in the far east, opened a cave in the earth and brought forth all kinds of land animals, formed men, instructed them in the art of making fire and in the growing of maize; and it is he who imparts fertility to the soil.[1] Ioskeha is therefore the culture-hero and divine helper of the Huron-Iroquois; and the deeds and combat of the Heavenly Twins are the foundation of their mythology.

Without pausing to consider any other N. American twins, we may turn to Peru.

From before the times of the Incas the Peruvians seem to have worshipped as creator a god whose name has come down to us as Ataguju, conjectured by Brinton to be properly Atachuchu, 'lord of the twins.' From him proceeded the man Guamansuri, who seduced the sister of certain Guachamines, 'rayless ones' or 'darklings.' She proved pregnant and produced two eggs, but died in putting them into the world. From these eggs emerged two brothers, Apocatequil and Piguerao, names which have also suffered some deformation. Apocatequil was the more powerful. By touching his mother's corpse, he brought her back to life; he slew the Guachamines, who had destroyed his father; he released the race of Indians from the soil by turning it up with a golden spade. The thunder and lightning were due to him; thunderbolts were his children. Stones held to be thunderbolts protected from lightning, gave fertility to the fields, and were esteemed as love-charms. 'In memory of these brothers, twins in Peru were deemed always sacred to the lightning; and when a woman or even a llama brought them forth, a fast was held and sacrifices offered to the two pristine brothers, with a chant commencing *A chuchu cachiqui*, "O Thou who causest twins," words mistaken by the Spaniards for the name of a deity.'[2]

The Bakaïri, a Carib tribe in the northern part of the Amazon basin, have a legend of twins who were culture-heroes.

The Bakaïri were then few and oppressed by the jaguars, who are indistinctly imagined with traits of both the lower animals and humanity. Their mother, captive to the jaguars, became pregnant by sucking two finger-bones of Bakaïri killed by the jaguars. She died before giving birth to her children; and they were cut from her body by the Cæsarian operation. The boys, who are called Keri and Kame, were fostered by the jaguar, their mother's captor. They had not yet human form, but manipulated one another to complete it. They then avenged their mother's death on their foster-father. With the help of the vultures they procured the sun and moon. They stole fire from the fox (*canis vetulus*). From the Ochobi water-snake they obtained water and made the rivers. From various animals they got hammocks, sleep, stones to build houses, arrows, tobacco, manioc, and cotton. They invented flutes and dancing. They made various tribes of men; and Keri is honoured as the ancestor of the Bakaïri. They quarrelled, but made the dispute up again. Finally they disappeared, nobody knows whither.[3]

There are other mythical twins in S. America, but the subject need not be pursued.[4] In New Zealand, Melanesia, and Micronesia there are moreover legends of two brothers, or a band of brethren, who appear to be culture-heroes, though the opposition of beneficent and malicious or of wise and stupid brethren is also developed; but they are not specifically described as twins.

If we inquire into the origin of the cult, it seems clear that the Dioscuri, as the sons of Zeus, were regarded as divinities of light. It has been long ago pointed out that their appearances are represented as taking place in the middle of the summer about the first full moon after the solstice.[5] So also there can be little doubt that the Aśvins in India were divinities of the dawn and possibly the evening twilight. From divinities of light they would naturally pass to wield, or personify, the lightning (Zeus's weapon) and the storm. They came to be looked upon as protectors from the violence of the elements, and thence of voyagers on river or sea, and, by extension of the idea, of travellers generally. Their powers would gradually grow until they covered a still larger area of human life. The same connexion with light and lightning is to be traced on the American

continent, where they further tended to become culture-heroes. But this does not account for their duality, except in so far as they may be held to represent the morning and evening, the dawn and the disappearance of light. It is perhaps due to an innate tendency in the human mind to repeat, to echo, to balance, or to contrast. This psychological quality constantly exhibits itself in every department—in philosophy, theology, mythology, literature, art, ethics. It is responsible for the dualism of the great religions, for the frequent reduplication of incident in a fairy-tale, for the symmetrical grouping of figures in a work of art, and for dramatic nemesis. In the domain of mythology and religion, whether pagan or Christian, it has doubtless been emphasized by the mystery attaching to the comparatively infrequent phenomenon of human twins. The beneficent and maleficent sides of their tabu are expressed in the opposition of characters and frequently in the double pedigree.[1]

5. Afterbirth as twin.—The Baganda hold a curious belief that the afterbirth, or the navel-string (there is a variation as to this between the two accounts given by Roscoe, to whom we are indebted for the information), is the twin or double of the child to whom it belongs.

The afterbirth was enclosed in a broken cooking-pot, covered with leaves and placed at the root of a plantain-tree—if a boy, at the root of a plantain from which beer was made; if a girl, at the root of a plantain used as a vegetable. We are told that 'the afterbirth was called the second child, and was believed to have a spirit, which became at once a ghost.' On account of this ghost the plantain was guarded, to prevent any one not belonging to the clan from partaking of the beer made from it, or of the food cooked from it; else the beer or the food, by being consumed, would be lost to the clan, and the child would then die in order to follow the ghost of its twin. To obviate this catastrophe, the grandfather ate the food and drank the beer, so retaining the ghost of the afterbirth in the clan. More elaborate was the care taken of the king's umbilical cord, to which the ghost of the afterbirth attached, and which was always spoken of as if it were the afterbirth itself: hence probably the confusion between afterbirth and cord. A special officer, called the *kimbugwe*, who was second only to the *katikiro*, or prime minister, was appointed to the charge of it. He occupied an enclosure next to the king's, in which was a temple built for the 'twin.' Once a month at new moon he carried the 'twin,' wrapped as it always was in bark-cloth, into the presence of the king, who took it out of its wrappings, inspected it, and returned it to the *kimbugwe*. He then exposed it in the doorway of the temple for the moon to shine upon it, anointed it with butter, wrapped it up again, and restored it to its place in the temple. When the king died, the *kimbugwe* made way for a new *kimbugwe* to take charge of the new king's 'twin'; but it still remained his duty to care for the old king's 'twin,' and to provide for the upkeep of its temple and enclosure. In due time the dead king's jaw-bone, to which the king's own ghost was believed to adhere, would be added to his 'twin' and kept at the temple, where he would continue to be venerated.[2] Even the jaw-bone and umbilical cord of the god Kibuka were preserved in his temple on an island of Lake Victoria Nyanza; and they are now in the Ethnological Museum at Cambridge.[3]

To the south of Uganda and west of the great lake, in Kiziba, formerly in German territory, similar customs and beliefs prevail.

The afterbirth, we are told, is considered as a kind of human being, and on the birth of twins the children are spoken of as four, instead of two, each afterbirth being looked upon as a child.[4]

In ancient Egypt also there seem to be traces of the same idea.

Monuments of the earlier dynasties show an object which has been identified as the king's afterbirth carried upon a standard in procession, together with the usual symbolical standards of animals. Its use continued to the end of the Egyptian kingdom, though its shape was gradually conventionalized. The goddess represented as presiding at the birth of Queen Hatshepsut wears on her head an object remarkably like the reliquary containing the navel-string of Kibuka; and in other representations the same goddess wears a vase-like object which may be intended for such a reliquary. Though there are not many texts referring to the afterbirth or navel-string, importance—not to say sanctity—does seem to have been attached to 'the umbilical cord of Osiris.' Horus is described as rescuing it from Seth and depositing it 'in its place in Herakleopolis,' or, as the Egyptians called the city, 'House-of-the-Child-of-the-King.' It has also been suggested that the object carried on his head by the moon-god Khons (and perhaps Khons himself) was evolved from the Pharaoh's afterbirth. There was some relation in Uganda between the moon and the royal 'twin.'[1]

In this connexion the common Hamitic strain in the ancestry of the royal houses both of Egypt and of Uganda will be remembered. At present, however, the interpretation of the Egyptian evidence has hardly got beyond the conjectural stage.

LITERATURE.—The only writer who has made a special study of the subject is J. Rendel Harris, whose three volumes, *The Dioscuri in the Christian Legends*, London, 1903, *The Cult of the Heavenly Twins*, Cambridge, 1906, and *Boanerges*, do. 1913, are indispensable. The principal sources of information apart from these are to be found in works dealing with the customs or the myths of various peoples, as indicated in the references above.

E. SIDNEY HARTLAND.

TYPOLOGY.—1. Definition and scope.—Typology is the science, or rather, only too often, the curious art, of discovering and expounding in the records of persons and events in the OT prophetical adumbrations of the Person of Christ or of the doctrine and practice of the Christian Church. It is thus a branch of that method of interpreting Scripture which is sometimes called 'spiritual' and sometimes 'mystical,' as opposed to the literal or grammatical interpretation. Origen, as is well known, spoke of several subdivisions of this 'spiritual' method, and highly favoured it. It was not his invention. Already both pagan and Jewish writers had found in it an admirable expedient for extracting edification from passages in their sacred books which seemed to be trivial, perplexing, or even of doubtful moral worth, if taken at their face value. It flourished particularly at Alexandria, and was much used by Philo. The practice of allegorizing the OT Scriptures became so popular, and the defining line between allegorizing and typology in the strict sense is so uncertain, that it is necessary at the outset to refer to the former; both branches of this mystical interpretation, as used by Christian writers, aimed at elucidating the latent principles of Christianity in the OT, but, if a definition between them is demanded, it is supplied by Herbert Marsh (bishop of Peterborough, 1819–39) in these terms:

'According to one mode [*i.e.* typology] facts and circumstances . . . have been applied to other facts and circumstances, of which they have been described as representative. According to the other mode [*i.e.* allegorizing] these facts and circumstances have been described as mere emblems'; or, again, 'An allegory is a fictitious narrative, a type is something real.'[2]

This last sentence requires some modification: allegorizing may accept the historical truth of the narrative treated, but does not depend upon it; typology, the bishop holds, demands its historical truth. Van Mildert brings us nearer to the true test when he says:

'It is, indeed, essential to a Type, in the Scriptural acceptation of the term, that there should be competent evidence of the Divine *intention* in the correspondence between it and the Antitype.'[3]

Again, Westcott says:

'A type presupposes a purpose in history wrought out from age to age. An allegory rests finally in the imagination, though the thoughts which it expresses may be justified by the harmonies which connect the many elements of life.'[4]

Any account, however, of the history of typology must take into consideration the fact that this

distinction between type and allegory was not at all times recognized, and there must always be room for difference of opinion as to how far the interpretation offered of any passage 'rests finally in the imagination.' One characteristic feature of the history of typology is the divergence of opinion as to the limits of justifiable exposition of types.

The fundamental principle at the heart of this method of interpretation is that of the continuity of revelation and the divine unity of Scripture. In days when the historical sense and the recognition of progressive revelation were still inchoate it was the natural way of evidencing this unity of revelation. It is the product of the ages when history was regarded as a series of catastrophic events rather than as the unfolding of an age-long process, and it was therefore of immense value as a means of showing that history is not a mere series of accidental events, but the accomplishment of a divine purpose. Thus, though typology, as a branch of serious theological study, is now generally discredited and practically obsolete, surviving only for devotional and homiletic purposes, it is not deserving of the scorn to which not only its outworn usefulness but also the arbitrariness and fancifulness of some of its former champions expose it. In any case the place it holds in the NT itself deserves careful study. It is proposed in this article to discuss (1) the extent and character of typological references in the NT, (2) the general history of typology in later times, and (3) its strength and weakness as a method of interpretation.

2. In the New Testament.—From the first it was an integral and essential feature of the gospel of Jesus Christ to establish and maintain an unbroken connexion with the old covenant. Jesus was aware that His teaching was such as to precipitate a cleavage with the traditions of the Jews. He therefore emphasized the essential unity: 'I am not come to destroy but to fulfil.' In the synagogue at Nazareth He expounded Is 61 as a scripture that day fulfilled in the ears of His hearers. He saw in John Baptist the fulfilment of the 'Elijah' prophecy. After His resurrection He expounded to His disciples 'in all the scriptures the things concerning Himself.' He taught that they 'testified to' Himself. Further, He illustrated His message from OT parallels, as when He referred to Elijah at Zarephath, and Elisha and Naaman (Lk 4^{25-27}). On two occasions He is recorded to have referred in particular terms to events of the old covenant, viz. the sign of the prophet Jonah, and the lifting up of the brazen serpent. At these we must look more closely.

Concerning the sign of the prophet Jonah, Matthew ($12^{39f.}$) interprets the sign as Jonah's confinement in the belly of the whale foreshadowing Christ's burial and rising. Luke ($11^{29f.}$) omits this application (though Plummer[1] contends that it is implied in δοθήσεται). Matthew and Luke agree in giving the application that the contrast between the penitence of the Ninevites and the impenitence of the Jews at the preaching of a greater than Jonah is the warning sign. We have to inquire therefore whether Mt 12^{40} is an interpolation by the evangelist, and also whether Jonah can be justly regarded as a type. The story is now generally accepted as an allegory of the experiences of Israel, and as such is typical of Christ, in so far as the whole history of Israel is prophetic, but, regarded as a personal history, the story of Jonah corresponds so little with the ministry of our Lord in principle, and offers so many difficulties in detail, that the suggestion worked out by Sanday,[2] that Mt 12^{40} is not a saying of Jesus, is very attractive.

With regard to the reference to the brazen serpent, apart from the difficulty of treating the discourses in the Fourth Gospel as the actual words of Jesus, the case is clearer. But the treatment is markedly on broad lines of principle and suggestiveness rather than detailed and exhaustive. The incident referred to was already regarded as mysteriously embodying a spiritual principle (Wis $16^{6f.}$), especially as it apparently contravened a divine law.[3] Jesus intimates that that principle will be revealed in His own ministry, and the terms in which He speaks of it are such as to express that principle in the broadest possible way, for the lifting up of the Son of Man is a conception not exhausted by reference to the manner of Christ's death. In a very similar way Jesus spoke of His Body in terms of the Temple, because the Temple 'as the seat of God's presence among His people'[1] exhibited a principle to be more perfectly fulfilled by the Body of Christ.

Our Lord's example in this matter of reference to the OT Scriptures may be summed up as a full recognition that the principles of truth enshrined in the OT were to receive in Himself a fuller and clearer explication, and that therefore the OT Scriptures are full of teaching concerning Him; His practice therefore encourages us to search the Scriptures for the revelation of such principles, but it may be questioned if we can derive from His teaching any justification for the exploitation of formal resemblances or for indulgence in the fascination of elaborate working out of details.

Throughout the NT the same reverence for the dignity and true spiritual value of the OT is marked. Even in those books which show the clearest leanings towards mystical interpretation, in instances where the correspondence seems most far-fetched (*e.g.*, Mt $2^{15.\ 23}$), or the argument most alien to our modern ways of thought (*e.g.*, Gal 3^{16} or 1 Co 10^{4}), the respect for the old covenant as a real revelation and the loftiness of purpose sharply distinguish the writers of the NT from even their immediate followers. Nothing in the NT can be compared with the puerilities of such a work as the *Epistle of Barnabas*, which degrades the old covenant to 'a mere riddle of which Christianity is the answer,'[2] and which solemnly sees in Abraham's 318 men a foreshadowing of the Cross of Jesus, because the Greek numerals are T I H![3] Even in the Epistle to the Hebrews—a work clearly influenced by Alexandrian methods of thought—the OT is never merely allegorized, and the restrained treatment of the figure of Melchizedek and of the Tabernacle ritual in that book affords a marked contrast to the fanciful elaboration with which both have been treated by later writers. A recognition of typological methods of thought is essential for a true understanding of the NT.

The extent of possible typological references is remarkably small.

Patrick Fairbairn[4] gives the following list. But he has to confess that even this would be regarded by some as too long a list.

Persons: Adam, Melchizedek, Sarah and Hagar, Ishmael and Isaac, and by implication Abraham, Moses, David, Solomon, Jonah, Zerubbabel, and Joshua.

Events: the preservation of Noah, the Passover, the Exodus, the passage of the Red Sea, the giving of manna, the veiling of Moses' face, the water flowing from the smitten rock, the serpent in the wilderness, and some other events (see 1 Co 10), besides the Tabernacle with its furniture and services.

At any rate it is important to note that all these references occur quite naturally and that nowhere is there any sign of a studied exploration of the OT for possible types.

3. History of typology.—This may for convenience be divided into three groups rather than periods, though each group corresponds roughly to a period in the history of the Church.

(*a*) The first is that of the apologetic use of types to prove as against Jewish or pagan objector the antiquity of the Christian faith or to refute heretics. The very purpose of the apologists exposed them to fancifulness. Whereas the author of the Epistle to the Hebrews would show his readers that what they valued in the old covenant was but a shadow preparing the world for better and enduring things to come, Justin had to show that what the Jew

objected to in the Christian gospel lay hidden in the Jewish Scriptures. We can understand how he came to hold that the outstretched arms of Moses at Rephidim prefigured the cross of Christ, or even how the bells on the high priest's garment were a mystical foreshadowing of the apostolate.[1] Against heretics the aim was partly to refute the very fanciful interpretations of those false teachers who, as Hippolytus puts it, 'by seducing those ignorant of the holy Scriptures into such like fancies make fools of them.'[2] The Catholics met such errors, not by a rejection of typical or allegorical interpretations, but by the application of a canon of truth or tradition, which limited typological exploration to the treatment of narratives in the canonical books and to the illumination of truths revealed in Scripture — a limitation not always observed in later times. When we come to Origen, we find him using and extolling the allegorical method because so he could reply to Celsus's objection to some passages in the OT. Herein he simply took over the already long-established method of dealing with difficulties in Homer. His intellectual greatness saved him from the extreme rashness of his predecessor Clement, though he adopted his recognition of a manifold sense of Scripture (viz., on the one hand, the literal or grammatical; and, on the other, the allegorical, anagogical, and tropical). It must be remembered that, though Jerome accuses Origen of allegorizing to such an extent that 'historitatis auferat veritatem,' Origen recommended the retention of the literal sense where it was profitable, but the literal often failed to edify (*πολλαχοῦ γὰρ ἐλέγχεται, ἀδύνατον ὂν τὸ σωματικόν*),[3] and then the superiority of the spiritual over the carnal was made manifest, and again that Origen did not regard his interpretations in the least as 'resting finally in the imagination,' for he says:

καὶ δῆλον, ὅτι Μωσῆς ἑώρα τῷ νοὶ τὴν ἀλήθειαν τοῦ νόμου, καὶ τὰς κατὰ ἀναγωγὴν ἀλληγορίας τῶν ἀναγεγραμμένων παρ' αὐτῷ ἱστοριῶν.[4]

(*b*) The school of Alexandria, inheriting this tradition from so great a master, carried the discovery of mystical significance in the Scriptures to excess, finding in the method a vast field of opportunity for the edificatory use of the Bible. The school of Antioch resisted this use; Theodore of Mopsuestia entirely rejects allegorical interpretations. Time showed both how attractive and how dangerous the practice was. Arnobius points out how well the method meets the need of pagan writers, but calls attention to the fact that in the lack of any sound rule of interpretation anything can be proved from the Scriptures.[5] Tyconius Afer endeavoured to establish rules for the proper surveying of the 'forest' of Scripture, and to systematize what he calls the 'reduplicationes' of the Bible. Being a Donatist, he fell under the condemnation of Augustine, who speaks slightingly of his work.[6] Augustine's own rule is thus summarized:

'Iste omnino modus est, ut quicquid in sermone divino neque ad morum honestatem neque ad fidei veritatem proprie referri potest, figuratam esse cognoscas.'[7]

On the whole the Latin writers were more restrained than the Greek, more tenacious of historicity, and therefore more inclined to typical interpretation proper than to what is merely allegorical; yet Jerome, for all his criticism of Origen's methods, is himself fairly free in dealing with Scripture. As time went on, the ignorance of the original Hebrew that fell upon the Church removed one of the surest restraints against unprofitable fancifulness.

(*c*) The third group or period is that in which typology took its place in constructive theology, and begins with the Schoolmen. Their task was to prove that the Christian faith is rational and to reconcile it with the doctrines of the current Aristotelianism. In the first stage of Scholasticism reason was subjected to faith. The example of the Fathers in admitting a threefold sense of Scripture was generally followed. Erigena indeed speaks of an 'infinite sense,' and was led by his mysticism to use the allegorizing method freely; the Scriptures to him were as a peacock's feather, every particle glittering with divers colours. Rabanus Maurus admits a fourfold sense. Others went farther, acknowledging a sevenfold or even an eightfold sense. In the later stages of Scholasticism, particularly after the rise of the theory of the twofold nature of truth, and the spread of mysticism, some schools practically scorned the literal interpretation of Scripture on the ground that 'litera occidit, spiritus vivificat,' and 'carried this often to such an extreme, as to leave scarcely a trace of the simple meaning.'[1] It must be acknowledged that some, like Hugo of St. Victor and St. Thomas Aquinas, tried to restrain such indulgence.[2]

The combined influences of the Revival of Learning and the establishment of the Bible as the sole *regula fidei* brought about in the writings of the Reformers a very much sounder attitude. Both Luther and Calvin are remarkable for the sanity and critical acumen of their commentaries. Reaction from Scholastic fancies and a new reverence for the plain teaching of Scripture produced this result; but soon the demand for popular expositions of Scripture (and perhaps the dearth of really scholarly teachers) brought typology into great favour, and it became a definite branch of hermeneutics. In this connexion the name of Cocceius of Leyden in the 17th cent. is prominent, although he adopted no definite system, and seems to have been content with a formal resemblance to justify typological interpretations. Others, however, did endeavour to systematize the method.

Salomon Glassius published at Jena in 1623–36 a work in five books called *Philologia Sacra*, of which one part is devoted to the study and classification of types. His work was incorporated in English in Benjamin Keach, *Tropologia: a Key to Open Scripture Metaphors and Types*, London, 1681, and is referred to as a principal authority by T. H. Horne, *An Introd. to the Critical Study and Knowledge of the Holy Scriptures*, the first ed. of which (in 3 vols.) appeared in 1818–21, the tenth and last being issued (in 5 vols.) in 1856. Glassius divides types into two main classes—'innate,' or those specifically asserted to be such in Scripture, and 'inferred.' These are further subdivided, the first into those which Scripture 'expresse ostendit' or 'tacite insinuat,' the second into those which are 'oblati' or 'contorti.' The last are to be rejected. He adds nine canons for classifying or recognizing types. The canons are not particularly helpful, but they afford the author the (to him) valuable opportunity of refuting Bellarmine's recognition of a type of the Mass in the story of Melchizedek—a recognition, of course, far older than Bellarmine. The fact reveals one reason why the Protestant theologians were anxious to find clear rules to govern typology. Other popular works on the subject were Thomas Taylor, *Moses and Aaron, or the Types of the OT opened*, London, 1653; Samuel Mather, *OT Types Explained and Improved*, do. 1673, rewritten by Catherine Fry and published in 2 vols. in 1834 under the title *Gospel of the Old Testament* (regarded by some as the fullest exposition of the subject); and K. Vitringa, *Observationes Sacræ*, 3 vols., Franeker, 1689–1708.

The last named deplores the rise of rationalism, and certainly the rationalistic and unimaginative temper of the 18th cent. was inimical to the practice of typology. Something of the 18th cent. methods of thought affects Marsh's *Lectures on the Criticism and Interpretation of the Bible*, and here we find a quite definite rule as to the scope of typology laid down. He will admit no types except those which Glassius had called innate. He defends this

[1] T. A. Liebner, *Hugo von S. Victor*, Leipzig, 1832, quoted by K. R. Hagenbach, *A Hist. of Christian Doctrine*, Eng. tr., Edinburgh, 1880–81, ii. 171.
[2] 'Pro fundamento tenenda veritas historiæ' (*Summa*, I. qu cii. art. 1).

position with much good sense and learning, though it is really a confession of weakness and inability to discover the principles which govern the practice of the NT writers.

At the beginning of the 19th cent. the subject attracted attention. It was much affected in circles influenced by the Evangelical Revival. Typology engaged the eloquence and learning of the Bampton lecturers in 1814 (Van Mildert) and 1824 (J. J. Conybeare), and of the Hulsean in 1826 (Temple Chevallier), besides giving rise to a good deal of other literature. But the spread of scientific criticism and the study of ancient religions, and before long of comparative religion, were destined to strike a death-blow to typology as a recognized branch of hermeneutics.

The religion of the Jews was for a time regarded as beneath the notice of the student of religion, and, when it came into its own again, a much broader view of the relation between the old and new covenants held the field. Thus De Wette wrote that the entire OT is a great type of Him who was to come, and that Christianity lay in Judaism as leaves and fruit lie in the seed.[1] Again, Clausen finds the foundation of the connexion between the 'deeper apprehension and the immediate sense' in the law of general harmony by which all individuals, in the natural as well as in the spiritual world, form one great organic system.[2] The impress of the modes of natural science upon this utterance did not recommend it to those whose conception of the supernatural and providential alienated them from the rising naturalism, but the effects of modern methods of scientific study are already apparent in Fairbairn's *Typology*, since the publication of which no standard work on typology has appeared. It survives now principally in devotional works or in the expositions of those to whom the results of Biblical criticism are still unwelcome. Sometimes it is pursued with dignity and real spiritual value (as in the works of Andrew Jukes), but sometimes with a distressing puerility or even offensiveness. It must be acknowledged that, on the other hand, modern writers of the critical school have unduly ignored the importance of typology—an attitude to which that of Edwin A. Abbott offers a brilliant exception. In his view the NT, and particularly the Fourth Gospel, is full of typical suggestions. In this way, believing the author to record what he took to be facts, but with a definite spiritual intention, he reconciles the rejection of the historicity of the narrative with the retention of its spiritual import. In a word, he allegorizes the records, while acknowledging that the author believed that he was recording facts, but facts with a typical significance.

This view is of importance in two respects. First, it reminds us of the fact that the symbolic significance of things and words held a far greater place in the thought of ancient times than it does with us, who have learned to form abstract conceptions and to search for exact definitions. *E.g.*, the NT writers can speak of the 'blood of Christ' without explanation, in a manner that perplexes us. In the second place, it is based on a fundamental principle of sound interpretation, viz. the endeavour to discover what the original author of any document meant to convey. When we read of Melchizedek, or the ritual of the Tabernacle, or of David, it is not enough to ask what those passages may suggest to us; we must first ask what they suggested to the original readers. If the principles of truth which they then suggested be one with the principles more clearly seen in the fuller revelation in Christ, then the imperfect revelation may be regarded as typical of the fuller yet to come, because so mankind was being prepared for the clearer light. Now, David's career is so presented in the OT as to subordinate the imperfections of his character to those qualities which suggested the ideal of a perfect Shepherd-King; the ritual of the Tabernacle was such as to awaken a sense of sin which the sacrifices could never satisfy, and the figure of Melchizedek held up to men (even if the story be simply legendary) a dim conception of a Priest-King greater than Abraham or the priesthood of Aaron's line. Inasmuch as such dimly seen ideals are the result of God's spirit working in the human spirit, we can justly speak of a divine intention in these records, and, without disregarding the human element or ignoring the original meaning, we see in them the gradual unfolding of a divine purpose, much as we can see in the lonely flowering of the first snowdrop an earnest of the summer glory of the garden.

4. **The strength and weakness of typology.**—The passing of typology need not cause alarm. Just as the discovery of the law of evolution necessitates a broader sweep of investigation on the part of those who to-day put forward the argument from design, but has not invalidated that argument, so our conception of the oneness of revelation is to-day based on a broader view of the OT, but is not therefore the less true or the less deeply founded. Typology not only bred fancifulness and, what was worse, quarrelsomeness among the theologians, but it tended to reduce revelation to the character of a jig-saw puzzle, for, at least in many interpretations, the types are scattered haphazard through the OT, and are quite unrecognizable as such until the antitype is revealed. Any one who has studied the works of art which typology has inspired will remember the chaotic confusion of the typical series as compared with the order of the antitypical. To-day we recognize the guiding hand of God in history as the typologists could not, and so see a deeper and truer continuity of revelation. But that in its day this system of expounding the mystical relation between the OT and the NT had a marked educational value can be seen from the widely popular *Biblia pauperum*, illuminated MSS of which exist as early as the 13th cent., and from a development of it, *Speculum humanæ salvationis*, of which over 200 MSS survive. The invention of printing made these works still more widely popular. The same fact is evidenced by works of art ranging from the frescoes in the catacombs, through mosaics such as those in Santa Maria Maggiore in Rome[1] or San Marco in Venice, down to the magnificent series of windows in King's College, Cambridge. Indeed this connexion of typology with Christian art suggests the very close association of typology with æsthetics. That love of mystery which is almost universal has in reality an æsthetic aspect; for some it is satisfied in the dramatic ritual of the Mass, and for those who repudiated this conception of worship it has been satisfied by the exploration of the mystical sense of the OT, somewhat as the Qur'ān supplied decorative motifs in Moorish art. This seems likely to give a permanent vitality to devotional typology, especially since the revival of popular mysticism. A word of caution may be offered. The history of typology shows how easily devotion may degenerate into fancifulness and unprofitable exercise of ingenuity. Only the most chastened of saints and the most self-restrained of scholars are immune from this danger; typology has always flourished in times of ignorance and

[1] On these cf. J. P. Richter and A. C. Taylor, *The Golden Age of Classical Christian Art*, London, 1904, a work full of references to early typology.

decay of learning, but its suggestions are not without value and helpfulness if they are received gratefully, much as one might derive illuminating thoughts from the contemplation of a sacred picture, rather than as revelations possessing dogmatic authority.

U

UDĀSIS.—The Udāsīs are the principal religious order of the Sikhs (*q.v.*). Also known as Nānak-putrā, 'sons of Nānak,' the founder of Sikhism, they are probably the oldest of the Sikh orders, but ascribe their foundation to Srī Chand, Nānak's elder son. The term *udāsī* is derived from Sanskrit *udās*, 'sad,' and means 'sorrow' or 'sadness.' The Udāsīs were separated from the active or militant Sikhs by the third *gurū* of that sect, Amar Dās, but he did not excommunicate them, as is sometimes stated. This separation is also ascribed to Arjan, the fifth of the Sikh *gurūs*. Whoever effected it, the severance marks the cleavage in the Sikh sect which definitely ranged it against the Muslim Mughal power, leaving the Udāsī order still in touch with orthodox Hinduism. Nevertheless the tenets of the order, deeply coloured as they are with Hindu asceticism, did not prevent its finding many followers among the descendants and disciples of the Sikh *gurūs*. Thus the sixth *gurū*, Hargovind, is said to have allowed Srī Chand to adopt Gurdittā, his eldest son, into the order by making him his direct disciple—a statement not free from chronological difficulties.

The Udāsī order was at an early period divided into four chapters (*dhuān*, lit. 'fires'). Their founders were Bābā Hasan or Hasna, Phūl, Gondā, and Al-mast—all four said to be disciples of Gurdittā. Of these founders the first bears a Muhammadan name (Hasan) and the last a purely Arabic title, *al-mast* denoting one drunk with love or devotion. Al-mast Sāhib, or 'the holy ecstatic,' is now represented at Nainī Tāl and Jagannāth, places far from the Panjāb and Sikhdom alike. Gondā Sāhib is revered at Shikārpur in Sind, as well as at a shrine near Amritsar in the Panjāb, while the other two possess shrines in the Panjāb hills only. This distribution points to efforts made by the earlier *gurūs* to spread Sikhism, or at least a quietist type of it, over India generally. The followers of these four chapters constitute the senior assembly (*barā akhārā*) of the order, its junior, or *chhoṭā akhārā*, having been founded later by Pherū, a disciple of Har Rāi, the seventh Sikh *gurū*. In theory all Udāsīs are celibate, but those who are so in practice are styled Nangā (or 'naked') Udāsīs. Sir Edward Maclagan, however, gives a different explanation of the term Nangā.

He describes their usual dress as red in colour, but 'a large section of them go entirely naked, except for the waistcloth, and rub ashes over their bodies. These, like the naked sections of other orders, are known as Nange; they pay special reverence to the ashes with which they smear their bodies, and which are said to protect them equally from either extreme of temperature. Their most binding oath is on a ball of ashes.'[1]

As smearing the body with ashes symbolizes also death to mundane things, the Nangā Udāsīs are probably strict celibates, and hence the Nange are correctly so described. Another chapter of the order, sometimes said to be one of the four *dhuān*, is called the Bhagat Bhagwān, or 'devoted to God' (Bhagwān). Its tradition connects it with Hinduism, for, it is said, a Sannyāsī, by name Bhagatgir, once visited the shrine (*derā*) of Bābā Nānak, the founder of Sikhism, when on his way to Hinglāj, a great place of Hindu pilgrimage in Baluchistān. Nānak's grandson, Dharm Chand, poured food into Bhagatgir's bowl, but failed to fill it. The addition, however, of a pinch of *karāh prasād*, or sanctified meal, blessed with the words, *Srī wāh gurū*, 'All hail to the *gurū*,' caused the bowl to be filled forthwith. This miracle converted Bhagatgir. It was confirmed when the goddess Hinglāj appeared to him and his companions as they kept their vigil before Nānak's shrine and thus fulfilled the object of their pilgrimage. Bhagatgir and his followers became disciples of Dharm Chand, assuming the title of Bhagat Bhagwān. The principal *akhārā*, or meeting-place, of the chapter is at the Bibiksar tank at Amritsar, but it also has subordinate *akhārās* at Barelī and other places in Hindustan and claims no fewer than 370 *gaddīs*, or monastic foundations, in eastern India. The Bhagat Bhagwāns wear the matted hair (*jaṭṭa*) of the Sannyāsī, with a chain round the waist, and smear their bodies with ashes. But in their beliefs they accept Nānak's precepts and follow his rules as to eating and the like.

Yet another chapter is the Sangat Sāhib, which is admittedly not one of the four *dhuān*. Gurū Har Rāi had a cook, named Pherū, whom he taught, investing him with a black girdle and cap, and sending him as a commissary to the southern Panjāb—his native country—and towards the Indus, with a mission to collect the dues paid by the Sikhs to the *gurūs*. When Gurū Govind Singh abolished this system and destroyed the *masands*, or commissaries, whose oppression had caused grave discontent, Pherū made no resistance, though no one dared arrest him, and waited on the *gurū*. Impressed by his righteousness, the *gurū* gave him half his *pagṛī*, or turban, in token that he was admitted to a share in his *gurū's* authority, and promised that his following should prosper. The *gurū* further bestowed on him the title of Sangat Sāhib, 'holy companion,' and sent him back to the scenes of his former activities, where he increased the number of his followers. In or before 1896 the Sangat Sāhib, as the chapter is called, established a peripatetic *akhārā*. One of its most noted disciples, an ascetic named Santokh Dās, worked many miracles. The Sangat Sāhibiās, or adherents of the chapter, are numerous and influential in the south and west of the Panjāb, but, as their traditions show, they are not completely under the control of the Sikhs or the regular Udāsīs. Another tradition assigns

[1] *Census of India, 1891*, vol. xix., *Punjab and Feudatories*, p. 152.

the foundation of the chapter to a follower of the famous Sultān Sakhī Sarwar, who was converted by Gurū Govind Singh, and it undoubtedly comprises many who used to affect the cult of that saint and perhaps still combine with it their acceptance of Sikh doctrine. The chapter, however, possesses the Brahmbhūt *akhārā* at Amritsar and an institution at Lahore, so it is distinctly affiliated to orthodox Sikhism, and in the great Sikh State of Patiāla, where it is called the Bakhshīsh Sangat Sāhib, it pays special reverence to the *Ādi Granṭh*, or original *Granṭh* ('Book') of Bābā Nānak, and has an *akhārā* of its own, distinct from those of the four *dhuān*. Lastly must be mentioned the Rāmdās Udāsīs, a sub-order ascribed to another Gurdittā (who was a grandson of one of Bābā Nānak's converts) and established by one of the later *gurūs* in a monastery at Rāmdās, where the sub-order possesses a fine temple, at some distance from Amritsar. Each subdivision of the Udāsīs has its own organization for collecting and administering funds. Each is presided over by a head abbot (*srī mahant*), to whom the ordinary *mahants*, or monks, are subordinated.

The Udāsīs generally are recruited from all Hindu castes and will take food from any Hindu. Sometimes, but not invariably, or even usually, congregated in monasteries, they are generally found wandering to and from such sacred Sikh places as Amritsar, Dera Nānak, and Kartārpur in the Panjāb, but they are also said to be numerous in the Mālwa to the south of it, and at Benares. The principal seats, however, lie in the central Panjāb and in the District of Rohtak, where Sikhism is by no means dominant. Their usages are not uniform. Some wear long hair like Sikhs, others matted hair like Sannyāsīs, and others again cut the hair. Some affect the *tilak*, or caste-mark, others avoid it. The dead are often cremated in the Hindu way, but apparently are sometimes buried. When a body is burnt, a *samādh*, or mausoleum, is erected to some Udāsīs, but this privilege must be confined to those of special sanctity or *mahants*. While the majority are ascetics, some frankly engage in secular callings. Maclagan gives the following picture of their relations with the Panjāb villagers:

'In Ludhiāna the Udāsīs are described as mostly Jāṭs by origin, the *chelā* or disciple and successor being usually chosen from this tribe, and are found to be in possession of the *dharmsālās* in Hindu villages, where they distribute food to such as come for it and read the *Granṭhs* both of Bābā Nānak and of Gurū Gobind Singh, although they do not attach much importance to the latter. The head of the college is called a *mahant* and the disciples *chelās*. They live in Sikh as well as in Hindu villages, and it is probably on this account they do not quite neglect Gurū Gobind Singh. They rarely marry; and if they do so, generally lose all influence, for the *dharmsālā* soon becomes a private residence closed to strangers. But in some few families, such as that of Jaspāl Bāngar, which keeps a large *langar* or almshouse going, it has always been the custom to marry, the endowments being large enough to support the family and maintain the institution; but the eldest son does not in this case succeed as a matter of course. A *chelā* is chosen by the *mahant*, or by the family. If a *mahant* whose predecessors have not married should do so, he would lose all his weight with the people. The great shrine at Dera Bābā Nānak, in the Gurdāspur District, is in the custody of a community of Udāsī *Sādhs*, whose *mahant* used to be appointed with the consent of the Bedīs. Another shrine at the same place known as Tāhlī Sāhib, from a large *tahlī* or shīsham tree[1] which grew close to it, was founded by Srī Chand, and is also looked after by *mahants* of the Udāsī order.'[2]

Thus the Udāsīs display all the normal features of an Indian religious order—a lofty ideal, readily abandoned in practice, professed adherence to a reformed faith, tempered by judicious compromise with the established system, and the inevitable evolution from an ascetic celibate order into a hereditary caste. In the last phase of the Sikh régime the Nānakputras had sunk to employment as escorts to caravans, their sacred character as 'sons of Nānak' ensuring them against attack.

ULTRAMONTANISM.—Ultramontanism is the term applied, often in a hostile or critical spirit, to the tendency to centralize in the papacy the doctrinal teaching and government of the Catholic Church. More vaguely still it is applied in general to extreme Roman Catholicism, to the tendency to emphasize all that separates Catholics from other Christians or from other men. Often enough it is used, quite inappropriately, as a mere nickname for ordinary Catholics who are conscious of their obligations as members of a universal Church. Thus the Catholic parties in the German and Belgian Parliaments have been called Ultramontane, though they would certainly not admit that they take their politics from Rome.

Historically the word 'ultramontanus' was in occasional use in Central Europe from the 11th cent. onwards in a merely geographical sense, just as 'citra-montanus' was used in Italy, to describe a man who lived south of the Alps. It does not seem to have been commonly used with any theological significance till the 17th cent., when it was applied to those who opposed the prevailing Gallican tendencies in France. The counter-reformation in general, and especially the pontificate of Sixtus V. at the close of the previous century, had done much to organize the central administration of the Church, while, on the other hand, the growing power and self-consciousness of the French monarchy tended to insist upon, and to express more definitely as principles, Gallican practices which might be traced back to the 13th century. It is in opposition to Gallicanism (*q.v.*) that Ultramontanism has its most definite meaning, and Fénelon, the Jesuits, and others who opposed the ecclesiastical policy of Louis XIV. and the Four Articles of 1682, were, in a sense, the first Ultramontanes. In the 18th cent., when the influence of religion was at its lowest, Gallican principles kept a strong hold on the French Church, but they found their most complete expression in the writings of the German Febronius and in the policy of Joseph II. The Ultramontanism which opposed Gallicanism and Josephism was little more than the assertion of the universal character of the Church, which both these systems tended to obscure, and an effort, far from successful till the 19th cent., to assert the right of the Church to live her own religious life without the constant interference of the State.

Formal Gallicanism, with its Four Articles, may be said to have been destroyed in France by the Revolution. The fall of the *ancien régime* liberated the Church; numbers of the more Gallican clergy were discredited by joining the Constitutional Church; and Catholicism was purified and revivified by suffering and persecution. No more striking manifestation of papal power had yet been seen than the act which, in accordance with the Concordat, practically deprived thirty-seven bishops of their sees. The Concordat was thus an Ultramontane act, and, though Napoleon added to it the Gallican *articles organiques* and, when he quarrelled with the pope, tried to make the Four Articles the law of the State, nothing could restore the old pre-

Revolution Gallican system. The spirit, however, survived and inspired both the statesmen of the restored monarchy and many of the more old-fashioned clergy, yet the Restoration was also the period in which the Ultramontane movement of the 19th cent. received its most powerful expression in the writings of Joseph de Maistre, de Bonald, and Lamennais. These men realized that the Revolution had destroyed the old foundations on which men had rested their habits of thought and action, and that a fresh start had to be made. De Maistre knew that the revolutionary spirit was still abroad, stronger perhaps than ever, and his *Du Pape* (1819) is an appeal as much to practical utility as to principle. It is only the Christian Church which has in it the strength to overcome 'the Revolution'; and without an infallible papacy the Church is, like the States-General, reducing the monarchy to a shadow and therefore slipping back into revolution. He was disappointed with the immediate effect of his book, but his rigid, authoritative mind had great influence on the Ultramontanes of the middle of the century. A man of far greater intellectual power than de Maistre, the Vicomte de Bonald emphasized the weakness of the individual man in finding out for himself the essential principles of thought and conduct. What a contrast between the disagreement of philosophers and the agreement of practical men about practical matters! The individual reason rightly, therefore, falls back for support on the convictions of society and on tradition. This 'traditionalism' Lamennais combined with the Ultramontanism of Joseph de Maistre. Lamennais's passionate temper always made him push a thing to its extreme limit, and he turned de Bonald's trust in tradition into a universal test of truth. The voice of the pope was for him the expression of this 'universal consent.' In his first stage he combined legitimacy with Ultramontanism; in his second he appealed to the people and tried to make democracy the exclusive ally of the Church. The *Avenir*, which Lamennais and his friends edited in 1831, was probably the most brilliant expression of the earlier stage of 19th cent. Ultramontanism. The enemy which the *Avenir* fought was the Gallican tradition of State control over the Church which had been reinforced by the revolutionary doctrines of State-absolutism. The aim was liberty—liberty of conscience, of association, of education, of the press. Devotion to Rome was the great instrument of liberty, for the papacy represented the universal aspect of the Church and was independent of the different governments. It provided also an element of fervour and historic sentiment at a time when Europe, under the influence of the Romantic movement, was casting off the 18th cent. and all its works and recapturing the power of religious enthusiasm. The exclusive form in which Lamennais's ideas were expressed ultimately set Rome itself against him, but the movement continued under wiser men, Lacordaire, Montalembert, de Ravignan, and others. They succeeded in all but destroying the old Gallican spirit and in putting a new life into the French Church. In the Revolution of 1848 the Church, which had been so unpopular in 1830, exercised a powerful influence.

The defeat of Gallicanism, however, brought out a division in the Ultramontane ranks which the struggle had concealed. The Falloux Law, which was passed under the Second Republic and which broke down the old State monopoly of education, led to the first open breach. On one side Montalembert, Falloux, and Dupanloup were prepared to make concessions to the State in order to secure an invaluable piece of legislation, and because they shared in the ideas of their time so far as these were not definitely opposed to Catholic principle. On the other side were a number of Catholics whose policy became characteristically identified with a newspaper, the party of the *Univers*. Louis Veuillot, the editor of the paper, may without much exaggeration be called the leader of the party; he was certainly its noisiest and most popular mouthpiece. The aim of this school went much farther than merely to acquire for the Church the control of her own religious life. They wished to secure for her the predominance which in an ideal world the spiritual would have over the temporal, and which in fact the Church did partly enjoy in the Middle Ages. Such an aim was incompatible with the ideas and practices prevailing among a people who were far from being mediæval in faith, but Veuillot and his party were prepared to fight for it by bitter antagonism to free-thinkers, by opposition often bitter enough to those, even should they be bishops, whom they considered lukewarm Catholics, and by making the most of the support of the State, if it should happen to be on their side, even when that State was the autocratic Second Empire. The archbishop of Paris himself, Sibour, brought out the difference between the two schools in a letter to Montalembert (1853):

'When twenty-five years ago,' he said in substance, 'we boldly professed ourselves "Ultramontanes," the Ultramontane school was then a school of liberty. We defended the independence of the spiritual power against the encroachments of the temporal power, but we respected the Constitutions of the Church and of the State. The Pope was not the whole Church nor the Emperor the whole State. On the one side there were bishops and councils with a real authority, on the other aristocratic and democratic elements with their rights. No doubt there are times of crisis when both the Pope and the civil government may override all rules. The old Ultramontanes admitted this, but they did not turn the exception into a rule. The new Ultramontanes have pushed everything to extremes and accepting to the full the idea of power they have argued extravagantly against all liberties whether in Church or State.'[1]

Another French bishop could write that the fanaticism of the *Univers* had done more harm to religion than that of Voltaire. It is indeed difficult at first to understand Veuillot's popularity among French Catholics. He seems the most perfect representative of that 'insolent and aggressive faction' which never tired of calumniating their brethren in the faith and of trying to force their private opinions on the Church. For men not of the faith, whom he considered its enemies, for free-thinkers, for 'the race of Cain,' he had no pity. He had never any hesitation in distinguishing between the wheat and the tares. Yet the *Univers* was read in nearly every *cure* in France, and Veuillot appealed far more than Montalembert to most French Catholics. To begin with, he was intensely democratic. Himself a man of the people, he was always thinking of the people. It was his passionate desire to protect the simple from the aggressive irreligion of the bourgeois free-thinker, while his fondness for the extreme point of view in controversy, his scorn of moderate opinions, and his intolerable abuse of the military metaphor in matters of religion were more in sympathy with French character than the constitutionalism of the Montalembert school.

It must be added that the extreme character of French Ultramontanism under the Second Empire is partly to be accounted for by the reactionary policy adopted by Pius IX. when he returned from the exile to which he had been driven in spite of his liberal reforms. To the world at large the most complete expression of this reactionary policy was the Syllabus of 1864. More sympathy would be felt now than in optimistic mid-Victorian days for a document which declared that the world had gone astray by the neglect of God and of Catholic principles. At the time, however, what appeared

[1] Cf. Lecanuet, *Montalembert*, iii. 104.

to be a declaration of war against 'modern civilization' was taken as an official confirmation of all the excesses of the *Univers*.

'Ultramontanism' is a word much used in German politics and religious controversy of this period, but so heavy was the hand of the Erastian State in the first half of the 19th cent. that the word meant no more than the natural claim of German Catholics to manage their own spiritual affairs. Josephism survived longer in Germany than Gallicanism in France, and it was reinforced first by the current German philosophy of State-absolutism and later by the growth of conscious German nationalism. There was an important Catholic revival in the twenties and thirties, closely connected with the Romantic movement, but it had little effect on religious politics. The first struggle for liberty and the first victory occurred not in any of the Catholic states but in Protestant Prussia. The imprisonment in 1837 of the aged archbishop of Cologne and the support given him by Pope Gregory XVI. led to a popular movement in his favour and a general protest against the action of the Government. When Frederick William IV. came to the throne in 1840, he inaugurated a new policy and Prussia, by the freedom which she allowed the Catholics, became a model for other German states. The Revolution of 1848 extended this liberty to different parts of the country, but it was followed by a reaction, especially in S.W. Germany. Two schools began to be distinguishable in the fifties. One was that of Mainz, led by Bishop Ketteler, with the *Katholik* as its organ, devoted mainly to practical work and social problems, but in close union with Rome and therefore soon to be called Ultramontane. Closely connected with it was the more learned group of Würzburg, where Denzinger, Hettinger, and Hergenröther were teaching. The rival school was that of Munich in alliance with the Bavarian Government and the University. Its leading spirit was Döllinger, and it was interested mainly in the philosophical and historical aspects of theology and was very jealous of any Roman interference with German science. The education of the clergy came to be a subject of much controversy, for in Germany seminary and university training had long gone on side by side. A number of the bishops distrusted the theological teaching and the atmosphere of the universities, while Döllinger and the Munich school suspected intensely the training given by the Jesuits in the German College in Rome, were contemptuous of Roman theology, fought against the revival of Scholasticism, and dreaded the spread of Jesuit influence in and through the German seminaries. In time they came to see in the power of the State a means of checking this 'Romanization,' and Döllinger, who had fought for the Church against Josephism and been called an Ultramontane in 1848, now began to appeal to the State against Ultramontanism. Yet among the German Ultramontanes there was little of the extravagance of the *Univers*. No doubt, as controversy grew more bitter, there were violent language and personal attack on both sides, and the air had to be cleared in Germany, as elsewhere, by the Vatican Council.

In Italy the more extreme Ultramontanism was represented by the *Civiltà Cattolica*, a review published in Rome under the editorship of Carlo Curci and a small number of Jesuits who were a curiously independent body and often quite out of sympathy with their more moderate brethren across the Alps and even in Italy. The *Civiltà* was notorious for its support of the *Univers*, for its extreme papal doctrines, and for its personal attacks on more liberal though equally devoted Catholics.

There was an echo of these continental battles even in England in the controversy which was aroused by the reviews edited by Acton and his friends, first the *Rambler* and then the *Home and Foreign Review*. These reflected, though in a more moderate form, the views of Döllinger and the Munich school. On the other side the lead was taken by William George Ward and the *Dublin Review*. Neither side disputed the authority of strict definitions of dogma; but the controversy turned on the amount of respect due to the general guidance of Rome. Acton claimed absolute liberty outside dogmatic definitions, while Ward looked to the papacy for positive direction. A loyal Catholic, he maintained, should accept not only the defined teaching but the 'doctrinal intimations' of Rome.[1]

Underneath these controversies of the sixties we seem to see two tendencies at work. The more liberal Catholics wished, in various degrees, to keep in touch with the times, to make the best of the learning, the thought, the science, the political conceptions of the age. With some this might and did lead to a real contempt for traditional Catholic practices and methods. The Ultramontanes, on the other hand, felt the danger which lay in excessive sympathy with the 'spirit of the age.'

'The "Rambler" . . . appeared to Mr. Ward to worship the modern ideal, both in ethics and in politics, with an unreserve which was quite inconsistent logically with the principles of Christianity.'[2]

Ward had no hope in the movement led by Döllinger. To him contemporary thought was moving away from Christianity, and the one essential thing was to react against it, to preserve the purity of the faith and of Catholic ideals. Push this point of view farther, much farther than Ward ever pushed it, and you come to Veuillot's extravagances with his conflict between the 'race of Abel' and the 'race of Cain.' Now the papacy under Pius IX. undoubtedly took the Ultramontane side, and the liberals found themselves more or less in opposition to the tendencies prevailing in Rome, while the Ultramontanes were anxious to make these tendencies prevail everywhere and, in opposition to the nationalism of the day and the attacks on the temporal power, to magnify the authority of Rome in the government and teaching of the Church. Veuillot, *e.g.*, looked forward to the time when papal bulls would take the place of all conciliar deliberation. Thus it is that the question of the doctrinal authority of the pope was raised and that the Syllabus led to the Vatican decree of infallibility. Yet there is a certain unreality about the controversies which raged round the Council in 1869 and 1870, for the number of those who actually disbelieved in papal infallibility was small indeed. The papal Definition of the Immaculate Conception in 1854 had been accepted universally. What most of the opposition feared was the added governmental authority which they conceived the decree would give to the pope, the increase which it would produce in all those centralizing and autocratic tendencies which they dreaded.

'I am much more concerned,' said Montalembert, 'about the government of the Church than about the definition of Papal Infallibility.'[3]

It is obvious too that the opposition of Dupanloup and the 'Inopportunists' was due to the fear that the Definition would lead to conflict with the State and would emphasize the differences between the Church and modern society. The language of the more extreme Ultramontanes in speaking of the pope as 'inspired,' or in such mad phrases as 'when the Pope thinks, it is God who meditates

[1] W. Ward, *W. G. Ward and the Catholic Revival*, p. 146.
[2] *Ib.* p. 139. [3] Lecanuet, iii. 456.

in him,' must have contributed not a little to make the 'liberals' fear that the Definition might mean the triumph in the Church of the more extreme faction.

The Definition came, after months of discussion, in a form more moderate than even such Ultramontanes as Ward had originally expected. It had the effect of making a clearer distinction between the doctrinal and the administrative functions of the papacy. It is no longer possible for an Ultramontane to claim that every utterance of the pope on matters of faith is protected by God from error. Papal infallibility is defined and in so far limited, and the conditions laid down in the Definition have seldom, if ever, been satisfied by the papal doctrinal pronouncements of the last forty years.

Ultramontanism became, therefore, a vaguer term after 1870. The party of the *Univers* continued, indeed, to exist and to carry on its controversial methods in support of the temporal power of the pope or of the royalist movement in France. It saw in a political *coup d'état* the only defence against the attack which from 1879 onwards the Republican party directed against Catholic education, the religious orders, and other forms of Catholic life. Louis Veuillot died in 1883, but the *Univers* remained the most popular of Catholic newspapers until its place was partly taken by Paul de Cassagnac's Bonapartist *L'Autorité*. It seems absurd, however, to call this party Ultramontane, seeing that at least during the pontificate of Leo XIII. its aims were opposed to those of the papacy. The pope was anxious to reconcile the Catholics with their governments both in France and in Germany. In Germany he succeeded in bringing the *Kulturkampf* to a close, though at the cost of putting pressure in 1886 on the so-called Ultramontanes of the Centre party, in order to secure their support for Bismarck's seven years' army estimates, whilst in France his policy of urging the French Catholics to accept the Republic met with much opposition from the royalists.

In a sense, however, the term 'Ultramontanism' may be rightly applied to the administrative centralization which is a mark of papal policy since the middle of last century. The enthusiasm felt so widely among Catholics for Pius IX., the great prestige of Leo XIII., a conscious reaction against disruptive national movements, the mere improvement in the means of communication—these are some of the causes which explain such a centralization. It was a particular feature of the pontificate of Pius X. and of the measures which he took against 'Modernism.' It has certainly helped to protect the unity and the tradition of the Church in the midst of growing hostility or at least indifferentism, and often enough Rome has proved more broad-minded than the local ecclesiastics. Thus two of the greatest bishops of the second half of the century, Ketteler and Manning, were appointed by the direct action of the papacy. Many Catholics would, however, welcome a reaction in the direction of the constitutional traditions of the Church, especially in such matters as the election of bishops and their synodal meetings.

LITERATURE.—It is difficult to give a bibliography on so general a subject. For the Gallican controversy see art. GALLICANISM; for 19th cent. Ultramontanism, F. Nielsen, *History of the Papacy in the XIX^th^ Century*, Eng. tr., 2 vols., London, 1906. An excellent study of the question is to be found in Wilfrid Ward, *William George Ward and the Catholic Revival*, do. 1893; E. Lecanuet, *Montalembert d'après son journal et sa correspondance*, 3 vols., Paris, 1895–1902, contains the best account of the controversy with Veuillot. For a defence of Veuillot on general grounds cf. Jules Lemaitre, *Les Contemporains*, do. 1888–98, vi. For the Catholic controversies in Germany cf. G. Goyau, *L'Allemagne religieuse: le Catholicisme*, 4 vols., do. 1905–09. For the Vatican Council see art. COUNCILS (Christian: Modern); for the measures taken by Pius X. against the Modernists see art. MODERNISM.

F. F. URQUHART.

'UMAR AL-KHAYYĀM.—Although much has been written by European biographers concerning the celebrated astronomer and poet of Nīshāpūr, 'Umar ibn Ibrāhīm al-Khayyām or al-Khayyāmī, generally known in Persia as 'Umar Khayyām, the greater part consists of legends derived from late and untrustworthy sources, while the facts of his life and character remain singularly obscure, notwithstanding that since 1897 one contemporary and several early notices have become available. Khayyām or Khayyāmī is a family name, and does not indicate that either 'Umar or his father was a tent-maker by trade. The dates of his birth and death are uncertain. Probably he was born between A.D. 1025 and 1050, and the evidence of his contemporary, Niẓāmī 'Arūḍī, shows that his death took place after 1115 and some years before 1135, and that he was buried at Nīshāpūr in the Ḥīra cemetery;[1] the date A.D. 1123 given by some authorities may well be correct. On chronological grounds alone, the story of his friendship at Nīshāpūr with two school-fellows who afterwards rose to eminence—Niẓāmu 'l-Mulk, the great vizier of the Seljūq sultans Alp Arslān and Malikshāh, and Ḥasan al-Ṣabbāḥ, chief of the so-called 'Assassins'—is extremely improbable; and, though it occurs in the history of the Mongols by Rashīdu'ddīn († A.D. 1318), it must be regarded as a fiction.[2] 'Umar received the education of a scholar, including literature, natural science, theology, philosophy, and medicine. We possess two treatises on algebra and geometry from his pen;[3] of seven other works on scientific and metaphysical subjects only the titles have been preserved.[4] Adopting astronomy as a profession, he was chosen in A.D. 1074 to take part in, and apparently to preside over, a commission of astronomers appointed by Niẓāmu 'l-Mulk and Sultan Malikshāh for the purpose of reforming the calendar.[5] Their labours resulted in the institution of the Jalālī era, named after the honorary title (Jalālu'ddīn) of Sultan Malikshāh, and in the publication of the astronomical tables known as *Zīj-i Malikshāhī*, which were edited by 'Umar Khayyām.[6] Like most mediæval astronomers, 'Umar practised astrology, and two of his predictions are recorded by Niẓāmī 'Arūḍī,[7] who observes that 'Umar had no great belief in such prognostications. During the period of disturbance following the death of Malikshāh (A.D. 1092) he seems to have left Nīshāpūr. He was at Balkh in A.D. 1112–13, and at Merv two years later.[8] Possibly it was at this time that he made the pilgrimage to Mecca, 'not from piety but from motives of prudence, and, when he reached Baghdād on his homeward journey, refused to meet the learned scientists of that city who were eager to become acquainted with him.'[9]

Besides a few Arabic poems, 'Umar wrote a number of Persian quatrains (*rubā'iyyāt*). That he was regarded as a writer of occasional verse rather than as a poet appears from the fact that his name is not mentioned at all in the oldest extant work containing biographies of Persian poets, the *Lubābu 'l-Albāb* of 'Aufī (*c.* A.D. 1220),

and only incidentally by Daulatshāh (end of the 15th cent.); moreover, the author of the *Chahār Maqāla*, who treats of poetry and astrology in separate sections, places 'Umar among the astrologers and makes no reference to his poems. The most ancient MS, preserved in the Bodleian Library and dated A.D. 1461, contains 158 *rubā'is*; a facsimile of this text has been published by E. Heron-Allen.[1] In later MSS and editions the number of quatrains is very much larger. The question as to their authenticity was first raised in 1897, when Valentin Schukovski published in Russian in *al-Muẓaffarīyé* (a *Festschrift* in honour of Baron Victor Rosen) his famous article entitled "'Umar Khayyám and the "Wandering" Quatrains."[2] Here Schukovski shows that 82 quatrains ascribed to 'Umar are to be found in the works of other Persian poets. Since the publication of his article the number of 'wandering quatrains' has risen to 101, representing 46 different poets[3]—a total which would be enormously increased if the entire field of Persian poetry were explored in a systematic manner, and if account were taken of anonymous quatrains, either written as variations on those which already formed part of the collection or added to it for no better reason than that 'Umar being specially and pre-eminently a quatrain-writer, it was natural to ascribe to him any favourite *rubā'ī* of which the authorship was unknown. Even in the oldest and presumably least adulterated MS the proportion of 'wandering quatrains' already discovered and assigned to their proper authors is about 12 per cent. Of the remainder many are likely to be genuine, but we have no means of identifying the original 'Umarian nucleus or determining its size. The whole collection must be viewed, not as the work of an individual, but as an anthology reflecting various aspects of Persian spiritual and intellectual life and covering a period of six centuries.

It follows that the character of 'Umar Khayyām cannot be read in the *Rubā'iyyāt* attributed to him, which give expression to diverse and often radically inconsistent modes of thought. Two notices, however, cited by Schukovski from writers of the 13th cent. throw some light on the matter.[4] The first, by Ibnu'l-Qifṭī (see reference above), describes 'Umar as a man who tried to conceal his want of religion and shrank from uttering his real opinions. Concerning his poetry, Ibnu'l-Qifṭī remarks that it is widely circulated and reveals an irreligious spirit to those who look below the surface, although its literal sense is sometimes in accord with the teaching of the Ṣūfīs.[5] He then quotes four Arabic verses, of which the following is a translation:

'If my soul is content with a livelihood sufficient for my needs, which is gained by the labour of my hands and arms, I am safe from all changes and accidents, and care not whether Time threatens me or flatters my hopes.
Have not the revolving heavens determined to reduce all happiness to misfortune?
Therefore, O my soul, abide patiently in thy sleeping-place: its towers will not topple down until its foundations have collapsed.'

Najmu'ddīn Dāya († A.D. 1256), author of a mystical treatise entitled *Mirṣādu'l-'Ibād*, reckons 'Umar among those unhappy philosophers and materialists who have gone astray from the truth, and quotes two sceptical quatrains[6] as evidence of his 'utter shamelessness and corruption.' This passage is important because it shows that an ardent Ṣūfī of the 13th cent. looked upon 'Umar as an enemy to mysticism; and, inasmuch as the *rubā'is* quoted are probably authentic, we cannot but agree with his judgment so far. The charge of materialism, when brought by Ṣūfīs and theologians against scientists and philosophers, carries no weight: 'Umar is as unlikely to have been a materialist as he is likely to have been a free-thinker and pessimist. It should be noted, further, that the name Khayyām occurs in twelve quatrains, and constitutes at least a presumption in favour of their authenticity, and that these, together with the two quoted by Najmu'ddīn Dāya, exhibit the principal elements of the *Rubā'iyyāt*, viz. hedonism, philosophical contempt for the *profanum vulgus*, attacks on the orthodox, lamentations for the cruelty of fate, meditations on the incompatibility of a supreme intelligence with the sufferings of life and on the nothingness of man, hope of divine mercy, and a certain morality which recognizes the duty of doing good to others. 'But the Ṣūfī mysticism seems to be excluded, although the poet often makes use of Ṣūfistic terms.'[1]

Nicholson, Introd. to the ed. of Fitzgerald's version of the *Rubā'iyyāt*, do. 1909; J. B. Nicolas, *Les Quatrains de Khèyam*, Persian text and French tr., Paris, 1867.

REYNOLD A. NICHOLSON.

UNCLEAN.—See HOLINESS, TABU.

UNCTION (Christian).—As a religious rite, and apart from social usages, unction was taken by the Christian Church immediately from the Jews, though for some purposes it was borrowed by the Jews from other nations. In the OT unction was used in the 'consecration' of priests, kings, prophets, and places.[2]

1. In connexion with the complete rite of baptism.—This use of unction was almost universal from very early times up to the Reformation.

(*a*) *The New Testament.*—It is disputed whether the apostles used unction in the rite of Christian initiation. In 2 Co $1^{21f.}$, 1 Jn $2^{20.\ 27}$, all Christians are said to have been anointed. This is undoubtedly metaphorical, but it perhaps points to the actual use of oil in the apostolic age before or after baptism, at least in some places; as it was then certainly in use for other purposes,[3] the metaphor would in that case be more apposite. On the other hand, in Acts, where two accounts are given,[4] in which in addition to the baptism proper the laying on of hands is described, unction is not mentioned. Tertullian certainly thought that the apostles used it in connexion with baptism, for he traces it back to the 'primitive discipline' of the OT.[5] It is possible that it was used in the apostolic age in some places, but not in others, and it is noticeable that laying on of hands and anointing are not for this purpose joined together in the NT, though they were both there used for other purposes.[6] Or it is possible that the custom of anointing at baptism arose in sub-apostolic times, being due to a literal interpretation of the NT metaphor.[7]

(*b*) *The subsequent ages.*—After NT times or at least from the middle of the 2nd cent. onwards unction was used, sometimes preceding, sometimes following, immersion, or both before and after. But it is necessary to note that, originally and for many centuries, immersion and its complement, which in the West from the 5th cent. onwards has been known as 'confirmation,' were as a normal

rule a single rite; and it is immaterial to consider whether any particular anointing belongs to the one part or to the other.

We get no light on the subject in the scanty literature of the first three quarters of the 2nd cent.; but it is to be remarked that unction is not mentioned in the *Didache*, though it gives the words of baptizing into the threefold Name.[1] Towards the end of the century Tertullian tells us that unction was administered after the immersion, as a long-standing custom;[2] Irenæus says that the Gnostic Marcosians used it in the parody of Christian baptism;[3] and early in the 3rd cent. Hippolytus says that the Naassenes (or Ophites) used it.[4] Theophilus of Antioch also mentions unction as being the reason of the name 'Christian,'[5] and thus implies his belief that the custom was apostolic.

Irenæus and Hippolytus, in the works mentioned, do not actually say that the Catholics used unction, though we may infer this from the fact that the Gnostics were clearly copyists in their baptismal rites; but the matter is now set at rest by the fact that the 'so-called *Egyptian Church Order*' in all its versions has unction, in this case before as well as after immersion (though the fragmentary Latin version, which appears to be the oldest, is wanting in the description of the rite before immersion). R. H. Connolly has shown that this Church Order, at least in the main, dates back to Hippolytus himself.[6]

Later in the 3rd cent. the custom of anointing at baptism is attested by Cyprian[7] and Origen;[8] but it was not used by the Novatians.[9] There are frequent references to unction in connexion with baptism in the Church Orders and in the Fathers from the 4th cent. onwards; there was usually an anointing before immersion and either one or two anointings after: if two, then the presbyter administered the former, the bishop the latter. But a peculiar custom prevailed in the early Syrian Church. There we find only one anointing, and that before immersion, so that in this Church the 'confirmation' took place before the rite at the font, instead of after it, as everywhere else and as in the NT.

The evidence for this custom is now full and complete;[10] it continued till the 5th or 6th century. Probably Severus (patriarch of Antioch, A.D. 512–519) introduced the post-baptismal unction among the West Syrians (Monophysites), and the catholicos Ishū'yahbh III. (A.D. 647–658) among the East Syrians (Nestorians). The only known exception is in a commentary ascribed to Ephraim,[11] where an unction after immersion is mentioned. But this work is probably not Ephraim's. These commentaries are a catena of notes on the OT, many by Jacob of Edessa, some headed 'Of Ephraim,' though the heading is often doubtful, and the extracts may be paraphrases rather than quotations. If at any point they are not in accord with attested sayings of Ephraim (as is the case here), we may safely conclude that they are not his.

The ordinary custom, then, from the time of Hippolytus, was to have an anointing before, and at least one after, immersion; in that case ordinary olive oil was generally used before immersion and chrism or unguent (*μύρον*) after, the latter being oil mixed with balsam, spices, etc. But there are several exceptions. In Theodoret[12] 'chrism of *μύρον*' is used before immersion; in the Armenian and East Syrian rites oil is used throughout.

(*c*) *At the effeta.*—This was a ceremony in the West (called in Spain *effetatio*) which took place several days before baptism, and was named from the Aramaic *Ephphatha* ('Be opened'), the ears and nose being touched. For this ceremony oil was originally used, as we see in John the Roman Deacon's *Epistle to Senarius*[1] and in the works of Ildephonsus, bishop of Toledo.[2] Afterwards, as in the *Gelasian Sacramentary*[3] and in later pontificals, saliva was used instead.

In several authorities, such as Ambrose,[4] the *Bobbio Missal*,[5] the *Stowe Missal*,[6] Alcuin,[7] and Amalarius of Metz,[8] neither saliva nor oil is explicitly mentioned at the effeta itself; but in the *Gregorian Sacramentary*[9] and the *Gelasian*, and often elsewhere, the effeta takes place just before the anointing of shoulders and breast. It is quite possible that this anointing may be the unction which takes place just before immersion, put into an earlier position.

(*d*) *In consecrating the font.*—In both East and West oil or chrism or both were often poured in the form of a cross into the water at the consecration of the font. This we find in Ildephonsus[10] in Spain; at Rome in the *Ordo Romanus Septimus*;[11] in Gaul in the *Missale Gallicanum Vetus*,[12] also in the *Bobbio Missal*[13] and the *Missale Gothicum*;[14] and in most Western pontificals. It is also common in the East. It is mentioned in the writer who poses as Dionysius the Areopagite;[15] and is found in the Greek rite of baptism,[16] and the Armenian,[17] the Coptic, West Syrian, Maronite, and (in some MSS) the East Syrian.[18]

(*e*) *During the catechumenate.*—There are a few traces of an earlier unction than that of the effeta mentioned above. Augustine, speaking of our Lord's anointing the blind man with the clay in Jn 9[6], says that Jesus 'perhaps made him a catechumen.'[19] This may refer to a custom of unction at the reception of candidates into the catechumenate. In Spain Isidore of Seville speaks of catechumens being anointed before they became 'competentes,' *i.e.* accepted candidates for baptism.[20] The Roman Synod held A.D. 402 speaks of their being anointed at the third scrutiny.[21] But the phrase 'oil of catechumens' usually means the oil administered just before immersion, as opposed to the chrism administered after. In the later Western authorities three oils are distinguished: (1) 'holy oil,' to sign the 'heathen child' on the breast and between the shoulders before immersion;[22] (2) 'holy chrism,' after immersion; (3) 'sick man's oil.'[23]

(*f*) *Consecration of the chrism.*—In the West the chrism was ordinarily hallowed by the diocesan bishop, in the East by the patriarch, on Maundy

1 § 7 (*c.* A.D. 120?). The view of J. Armitage Robinson, that the *Didache* only represents a piece of false antiquarianism, and does not give us a true picture of Christian life, is perhaps not very probable (*JThSt* xiii. [1912] 339 ff.; and *Barnabas, Hermas, and the Didache* [Donnellan Lectures], London, 1920, Appendix A).

Thursday; so, in the West, in the *Gregorian*[1] and *Gelasian*[2] *Sacramentaries*. Leo the Great implies that the same custom existed in Egypt in the 5th century.[3] Proterius, bishop of Alexandria, was murdered on that day, and Leo says that 'the hallowing of the chrism has failed.' But in the East Syrian and Malabar rite, where ordinary oil is used instead of chrism, it is consecrated by the presbyter at the time of baptism;[4] a little of the 'holy oil' said to be descended from St. John is added.[5] There were elsewhere some exceptions. At the first Council of Toledo (A.D. 400) permission was given to consecrate chrism at any time.[6] In Gaul it was perhaps consecrated on Palm Sunday.[7] Formerly the Armenians sometimes allowed diocesan bishops to consecrate the oil,[8] but this is now confined to the catholicos.

The rule that bishops alone may hallow the chrism is laid down in the West at the first Council of Toledo,[9] by Pope Innocent I.,[10] at the second[11] and third[12] Councils of Carthage, at that of Hippo,[13] by Augustine,[14] at the Council of Vaison in Gaul,[15] and at the second Council of Seville,[16] by Amalarius of Metz,[17] and by Thomas Aquinas;[18] also in Egypt, early in the 4th cent., by Didymus of Alexandria.[19] But in time of persecution in 'Africa' presbyters were allowed to consecrate the chrism, as John the Deacon tells us.[20] In the West the oil, as opposed to the chrism, was ordinarily consecrated at the time of the service by the officiant, whoever he might be.

(*g*) *Meaning of the unction.* — Originally the anointing was considered to be the consecration of the Christian to the royal priesthood.[21]

So Tertullian compares the baptismal unction to the anointing of the Aaronic priests.[22] The same idea is found in the 3rd cent. in the *Older Didascalia*;[23] and (emphatically) in the derived *Apostolic Constitutions*.[24] Jerome, apparently alluding to unction, and using the word 'baptism' in its widest sense, says that 'the priesthood of the laymen is baptism.'[25] The idea of consecration to the priesthood is also found in Augustine,[26] Ambrose,[27] John the Deacon,[28] Isidore of Seville,[29] Alcuin,[30] and his disciple Rabanus Maurus,[31] and became a commonplace. The consecration was specially connected, by John the Deacon, Alcuin, and many others, with the anointing of the head immediately after immersion.

A special significance was attached to the post-baptismal unction[32] in places where the laying on of the hand was dying out, or was less emphasized, and even in Egypt, where that ceremony was long retained. The gift of the Spirit, elsewhere associated with the imposition of the hand, was then ascribed to the unction.

This is the case with Serapion of Thmuis in Egypt,[33] Ambrose (probably),[34] and even Pope Innocent I.[35] The North Italian author of the *de Sacramentis* says that at the signing (with chrism) the bishop (*sacerdos*) invokes the Holy Ghost in His sevenfold gifts.[36] Even Augustine[37] and Pacian of Barcelona[38] speak in the same sense. In the East, where the imposition of the hand in confirmation died out early, we should expect the same thing; and Cyril of Jerusalem[39] says that the object of the *μύρον* is to convey the Holy Ghost. Narsai (an East Syrian) apparently calls the unction 'the drug of the Spirit, and certainly says that the Spirit is given by it.[1]

In the developed Eastern rites we sometimes find the association of the gift of the Spirit with the chrismation; explicitly in the Coptic rite in the prayer at the unction after immersion,[2] and in the Ethiopic.[3] Other Eastern rites are confused on this point, but, as immersion and confirmation are never separated in them, they are not particularly careful to ascribe a special significance to one or other part of the service.

(*h*) *Unction at the reception of heretics.*—This is in reality part of the question which we are now considering. For, as all agreed that the Holy Spirit could not be given outside the Church, even in the great controversy between Cyprian and Pope Stephen as to heretical baptism in the 3rd cent., the ceremony used when heretics were converted and admitted to the Church had normally as its object the reception of the Holy Ghost. It was the custom in the West and in 'Africa,' and originally (it seems) in at least some parts of the East, to receive heretics by the imposition of the hand. But in places where the latter ceremony was less emphasized they were received by unction.

This was the case in Didymus of Alexandria,[4] at the councils of Orange on the Rhone[5] and of Epaon in Burgundy,[6] and at the Trullan Council of Constantinople.[7] Basil also directs the reception of heretics by unction,[8] and Gregory the Great says that this was the custom in the East.[9] Theodoret says that the Novatians were anointed on reception, because they did not use unction in baptism.[10]

2. Unction of the sick.—The early history of this subject has too often been considered, by writers of all schools of thought, merely from the point of view of post-Reformation controversies. It is more profitable to put these, in the first instance, on one side, and to deal with the purely historical question of the use by the Early Church of unction for sick people, whatever was the purpose of such unction. In the opinion of the present writer, it will be found that the evidence for unction of the sick is very much the same, as regards time, as that for unction in connexion with baptism, the only difference being that, while for the latter the evidence of the 2nd cent. is stronger than that of the 1st, for the former the case is reversed, and the evidence for unction of the sick, which is strong in the apostolic age, is less so in the age which followed it. It will be found, it is believed, that the commonly expressed opinion on this subject will have to be reconsidered.[11]

(*a*) *The New Testament.*—Unction of the sick is mentioned as having been used during our Lord's ministry: in Mk 6[13] the Twelve 'anointed with oil many that were sick, and healed them.' In the subsequent period it is commended by St. James;[12] the sick man is to call for 'the presbyters of the church,' who are to pray over him, 'having anointed him with oil in the name of the Lord,' and this 'prayer of faith' is both for bodily healing and for forgiveness of sins. We read also of our Lord anointing with saliva[13] in performing cures; and of the figurative anointing of the eyes with eye-salve in the Apocalypse.[14] The 'oil and wine' used by the Good Samaritan had no religious significance,[15] though they have received a spiritual interpretation. The passage in St. James is referred to by Origen[16] and Chrysostom.[17] The

latter implies that the unction of the sick was still practised in his day: he is speaking of the power of the priest to forgive sins.

(*b*) *2nd and 3rd centuries.*—The first known reference to the unction of the sick after St. James applies to the reign of the emperor Septimus Severus (A.D. 193–211), or more probably to a time before his accession. Tertullian says[1] that the Christian Proculus Torpacion had once (*aliquando*) healed 'Severus, the father of Antoninus' [Caracalla] by anointing. If unction was used for the healing of a sick heathen, *a fortiori* it would be used for Christians. It might be held that this was a purely medical use of unction. But any possible doubt on this head has been taken away by the investigations of R. H. Connolly with regard to the *Egyptian Church Order* (already referred to).[2]

In the Latin as well as in the Ethiopic version of this Church Order there is a form given for the blessing of the oil for the sick, offered apparently by the laity.[3] This form we may with confidence assign, with the great bulk of this work, to Hippolytus of Portus, and therefore we have evidence of unction of the sick at Rome early in the 3rd century. The form states that the unction is for the healing of the body, but nothing is said of spiritual blessing. This new evidence shows that we must correct the statement of the committee of the Lambeth Conference of 1908, that 'there is no clear proof of the use of unction for the sick in the Christian Church until the fourth century'[4]—a statement which has been frequently repeated.

(*c*) *From the 4th cent. onwards.*—In the 4th cent. we have a series of Church Orders which show that unction of the sick was a common practice. In the *Testament of Our Lord*[5] a form is given for blessing oil and water for healing; this prayer is independent of the Hippolytean form, and much fuller; it incidentally refers to spiritual benefits. The oil would be for application, the water for drinking. The *Apostolic Constitutions* give a form[6] for consecrating oil and water by the bishop, or in his absence by the presbyter; this refers to healing, but incidentally also to demons and other spiritual ills. This form is not found in the epitome (of the eighth book of *Apost. Const.*) known as the *Constitutions through Hippolytus*.[7] In the *Canons of Hippolytus*[8] oil for the sick and first-fruits are blessed; no form is given, but 'Gloria Patri' is added. In the *Sacramentary of Sarapion*[9] oil and bread and water for the sick are blessed, doubtless by the bishop, as the book contains only the portions of the services said by him.

The form contains the words 'Let every Satanic energy . . . depart from . . . these thy servants,' and it has been suggested that this shows that the oil was consecrated at the time of use.[10] Elsewhere in this work there occurs, after the anaphora, a 'prayer concerning the oils and waters that are offered' [by the laity]. In both these prayers bodily healing is primarily asked for, then spiritual blessings, and protection against demons and the like. A form for consecrating oil for the sick is found also in G. Horner's *Statutes of the Apostles*.[11]

In the above works the people seem to have brought the oil (and water and bread) for the sick to be blessed by the bishop or presbyter, and then to have applied it themselves, in spite of Ja 5[14]. At the same time they also brought firstfruits to be blessed.

We have a good deal of other evidence of the use of unction for the sick, the earliest referring to Egypt.

Palladius, bishop of Helenopolis, in his *Historia Lausiaca*, describes how the monks of that country in the 4th cent. used oil for the sick—Benjamin of Nitria,[1] Macarius of Alexandria,[2] and John of Lycopolis.[3] The first of these monks healed the sick by touch of the hand or by oil consecrated by himself. Sozomen also tells us how the monks of Egypt in that century anointed a paralytic with oil and healed him;[4] and Rufinus makes a similar statement.[5] On the other hand, Athanasius mentions only imposition of the hand in healing the sick; the Catholics would not allow an Arian to lay a hand on a sick man's head.[6] Thus unction and laying on of the hand were alternatives, and we see the same thing in the NT: Mk 5[23] 6[5] 7[32] 8[23]. [25] [Mk] 16[18], Mt 9[18], Lk 4[40] 13[13], Ac 9[12. 17] 28[8]—all of our Lord and the disciples.

In the 4th cent. Chrysostom says that the sick were healed with oil from the church lamp,[7] and this was afterwards a common practice.[8]

In the 5th cent. Pope Innocent I., asked if the sick might be anointed with chrism (*sanctum oleum chrismatis*), and if bishops might anoint, answers in the affirmative; the oil blessed by the bishop may be applied by any Christian if necessary, but it cannot be applied to penitents, because it is of the nature of a sacrament.[9]

Some eighty or more years later Cæsarius, bishop of Arles († 542), says in one of his sermons: 'Whenever any sickness comes, let the sick man receive the body and blood of Christ and then anoint his body,' and the promise made by St. James will be fulfilled.[10] And in another sermon he says that it is better than magic uses to go to the Church and receive the body and blood of Christ, and faithfully and copiously to anoint (*perunguerent*) oneself and one's own with blessed oil, and to receive not only healing of the body, but also remission of sins, as James the apostle says.[11]

Here then, in the beginning of the 6th cent., it is contemplated that the sick man should ordinarily anoint himself, though the oil has previously been consecrated.

From the 6th cent. onwards we read of the 'oil of the cross' in healing. This was oil touched by a relic of the true cross, and was considered to be especially efficacious.[12]

Among the Easterns we find the use of oil for the sick to be almost universal.

(*d*) *Armenians* in practice anoint only sick priests, not deacons or lay people.

The *Instruction in the Christian Faith*, by Chosrov, says that the unction is for the healing of the body and the forgiveness of lighter sins; the apostles sometimes laid hands on the sick, and sometimes anointed; unction is not essential, but prayer is, and, if necessary, this sacrament may be administered without the anointing of oil.[13]

The earliest mention among the Armenians of unction as a preparation for death is *c.* A.D. 800; and no rite for the anointing of the sick is found in any ancient euchologion or *mashtotz*.[14] The old Armenian office for the visitation of the sick consists of prayers and communion.[15] Denzinger mentions an Armenian custom of anointing the faithful (not only the sick) on Maundy Thursday with butter (not oil), blessed by the bishop.[16]

(*e*) *East Syrians* (*Nestorians*).—In the *Ṭakhsā*, or Missal, it is directed that the holy oil of baptism is not to be used for consecrating churches or for anointing the sick;[17] for unction of the sick

a single collect is appointed, and is to be said by the priest when he blesses the oil.[1] In this Church *hnānā* (lit. 'mercy'), dust from the tombs of the martyrs, is mixed with oil and water and applied to the sick person.[2] In the ordination of presbyters prayer is offered that 'they may lay their hands on the sick and they may be healed.'[3]

(*f*) *The Copts* have an office of the 'holy oil' which they call 'the lamp' (*φανός*);[4] imposition of hands is included in it, and seven presbyters officiate. The Greek Orthodox also have a direction to anoint the sick with 'the holy oil from the lamp.'[5]

(*g*) *The West Syrians* (*Jacobites*) also have an office for blessing 'the oil of catechumens, which is also the oil of the sick.'[6]

(*h*) *The Orthodox.*—Here seven priests, if they can be had, administer the oil. The Russian *Longer Catechism* says[7] that unction with oil is a sacrament, in which, while the body is anointed with oil, God's grace is invoked on the sick to heal him of spiritual and bodily infirmities; and it then quotes Mk 6[13], Ja 5[14f.].

(*i*) *Unction of the sick in England.*—Theodore, archbishop of Canterbury, in his *Capitulare* (A.D. 680), says that Greeks allowed presbyters, if necessary, to make the exorcized oil and chrism for the sick, but Romans confined the consecration of it to the bishop.[8] The *Excerptiones* of Egbert, archbishop of York (A.D. 732–766),[9] say that the sick are to be anointed with oil hallowed by bishops (*sacerdotibus*), and that the presbyter is to have the eucharist always ready, that the sick may not die without communion.[10] King Edgar's *Canons* (A.D. 960) order every priest to have unction for the sick.[11]

Ælfric's[12] *Canons* (*c.* A.D. 1000) direct the priest to 'have hallowed oil apart for children [*i.e.* for confirmation], and apart for sick men, and always to anoint the sick in bed. Some sick men are fearful, so that they will not consent to be anointed' [they feared that unction would kill them]. If a man is anointed and recovers, and then once more falls sick, he can again receive unction; it is not an ordination, but in it is healing and forgiveness.[13]

The form of blessing the oil is given in the *Pontifical of Egbert*, archbishop of York.

It prays that it may be to every one who touches it for protection of mind and body, for the driving away of all pains and all infirmities, and every sickness of body; and refers to the anointing of priests, kings, prophets, and martyrs.[14]

The form in the present *Roman Pontifical* is nearly the same.

In the later instances we see the restriction of the administration of the oil to a priest. This led to the practice of extreme unction, and then unction was made to precede the last communion. The anointing of the sick was retained in the First Prayer-Book of Edward VI. (1549), and was on the forehead, and explicitly for the healing of both soul and body. It was omitted in the Second Prayer-Book (1552), but restored by the Non-jurors.

3. Extreme unction.—When the anointing of the sick came to be looked upon principally as a preparation for death, it received this name, which properly means 'the last of the unctions' but was popularly understood to mean unction administered to those *in extremis*; it was no longer, unless in exceptional cases, for the healing of the body, but was for spiritual benefit only. The name is not found before the end of the 12th cent.; it appears first in Peter Lombard;[1] after that it became common. But the idea itself is found in the 10th cent., in Ælfric.[2]

We find frequent directions on the subject in the Middle Ages. The Synod of Exeter under Bishop Quivil (held in 1267) says that extreme unction is for the healing of the body and for forgiveness of sins; it is not the least venerable of the sacraments, and no money is to be exacted for it; the clergy are not to absent themselves from their parishes except of necessity, lest any die without confession, viaticum, and extreme unction; some ignorant persons refuse to receive this last-mentioned rite, and the clergy are to preach about it.[3] The Synod of Worcester under Bishop Woodloke (held *c.* 1308) has the same directions, except about the money.[4] And in Scotland we find similar rules in the 13th century. Every sick person over 14 years of age in danger of death should receive extreme unction, and no fee is to be charged. It may be repeated if necessary, and no restriction is laid down on this point.[5]

Aquinas deals at length with extreme unction in the supplement to his *Summa Theologica*, written between 1265 and 1271. He says[6] that it is a sacrament because it avails for the remission of sins, whereas the oil of catechumens [administered before baptism] does not do so. This sacrament was instituted by Christ Himself, though He promulgated it through the apostles; some, however, think that He left it to the apostles to institute.[7] Olive oil is the convenient 'matter,' as in Ja 5[14f.], and it is to be first consecrated by the bishop, as in all other unctions.[8] Extreme unction must have a 'form,' as all other sacraments of the new law have; this form is a prayer, as in St. James, but the intention of the minister is expressed in the words 'By this holy unction,' etc.[9] Aquinas proceeds to deal with the theological significance of the rite. It avails for the remission of sins, as St. James says, and also for the healing of the body, just as immersion in baptism cleanses the soul through the cleansing of the body.[10] It does not impress 'character,' like ordination or confirmation, seeing that it may be repeated.[11] Aquinas then deals with the minister of extreme unction. It cannot be conferred by a layman, like baptism, as it is not so necessary, nor yet by deacons, for St. James speaks of 'presbyters'; but the administration is not confined to bishops alone.[12] With regard to the recipients of extreme unction, Aquinas remarks that it is not for those who are in health, nor for all the sick, but only for those who are near death. It is the last remedy which the Church can confer. It is not for madmen, unless in lucid intervals, nor for young children, as it is a remedy for actual sin, not for the relics of original sin, unless indeed these are strengthened in some way by actual sin. Only certain portions of the body, not the whole, are to be anointed, the mutilated being anointed on that part which is nearest to the lost limb.[13] Further, extreme unction can be repeated without injury, but not in the same illness.[14] Elsewhere Aquinas says that by it men are prepared for worthy communion [*i.e.* the viaticum]; it is inferior to baptism and the eucharist, and is not of necessity, but is for progress in the Christian life.[15]

Maskell[16] gives the rite of extreme unction from the *Sarum Manual* (his copy is dated 1543):

After a prayer referring to Ja 5[14f.] and asking for restoration to health ('salūti pristinæ restituere'), the priest anoints the eyes, ears, lips, nostrils, hands (the laity on the palms, the priests on the outside, as they had already been anointed on the palms at ordination),[17] the feet, and the back, or in the case

of a female the front. At each anointing he prays for forgiveness in these words: 'By this unction and His most tender mercy, may the Lord forgive thee whatsoever thou hast done amiss through sight' (hearing, etc.). A psalm is said between each anointing, and after the unctions a blessing is given, referring to purification of mind and body. Then follows a prayer which has special reference to the sick man's approaching death, but this is not in the Bangor MS quoted in Maskell's note, and seems to be later than the rest. The sick man is then communicated if he is capable of retaining what he swallows; otherwise he is assured that spiritual communion suffices, and the well-known words are quoted: 'Tantum crede et manducasti.'[1] In the *Pontifical of Magdalen College*, probably of Hereford or Canterbury and of the 12th cent., the first prayer mentioned above ends differently; here there is only one unction, in which the references to the various senses are combined.[2] In this *Pontifical* two different prayers follow the blessing, referring to the forgiveness of sins.

Only one priest is mentioned in the *Sarum Manual* as administering unction, but Walter Raynold, archbishop of Canterbury (1313–37), speaks of *sacerdotes* in the plural; and W. Lyndwood glosses this by saying 'two at least, except in case of necessity.'[3] Raynold says that all over fourteen years of age should receive extreme unction;[4] and also that it can be repeated only if a year has elapsed.[5]

The oil was consecrated on Maundy Thursday;[6] and this was the case also at Rome.[7] By a constitution of J. Peckham, archbishop of Canterbury (1278–94), any unused oil was burnt.[8]

The Council of Trent says that extreme unction was instituted by our Lord as a sacrament of the NT, outlined (*insinuatum*) by St. Mark, and commended to the faithful and promulgated by St. James. The 'matter' is oil blessed by a bishop, for the unction represents the grace of the Holy Spirit, and the 'form' is 'By this unction,' etc.[9] The effect is primarily forgiveness and strengthening of the soul, and occasionally restoration of bodily health; the ministers are bishops and presbyters. Extreme unction is to be used for those who appear to be dying; if they recover and then again fall ill, it may be repeated.[10] See also art. EXTREME UNCTION.[11]

4. Unction at ordination.—The idea of anointing at ordination is consecration to God and endowment with His gifts. The custom is derived from the OT, where kings, high priests, priests, and prophets are anointed.

In Ex 29[7], Lv 8[12], Moses anoints Aaron, whose anointing is also mentioned in Ps 133[2], Sir 45[15]. In Ex 28[41] 29[21] 30[30], Lv 8[30] 10[7], Aaron's sons are anointed as priests; in Lv 21[10], Nu 35[25], high priests in general receive unction. In 1 K 19[15f.] Hazael, Jehu, and Elisha are anointed. The unction of prophets in Ps 105[15], Is 61[1], is perhaps metaphorical. The anointing was with olive oil and spices in Ex 30[23ff.].

The same conception is found in the name 'the Christ,' 'the Messiah' ('the Anointed One'), as in Lk 4[18], which quotes Is 61[1], in Ac 4[26f.], which quotes Ps 2[2], in Ac 10[38], and in He 1[9], which quotes Ps 45[7]; cf. also Dn 9[24].

But, while in Eastern ordinals we frequently read of anointing in a metaphorical sense, the actual unction at ordination was confined to the West.

(*a*) At the consecration—or, as it was originally called, the ordination—of a bishop unction is not so ancient as the laying on of the hand, or as the custom of putting the book of the gospels on the elect's head. But it is found at Rome in the 5th century.

Leo the Great says: 'Now there is a nobler rank of Levites [deacons], there are elders [presbyters] of greater dignity, and priests [bishops] of holier anointing ['sacratior est unctio sacerdotum'].'[1] Elsewhere he says that 'it is not the prerogative of earthly origin which obtains the unction, but the condescension of divine grace which creates the bishop,'[2] and that 'the unction of the Holy Spirit consecrates priests.'[3] It is just possible, but not likely, that the unction here is only metaphorical.

In the 6th cent. Gregory the Great refers to this unction of the bishop;[4] and it is found also in Gaul, but not in 'Africa,' and perhaps not in Spain.[5] In *Egbert's Pontifical*, of the 8th cent., both head and hands were anointed;[6] and this was the case at Rome also.[7] In England the bishop's head was twice anointed, first with chrism mixed with oil, then (just before the unction of the hands) with chrism only; on each occasion was said:

'May thy head be anointed and hallowed with celestial blessing in the pontifical order, through the unction of holy chrism and oil and our blessing, in the name of the Father and of the Son and of the Holy Ghost, Amen.'[8]

(*b*) Unction at the ordination of a presbyter was not the custom of the earlier Roman Church, as Pope Nicholas I. explicitly states in 864.[9] It is not in the *Leonine Sacramentary* nor in some MSS of the *Gregorian*;[10] but it became general in the West after the 9th cent., and was introduced at Rome. Amalarius of Metz († 837) says that in Gaul the presbyter's hands were anointed at ordination by the bishop.[11] In *Egbert's Pontifical* the presbyter's head was also anointed,[12] but this seems soon to have been dropped.

(*c*) Unction of the hands at the ordination of deacons seems to have been a peculiarity of the Celtic and Anglo-Saxon rites; it is mentioned in Gildas's *Epistle*[13] (*c.* A.D. 560) and in *Egbert's Pontifical*.[14]

In all these cases the unction of the hands was on the palms.[15]

5. Unction at the coronation of kings.—The idea of this unction was the same as that of the unction at ordination. It is taken from the OT.

In 1 S 9[16] 10[1] 16[13] Samuel anoints Saul and David; in 2 S 2[4] men of Judah anoint David (so metaphorically Ps 89[20]); in 1 K 1[34. 39] Zadok and Nathan anoint Solomon, Zadok applying the oil; in 1 K 19[15f.] Elijah anoints Hazael and Jehu; in 2 K 11[12] 'they made [Joash] king and anointed him.' Hence comes the phrase 'the Lord's Anointed' in 1 S 16[6] and elsewhere, also in La 4[20], and even of Cyrus in Is 45[1]; and in Jotham's parable, Jg 9[8], the trees 'anoint a king over them.'

This unction is first mentioned as a Christian custom in the Acts of the sixth Council of Toledo[16] (A.D. 638). The Visigoth kings in Spain were anointed at their inauguration. We read of unction at that of King Wamba in 672.[17] And in

1 'Only believe, and thou hast eaten.' The saying is from Augustine, *in Johann.* tract. xxv. 12 (on Jn 6[28f.]), 'crede et manducasti'; but he is not speaking specially of spiritual communion.

11 The subject of unction of the sick is treated very fully by F. W. Puller (*The Anointing of the Sick*, London, 1904), but the present writer had not the advantage of having seen that book before compiling this article. Puller gives at length the evidence of which only an outline is here attempted. He is specially concerned to refute the later teaching about Extreme Unction and to advocate what he argues to be a more primitive use. His argument is greatly strengthened by R. H. Connolly's investigations as to the 'so-called *Egyptian Church Order*'; see § 1 (*c*) above.

Woolley, *Coronation Rites*, Cambridge, 1915. The 'cornu illud de quo reges unguebantur' of the *Pilgrimage of 'Etheria'* ('Silvia') refers, not to Christian practice, but to a supposed relic of OT times (Duchesne, *Christian Worship*[3], p. 510).

17 Woolley, pp. 33, 120.

France Pippin, father of Charlemagne, was anointed in 750.[1] But in these cases there is no mention of crowning, and the anointing was the central feature of the rite.[2] On the other hand, the emperors who were crowned for many centuries at Constantinople—for no emperor was crowned at Rome before Charlemagne—appear not to have been anointed before the 9th cent. (when Basil the Macedonian [867–886] is thought to have received unction),[3] or, as some believe, not before the 12th or 13th cent.;[4] in the latter case the earlier references are metaphorical only. In the Greek rite of coronation as fully developed, and hence in the Russian rite which is derived from it, unction is a prominent feature.[5] It is uncertain if Charlemagne was anointed *as Roman emperor*.[6] It will thus be seen that unction at the inauguration of kings is earlier than at that of emperors. Both England and France claimed to have a miraculous chrism sent down from heaven for the purpose.[7]

The Abyssinians have the custom of unction at the coronation of the Negus; it is probable that this is not derived from European practice, but is directly deduced from Holy Scripture.[8]

The coronation service for an English king found in *Egbert's Pontifical* is the most ancient of those extant; it is printed by Martène[9] and Maskell,[10] and the latter gives in his notes a collation of the same service in the *Leofric Missal*. In Egbert the king is anointed once only, on the head, one of the bishops ('unus ex pontificibus') saying the prayer, and the others anointing him. There is here no coronation of a queen-consort, though we find one later (with unction), in the 10th century.[11] There was more than one recension of Egbert's office; that called the *Liber Regalis*, which probably dates from the time of Edward II., remained almost unchanged till the coronation of James II.[12] In the service in the *Sarum Pontifical* given by Maskell[13] the king's hands, head, breast, shoulder-blades, and elbows ('ambae compages brachiorum') are anointed.[14] The custom of anointing has been retained in England ever since the Reformation, at the coronation of a king, of a queen-regnant, and of a queen-consort. Notices of unction at the coronation of James I. and his queen, of Charles I., Charles II., James II., William and Mary, and Victoria may be found in *Hierurgia Anglicana*.[15] At the coronation of George V. the king was anointed thrice in the form of a cross (four Knights of the Garter holding over him a rich pall of silk or cloth of gold): first on the crown of the head, then on the breast, then on the palms of both hands.[16] Charles I. was anointed first on the palms of the hands, then (after a prayer) on the breast, then between the shoulders, then 'on the boughs of both arms,' then on the crown of the head;[17] this followed the more ancient custom. The English coronation rite is the only remaining office in Christendom where the full rites of the anointing and all the details of solemn investiture are still extant.[18] The chrism was, before the coronation, consecrated by the Dean of Westminster if a bishop, otherwise by the Archbishop of Canterbury; but in the case of William and Mary the oil was blessed in the coronation service itself; this addition to the latter was dropped from the time of Anne.[1]

In France Napoleon I. was anointed on head and hands at his coronation; and his consort Josephine likewise.[2]

In Scotland unction was first allowed at a king's inauguration in 1329.[3] After the Reformation there were four Scottish coronations: James VI. was crowned in 1567, when one year old; his consort, Anne of Denmark, was crowned in 1590; Charles I. was crowned as King of Scotland in 1633, Charles II. in 1651; at the first three coronations unction was used, but not at the last.[4]

On the continent of Europe we find anointing retained at coronations in the reformed rite at Prague in 1619, in Prussia in 1701, in Denmark from 1559 to 1840, in Sweden from 1675 till our own day, and in Norway in modern times.[5]

6. Unction at the consecration of churches, etc.—This also is taken from the OT.

Jacob anointed the stone in Gn 28[18], and S. R. Driver remarks that this was a very common idea among primitive peoples.[6] The tabernacle was anointed in Ex 30[26] 40[9], Lv 8[10], Nu 7[1]. In Is 57[6] we read of the pouring of a drink-offering to the 'smooth stones of the valley.'

From an early date churches and altars were consecrated with chrism.

We read of this in Gaul at the councils of Agde or Agatha[7] and Epaon,[8] in the *Canons* of Egbert of York,[9] in his *Pontifical*,[10] in Isidore of Seville,[11] Rabanus Maurus († A.D. 815), the disciple of Alcuin,[12] and Walafrid Strabo († A.D. 849).[13] In the *Sarum Pontifical*[14] twelve places in the church and the altar are anointed with chrism; holy water is also used. But neither oil nor chrism was used in reconciling a desecrated church.[15]

We find the same custom in the East. In pseudo-Dionysius the Areopagite (*c.* A.D. 500?) the altar is consecrated with unguent (*μύρῳ*).[16] The West Syrians (Jacobites) use chrism in consecrating altars,[17] as also do the Greeks.[18] From the 8th cent. we read of the Armenians consecrating churches with unguent,[19] even in the case of the rededication of a desecrated church.[20] Among the East Syrians (Nestorians) the consecration of a church is called *syāmīdhā* ('laying on of the hand') and is of two kinds, with and without oil; the former is for new or rebuilt churches, or for rededicating a church which has been desecrated owing to some very grave cause, and must be performed by a bishop; the latter is intended for use after minor accidents or breaches of the ecclesiastical law, and may be performed by priests commissioned by the bishop. In the former each wall and the altar and the outer lintel of the sanctuary door towards the nave are signed with the oil in the form of a cross.[21]

In the *Sarum Manual* of 1543 bells also are dedicated with oil and chrism,[22] and, at a much earlier date, in *Egbert's Pontifical*.[23] Similarly the Armenians dedicate with chrism the semantron—a wooden board struck by a mallet, and much used by Eastern Christians to call the people to church.[24] The Armenians also solemnly dedicate a cross, even for private use, with unguent.[25] In *Dunstan's Pontifical* the chalice is anointed when it is dedicated.[26]

In England the Caroline divines used oil in consecrating churches. The Puritans objected that 'they shew us that the church, by the bishop's anointing some stones thereof with oil, and sprinkling others with water, and using from the Roman pontifical some more prayers, some more ceremonies upon it, becomes a ground more holy.'[1]

7. Unction of a dead body.—From the first the Christians prepared the body for burial either by embalming or with spices and unguents (*μύρα*);[2] this was in contrast to the Roman custom of cremation. References to the Christian usages in this respect are found in Tertullian,[3] Clement of Alexandria,[4] Minucius Felix[5] (early 3rd cent. ?), and in the *Acta* of Tarachus, a martyr in the Diocletian persecution (A.D. 304).[6]

As an ecclesiastical act we find it, in the East, in pseudo-Dionysius the Areopagite; the hierarch [bishop] and the rest salute the dead body, and the hierarch pours oil on the departed, just as before baptism the candidates are anointed with the oil of the sacred chrism.[7] In Goar's *Euchologion* we read of a corpse being anointed just before burial with oil from church lamps, or of a cinder from the thurible being placed on it.[8] This custom is also found in the books of the East Syrians (Nestorians) and of the Armenians, where clergy anoint the departed, the Armenians calling it a sacrament;[9] but in practice, while in the case of a departed dignitary the East Syrians retain the solemn final kiss of peace, they do not appear to use unction.[10] The office used by the Armenians for the purpose may be seen in Denzinger.[11] In the West, Theodore, archbishop of Canterbury, says that dead monks were carried to church and anointed on the breast with chrism before the mass.[12]

LITERATURE.—This is given in the footnotes.

A. J. MACLEAN.

UNDER WORLD.—1. Origin of the belief.—The wide-spread conception of an under world in religion and myth is generally, though not invariably, associated with the dead. An under world of the dead is not the only conception of their dwelling-place: spirits may lurk about the place of burial or linger among the abodes of the living; they may dwell in distant regions or islands, or they may ascend to a place in the sky. These conceptions may be held simultaneously, especially where differences of rank or ideas of retribution suggest separate places for different classes of souls. They are also connected, especially in the lower culture, with the idea that man has several souls which after death separate and abide in different localities. They may also result from the mingling of different tribal or racial beliefs.[13] We do not know what ideas the earliest men had regarding the dead, or how soon the belief in a spirit or soul, apart from the body, was entertained. But, while it must have been obvious that death had brought about some difference between the dead and the living, it is doubtful if the dead were ever regarded as absolutely extinct and cut off from all life and action. The wide-spread and early custom of burial, the practice of placing articles by the corpse, and the feeding of the dead at the grave, all suggest the contrary. It is not improbable, therefore, that the dead man was regarded as passing some kind of existence in the grave. The grave was his house, and it was this idea perhaps that led to the custom of making very elaborate tombs for the dead, of which the chambered barrow forms an example. That the dead lived on in the grave, while their return among the living was feared, is also suggested by the belief that they could come from it in the body—in which we find the root of the vampire belief[1]—and by the customs of heaping a mound of earth or placing heavy stones on the grave, and binding the dead with cords.[2] Many folk-traditions represent the dead as coming in the body from the grave,[3] and the idea of their still living in the grave or barrow is seen clearly in early Scandinavian tradition. Thus the grave was in itself a small under world. This was more emphasized where several persons were buried in one tumulus or grave, or where the separate graves of members of one family or clan lay side by side. The grave or graves as a subterranean dwelling-place easily passed over into the conception of a hollow region under the earth, an under world where the dead lived. At whatever time the conception of the soul, spirit, or shade arose, it did not alter this belief. The spirit might come and go from the grave or inhabit with other shades the larger under world.

The formation of a belief in an under world was also aided by observed phenomena. The sun seemed to rise out of the earth or sea in the east and to sink into these again in the west. What then more natural than to suppose that during the night it passed through some underground region, to emerge again in the morning? This under world (sometimes thought of as beneath the sea into which the sun seems to sink) through which the sun passed was then associated with the abode of the dead, and in many descriptions of the latter we are expressly told that, when it is night here, it is day there, and *vice versa*. Hence, too, the entrance to the abode of the dead is not always near at hand, but far off, usually towards the sunset, and their dwelling-place is reached only after a long and perilous journey.

Yet for many races the under world was not visited by the sun. Being under the earth, it was a dark and gloomy place, and this was accentuated by the fact that those who inhabited it were shades or shadows. Here, too, we may see another conception leading to the idea of another world. The eyes of the dead were closed; they were in darkness. Their shades were faint replicas of living beings, seen only in dreams and darkness. Where could such have their abode? The grave was a dark, hollow place, and men knew also that caves leading into the interior of earth grew darker as the entrance was farther left behind. There must then be a dark, hollow place within the earth, fit abode for those now shut off from light.

Thus the under world may be a shadowy, undesirable place, or, again, it may be a reflexion of the upper world, now light, now dark, as the sun visits or leaves it.

2. The under world in ancient religions.—It is surprising that cultured races in the past hardly abandoned the belief in a gloomy under world. The Babylonians called this region Aralu, and it was conceived as a vast underground dwelling, as 'the land without return,' the dark abode of all the shades of the dead, with its entrance in the west, the region of sunset. The sombre goddess Eresh-Kigal and the terrible god Nergal ruled over it. Seven walls, pierced by as many gates,

[3] J. A. MacCulloch, *CF*, p. 102 *f.*

surrounded this place of terror, where 'dust lay thick on door and bolt,' where the shades dwelt with dust for their food, in darkness and gloom, among terrible evil spirits and demons. All these ideas are vividly set forth in the story of the descent of Ištar to Hades. How far other conceptions of a better region or of retribution were held by the Babylonians need not be discussed here. Gloomy as was the fate of the dead in Aralu, there was a worse fate, viz. where burial rites had not been performed and the spirit had to wander, consumed by gnawing hunger and feeding on offal.[1]

The older Hebrew conception was not dissimilar, and the strong desire to be buried in the family grave or by the side of relatives suggests that Sheol or Hades, like the under world elsewhere, was 'originally conceived as a combination of the graves of the clan or nation.'[2] The shades (*rĕphāîm*) dwelt in the under world, outside the rule of Jahweh, distinguished from each other according to their state on earth, but in a region of darkness, dust, and silence. The state of the shades in Sheol is seen from such passages as Ps 115^{17}, Job 7^{9} $10^{21f.}$, Is $14^{9f.}$, Ezk $32^{17f.}$. While the later belief was generally different from this, it still kept the idea of an under world, but now generally as an intermediate state of the dead, waiting for the day of judgment in different compartments of it, better or worse, for the righteous or the wicked. Sometimes it was a place of torment for the wicked at death, or it or a subterranean Gehenna became the place of torment after the judgment.[3]

An under world does not appear consistently in Egyptian beliefs regarding the dead, their state and locality, which were of a conflicting nature. In the earliest period, and indeed all through the later periods, the soul was associated with the body in its sepulchre, leaving it and returning to it. An under world is spoken of here and there, probably connected with the grave. But many other regions—on earth's surface or in heaven—were open to the dead. In the Osirian religion the blissful abode was in heaven or elsewhere, and it was sometimes regarded as lying in a deep hole under the earth.[4] The theology of the religion of Rā pictured the soul traversing the other world in the bark of the sun by night, passing through guarded gates into twelve successive regions, peopled by gods, demons, and the dead. These regions were either underground or in what corresponded to an under world—the valley through which the sun passed behind the Mountain of Sunset until it reappeared in the east. This was the Duat, or Tuat, the hidden part of the world.[5]

According to O. Schrader, the primitive Indo-European conception of the realms of the dead was that the ancestral spirits dwelt in the earth. They made no distinction between this region of the dead and the tomb.[6] In Vedic times in India, probably as a result of the newer custom of cremation, Yama's kingdom, to which the spirits of the fathers went (the *pitṛs*), was a heavenly one, but it is probable that it had formerly been a subterranean region.[1] The Vedic hells as well as those of Brāhmanic and later Hindu belief are abysses of the under world;[2] yet even in the earlier (Vedic) period we hear of the fathers being in the earth, and in the age of the epics Yama's realm is in the south, beneath the earth.[3]

The Greeks preserved the idea of an under world of the dead, Hades, the hidden place, intact for a long period. See art. UNDER WORLD (Greek).

The Roman under world, Dis, was the abode of the *manes*, and this belief was connected with the earlier one, that the soul rested with the body in the tomb. In the Comitium at Rome the *lapis manalis* covered an opening which was supposed to lead to the underground abode of the shades, whence they came up to be fed on the days when the stone was removed. Other approaches to the under world were known—*e.g.*, the cave of Avernus at Naples. But to the Romans the under world was never such a definitely expressed object of belief as it was to the Greeks.

The Scandinavian and Teutonic under world, Hel, the hollow place, was perhaps an extension of the hollow barrow or tumulus in which the dead were supposed to live feasting and occupying themselves with the good of their kindred. Though later conceived as a gloomy place of punishment, this description applies more properly to Niflhel, lower than Hel. All men at first went to Hel,[4] which, in the Elder Edda, is hardly a place of gloom. As described in *Balder's Doom*, a road leads through the under world by grassy plains to the mighty hall of Hel (*i.e.* the goddess who rules over Hel). Walls are decked with shields, and beer stands ready on tables.[5] The myths seem to prove that Mimir's fountain of immortal mead and his grove, and Urd's fountain, were in the under world.[6]

Similarly in the old mythology of the Finns and of the Esthonians the region of the dead is an under world. By the Finns it was called Tuonela, and, possibly through Christian influences, it had come to be regarded as a place of punishment. The Esthonians called their under world Porgu, and it was supposed to be reached through a cave.[7]

The old native religion of Japan, Shinto, regarded the dead as still living in the tomb, but the Japanese also had a belief in a dark and repulsive under world called Yomi ('darkness') and Ne no kuni ('the root country'), with divinities of death and plague. Though not specifically said to be the region of the dead, it would appear to have been, as the name Yomi is used for the state of the dead or the grave, while the place itself, regarded as a region of corruption, suggests the decay of the tomb. Yomi was later identified with the Buddhist hell.[8]

3. **The under world in the lower culture.**—Among the lower races opinions as to the locality in which the dead exist are as various as in the beliefs of the higher races, but the conception of an under world frequently occurs, and its nature and conditions are described with great detail.

Such an under world, sometimes situated beneath the sea, is known to some of the tribes of New Guinea, sometimes as a place resembling this world, sometimes much superior to it, while, as with the Waga-Waga, it is said that, when it is night here, it is day there, and *vice versa*, suggesting that it is visited by the sun during our night.[1] A region under the sea, called Tsiabiloum, is the place of spirits, according to the New Caledonians — a delightful place, far more fertile than earth, where sickness, death, toil, and darkness are unknown.[2] In many parts of Melanesia the other world is above ground, often on a distant island, but in the eastern group of islands it is below the earth and is called Panoi and other names. It is a peaceful place and on the whole resembles the upper world. But, according to some, the spirits die there, and then revive in another Panoi, situated below the first.[3]

Generally in Polynesia, while a superior heavenly region was reserved for men of rank or for those slain in battle, there was an under world for all the other spirits of the dead, called Po, or Sa-le-fee, or other names. This region was mainly regarded as a gloomy, undesirable place, though sometimes, as in Raratonga, it was pleasant and bright.[4]

In N. America the Eskimo have a belief in various regions for different people, but among the different tribes the under world constantly appears, now as a better, now as a worse place.[5] The American Indian tribes are far from uniform in their beliefs; the under world of the dead is found mainly among the tribes of the south-west, but sporadically elsewhere. It is reached after a long journey, and is generally a pleasant region, and also the place whence the first men emerged on earth's surface.[6] Occasionally, as with the Tlingit, the underworld abode is one of several, and it is to it that drowned persons go.[7] Similar distinctions, according to rank or manner of death, occurred with the Mexicans, whose under world, Mictlan, was a gloomy place, reserved for those who did not go to one of the other regions. This resembled the dismal under world of the Peruvians, the place allotted to the bulk of the people. An under world of the dead is less frequently met with among the S. American tribes—*e.g.*, the Matacos, the Muyscas, and the Patagonians, who thought that vast underground caverns contained the souls of the dead. None of these were unpleasant places.[8]

Among African tribes, both Bantu and Negro, the belief in an under world is very common. This country of the dead is usually reached through a cave or hole in the ground, or through a pool or lake. Especially with the Bantu it is a region much like the earth, with villages, forests, rivers, etc., but among some Negro tribes it is less desirable, as some of their sayings suggest.[1] Stories of descent by the living to this underground region are widely spread over Africa.

4. The under world in Christian belief.—Through both Jewish and pagan influences the locality of the souls of the dead in Christian belief was placed beneath the earth, either as an intermediate state, with part of it as a paradise region (Irenæus, Tertullian), or, more generally, a place of punishment. This belief is illustrated from theological writings, legends, poems (*e.g.*, Dante's *Inferno*), and art. It has now ceased to be a vital part of Christian belief.

5. The under world as fairyland.—In the art. FAIRY it is shown how frequently the abode of the fairies, dwarfs, and such like beings is underground, and various theories for this folk-belief are discussed—*e.g.*, that which regards fairies as spirits of the dead.

6. Divinities of the under world.—The divinity who reigns over the under world is frequently a personification of that region itself, and this is more particularly the case where, *e.g.*, Earth and Under-earth are conceived as personified in one being. The earth-goddess is also the ruler of souls (*e.g.*, Demeter or Persephone), with the under-earth people, the Δημήτριοι or ὑποχθόνιοι, as her subjects.[2]

LITERATURE.—This is referred to in the footnotes. See also artt. STATE OF THE DEAD, DESCENT TO HADES (Ethnic).

J. A. MACCULLOCH.

UNDER WORLD (Greek).—The Greek conception of the under world is the product of a long process of evolution. The following strata can be clearly determined.

1. An under world which is strictly local, and in which the attributes of the dead are purely physical.—This conception is well expressed in a vase in the Central Museum at Athens. This archaic vase is of the type known as 'prothesis,' a class of vase used in funeral ceremonies and decorated with funeral subjects. Two mourners stand lamenting, one on either side of a grave, erect on which is a 'prothesis' vase. Within the grave itself is represented what the mourners believed the grave to contain: (*a*) the *eidola*, little winged figures of the dead, and (*b*) a great snake. The under world was to the vase-painter strictly local; it was the grave itself. The little winged *eidola*, shrunken men, represent the individual dead, strengthless and vain; the great snake represents the collective might of the dead, the δαίμων of life and reincarnation, the immortality of the γένος or tribe. This δαίμων in human form was the tribal hero, in later monarchical days the king, like the ancestor of the Athenians, envisaged as half-man, half-snake. He was essentially a local power, and to him the fertility of the local earth was due; his temple was his tomb. This belief in the snake-hero was essentially the faith of a settled people of agriculturists to whom the local earth with its perennial crops was all-important—a people who practised field-magic. With the heroic age, its shiftings of peoples, its conquests and migrations, the conception of the under world, dependent like all other religious conceptions on social developments, was bound to change. This brings us to the next development or stratum.

2. An under world remote, non-local, Pan-Hellenic—in a word, the Homeric or heroic under world.—In *Odyssey*, xi., the so-called *Nekuia*, we have a description of an under world which, though its kernel is undoubtedly local, *i.e.* Bœotian, has become in virtue of many accretions Pan-

Hellenic. This under world is no longer a local grave, but a vast remote kingdom of the dead, separated from the living world by the stream of Okeanos, but in confused fashion accessible by a trench dug in the earth. The old conception partly lives on. This under world of Homer reflects of course the Homeric social structure. We have the great mass of the people represented by the 'strengthless heads of the dead,' who 'sweep shadow-like around,' and with whom Odysseus holds no converse; and we have the souls of great particular heroes, who, after drinking of the black blood, can hold converse with the living. Instead of the collective *δαίμων*, the snake, we have individual aristocratic heroes who emerge in truly heroic fashion. The function of these splendid Homeric dead is not to fertilize the earth for their successors, but to live on themselves after their kind, though in more shadowy fashion. They are no longer either physical or local; they are functionless—no longer perennial, but merely immortal and quite non-moral.

To the literary *Nekuia* of Homer must be added the great fresco of Polygnotus, the Nekuia painted by him in the Lesche at Delphi of which Pausanias has given us a detailed account.[1] The Nekuia of Polygnotus is, if we may trust Pausanias, based not on the *Odyssey* but on another Bœotian epic now lost, the *Minyad*. In it stress is laid on a new element just dawning in the *Nekuia* of the *Odyssey*, and this brings us to our third stratum.

3. An under world which is moralized, containing new elements—retribution and purification.—These two elements appear very clearly in a black-figured amphora at Munich.[2] To the right is Sisyphos rolling up his stone, to the left the Danaids are filling their bottomless cask. Sisyphos stands for retribution, the Danaids mark the transition to purification.

In the *Nekuia* of Homer Odysseus, after he has had speech of various heroes whom he has known in the upper world, sees as in a vision, but does not speak with, Minos the judge of Hades, Orion the mighty hunter, and the great criminals Tityos, Tantalos, Sisyphos. Of these figures the two first are marked by one great characteristic: they are doing in Hades what they did in the upper world. Minos, who judged Crete, is judging in Hades; Orion is still hunting wild beasts. But the three 'criminals' have been usually supposed to be, not carrying on their normal pursuits, but being 'tormented.' S. Reinach has brilliantly and conclusively shown that the three 'criminals' also are depicted as carrying on their earthly activities; it is only a later moralizing age that supposes them 'tormented.' We will take only one instance—Sisyphos rolling his stone. Sisyphos is the ancient king of Corinth, and, like all other ancient kings, a *δαίμων* of weather and sky powers. He controls the sun; in a sense he is the sun. It is his business to roll the ball of the sun, the huge stone, up the steeps of heaven, whence eternally it rolls down again. The senseless punishment becomes intelligible as a periodic function eternally incumbent. Hades is peopled with the *δαίμων* powers of an elder world; it is the dower-house of antique religion.

The Danaids are analogous figures; but about them have grown up accretions more complex; they stand not only for retribution but also for purification, and they are ultimately connected with the mystery-cult of Orpheus. Primarily, however, they are quite simple figures; they are the daughters of the old Danaos, king of Argos. He makes the weather, and they make the rain; they are well-nymphs, projections of ancient rain-making ceremonials; they carry water in order that water may well forth from sky and earth. They are depicted as on the vase pouring water in a *pithos*-well, the bottom pierced to communicate with and fertilize the earth. But their labour is ceaseless, *i.e.* periodic, year by year. But, when their nature as rain-makers is forgotten, the ceaseless labour is thought of as a punishment, a retribution; they are 'condemned to carry water in leaky vessels'; they, the fertility-bringers, are doomed to endless, barren toil. What was their crime? But for Pausanias,[1] we could never have guessed. He saw in the Nekuia at Delphi figures represented as carrying water in broken vessels, and he explains them as 'of the number of those who held the Eleusinian mysteries to be of no account.' They are the uninitiated, never purified in the upper world; they ceaselessly seek purification in the world below. Thus the well-nymphs, with their simple physical function as perennial fertilizers, have been moralized by a later and mystical theology.

In the Hades of Homer there are no water-carriers, no uninitiated, for Homer knows nothing of the mysteries. His theology has reached the retribution, but not the purification, stage. But from Homer onwards, as has recently been shown by Gilbert Murray, the conceptions of bliss and torment are in ancient literature, and we may add in ancient art, 'always connected with the mysteries,' whether Orphic or Eleusinian. The mental pictures of Heaven and Hell which were current in ancient times and are still to a certain extent traditional among us are based on the actual ritual of the mysteries. The scenery and arrangements, so to speak, of the other world are, in the first instance, projections of the initiation-ceremonies. Such is the purgatorial water-carrying of the uninitiated Danaids.

UNIFORMITY.—See LAW (Natural), ORDER.

UNITARIANISM.—Unitarianism, an English term derived from the Latin *unitarius* (first used of a legalized religion in 1600[2]), is applied to a mode of religious thought and organization founded on the conception of the single personality of the Deity in contrast to the orthodox doctrine of His triune nature. The corresponding term 'Trinitarian' was first used in the modern sense by Servetus in 1546. The adjective 'Unitarian' has sometimes been employed beyond the limits of Christianity—*e.g.*, in connexion with Muhammadanism; this article deals only with the development of modern Unitarianism on Christian lines. The place of the corresponding doctrine in the NT and the early Church must be studied in the usual authorities on historical theology.

1. Beginnings on the Continent.—The general movement of humanism at the opening of the 16th cent. led to a variety of speculation which was largely stimulated by the publication of the Greek text of the NT by Erasmus (1516). His omission of the famous Trinitarian verse, 1 Jn 5^7, and his aversion to the scholastic type of disputations produced a marked effect on many minds. The earliest literary trace of anti-Trinitarian tendencies is usually found in a treatise of Martin Cellarius

[1] x. 28-31. [2] Jahn Cat. 153.

[1] x. xxxi. 11. [2] See § 4 below.

(1499–1564), pupil of Reuchlin, and at first a follower and friend of Luther. In 1527 he published at Strassburg a work entitled *de Operibus Dei*, in which he used the term *deus* of Christ in the same sense in which Christians also might be called *dei* as 'sons of the Highest.' The first treatise of Servetus (1511–53), *de Trinitatis Erroribus*, followed in 1531. The minds of the young were on the alert. Teachers, theologians, lawyers, physicians, mathematicians, men of letters and science, were all astir. They travelled and discussed, and new views were carried far and wide. In Naples a young Spaniard, John Valdes, became the centre of a religious group of noble ladies for the study of the Scriptures till his death in 1541; and in 1539 Melanchthon found it necessary to warn the Venetian senate of the existence of widespread Servetianism in N. Italy. Out of this circle comes Bernard Ochino (1487–1565) of Siena, who passes slowly through Switzerland to London, serves as one of the pastors of the Strangers' Church (1550–53) till it is broken up by Queen Mary, takes shelter again in Zürich, and finally migrates to Poland in 1559, and joins the anti-Trinitarian party. There Catherine Vogel, a jeweller's wife, had been burned at the age of 80 in 1539 at Cracow for believing in 'the existence of one God, creator of all the visible and the invisible world, who could not be conceived by the human intellect.'[1] An anti-Trinitarian movement showed itself at the second synod of the Reformed Church in 1556, and in 1558 secured a leader in the person of a Piedmontese physician, George Blandrata. Dutch Anabaptists started various heretical movements, and David Joris of Delft (1501–56) declared in his *Wonder-book* (1542) that there is but 'one God, sole and indivisible, and that it is contrary to the operation of God throughout creation to admit a God in three persons.' Thousands of Protestants from Germany, Alsace, and the Low Countries, migrated to England in the reign of Henry VIII., and the Strangers' Church under Edward VI. contained also Frenchmen, Walloons, Italians, and Spaniards.

2. Beginnings in England.—English thought was not unaffected. In the 15th cent. Reginald Peacock, bishop of Chichester, had opened the way by his two treatises, the *Repressor of overmuch Blaming of the Clergy*[2] and the *Book of Faith*,[3] to the discussion of the relative values of Scripture, tradition, and reason as grounds of faith, and had pleaded for freedom of investigation. Lollard and Anabaptist diverged in different directions from orthodoxy along independent lines. On 28th Dec. 1548 a priest named John Assheton abjured before Cranmer the 'damnable heresies' that 'the Holy Ghost is not God, but only a certain power of the Father,' and that 'Jesus Christ, that was conceived of the Virgin Mary, was a holy prophet . . . but was not the true and living God.' In the following April a commission was appointed to search out all Anabaptists, heretics, or contemners of the Common Prayer. A number of London tradesmen were brought before this body in May. The opinions which they recanted included the statements 'that there was no Trinity of persons; that Christ was only a holy prophet and not at all God; that all we had by Christ was that he taught us the way to heaven.'[4] Occasional executions took place, such as that of the surgeon George van Parris, of Mainz, in 1551 for saying that God the Father was the only God, and Christ was not very God. The Eastern counties, being in constant communication with Holland, supplied most of the victims, down to Bartholomew Legate, of Essex, who declared Christ a 'mere man,' but 'born free from sin,' and who was the last sufferer by Smithfield fires (1612), and Edward Wightman, who was burned a month later at Lichfield, charged with ten various heresies as incongruous as those of Ebion, Valentinus, Arius, and Manes.[1] One foreign teacher, Giacomo Aconzio (Latinized as Acontius, born at Trent about 1520), held his own through the troubled times. Engineer and theologian, philosopher and lawyer, mathematician and poet, he came to England in 1559, and received a post at Elizabeth's court, which he managed to retain even when Bishop Grindal excommunicated him two years later for advocating tolerance to Anabapists. In his *Stratagemata Satanæ*[2] he drew a distinction between articles of faith necessary to salvation and beliefs derived from them which might be matters of dispute. Adhering to Scripture, he declared the Father to be 'the only true God'; affirmed the moral, not the essential, filiation of Jesus Christ; and asserted the subordination of the Holy Spirit to the Father. But the time was not yet come for his full influence in England.

3. Types of speculation.—Three types of speculation were thus in the European field by the middle of the 16th century. (1) That of Servetus was founded on the 'dispositio' of Irenæus and the 'economy' of Tertullian;[3] the Trinity was a Trinity of manifestations or modes of operation; when God is all in all (1 Co 15^{28}), 'the Economy of the Trinity will cease.'[4] His theology was Christocentric: 'There is no other person of God but Christ . . . the entire Godhead of the Father is in him.'[5] (2) Many of the Anabaptists were Arians. (3) A humanitarian view of Jesus, recognizing a miraculous birth, was beginning to claim attention. The last of these succeeded in establishing itself in the east of Europe before English Unitarians began to move.

4. The Socinian development.—When Blandrata reached Poland in 1558, he found that there were already some anti-Trinitarians in the Protestant synod. Seven years later they were excluded, and they consequently formed a small group which refused to call itself by any other name than Christian, though other titles (such as the Minor Church) were sometimes applied to it. In 1579 the settlement of Faustus Socinus in their midst led to the establishment of a new theological type to be long known in Western Europe as Socinianism (*q.v.*).

Socinus (1539–1604) belonged to a distinguished Italian family, the Sozini, in Siena. His uncle Lelius Socinus (1525–62) had evaded the Inquisition by flight to Switzerland in 1547. He became the friend of Calvin and Melanchthon; he visited England; he travelled to Poland. He did not escape controversy and suspicion; he would not deny the doctrine of the Trinity, but he would accept it only in the words of Scripture. Faustus Socinus was of a more aggressive temper. At twenty-three years of age he published his *Explicatio primæ partis primi capitis Evangelii Johannis*,[6] in which he ascribed to Christ only an official and not an essential deity. A long series of works followed, and in 1578 he accepted an invitation from Blandrata, then in the service of Prince John Sigismund of Transylvania, and went to Kolozsvár. Blandrata had invoked his aid against Francis Dávid, who rejected all forms of

cultus addressed to Christ.[1] Socinus pleaded for the *adoratio Christi* as obligatory on all Christians, and urged that the *invocatio Christi* should not be forbidden. In 1579 he settled in Poland, where the rest of his life was spent. The members of the Minor Church were converted to his views, which found expression in the *Racovian Catechism* issued in Polish in 1605, a year after his death.[2] A Latin edition followed in 1609. The Polish adherents of Socinus failed, however, to hold their ground. Deprived of their right to office, their leaders were powerless. Roman Catholic reaction triumphed. Their college at Rakow was suppressed, and finally in 1660 they were offered the option of conformity or exile. Some went to Germany and Holland; some carried their worship to Transylvania, and maintained a slender separate existence till 1793. But the influence of Socinus was perpetuated in the massive volumes of the *Bibliotheca fratrum Polonorum quos Unitarios vocant*, published at Amsterdam (1665-69). His theology rested on a rigid view of the authority of Scripture.[3] The modern methods of historical criticism were of course unknown. Philosophy raised no difficulties about the supernatural, but reason started objections from the side of the multiplication-table.

'The essence of God is one,' says the *Racovian Catechism*, 'not in kind but in number. Wherefore it cannot in any way contain a plurality of persons, since a person is nothing else than an individual intelligent essence. Wherever then there exist three numerical persons, there must necessarily in like manner be reckoned three individual essences, for in the same sense in which it is affirmed that there is one numerical essence, it must be held that there is one numerical person.'[4]

But Socinus admitted the application of the term 'God' to Christ in an inferior sense (Jn $10^{34ff.}$), and argued from Jn 3^{13} that after his baptism Christ had been conveyed to heaven, where he had beheld his Father, and heard from him the things which he was afterwards sent back to earth to teach. Raised again to heaven after his resurrection, he was made the head of all creation, with divine authority over the world, and in that sense God. He was thus no 'mere man,' and deserved divine honour. Modern Unitarianism has departed widely from this Christology. Apart from the necessarianism of Priestley, it is nearer to Socinus in its view of human nature, which he treated (against the Calvinists) as endowed with free will, and capable of virtue and religion. But the Polish Unitarians did not regard it as intrinsically immortal. A future life would be a gift direct from God, its conditions being made known by Christ. For those who did not fulfil them there was no hell, only extinction.

Unitarianism acquired ecclesiastical status also in the adjoining province of Transylvania. In 1563 Blandrata was invited by Queen Isabella to the court of her son Prince John Sigismund. At Kolozsvár (Klausenburg) he was brought into contact with Francis Dávid, who had been sent by his Roman Catholic teachers to Wittenberg. There Dávid had passed into Lutheranism, but afterwards, dissatisfied with its doctrine of the sacraments, he joined the Calvinists. His distinction led to his appointment (1564) as bishop of the Hungarian churches in Transylvania. Under Blandrata's influence he began to doubt the separate personality of the Holy Spirit, and became involved in discussions with the Calvinist leader, Peter Melius. In these debates Melius is said to have first used the word *Unitarius*. Dávid was strong enough to carry large numbers of clergy and laity with him. In 1568 a royal edict was issued, granting entire freedom of conscience and speech, and giving legal recognition to 'the Four Religions,' Roman Catholicism, Lutheranism, Calvinism (or Reformed), and 'the Klausenburg Confession.' More than 400 preachers with their churches, and many professors in colleges and schools, ranged themselves under Dávid's supervisorship. Dávid, however, soon advanced another step, and questioned the propriety of prayer to Christ. Blandrata's attempt to influence him through Faustus Socinus (1578) did not convince him, and in the following year, under a Roman Catholic prince, Dávid was tried for innovation in doctrine and sentenced to imprisonment. Five months later (Nov. 1579) he died in the castle of Deva in his seventieth year.

The name *Unitarius* first appeared in an authoritative document in a decree of the Synod of Lécsfalva in 1600. It was formally adopted by the Church in 1638. For two centuries after Dávid's death the community was in frequent danger from political and religious vicissitudes. Their churches were transferred to Calvinists or to Roman Catholics; they were deprived of their schools; they were debarred from public office. A statute of 1791, however, confirmed their position as one of 'the Four Religions,' and they have since enjoyed ecclesiastical peace.[1] They have now about 140 churches, chiefly among the Szeklers of Transylvania, with a few in Hungary, including a vigorous modern foundation in Buda-Pesth. Till 1919 their bishop sat in the Hungarian House of Peers. At Kolozsvár they have a university, and they have devoted great attention to education. No doctrinal subscription is imposed upon their ministers, and under the influence of progressive change, and contact with Unitarian teaching in England and America, the Socinian Christology has been abandoned. The official hymn-book of 1865 made no provision for the worship of Christ.

5. **Growth of Unitarianism in England.**—The teaching of Socinus gradually made its way into England. The Latin version of the *Racovian Catechism* was sent to England with a dedication to James I.; it was formally burned in 1614. Two Socinian works appear in the first two catalogues of the Bodleian Library (1620–35), but a considerable number may be traced in the catalogue by Thomas Hyde in 1674. Bishop Barlow, himself once librarian, in *Directions for the Choice of Books in the Study of Divinity* (originally drawn up in 1650 and expanded after 1673), named numerous others in connexion with a syllabus of the principal questions at issue between Socinians and other Reformed communions.[2] Theology was deeply concerned with the claims of the Roman Catholics on the one hand and the controversies of the Puritans on the other, and from the days of Richard Hooker (1553–1600) a series of writers discussed the respective authority of the Church, the Scriptures, and reason. Doubtless revelation was necessary, but Scripture was its medium. If it was the teacher of theology, what was theology, asked Hooker, but the science of divine things? and 'what science,' he went on to ask, 'can be attained unto without the help of natural discourse and reason'?[3] The Arminian revolt against Calvinism tended in the same direction, and 'the ever memorable' John Hales (1584–1656), when he

[1] See below.

[2] The town of Rakow, founded in 1569, was the ecclesiastical base, with a school and university (1602).

[3] His treatise *de Auctoritate S. Scripturæ*, written in 1570, was first published at Seville, and claimed by a Jesuit Lopez as his own. Commended in 1728 in a charge by Bishop Smallbrooke, it was translated into English by Edward Combe in 1731.

left the Synod of Dort after hearing Episcopius expound Jn 3[16], 'bid John Calvin good-night.'[1] A stream of protest flowed on against the attempt to define the mysteries of the Godhead beyond the terms of Scripture. It had been the plea of Acontius in the *Stratagemata Satanæ*; and William Chillingworth (1602–44) owned him as his teacher of the mischief of creeds which led to the 'persecuting, burning, cursing, damning of men for not subscribing to the words of men as the words of God.'[2] Chillingworth was indebted for acquaintance with Socinian literature to Lord Falkland. He had seen some volumes in the rooms of Hugh Cressy of Merton College, Oxford, who 'claimed to have been the first to bring in Socinus's books.' Cressy afterwards became a Benedictine monk; Falkland was designated by John Aubrey 'the first Socinian in England.' Other and wider influences were at work. Lord Herbert of Cherbury (1583–1648) in his *de Veritate*[3] analysed the whole faculties of the mind, and discovered among its *notitiæ communes*, innate, of divine origin, and indisputable, certain 'common notions' of religion in five articles. These he exemplified historically twenty years later in the *de Religione Gentilium* (completed in 1645), one of the earliest treatises in comparative theology. The great authority of Grotius (1583–1645) gave special weight to his exposition of Christianity in the *de Veritate Religionis Christianæ*.[4] He discourses of the attributes of God, but is silent about His triune nature. He proves that there was such a person as Jesus, that he rose from the grave and was worshipped after his death. He vindicates his character as Messiah, but never mentions the Incarnation. His *Annotationes* on the NT were equally free from traditional dogma. It was not surprising that Stephen Nye, the author of the *Brief History of the Unitarians also called Socinians*,[5] should affirm that he 'interpreted the whole according to the mind of the Socinians.' Under such influences diversity of opinion was recognized as inevitable. Writers so different as Hales, Jeremy Taylor,[6] and Milton[7] declare in almost the same words that heresy is not a matter of the understanding; the faithful pursuit of reason did not make a heretic; the mischief lay in the influences that perverted the will. Chillingworth thought it possible to reduce all Christians to unity of communion by showing that diversity of opinion was no bar to it. That all Christians should think alike was an impossibility; it remained for them to be 'taught to set a higher value upon those high points of faith and obedience wherein they agree than upon those points of less moment wherein they differ.'[8] Such writers did not adopt the theology of Socinus, but they were in agreement with him in his plea for Scriptural statements rather than dogmatic creeds. 'Vitals in religion,' said Benjamin Whichcote (1609–83), the leader of the Cambridge Platonists, 'are few.'[9]

Meanwhile an occasional English traveller like Paul Best (1590–1657) had visited Poland and returned infected. Milton noticed in the *Areopagitica*[10] the 'stay'd men' sent by 'the grave and frugal Transilvanian' to learn the 'theologic arts' of England. The danger of Socinianism was spreading. The Convocations of Canterbury and York agreed in June 1640 to prohibit the import, printing, or circulation of Socinian books; no minister should preach their doctrines; laymen who embraced their opinions should be excommunicated.[1] A series of angry writers denounced them with shrill abuse. Parliament made the denial of the Trinity a capital crime (1648), but an English translation of the *Racovian Catechism* was published in 1652 at Amsterdam, followed by *A Twofold Scripture Catechism* from the pen of John Biddle in 1654. These works led the Council of State to order John Owen, whom Cromwell had made Dean of Christ Church and Vice-Chancellor of the university of Oxford, to prepare a reply. His *Vindiciæ Evangelicæ* appeared in 1655.

'Do not *look* upon these things,' he wrote with heat,[2] 'as *things afar off* wherein you are *little concerned*; the *evill* is at the *doore*; there *is* not a *Citty*, a *Towne*, scarce a *Village* in *England*, wherein some of this poyson is not poured forth.'

6. **Influence of Biddle and Locke.**—John Biddle (1616–62) has often been called the father of English Unitarianism. Sprung from the family of a Gloucestershire yeoman, he came up to Oxford in 1634, and graduated M.A. in 1641. The Gloucester magistrates appointed him shortly after to the mastership of the free school in the parish of St. Mary de Crypt. There his Biblical studies led him independently to doubt the doctrine of the Trinity, the particular difficulty being the deity of the Holy Ghost. Imprisonment in Gloucester and at Westminster did not prevent him from publishing his views, which became more and more opposed to the prevailing orthodoxy. Released in 1652, he founded for the first time gatherings for the exposition of the Scriptures on anti-Trinitarian lines, and these developed into regular meetings for worship. Biddle's catechism shows distinct Socinian influence in the views that Christ as man was taken up into heaven to be instructed for his prophetical office, that God's love was universal, and that Christ died to reconcile man to God, not God to man. But Biddle did not adopt the Socinian practice of prayer to Christ. In spite of imprisonment and exile in the Scilly Islands (1654–58) he gathered followers in increasing numbers. They were sometimes called Biddelians, sometimes Socinians, but they are said to have preferred the name Unitarian to all others.[3]

The death of Biddle in 1662 and the Act of Uniformity checked the movement as an organization for worship, but it continued as a mode of thought. The constant plea for a return from the creeds to the Scriptures led Milton finally into an Arian Christology. Thomas Firmin (1632–97), a wealthy and generous mercer, who had been the friend of Biddle and also had close relations with Archbishop Tillotson (1630–94), promoted the circulation of literature. The *Brief History of the Unitarians, also called Socinians*, was published at his request in 1687. The Toleration Act of 1689 excluded those who denied the Trinity on the one side, and Roman Catholics on the other. But an active controversy broke out the following year, which resulted in the production of a long series of Unitarian tracts (1691–1705) largely financed by Firmin, in which the chief ecclesiastical disputants, John Wallis and William Sherlock,[4] were cleverly played off against each other, and the argument was enforced on grounds of Scripture and early patristic testimony. The Unitarian influence was so strong that Parliament found it necessary (1698)

[3] The name has been found by Alex. Gordon in a controversy between Henry Hedworth and William Penn in 1672. The pamphlets are preserved in the Friends' Library at Devonshire House, Bishopsgate, London, E.C.
[4] Cf. John Barling, *A Review of Trinitarianism*, London. 1847, p. 71; John Hunt, *Religious Thought in England*, 3 vols., do. 1870–73, ii. 201 ff.

to threaten the profession of the obnoxious heresy with cumulative penalties amounting to the loss of all civil rights, and three years' imprisonment. But in the meantime a new and powerful influence had entered the field. In 1695 John Locke (1632–1704) had published his treatise on *The Reasonableness of Christianity*.

Locke's *Letters concerning Toleration*[1] and his *Essay concerning Human Understanding*[2] had already placed him at the head of contemporary English thinkers. It was a lamentable sign of the heated temper of the time that the inquiry into the essential nature of Christianity was published anonymously. Locke did what Grotius and Hobbes (in the *Leviathan*[3]) had done before him. He went back to the Gospels and the first preachers of the new faith, and found that their message consisted in the proclamation of Jesus as the Messiah, the proof of this character resting on his fulfilment of prophecy and his miracles, especially the Resurrection. He had indeed already confided to his journal in 1681 the pregnant remark that the miracles were to be judged by the doctrine, and not the doctrine by the miracles. But he could still say in 1703 that the Scripture had God for its authority and truth without any mixture of error for its matter. This did not, however, prevent him from recognizing the occasional character of the apostolic letters; and in the paraphrases of the Epistles of St. Paul[4] (published after his death), by treating their teaching as relative to the age and persons for whom it was designed, he really laid the foundation of the historical method. His whole theory of knowledge, however, and his polemic against innate ideas, led him to fall back on the conception of revelation, and to find in Scripture an ultimate authority for religious truth. Meanwhile the violence of some of the Trinitarian controversialists drove many minds along the paths already trodden by Milton and Sir Isaac Newton in the direction of some form of Arianism. William Whiston (1672–1752), who had succeeded Newton at Cambridge as Lucasian professor in 1703, was deprived for this heresy in 1710; and it was in the background of the treatise of Samuel Clarke (1675–1729) on *The Scripture Doctrine of the Trinity*,[5] though he objected to the ancient Arian statement, 'there was [a time] when there was no Son.'

The formularies of the Church of England prevented anything like general change within its ranks. But Protestant Dissent was not organized on the basis of dogmatic creeds. The English Presbyterians under the leadership of Richard Baxter (1615–91) had ardently desired comprehension in the Establishment, but they had as ardently repudiated what they called 'human impositions.' Driven out of the Anglican Church, and unable to create a Presbyterian polity, they found themselves side by side with the Congregationalists in 1689. When they took out licences for places of worship, their trustees avoided doctrinal tests, though they themselves were mainly Calvinistic. They often devoted their chapels to 'the worship of God by Protestant Dissenters.' Sometimes the Presbyterians were named, sometimes the Independents, sometimes both conjointly. They reserved to themselves, in the language of Timothy Jollie of Sheffield (1659–1714), 'liberty to reform according to Scripture rule in doctrine, discipline and worship.'[6] The way was thus open to gradual theological modification. The process was slow, and its operation unequal in different places. Pastors and people did not always move together. The transition through varying types of Arianism naturally took place at varying rates · *e.g.*, Nathaniel Lardner (1684–1768), after resting in Clarke's Arianism, finally abandoned it in his *Letter* on the Logos.[1] The result was that at the beginning of the 19th cent. nearly 200 chapels were occupied by Unitarians, whose principles were unfavourable to sectarian activity. When the Manchester Academy (now Manchester College, Oxford) was opened in 1786, its first principal, Thomas Barnes, who dedicated it 'to Truth, to Liberty, and to Religion,' was himself an Arian. His colleague, Ralph Harrison, became a Unitarian. True to the practice of their forefathers, the founders refrained from imposing any tests on either tutors or students. The Presbyterian Board, established in 1689, governs the Presbyterian College at Carmarthen—the continuator of a series of academies, the first of which was founded on the same basis by Samuel Jones, sometime fellow of Jesus College, Oxford, one of the 2000 ejected ministers of 1662.

7. The work of Priestley and Belsham.—The process of theologic change was promoted from another side. Joseph Priestley (1733–1804), bred among the Independents, threw off the Calvinistic theology of his youth, and, after resting a little while in Arianism, reached in 1768, while minister at Leeds, a simple humanitarian view of the person of Jesus. His scientific studies had already gained him the fellowship of the Royal Society (1766), and his *Appeal to the Serious and Candid Professors of Christianity*[2] carried his name in 30,000 copies all over England. His industry, his wide range of knowledge, his clearness of thought and style, his fearless utterance, his untiring earnestness, his elevation of purpose and purity of life, his simple piety, secured for his theological and philosophical teaching a dominant position in Unitarian thought. At Doddridge's Academy at Daventry he had studied Hartley's *Observations on Man*,[3] and adopted a materialist view of human nature. But this in no way impaired the religion which he learned from the Gospels. The teachings of Jesus, guaranteed by his miracles and triumphantly established by his resurrection, supplied him with a positive ground for faith; and the identification of the God of revelation with the Sole Cause of all phenomena, including every form of human activity, created a type of religious sentiment which long pervaded Unitarian devotion. In his *Doctrine of Philosophical Necessity Illustrated*[4] he affirmed that his doctrine should produce 'the deepest humility, the most entire resignation to the will of God, and the most unreserved confidence in his goodness and providential care.'[5] Among the Yorkshire acquaintances of Priestley was Theophilus Lindsey (1723–1808), vicar of Catterick on the Tees. A movement had been started by a small group of the clergy of the Establishment for the relaxation of the terms of subscription. The failure of a petition to Parliament led Lindsey to resign his living (1773) and make his way to London. There in 1774 he opened an auction-room in Essex Street, Strand, as a Unitarian chapel, and thus 'first organized Unitarian Dissent as a working force in the religious life of England.'[6] He used the Anglican liturgy adapted to 'the worship of the Father only.'

The London movement was reinforced in 1789 by the appointment of Thomas Belsham (1750–

1829), once like Priestley an Independent, to a theological tutorship in a college at Hackney. A scholar of no small attainments, he wielded a vigorous pen, and took a leading share in promoting the development of denominational activity. This was opened in 1791 by the foundation of the 'Unitarian Society for promoting Christian knowledge and the Practice of Virtue by the Distribution of Books.' Lindsey, Priestley, and Belsham were its leaders. The preamble and rules, drawn up by Belsham, contained the first public profession of belief in the proper unity of God, and of the simple humanity of Jesus Christ, in opposition both to the Trinitarian doctrine of three Persons in the Deity and to the Arian hypothesis of a created Maker and Preserver of the world. The love of civil and religious liberty prompted a petition the next year (1792) for the abolition of the penal laws affecting religion, to which Charles James Fox lent his aid, and this was accomplished in 1813 (so far as Unitarians were concerned) by the repeal, through the efforts of William Smith (1756–1835), M.P. for Norwich, grandfather of Florence Nightingale, of the clauses of the Toleration Act which rendered the profession of Unitarianism illegal. Meanwhile local Unitarian associations had been founded, and a denominational literature was springing up. Chapels long closed were reopened; new congregations were assisted; a Unitarian Fund was started; and missionaries were sent out to various parts of the kingdom. Endowed by the Act of 1813 with civil rights, the Unitarians proceeded to form an association for protecting them (1819); and finally in 1825 a number of separate organizations were amalgamated in the British and Foreign Unitarian Association. This body was created to promote the principles of Unitarian Christianity. But its founders refrained from imposing any definition of them on its adherents. In the spirit of the English Presbyterians of a century and a half before, they left each member free to interpret them for himself.

The type of Unitarianism then prevailing was largely shaped by the writings of Priestley and Belsham. There were still Arians of different degrees (designated as 'high' and 'low') among both ministers and congregations. But the emphasis of controversy fell more and more clearly on the humanity of Jesus, and the proof of this lay in the Scriptures. The doctrine of their plenary inspiration was indeed denied. Criticism had already distinguished different documents in Genesis. The narratives of the birth of Jesus were inconsistent with each other, and one or both might be rejected. But both the OT and the NT contained 'authentic records of facts and of divine interpositions,' and Charles Wellbeloved, principal of Manchester College, York, could write in 1823:

'Convince us that any tenet is authorised by the Bible, from that moment we receive it. Prove any doctrine to be a doctrine of Christ, emanating from that wisdom which was from above, and we take it for our own, and no power on earth shall wrest it from us.'[1]

On this basis Jesus was presented as 'a man constituted in all respects like other men, subject to the same infirmities, the same ignorance, prejudices and frailties,'[2] who was chosen by God to introduce a new moral dispensation into the world. For this end the Holy Spirit was communicated to him at his baptism. He was instructed in the nature of his mission and invested with voluntary miraculous powers during his sojourn in the wilderness, and, thus equipped as the Messiah, was sent forth to reveal to all mankind without distinction the great doctrine of a future life in which men should be rewarded according to their works. Of this the supreme proof was found in the Resurrection, to which his death on the cross as a martyr to the truth was a necessary preliminary; and he was destined to reappear to raise the dead and to judge the world. From this scheme all theories of atonement and satisfaction disappeared. Priestley with his usual frankness had admitted that a necessitarian 'cannot accuse himself of having done wrong in the ultimate sense of the words.'[1] But, though this type of Unitarianism was deficient in the sense of sin and produced a curious reluctance to recognize the existence of a 'soul,' its teachers lived habitually at a high moral tension, demanding a constant conformity of the will of man to the will of God. Associated with the emphatic assertion of the Father's wisdom and beneficence, such views naturally anticipated the final victory of good. Thomas Southwood Smith (1788–1861) in his *Illustrations of the Divine Government*[2]—a book warmly admired by Byron, Moore, Wordsworth, and Crabbe—powerfully impressed on Unitarian thought the doctrine of universal restoration, which had already found utterance in one of Cromwell's chaplains, and gained various champions (Hartley among them) in the 18th century.[3]

8. Legal difficulties.—The modifications of belief which had brought many of the occupants of chapels erected by Presbyterians and Independents to Unitarian theology at last aroused the attention of those who remained orthodox. Besides a number of meeting-houses, the Unitarians were in possession of two important trusts—Lady Hewley's Charity in York (1704), and Dr. Williams's Trust in London (1716). A suit was instituted against Lady Hewley's trustees in 1830. Legal proceedings were slow and costly, and on 23rd Dec. 1833 judgment was finally given against them. One of the trustees was the minister of St. Saviourgate Chapel (which Lady Hewley had habitually attended), Charles Wellbeloved. It was at once seen that the whole tenure of the chapels was endangered. A long period of litigation followed, but the Law Lords finally confirmed the first decision in 1842. Meanwhile numbers of suits were threatened for the recovery of the buildings, burial-grounds, and endowments which had descended in undisputed succession through generations of pastors and laity. Between Lady Hewley's pastor, John Hotham, and Charles Wellbeloved there had been but one ministry, that of Newcome Cappe (1755–1800); the three pastorates covered 144 years. In the presence of such continuity of tenure the claim of the existing occupants was irresistible, and in 1844 the Dissenters' Chapels Act, introduced by the Government, gave the needed relief. Without naming either Presbyterians or Unitarians, it secured to such Dissenting congregations as had no creeds or tests the right to change their opinions as they saw fit in the lapse of time.[4] The chapels subsequently built by Unitarians, and the funds raised for the support of their ministers, have been almost invariably founded on the principle known as 'open trust.' The consciousness of this historic evolution supplies the key to the conflict of tendencies in modern Unitarianism between the impulse to theological denominationalism and the desire to realize on however small a scale the 'Catholic communion' which had been the ideal of the English Presbyterians who followed Baxter.

9. Martineau and the modern school.—The most potent personal influence in the latter direction was that of James Martineau (1805–1900) (*q.v.*).

[3] See art. UNIVERSALISM.

[4] Cf. the speech of W. E. Gladstone, on the second reading, *Parliamentary Debates on the Dissenters' Chapels Bill*, London, 1844, p. 165.

In his first work, *The Rationale of Religious Inquiry*,[1] he abandoned the position of the older Unitarianism, which would have accepted the doctrines of the Trinity, the Atonement, and everlasting torments, if they could be found in the Scriptures. 'No seeming inspiration,' he affirmed, 'can establish anything contrary to reason.'[2] Three years later in the famous Liverpool controversy (1839), in the midst of incisive criticisms of the evangelical scheme of salvation, he laid the foundations of a new view of revelation no longer as a communication of truth, certified by miracles, but as an appeal to the conscience and affections—and a fresh interpretation of the moral life on the basis of free will instead of necessity. Meanwhile he was reading Strauss, and soon reached the conclusion that belief in miracles was not essential to Christianity. The Messianic function of Jesus was thus undermined. Wellbeloved had already insisted on the contemporary significance of many of the prophecies supposed to refer to Christ. When the miracles were disowned, the second guarantee of the supernatural character of Jesus fell away: the followers of Locke found themselves deprived of their 'reasonable' Christianity, and the faith of Christ seemed to become only a superior kind of natural religion. Martineau meanwhile pursued a double line of study. In a group of articles in the *Westminster Review* he expounded the Tübingen reconstruction of the origins of Christianity on its critical side, while on the philosophical he vindicated the communion of the human spirit with the Divine, and presented Jesus as the expression, within the limits of our nature, of the righteousness and love of God. Revelation was thus transformed from supernatural instruction into the realization of more exalted character; its medium was not a written word, but a higher personality. To establish the principles of spiritual theism and find a place in man's soul for that 'dwelling in God and God in him' which Priestley had described as the highest type of personal devotion was the aim of a long series of brilliant articles in the *Prospective* and *National Reviews*, which culminated in two great treatises, *Types of Ethical Theory*[3] and *A Study of Religion*.[4] By these works, as well as by his sermons and occasional *Addresses*, he exercised an influence which went far beyond his own denomination, so that Gladstone described him as 'the greatest of living [English] thinkers.'[5]

Other writers were not inactive beside him. The saintly John James Tayler (1797–1869), in his *Retrospect of the Religious Life of England*,[6] delineated with singular breadth of view and literary charm the significance of contrasted principles of authority and freedom; and from his pen came the first formal discussion of the Johannine question in England in his *Attempt to ascertain the Character of the Fourth Gospel*.[7] A long series of scholars had pleaded for the revision both of the text and of the translation of the NT; and, by the advice of the veteran John Kenrick, George Vance Smith was invited to join the company of the Revisers (1870). In James Drummond (1835–1918) Unitarianism possessed a theologian of the older school of learning, whose works on *The Jewish Messiah* (1877), *Philo Judæus* (1888), *Inquiry into the Character and Authorship of the Fourth Gospel* (1903), and *Studies in Christian Doctrine* (1908) maintained the tradition of devout scholarship. John Relly Beard (1800–76) led the way to modern dictionaries of the Bible by his *People's Dictionary of the Bible*,[1] and made other valuable contributions to theological literature. Cultivated laymen, also, such as Edgar Taylor, Samuel Sharpe, and H. A. Bright, rendered no small services to the Unitarian cause. Most influential of all, perhaps, in its protest against prevailing supernaturalism was *The Creed of Christendom*[2] by William Rathbone Greg. Francis William Newman and Frances Power Cobbe found many readers; and the writings of Ralph Waldo Emerson and Theodore Parker, together with the studies of Max Müller, opened the way to religion beyond the bounds of Christianity. The Hibbert Trustees, who sought to promote the spread of Christianity in 'its simplest and most intelligible form,' were the first to inaugurate in 1878 a series of lectures on the history of religions, and Manchester College included that subject in its theological course as early as 1875. The discourses of Martineau, J. Hamilton Thom, and Charles Beard provided varied illustration of the preacher's power; and the sermons and hymns of Stopford Brooke, after his withdrawal from the Church of England in 1880, presented, with a rich glow of poetic beauty, the main features of religion as understood by Unitarians.

10. **Church organizations.**—While English Unitarians have been active in education and philanthropy (witness their domestic missions in important urban centres, established on unsectarian principles after the visit of Joseph Tuckerman of Boston, Mass., in 1833), they have not attempted to secure large numerical increase. New chapels have been built, but denominational zeal has never been active. Congregational independence has been sturdily maintained. In 1882 a National Conference was organized, which has now 365 congregations in the United Kingdom on its roll, but they have no common name. Proposals for united action on Presbyterian lines were made by Martineau in 1888, but the demand for congregational autonomy defeated them. The individualism fostered by the constant plea for liberty is unfavourable to the growth of corporate church-life. Generous funds have been raised in aid of ministers' incomes and insurance, and the Conference has found it necessary to lay down educational qualifications for access to these benefits, and has thus constituted an accredited class of religious teachers. Unitarianism has thriven actively in some districts of Wales, but it has little hold in Scotland. The oldest of its congregations north of the Tweed was founded at Edinburgh in 1776. In Ireland Thomas Emlyn was prosecuted at Dublin in 1703 for denying the deity of Christ. Ulster Presbyterianism witnessed a movement against subscription which culminated in 1726 in the formation of a separate Presbytery of Antrim on a non-subscription basis. Many of the ministers passed through Arianism to Unitarianism, and in 1830 the Remonstrant Synod of Ulster was formed. At the same time, largely through the zeal of Martineau, then assistant pastor in Dublin, an Irish Unitarian Christian Society, embracing both individuals and congregations, was established in Dublin, which was merged (1835) in an Association of Irish Non-subscribing Presbyterians and other Free Christians, including the Presbytery of Antrim, the Synod of Munster, and the Remonstrant Synod of Ulster. Finally, in 1910 the Antrim Presbytery and the Ulster Synod united for purposes of church government under the name of the Non-subscribing Presbyterian Church of Ireland.

11. **Unitarianism in America.**—Unitarianism in America sprang out of the Congregational order

of the New England churches. Their theology was Calvinistic, but the 17th cent. foundations were based upon religious covenants instead of dogmatic creeds. Thus the First Church in Boston affirmed :

'We . . . do hereby solemnly and religiously promise and bind ourselves to walk in all our ways according to the rule of the Gospel, and in all sincere conformity to [Christ's] holy ordinances, and in mutual love and respect to each other, so near as God shall give us grace.'[1]

The way was thus open, as in English Dissent in the 18th cent., to gradual theologic change. The literature of the Trinitarian controversy passed across the Atlantic, and the leaven of discussion in the works of Sherlock and South, Clarke and Whiston, supplemented by the writings of the Unitarian Emlyn, began to produce its effect. A slow movement towards Arianism and Arminianism set in, invigorated by reaction against the 'great awakening' under Jonathan Edwards (1735) and the early preaching of George Whitefield (1740). Jonathan Mayhew (1720–66) and Charles Chauncy (1705–57), pastors in Boston, led the way towards a more liberal faith. Under the ministry of James Freeman (1759–1835) the congregation of King's Chapel purged their Anglican liturgy of all references to the Trinity (1785). By this act, says the historian of the chapel, the first Episcopal church in New England became the first Unitarian church in the New World. The writings of Priestley and Lindsey were freely circulated, and at the end of the century the doctrine against which they protested had been rejected by all the Boston ministers but one. The name Unitarian was indeed rarely attached to the churches, but the mode of thought and worship prevailed more and more widely. It was found all the way from Portland (Maine) to Charleston (S. Carolina).

In 1803 William Ellery Channing (1780–1842) came to Boston and began the ministry which so powerfully influenced Unitarian thought. In reaction against a still powerful Calvinism, with its doctrines of human depravity, the wrath of God, and the atoning sacrifice of Christ, he proclaimed 'one sublime idea,' which he defined as 'the greatness of the soul, its divinity, its union with God by spiritual likeness, its receptivity of his Spirit, its self-forming power, its destination to ineffable glory, its immortality.'[2] This was the real challenge to New England orthodoxy; it operated with no less force in dispelling the materialism of Priestley and giving a fresh impulse of spiritual life to Unitarianism on both sides of the ocean. With this exalted view of man's true being, Channing declared himself surer that his rational nature was from God than that any book is the expression of His will; and reason and conscience were thus enthroned in the ultimate seat of judgment. Neither philosopher nor scholar in the technical sense, he exercised by his religious genius and the force of his ethical appeal a far-reaching influence both in the United States and in Europe. 'Always young for liberty,' he protested against every form of sectarian narrowness. He cheerfully took the name Unitarian because unwearied efforts were made to raise against it a popular cry, and he never was in any sense a Trinitarian. But he believed in Christ's pre-existence; he accepted his miracles. He would not, however, exclude from his fellowship the stoutest humanitarian, though he might repudiate the miracles altogether. For such a mind denominational aggressiveness was impossible, and this spirit was infused into the leaders of the movement which culminated in the foundation of the Divinity School of Harvard University in 1816, when the Unitarian controversy was at its height.

'It being understood,' said the constitution, 'that every encouragement be given to the serious, impartial, and unbiassed investigation of Christian truth; and that no assent to the peculiarities of any denomination be required either of the Students, or Professors, or Instructors.'

The movement of which Channing was the most distinguished representative soon demanded some kind of organization. Literature must be circulated, congregations assisted, and churches built. In 1825, on the same day on which English Unitarians formed their association,[1] the American Unitarian Association was constituted. A noble line of eminent scholars, theologians, historians, jurists, poets, statesmen, accepted its principles and gave dignity to its profession of faith. It was not long, however, before new forces appeared on the field. The study of German philosophy produced a school of New England transcendentalism. Ralph Waldo Emerson (1803–82) (*q.v.*) resigned the pulpit of the Second Church in Boston on the question of the observance of the Lord's Supper, and six years later his famous 'Address to the Harvard Divinity School' (1838) signalized the breach of the new thought with the older views of revelation and miracle. Theodore Parker (1810–60) emphasized the same theme in a much criticized sermon on 'The Transient and Permanent in Christianity' (1841), followed by his widely read 'Discourse of Matters pertaining to Religion' (1842). A new type of Christianity without miracle was thus presented, emphasizing the divine immanence in nature, and holding up the religion of Jesus—the love of God and the service of man—as the 'absolute religion.' Unitarianism fell into the snare from which Channing would fain have saved it, and developed an orthodoxy of its own. When Henry Whitney Bellows of New York proposed to organize the churches (1865) in a National Conference, and its members adopted the declaration that they were 'disciples of the Lord Jesus Christ,' a group of bolder spirits formed a 'Free Religious Association,' where Emerson's name appeared first on the list. In 1894, however, the Conference repudiated all authoritative tests, and simply accepted 'the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and love to man.'[2] The developments of criticism, science, and philosophy, the study of comparative religion, the desire for the widest possible fellowship, and the growing demands of philanthropy, have all contributed to broaden the outlook in every direction, and in 1900 the 'International Council of Unitarian and other Liberal Religious Thinkers and Workers' was formed in Boston. It has since held large and successful gatherings in London, Amsterdam, Geneva, Boston, Berlin (1910), Paris (1913), and Boston (1920), assembling a wide representation of different nationalities and faiths.

As in England, so also in America, Unitarianism has been an important influence in religious thought. It represents a mode of approach to the great problems of human life and destiny in which it is closely allied with the time-spirit. Its looseness of denominational organization makes its advance over so vast an area slow and hesitating, but its churches steadily increase, and in 1918 the list (including Canada) comprised 490 societies. The Divinity School at Harvard University gradually broadened out under the administration of Charles W. Eliot (1869–1909) into a school of scientific theology and independent research. The Meadville Theological School (Pennsylvania), founded in 1844, and the Unitarian Theological

School at Berkeley (California), founded in 1904, have remained more definitely within Unitarian lines.

12. **World-wide influence.**—(*a*) *The Colonies and India.*—The British Dominions, Canada, Australia, New Zealand, Africa, all have Unitarian churches. English and American Unitarians are also in close touch with the Theistic churches of India, and with Unitarian work in Japan, and receive students from the Far East into their theological colleges, besides sending out representative ministers to preach and lecture.

(*b*) *Germany.* — Continental thought has been affected by the same general influences which produced the Unitarian movement in England and America. The writings of the English Deists of the 18th cent. helped to foster German rationalism, and the critical study of the Scriptures led to the abandonment of doctrines of mechanical inspiration and Biblical authority. Belief in miracles was partly undermined by the influences of science and philosophy; and the *Leben Jesu*[1] of D. F. Strauss, together with the investigations of F. C. Baur into the development of the early Church, opened new paths for the historical treatment of the origins of Christianity. The results reached by Baur were modified by the subsequent researches of some of his own pupils, but a powerful school of thought, led by teachers such as H. Holtzmann (Strassburg), C. Holsten (Heidelberg), Carl von Weizsäcker (Tübingen), A. E. Biedermann (Zürich), R. A. Lipsius (Jena), O. Pfleiderer (Berlin), reached a position which was substantially Unitarian, though it did not employ the name or lead to withdrawal from the State Church. In 1863 a liberal union was founded under the title of the 'Protestantenverein,' which gave practical expression to this mode of thought. It still exists, though in a state of somewhat diminished activity. Recent theological liberalism has tended to take one of two directions. Under the influence of Albrecht Ritschl (*q.v.*) of Göttingen, a higher value has been ascribed to the person of Jesus, quite apart from external miracle, than was usual among the older 'liberal' theologians. Among the leaders in this direction are A. Harnack, W. Herrmann (Marburg), and H. H. Wendt (Jena). On the other hand, the study of Christianity in connexion with the religions of the empire has led younger scholars to emphasize its relations with contemporary phenomena; and along these lines the late professors W. Wrede, J. Weiss, and W. Bousset, and the brilliant group led by H. Gunkel, E. Troeltsch, C. Clemen, H. Weinel, W. Heitmüller, and H. Lietzmann have all been working. The valuable translation and commentary issued under the general editorship of Johannes Weiss,[2] and the long series of *Religionsgeschichtliche Volksbücher*, represent the general attitude of liberal theology on the problems of primitive Christianity.

(*c*) *France.*—A similar movement of thought, though more limited in range, may be traced in France, since the appearance of Renan's *Vie de Jésus*,[3] within the Reformed Church, represented especially by A. Coquerel (*fils*), Albert and Jean Réville, and a distinguished group of scholars and preachers. When the 'Séparation' took place in 1905, the Reformed Church split into two bodies, the 'National Union of Evangelical Reformed Churches' retaining a Confession of 1872, and the liberal group designating itself the 'National Union of Reformed Churches,' which is powerfully represented in the Theological Faculty of Paris, and exercises the greater influence both in the pulpit and in the press. Liberal Lutherans like Maurice Goguel and Eugène Ehrhardt share the same general view.

(*d*) *Switzerland.*—Swiss Protestantism has been affected in like manner. The abolition of formal tests of orthodoxy by the Genevan Church opened the way for a type of Christianity essentially Unitarian; and in German Switzerland the theologians of Basel and Zürich have made important contributions to both Biblical and dogmatic studies on similar lines. Practical interest in social questions is now to some extent withdrawing attention from the critical and historical inquiries of the older liberalism, and even leading to a partial reaction towards the language and ideas of orthodoxy.

(*e*) *Holland.*—A similar tendency shows itself in Holland. In the second half of the 19th cent. the Dutch Reformed Church, the Remonstrants, the Mennonites, and the Lutherans were all affected by the philosophical and scientific modes of thought which generate Unitarian theology. Scholars like J. H. Scholten, A. Kuenen, and C. P. Tiele educated successive generations of students in the newer methods of critical investigation. Many of the younger ministers of the present day, however, without returning to orthodoxy, are more inclined to recognize spiritual values in some of the old doctrines of the Church, and, while they claim to be 'liberals,' are at the same time unwilling to be classed as 'modern.' Their view of human nature is not optimistic. The natural man must be regenerated by the Spirit of Christ; for this generation there is no other way.

(*f*) *Other countries.* —In Italy a little group, assisted by various university professors, is conducting a monthly periodical, *La Riforma Italiana*, on Unitarian lines with the names of Mazzini and Channing blazoned upon its cover. There are Unitarian congregations in Denmark, Sweden, and Norway. The veteran poet Matthias Jochumssen in Iceland (†1920) espoused the same cause, and communicated his enthusiasm to his countrymen in the United States. Even among the educated negroes of Lagos on the W. African coast religious thought has produced spontaneously an active movement in the same direction.

UNITED PROVINCES OF AGRA AND OUDH.—These provinces, in which Oudh, a separate jurisdiction since its annexation in 1856, was included in 1877, were up to 1902 known as the North-West Provinces. The change of title was mainly due to confusion with that of the

North-West Frontier Province, which was formed out of some Districts of the Panjāb. The joint jurisdictions of Agra and Oudh extend between N. lat. 23° 52′ and 31° 18′, E. long. 77° 3′ and 84° 39′, with a total area of 107,267 sq. miles and a population in 1911 of 47,182,000. The Provinces contain a hilly and submontane tract to the north-west; Bundelkhand, a part of the Central Indian plateau to the south; while the central and more important region constitutes the W. and Central Indo-Gangetic Plain, the basin watered by the rivers Ganges and Jumnā (*qq.v.*). The Districts between these two main rivers until they join at Allāhābād (*q.v.*) are known as the Duāb, 'land of the two waters.'

1. **History.**—The United Provinces form one of the best-known historical regions of India. The aboriginal population, wrongly classed as Dravidian (*q.v.*) by Risley, was probably of the Mon-Khmer stock. These 'pre-Aryans' have left traces in stone implements in the hills and plains, cup-marks on boulders in the northern hills, and cave paintings in the Kaimūr range to the south. At some unknown date, possibly about 1000 B.C., the so-called 'Aryans' who had been settled for a considerable period in the E. Panjāb[1] seem to have moved gradually eastward, and the *Mahābhārata* and the *Rāmāyaṇa* epics describe the fortunes of two bodies of Kṣatriyas, one to the west with their capital at Hastinapur (*q.v.*), the other at Ayodhya, the modern Ajodhya in the Faizābād District. One wave of invaders or colonists seems in the early period to have moved along the base of the Himālaya into Magadha or Bihār; the other occupied Madhyadeśa, the 'Middle Land,' or the Duāb and its surrounding Districts.[2] For the earliest period there is no settled history till the time of Gautama Buddha (*c.* 407–487 B.C.). The next fixed date is that of Chandragupta Maurya (321–297 B.C.), the Sandrocottus of classical writers, who rose to power after the invasion of Alexander the Great. His grandson was the famous Aśoka (*q.v.*), three of whose pillar edicts have been found in the Provinces. We know little of the Kushān or Śaka invaders who entered India about the middle of the 2nd cent. B.C. The Gupta dynasty rose to power from about A.D. 320 until 450, when the first Hun invasion took place. This is remarkable because many of the Rājput (*q.v.*) houses sprang from its chiefs. In 1018 Maḥmūd of Ghaznī, the first Muhammadan invader, raided the Provinces, and under the early Muhammadan kings Delhi was the capital, being succeeded by Agra early in the 16th century. Bābur defeated the Afghān king Ibrahīm in 1526 and founded the Mughal empire, which with its capital at Agra or Delhi, under Humāyūn, Akbar, Shāhjahān, and Aurangzīb, lasted till the death of the last in 1707. Then commenced a period of anarchy until by treaty with Asafu-d-daula, Nawāb of Oudh, most of the eastern portion passed into the hands of the British. This was followed by further large cessions as the result of the Marāṭha war in 1803. In 1833 the Provinces were separated from Bengal and placed in charge of a lieutenant-governor. Since that time the only serious disturbance of order occurred in the Mutiny of 1857.

2. **Ethnology.**—The population is of a mixed type, made up of the pre-historic Mon-Khmer stratum leavened by successive entries of foreigners: Aryans, Scythians, Huns, Musalmāns. In the E. Gangetic Plain there is considerable congestion, the density of population rising to 706 per sq. mile. The people occupy 106,020 villages and 435 towns (of which 24 rank as cities), the most important in order of population being Lucknow, Benares, Agra, Cawnpur, Bareilly, Meerut. Muhammadans favour a town life much more than Hindus; out of 1000 of each faith only 72 Hindus as compared with 269 Musalmāns are urban. This concentration in towns is one cause of the progress of Islām.

3. **Religion.**—Hindus (85·04 %) are much in excess of Muhammadans (14·77 %) or Christians (·38 %), but now Hindus are slowly decreasing, and there is an increase in Muhammadans and Christians. The progress of Islām is not to any great extent the result of direct propaganda, but is due largely to social conditions. Muhammadans are more prolific; they live more in towns and under less insanitary conditions than Hindus; their diet is more varied and liberal, and they are less addicted to the use of drugs like the preparations of hemp; they marry later and allow widows to remarry, while high-caste Hindus prohibit widow-marriage. On the other hand, their women suffer in health from seclusion (*parda*), and, being confined to the house, they are more liable to attacks of plague.[1]

(*a*) *Brāhmanic Hinduism.*—What has been termed Brāhmanic Hinduism is the creed of the better classes, while the lower castes are largely animistic. It is impossible to draw the line between these forms of belief, which in all grades of society converge and intermingle. Orthodox Hinduism is regulated by a body of Brāhmans numbering 4¾ millions, many of whom enjoy a high reputation for sanctity, act as domestic priests, or study theology, philosophy, and ethics at sacred places like Benares. Those of a lower grade act as guides at places of pilgrimage, cast horoscopes, and practise various kinds of magic. The majority, however, exercise no religious functions, and make their living by agriculture or domestic service, or take employment in the army or the police. Some of the most sacred places of Hindu pilgrimage are found in these Provinces: Hardwār, shared by Śaivas and Vaiṣṇavas; Mathurā, devoted to the cult of Kṛṣṇa; Prayāg or Allāhābād, the sacred junction of the Ganges and Jumnā.[2]

(*b*) *The development of monotheism.*—An important development in recent times is the tendency to adopt a form of monotheism.

To quote R. Burn, 'the general result of my enquiries is that the great majority of Hindus have a firm belief in one Supreme God, called Bhagwān, Parameshwar, Ishwar, or Narain. Mr. Bailie made some enquiries[3] which showed that this involved a clear idea of a single personal God; but I am inclined to think that this is not limited to the more intelligent, but is distinctly characteristic of Hindus as a whole. . . . There has been much discussion as to whether this monotheistic idea has been a natural result of contact with Islām or Christianity. As pointed out above, however, the idea of a single personal God was not unknown to Hindus long before they came into touch with adherents of these two religions, and I am inclined to think . . . that the tendency of Hinduism, with all its eclecticism and elasticity, is to develop more on the lines of indigenous beliefs, than on an entirely new direction copied more or less from some foreign religion.'[4]

'The Hindu who is a Śaiva or a Vaishṇava has no real place for Parameshwar in his religious ideas, and would probably explain his presence by saying he was Śiva or Vishṇu. According to the Purānic philosophy, Parameshwar is the universal spirit when manifested as a personal god, who, according as he is dominated by activity (*rajas*), goodness (*saitva*), is separated from the divine personalities, Brahmā, Śiva and Vishṇu. This, however, is merely stated to explain his relation to them; for it is a recondite theory which does not trouble the ordinary Parameshwar worshipper. To him Parameshwar is the supreme personal God, who made the world, is pleased by good and displeased by evil deeds, but is too much exalted to trouble much about mundane affairs. If the Hindu is not professedly a Śaiva or a Vaishṇava, he will look on Śiva and Vishṇu as on the whole

subordinate to him, though much more valuable helpers in times of trouble. Still, nebulous as his idea of Parameshwar may be, it makes him at bottom a monotheist. But it is to some extent wrong to say that he "worships" Parameshwar. He may or may not repeat his name in the morning, and occasionally he has the *Sat Nārāyaṇ Kathā* recited in his honour; but this is all. It is a waste of time to importune a god with prayer and sacrifice when his attitude is one of suave aloofness; and the Hindu reserves his attentions for the minor gods and godlings.'[1]

(*c*) *Islām.*—The local distribution of Muhammadanism is dictated partly by historical, partly by economic causes.

'The Muhammadan is found chiefly where Muhammadans held sway in the past: in Meerut and Rohilkhand Divisions, the "Home Counties" of the Moghul Empire, in Agra, Farrukhābād, Jaunpur and Oudh, all centres of Muhammadan States or provinces. In Cawnpore, Allāhābād and other districts with large cities, his tendency to urban life is sufficient to explain his numerical strength; this is also a factor which affects his presence in such historically Muhammadan centres as Agra, Meerut, Lucknow, Fyzābād, and Bareilly.'[2]

(*d*) *Jainism.*—Jains, numbering 75,427 in 1911, show a tendency to decrease. The city mercantile class, deficient in virility owing to their sedentary habits, produce small families, and, as E. A. H. Blunt reports, the country Jain shows little enthusiasm for or knowledge of his religion.

'The truth seems to be that whatever theoretical differences may exist between Jainism and Hinduism, yet the followers of the same creeds in the same community do not differ very greatly in their practice. The bar to their intermarriage is no more insuperable than between Roman Catholics and Protestants. . . . Men of to-day think less about religion because the stress of modern conditions leaves them less time for other than mundane affairs. The active pursuit of religion, which means the active performance of ritual, is postponed to old age; the official or professional man takes to religion when he retires.'[3]

It is natural also that, when a Jain girl is married into a Hindu family, she rapidly succumbs to the influence of the more popular faith. Jainism being reticent and unenterprising, she naturally adopts religious usages which enjoy more prestige and which are regulated by Brāhmans, whom Jains themselves employ for their domestic rites.

(*e*) *Sikhism and other faiths.*—Sikhs, numbering 15,186, are foreigners, mostly sepoys or policemen. Parsis, Jews, and Brāhmans are also foreigners and possess little influence, while Buddhists, representatives of a faith once dominant, now number only 780, and are mainly confined to the Tibetan frontier, with a few Nepalese, Chinese artizans, Magh cooks, and other smaller groups.

The Ārya Samāj is chiefly confined to the upper and educated classes, and seems as yet to have made little impression on the peasantry.[4]

(*f*) *Christianity.*—Christians show a remarkable increase. The propaganda began with the visit of a Roman Catholic priest to Agra in 1578. It became active through the work of Henry Martyn at Cawnpur in 1810. In 1811 the Baptist Missionary Society, and in 1813 the Church Missionary Society, entered the field. Christians, including those in the Native States, numbering 58,518 in 1891 and 102,955 in 1901, increased to 179,694 in 1911.

'The new convert, may be, is no better than his predecessors; but a new generation, the children of the first generation of converts, is growing up. If the missionaries could and can get little out of that first generation, the second generation is in their hands from their earliest years. The children of the converts, born in Christianity, are very different to their parents; their grandchildren will be better still. It is this which provides the other side to the black picture so often drawn of the inefficiency of Christian conversion. And this generation is now beginning to make its influence felt. The Hindu fellows of these converts have now to acknowledge not only that they are in many ways better off than themselves, but that they are better men. And this has undoubtedly contributed to the better esteem in which Christians are regarded. . . . A convert, no doubt, is still outcasted, but he is now regarded as a member of a fresh caste, and Hindus bear with his idiosyncrasies as they do with those of any other caste.'[1]

UNITY.—See CHURCH.

UNIVERSALISM.—1. Uses of the term.—The word 'universalism' has been used in at least three distinct senses. (*a*) It is convenient to take first in order the use of the word which is in fact the most modern. It designates the setting aside of the belief that a nation or a race is privileged to enjoy the special protection and favour of God, or of a deity whom it recognizes as peculiarly its own; and contemplates all nations and races as standing, actually or potentially, in one and the same relation to one and the same God. Universalism in this sense has become current largely owing to the influence of F. C. Baur; its opposite is particularism. In the OT the view of the special relation of a deity to a people is expressed in such passages as Jg 11[24], when Jephthah says to the Amorite: 'Wilt not thou possess that which Chemosh thy god giveth thee to possess? So whomsoever the Lord our God hath dispossessed from before us, them will we possess.' The steps by which this particularism yielded to the larger thought, first of Jahweh's rule over all peoples as God above all gods, and next as being the only God, whose sway is universal, but who has chosen Israel as His special care, are sufficiently familiar. There are within the pages of the OT occasional indications of a desire to extend to other nations the Messianic hope and the kingdom of God.[2] In the NT we are familiar with the distinction between the universalism of St. Paul and of the Lucan writings,[3] in contrast with the exclusiveness of the Jew and the Judæo-Christian, who, if they did not entirely disapprove the proffer of the gospel to the Gentiles, yet wished to make conditions and impose practices which St. Paul strongly repudiates. In the NT the larger view seems to win its way from the announcement of a salvation which, beginning from Israel, shall be unto all peoples, to the Apocalyptic vision of the 'great multitude which no man could number, out of every nation, and of all tribes and peoples and tongues,'[4] and of a New Jerusalem whose gates are never shut.

(*b*) The second use of the term 'universalism' has to do with the theological question of the extent of the benefit wrought by the atoning death of Christ, and with the relation of the Calvinian doctrines of election and predestination (*qq.v.*) to the expressed purpose of the gospel, that all men might be saved. The Arminians had maintained, as the second of their five points, 'that Jesus Christ by His death and sufferings made an atonement for the sins of all mankind in general, and of every individual in particular,' but they went on to say that none could be partakers of this benefit but those possessing a true faith, which can belong only to those who are regenerated by the operation of the Holy Ghost. This was condemned as error by the Synod of Dort (1618). There were many, however, who desired to mitigate the lan-

[4] Rev 7[9].

guage of absolute predestination and particular redemption. Among these were John Cameron, professor in the Protestant seminary of Saumur (1618–22), and his pupil, Moyse Amyraut, professor of theology at Saumur (1633). The aim of both was to vindicate for the Deity a larger and more real benevolence and goodwill to mankind than was contemplated in the Canons of Dort. They postulated a general will to save all men, but, in order to be effective, this required to be reinforced by the exercise of a particular will. The merits of Christ's passion and death were in themselves sufficient, but not efficient for all men. In other words, though the impetration is universal, the application is individual: the general will is not a will *decreti* but *præcepti*, and it may be wholly resisted by mankind in bondage to sin. The universality of salvation is conditioned; the promise is *sub conditione fidei*. A similar distinction is made between objective grace, an offer of pardon to all, and subjective grace, which is the application to the individual by the particular will of God. The special action of grace is variously described: sometimes it seems identical with 'effectual calling'; in other connexions it is that which brings a man to the knowledge of the truth, and, acting through the intellect upon the heart, brings about conversion.[1] The doctrine of this school is known as 'hypothetical universalism.' Its promulgation led to some persecution of Amyraut in France, to the withdrawal by the Swiss Reformed Churches of their students from the seminary at Saumur, and the elevation of that of Sedan in its place as the centre of French Protestant orthodoxy. Amyraut and his friend Paul Testard were summoned to appear before synods of the Reformed Church of France at Alençon (1637) and Charenton (1644–45); they were acquitted on all charges of heresy, but this acquittal was strongly reprobated by the rigid Calvinists of the Reformed Church. It was, however, approved and defended by the learned Jean Daillé (Dallæus) (1594–1670), pastor of Charenton, who published in 1655 *Apologia pro duabus Synodis Nationalibus*. The position of the High Calvinists was defended by Friedrich Spanheim (1600–49), professor at Leyden, in his *Disputatio de gratia universali* (1644), followed by *Exercitationes* (1646).

The controversy spread to England, where John Davenant (1576–1641), bishop of Salisbury, who had attended the Synod of Dort, was engaged in finding a 'middle way' between the Remonstrants and the Supralapsarians, and did this with a special reference to the *Gallicana Controversia*, in his *Dissertationes duæ de Morte Christi et de Prædestinatione*, published at Cambridge in 1650. John Owen had already denounced the 'error' of universal redemption and those 'who try to go a middle way between the Churches of France and the Arminians,' especially in his anonymous work *Salus Electorum Sanguis Jesu* (1648). The term 'universalist' was applied to the advocates of universal redemption perhaps first by Obadiah Howe, whose work, *The Universalist Examined and Convicted*, appeared in 1648. The controversy engaged the ready pen of Richard Baxter, then at Kidderminster, who thus alludes to his early work upon it:

'Another Manuscript that lyeth by me, is a Disputation for some *Universality of Redemption*, which hath lain by me near Twenty years unfinished . . . partly because at last came out after *Amyraldus* and *Davenant's Dissertations*, a treatise of *Dallæus*, which contained the same things, but especially the same Testimonies of concordant Writers which I had prepared to produce.'[2]

This work, entitled *Universal Redemption of Mankind by the Lord Jesus Christ*, was published in 1694 by Joseph Reid, who had been Baxter's assistant and had transcribed his MS in the year 1657.

It is to be remembered that throughout this period the doctrine of 'general redemption' was being taught by the early English Baptists, known as General Baptists from their opposition to the doctrine of particular election. Of these the first was Thomas Helwys (1550?–1616?), who had been the chief supporter of John Smith's little congregation in Amsterdam, and had been baptized by him, and who returned to England after Smith's death in 1612. He set forth the doctrine of general redemption in a document of a few pages printed in 1611 and entitled *A Short and Plaine Proof by the Word and Workes of God . . . that all men are redeemed by Christ*. He was the founder of congregations in London and the home counties.

(*c*) Universalism in the third sense denotes the doctrine held by persons and churches called 'Universalist.' With some minor differences, all such agree in the belief in the final salvation of all mankind. The opponents of this doctrine are designated by its adherents as partialists or limitarians.

The assertion and defence of this doctrine are based mainly on the language of the NT, as, *e.g.*: 'All that the Father giveth me shall come to me; . . . and this is the Father's will which hath sent me, that of all which he hath given me I should lose nothing' (Jn $6^{37.\ 39}$). 'And I, if I be lifted up from the earth, will draw all men unto me' (12^{32}). 'As in Adam all die, even so in Christ shall all be made alive' (1 Co 15^{22}). 'God was in Christ, reconciling the world unto himself' (2 Co 5^{19}). 'That . . . he might gather together in one all things in Christ, both which are in heaven, and which are on earth' (Eph 1^{10}). 'God our Saviour; who will have all men to be saved . . . for there is one God' (1 Ti $2^{3.\ 4.\ 5}$). 'For the grace of God hath appeared, bringing salvation to all men' (Tit 2^{11}). 'The Lord is . . . not willing that any should perish, but that all should come to repentance' (2 P 3^{9}). 'And he is the propitiation for our sins: and not for ours only, but also for the sins of the whole world' (1 Jn 2^{2}). 'Death and hell were cast into the lake of fire' (Rev 20^{14}).

In scriptural argument the Universalist contention has mainly turned on the following points:

(1) The purpose of God: see Ac 3^{21}, ἀποκατάστασις πάντων, where the recovery of a primal condition, once forfeited, is certainly indicated; the end is to be as the beginning.

(2) The means and sanction of such recovery by the office and work of Christ. 'Therefore as by the offence of one judgment came upon all men to condemnation; even so by the righteousness of one the free gift came upon all men unto justification of life' (Ro 5^{18}). 'That he by the grace of God should taste death for every man' (He 2^{9}).

(3) The nature of the ultimate salvation. 'Then cometh the end, when he shall have delivered up the kingdom to God, even the Father; when he shall have put down all rule and all authority and power. For he must reign, till he hath put all enemies under his feet. The last enemy that shall be destroyed is death. For he hath put all things under his feet. But when he saith all things are put under him, it is manifest that he is excepted, which did put all things under him. And when all things shall be subdued unto him, then shall the Son also himself be subject unto him that put all things under him, that God may be all in all' (1 Co 15^{24-28}). The consummation is reached by the divine indwelling in every human soul.

2. Universalism in Patristic literature.—When the expectation of a speedy coming of the end and a Messianic reign of a thousand years on earth died away in Christian circles, attention was directed to the idea of a world-process, involving an evolution of a spiritual realm, supplanting the material universe, which Gnosticism in its various forms had made familiar. Christian Platonism set itself to combine the promises of the gospel with the more spiritual elements of Greek philosophy. When the Christian philosophers of Alexandria undertook to set forth a true gnosis, as against the several false ones, they had to exhibit salvation on the scale not of the individual, but of the cosmos.[1]

In the view of Clement of Alexandria († A.D. 220) God's purifying discipline of man extends beyond this life.

[1] See art. AMYRALDISM.

[2] *Reliquiæ Baxterianæ*, London, 1696, bk. i. pt. i. p. 123.

[1] See art. ALEXANDRIAN THEOLOGY.

Death is the means whereby the soul is made more immediately subject to redeeming influences, and through correction and repentance may rise to various stages of spiritual development, the highest of which is eternal communion with infinite goodness, love, and truth. This is the completion of that likeness of God wherein man was made at the beginning.

Origen († A.D. 254) extended the notion of the discipline of souls much farther both in scope and in detail. His mind was at once more laborious and more speculative than Clement's.

He conceived a chain of existences in which the human life of this world is but a link. Souls arrive from an infinite past, in which their experience and their discipline have been carried on with the most varied results, to exercise here their privilege of free will, to rise or to sink according as they have accepted or resisted the spiritual influences that are perpetually striving for their redemption. Into future æons beyond this life Origen carries the divine work of leading souls towards the goal of all sentient being, which is attained in likeness to God, for in the end God will be all in all. Fallen angels and demons will be rescued to share with mankind the ultimate salvation. It is to be noted that, when Origenism was anathematized as heresy, under Justinian (A.D. 541–543), it was not his view of the universality of salvation that was condemned, but then, as afterwards, his doctrine of the pre-existence of souls and of the final salvability of devils.

Gregory of Nyssa († A.D. 394) moves towards the same result from his central conviction as to the ultimate annihilation of all evil. For he says:

'If God will be in all existing things, evil, plainly, will not then be among them.'[1] 'The resurrection is nothing else than the reconstitution of our nature in its original form.'[2] Nothing that had its origin from God will fall out of His kingdom. When all the evil that is intermingled with things that are is melted out by cleansing fire, everything that originated from God will become such as it was from the beginning, before the evil entered into it.

The same view was taken by Didymus of Alexandria († A.D. 395), who explicitly endorsed Origen's opinion on the conversion of devils.

Among the later Fathers of the Church in the East it suffices to mention Theodore of Mopsuestia († A.D. 428), an opponent of Origenism, who maintained that sin and its penalty were both agents in the moral purposes of God as conducive both to self-knowledge and to repentance, and thus effective for the restoration of the wicked.

The current of Alexandrian thought came again to the surface in the 9th cent. in the mind of John Scotus Erigena († A.D. 877), in the form of a pantheistic theodicy. He predicts, at the conclusion of a complicated and somewhat inconsistent scheme, the absorption of all into the divine; wickedness, death, and misery are all transformed into goodness, life, and blessedness; and the *consummatio mundi* is that God is all in all.[3]

In the period immediately preceding the Reformation some form of belief in universal salvation is found in connexion with very various forms of doctrine and life; *e.g.*, this belief is seen in combination with the Antinomianism of the Brethren of the Free Spirit (*q.v.*), and the fanatical asceticism of the Albanensian Cathari.[4]

3. Universalism in Germany.—A certain prevalence of Universalism among the German Anabaptists has been attributed to the influence of Hans Denk, scholar and mystic (1495–1527), but his extant writings do not show that he gave it any prominence in his teaching. That the Anabaptists were largely credited with such opinion is evident from cap. xvii. of the *Augsburg Confession* (1530), where there is formal condemnation of the Anabaptists 'who believe that there will be an end of the punishments of the damned and the devils.'

At the end of the 17th cent. and the beginning of the 18th controversy was very rife on three points—the eternity of punishment, the millennium, and the restitution of all things. A number of the publications of this time, especially on the last-named topic, are embodied in a great work published in three volumes folio at Frankfort in 1701–10, entitled *Μυστήριον ἀποκαταστάσεως πάντων, oder das Geheimniss der Wiederbringung aller Dinge*, compiled by Johann Wilhelm Petersen (1649–1727). Petersen had been professor at Rostock and a prominent divine of the Lutheran Church. He was deposed from office in 1692, because of his having embraced Universalist opinions, to which he had been converted by his wife, Johanna Eleanora von Merlau. She had been influenced in this direction before her marriage by the writings of the English mystic, Jane Lead, whose opinions were widely circulated in Germany by her disciples, who constituted the Philadelphian Society.[1] Petersen was a very voluminous writer, and both he and his wife contributed largely to the contents of the great compilation.

For many years after the appearance of Petersen's work a great number of writings, for and against the doctrine of restoration, were published. On the orthodox side appears the great name of Johann Lorenz von Mosheim (1694–1755). On the other side the most remarkable publication, in permanence and popularity, was the little work entitled *The Everlasting Gospel*, which, having run through many editions in Germany from 1700 to 1745, was destined to achieve wide influence in America. It professed to be written by Paul Siegvolk, but it is known that the author's real name was Georg Klein-Nicolai, for which Paul Siegvolk is a transparent disguise, effected with the aid of German, Latin, and Greek.

Such subjects as eternal punishment were from this time open to latitudinarian treatment in Germany, but it remained for F. D. E. Schleiermacher (1768–1834) to give to his contemporaries and successors a definite direction towards Universalism. Among systematic theologians the one who has most closely followed Schleiermacher (*q.v.*) in his eschatology is the Zürich professor, Alexander Schweizer (1808–88).[2]

4. Universalism in England.—It has been inferred, from a mandate of Simon Langham, archbishop of Canterbury, dated 5th Nov. 1368,[3] that doctrines of universal salvation, extending even to the salvability of devils, were current at that time in England. A number of opinions are condemned as erroneous, extending from the possible salvation of Saracens, Jews, and pagans to beliefs such as, *e.g.*, 'it is not possible that one should be damned for original sin without actual sin,' and that the nature of demons may not be essentially irreparable. This mandate is addressed to the Chancellor of the University of Oxford, and it is surely more probable that it intends to deal with the possible re-appearance of Origenistic speculation in academic disputations than with any popular advocacy of such views.

The 42nd of the English Articles of 1553 has for its title 'That all men shall not be saved at the length,' and it runs:

'They also are worthy of condemnation who endeavour at this time to restore the dangerous opinion, that all men, be they never so ungodly, shall at length be saved, when they have suffered paines for their sins a certain time appointed by God's justice.'

It is generally admitted that this condemnation is directed against Anabaptist opinions promulgated by foreign refugees who had then recently come to England in large numbers and been permitted to establish churches. Such doctrine is not attributed to the English Lollards, save probably in one document, viz. *The Protestation of the Clergy of the Lower House within the Province of Canterbury, with Declaration of the Faults and Abuses which heretofore have and now be within the same, worthy*

special Reformation (1536), where, under no. 4, we read:

'That if there be a place where they [souls departed] be punished, God is not yet born, nor He that shall redeem the world.'

Here, obviously, not a doctrine of temporary punishment, but one of no punishment at all, is condemned. The return of foreign Protestants to their own countries on the accession of Queen Mary (1553) probably accounts for the withdrawal of the Articles 40, 41, and 42.

It would have been strange if, in the general outburst of the most diverse religious opinions from 1640 onwards, the maintenance of universal salvation had not found a place. It is warmly advocated in a little anonymous book entitled:

'Divine Light, manifesting the love of God unto the whole world: with the True Church.

Wherein the holy Spirit of Truth manifesteth the Glory of God in Christ, exalting Christ, a spiritual Christ, and All-saving Jesus; shewing that Christ is a sure Foundation, and chief Corner-Stone for all Spirituall building, unto the raising up lively hopes for all People to proceed in Beleeving the greate Mercies and loving-kindnesses of our God in Christ, in whom God hath redeemed us his saints, and *All*; having wrought all things for us, and all in Christ, wherein wee are made perfect.

Sent forth by the Minister of the Lord Jesus, whom He hath appointed his servant for the Good of All:

In bringing Glad Tidings of Good Things unto the whole Creation. Esai 52. 7. 13.

. . . . . .

The Lord will worke for the manifestation of his Truth in this his due time. Printed in the year 1646.'

The author does not deny that the elect are found in every age, but they are those who are chosen to proclaim to the world general redemption and the holy covenant. It is evident that the work attracted much attention, for in *A Testimony to the Truth of Jesus Christ as also against the Errours, Heresies and Blasphemies of the Time and the Toleration of them, Inscribed by the ministers of Christ within the Province of London, December 14, 1647*, we find that the 'errours against God's eternal decree of Election and Reprobation' are taken verbatim from the *Divine Light*. Under date 4th Feb. 1646 the Lords and Commons put forth an order for a day of public humiliation 'for the growth and spreading of Errors, Heresies and Blasphemies,' and among the 'errors' enumerated are two, referred to *Divine Light*:

'(*a*) "That God's eternal election is of all men, one as well as another"; (*b*) "that all shall be saved at last, both men and devils, and that they that deny it are the great Antichrist; that true faith is to believe it; and that though this Faith of general redemption were but in three persons only in the world, it should be sufficient to save all the rest of the Creation."'[1]

In the so-called Draconic Ordinance, passed by Parliament in 1648, while deniers of the Trinity are threatened with death, those who maintain that all men shall be saved are declared liable to imprisonment.

Another vigorous little tract, of six pages, written by Henry Horn and published in 1653, deserves mention in connexion with the *Divine Light*, viz. *The Light of God spreading itself in all the dark Corners of the Earth; with glad Tydings to all People, with a Restauration of all Things, and the Lyon's Power overthrown.*

At this time three men were itinerating in the country, preaching Universalism, and gathering small bodies of adherents. They often preached in churches, but more frequently challenged the clergy in public disputation after the manner of the 'gifted brethren' of the army. These were William Erbury (1604–54), Gerrard Winstanley († 1652), and Richard Coppin († 1659). The last-named was frequently imprisoned; his works largely consist of accounts of debates with his clerical opponents and his judges. One of his chief contentions is that there may be redemption from hell, and in support of this he argues that, in Biblical language, 'everlasting' does not mean 'endless.'

The latter point is elaborated at length by Samuel Richardson, a Baptist, in his work entitled *Of the Torments of Hell: The Foundation and Pillars thereof discovered, searched, shaken and removed, with infallible Proofs, that there is not to be a Punishment after this Life, for any to endure, that shall never end*, printed in 1658, and reprinted in *The Phœnix*, ii. [1708]. In this little work the author carries himself beyond the end proposed, and convinces himself of the ultimate salvation of all men.

In 1661 appeared an anonymous treatise entitled *A Letter of Resolution concerning Origen and the Chief of his Opinions*, reprinted in *The Phœnix*, i. [1707]. The author was George Rust, who in 1667 became bishop of Dromore. His statement of Origen's opinions is not mere exposition, but reveals the author as more than favourable to the notion of universal restitution.

A classic of Universalist literature was being produced at this period by Jeremiah White (1629–1707), Fellow of Trinity College, Cambridge, and chaplain to the Protector. The book was not printed until 1712, and did not then bear the author's name. The title is *The Restoration of all Things, or a Vindication of the Goodness and Grace of God, to be manifested at last in the Recovery of his whole Creation out of their Fall. Rev xiv. 6.* White approaches his subject from the predestinarian side; his style is forcible, simple, and dignified, reminding the reader of the Cambridge Platonists.

Isaac Barrow (1630–77) had already approached the subject from the Arminian side in his sermons, nos. 39–42, 'The Doctrine of Universal Redemption Asserted and Explained.'[1]

Thomas Burnet (1635?–1715), Master of the Charterhouse, towards the end of his life, wrote a Latin treatise, *de Statu Mortuorum et Resurgentium*, which he circulated in MS among his friends, strictly enjoining that it was not to be printed. After his death, however, it appeared in print (1727), and subsequently in an English translation (1733). The author is perhaps not very clear as to the processes and stages by which the soul after death arrives at the general resurrection and the last judgment, but he is unmistakably opposed to the doctrine of endless punishment. He maintains, however, that this doctrine should not be publicly discredited, but used as a deterrent from sin in popular teaching.

Archbishop Tillotson (1630–94) held that the Biblical language as to future punishment is to be regarded as a divine threatening of wrath to come, which in God's mercy may not be literally realized.

The views of George Cheyne (1671–1743) inclined towards Universalism.

Popular preaching of Universalist doctrine had a brief success in London under the vigorous advocacy of James Relly (1720–78). He had been a convert of Whitefield's, and was for some time a preacher among his adherents, but he espoused the doctrine of a 'finished salvation' in Christ, maintaining that all sin and all suffering for sin had been accomplished and ended in the passion of Christ, and that mankind has therefore expiated all offence in the person of Christ, its corporate head. The only offence for which man is still accountable consists in the disbelief or the ignoring of this fact. Relly made a convert of John Murray, who in 1770 carried his doctrine to America.

Elhanan Winchester (1751–97) came from America in 1787, and in the following year published *The Universal Restoration Exhibited in Four Dialogues*. He gathered a large congrega-

[1] *Hell broke loose*, London, 1646, p. 5.

[1] *Works*, London, 1830–31, iii.

tion in Parliament Court, London, and was succeeded there, on his return to America in 1794, by William Vidler (1758–1816), who had been a Baptist minister at Battle, and, on embracing Universalism in 1792, had been expelled, with his congregation, from the Kent and Sussex Association of Baptist Churches. Vidler was not successful in maintaining a large congregation in London, but did great service to the cause he advocated by establishing in 1797 a periodical entitled *The Universalist's Miscellany*, which in 1802 became *The Universal Theological Magazine*. This continued from 1797 to the end of 1805, and was succeeded by *The Monthly Repository* (1806–37), a valuable record of men and movements on the liberal side of the old dissent.

Universalism, apart from any attempt at the organization of a Church, found an advocate in Sir George Stonhouse († 1793), a Syriac scholar of eminence, who had spent much time in the examination of Syriac MSS in Continental libraries. At Oxford he had been a member of the little band of Methodists over whom John Wesley presided, nicknamed the Holy Club, and had maintained, against his fellow-members, the doctrine of universal restitution. In later life he resided at East Brent, Somerset, and was much interested in a society formed in the neighbouring parish of Burnham and called the Burnham Society, 'to study philosophy and polemic divinity and debate on the difference of religious opinions, in brotherly love.' The minutes of the society record discussions on the pre-existence of souls and universal restitution.[1] Stonhouse published (anonymously at Bristol in 1761) *Universal Restitution a Scripture Doctrine*, and two subsequent volumes on the same subject in 1768 and 1773.

Another independent study is *The Restitution of All Things: An Essay on the Important Purpose of the Universal Redeemer's Destination* (1785), by James Brown, chaplain of the British garrison at Savannah in the Province of Georgia. The author is apparently quite unaware of any efforts or any books of purport similar to his own.

At the close of the 18th cent. Universalism began to spread among English Unitarians. John Prior Estlin, of Bristol (1747–1817), published *Discourses on Universal Restitution* (1813), directed principally against the doctrine of the final annihilation of the wicked. A more generally interesting treatment of the subject was put forth by T. Southwood Smith (1788–1861), in his *Illustrations of the Divine Government* (1816).

David Thom (1793–1862), minister of the Scotch Church, Rodney Street, Liverpool, having been licensed by the Presbytery of Glasgow, was in 1825 censured and suspended by that Presbytery upon charges of heresy, which, however, lay entirely within the sphere of Calvinistic doctrine. His adherents formed an independent congregation, which soon became known as Berean Universalists, for Thom now espoused the doctrine of a 'finished salvation,' analogous to that of Relly, and constructed on a distinctly Calvinistic basis. His works consisted of laborious and often paradoxical interpretations of Scripture, but in 1850 he republished Jeremiah White's *Restoration of All Things* with a historical preface. The same year marked the appearance of a magazine, *The Universalist*, edited by Richard Roe, to which Thom became a constant contributor, his efforts being largely devoted to restraining the Unitarian tendencies of contemporary Universalism, especially in the United States.[2]

Universalism has, at a later time, been approached from various sides by writers within the Church of England, notably F. W. Farrar,[1] Andrew Jukes,[2] and Alfred Gurney.[3]

5. **Universalism in Scotland.**—As early as 1755 certain small congregations in the Merse (Berwickshire) which had been associated with the Reformed Presbytery (a branch from the Cameronian side of the Scottish Covenanters) united in declaring their belief in 'the boundless love of God and the universal mediation of Christ.' Feeling the need of a pastor, they solemnly set aside three young men considered fit for the office, and, after a day of consecration and prayer, determined by lot which of the three should be recognized as their pastor. The lot fell upon James Purves (1734–95). This was in 1769; and, as they desired to have direct recourse to the Scriptures of the prophets and apostles as the source of true knowledge, ecclesiastical and civil, Purves was directed to apply himself to the study of the original tongues, and for this purpose went to the University of Glasgow. In 1776, many families of the original body having settled in Edinburgh, he was appointed pastor over them, but did not relinquish his relation with the societies in the Merse. Purves having publicly advocated Universalist views, his congregation in 1792 adopted the title of Universal Dissenters. Later, in 1813, it became generally known as Unitarian. In 1812 T. Southwood Smith became minister of the congregation, the charge having been vacant since the death of Purves. During the period of his ministry he studied medicine, and, having graduated M.D. in 1816, became subsequently well known as a pioneer of sanitary reform. The congregation is now represented by St. Mark's Chapel, opened in 1835.[4]

Neil Douglas (1750–1823), who in 1809 seceded from the Relief Church, established Universalist congregations in Greenock and Glasgow, and preached in many other places. His successor, William Worrall († 1828), continued his work, and congregations were established in Glasgow, Greenock, Johnstone, Paisley, Ayr, and Falkirk, which united in an annual conference. He published three volumes of a periodical entitled *The Gospel Communicator*. Probably a survival of his activity is to be seen in the Universalist Church of Stenhousemuir, Larbert, the only congregation in the United Kingdom still bearing the title Universalist.

James Morison (1816–93) founded the Evangelical Union in 1843 on the basis of three universals: universal love of God, universal atonement of Christ, universal work of the Holy Ghost. Declaring that the sacrifice of Christ was for all men everywhere, Morison stops short of universal salvation; the obstacle, in his view, is not, as in Amyraldism, the lack of special grace in the individual, but 'unbelief, the only obstacle to salvation which the death of Christ has not removed.'[5]

6. **Universalism in America.**—The progress of Universalism in America has found a competent and judicious historian in Richard Eddy; hence its main lines may be readily traced and succinctly stated.

The first advocates of universal salvation were probably the German Baptists, called Dunkers or Tunkers,[6] who were settled in Germantown, Pa., as early as 1719, and there established a church. They brought or imported Universalist books from Germany, and among them was *The Everlasting Gospel*, attributed to Paul Siegvolk (see above). The translation and printing of this, which may

be regarded as the primary document of American Universalism, is probably due to the influence of G. de Benneville, who, after having suffered persecution for preaching Universalism in France and Germany, settled in Pennsylvania in 1741. The title runs thus:

'The Everlasting Gospel, commanded to be preached by Jesus Christ, Judge of the Living and Dead, unto all creatures, Mark xvi. 15. concerning the Eternal Redemption found out by him, whereby Devil, Sin, Hell and Death, shall at last be abolished, and the whole Creation restored to its primitive Purity; being a testimony against the present Anti-christian World. Written in German by Paul Siegvolk, and translated into English by John S[echla]. Germantown: Printed by Christopher Sower, MDCCLIII.'

There is abundant evidence that in the latter half of the 18th cent. Universalism was spreading widely in the Episcopal, Congregational, and Presbyterian Churches. Controversy was roused especially by the anonymous publications of Charles Chauncy, of Boston (1705–87), *e.g.*, *Salvation for all Men* (1782). But the organization of societies on a basis distinctly Universalist is due to John Murray (1741–1815), who, deserted on account of his Rellyan views by his former friends in Whitefield's Connexion, and broken by domestic afflictions, had determined to seek refuge and obscurity in the New World. The ship that bore him and was making for New York was driven by a storm into shoal water off the coast of New Jersey. It became necessary to land part of the cargo, and of this Murray was left in charge. Wandering on shore, he came to a settlement called Good Luck, and met with its founder, an aged man named Thomas Potter, who, in addition to his farm buildings, had built a meeting-house, and confidently expected that the Lord would send him a preacher. He hailed Murray as the heaven-sent messenger of the gospel, and constrained him to preach. An inscription on a granite boulder now marks the spot where Potter and Murray met, and records that on 30th Sept. 1770 Murray first preached in America. For some time after this Murray itinerated as a preacher among orthodox Baptists, until in 1774 he settled at Gloucester, Mass., with a congregation many of whom had been already influenced by the teaching of Relly. Here in 1779 some of these joined with Murray in a church covenant; this marks the earliest form of organization among American Universalists.

Murray's later ministerial life was spent in Boston, but at this time a new centre of Universalist activity was formed in Philadelphia by the labours of Elhanan Winchester. Winchester's followers, who were at first known as Universal Baptists, joined the adherents of Murray in organizing 'The First Independent Church of Christ commonly called Universalists.' A convention, held in Philadelphia in 1790, drew up Articles of Faith and a plan of church government. The third of these Articles runs:

'We believe that there is One Mediator between God and man, the man Christ Jesus, in whom dwelleth all the fullness of the Godhead bodily; who, by giving himself a ransom for all, hath redeemed them to God by his blood; and who, by the merit of his death and the efficacy of his Spirit, will finally restore the whole human race to happiness.'

Murray and his adherents adopted these Articles in 1791, and subsequently altered them in a Rellyan direction. But the personal friendship of Murray and Winchester could not avert divergence between their followers; for, while Murray advocated a 'free and finished justification' obtained at once by the expiatory suffering of Christ, and summed up in the words 'no future punishment,' the adherents of Winchester suspected a perilous tendency to Antinomianism in these views, and Winchester's own teaching included an elaborate eschatology involving a millennial reign of Christ with the saints on earth, their ascent into the heavenly places, the conversion of this world into a lake of fire for the age-long punishment of devils and wicked men, and the ultimate purification and elevation of both to final sanctification.

Another view which would appear to be more definitely Antinomian in tendency than Murray's was propounded by Caleb Rich of Warwick, Mass. (1750–1821), and attained a certain local ascendancy. According to this, as at the creation the soul was inserted into the mortal frame, so now with each individual soul; it remains untainted by the deeds and desires of the flesh, and at the dissolution of its material envelope rises again to God in its original purity.[1]

Notwithstanding these divergencies, it is remarkable that in Aug. 1803 the Convention of Universalist Churches of New England, held at Winchester, N.H., in which 38 societies were represented, agreed upon a Profession of Faith which is still the standard of American Universalism. This, known as the Winchester Profession, is as follows:

'Article i.—We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God and of the duty, interest, and final destination of mankind.

Article ii.—We believe that there is one God, whose nature is Love, revealed in one Lord Jesus Christ, by one Holy Spirit of Grace, who will finally restore the whole family of mankind to holiness and happiness.

Article iii.—We believe that holiness and true happiness are inseparably connected, and that believers ought to be careful to maintain order and practise good works; for these things are good and profitable unto men.'

The general consensus marked by the Winchester Profession prepared the way for a new departure, and for the commanding influence of a new leader in the person of Hosea Ballou (1771–1852). He published in 1805 *A Treatise on Atonement* (subsequently much revised). This little work severed Universalism from its origins in Calvinism, and lifted it from controversy to a level of affirmation and construction. It sought to build up a theology on the one postulate of God's universal and everlasting love. Ballou finds the reality of atonement not in the appeasing of God's wrath and the reconciliation of God to man, but in the reconciliation of man to God.

'To believe in any other Atonement than the putting off of the old man, with his deeds, and the putting on of the new man, which after God is created in righteousness and true holiness, is carnal-mindedness and is death.'[2]

While he emphasizes God's dealings with man in the way of moral discipline and retributive justice in the present life, and insists on the continuity of the divine judgment of the individual from day to day, he anticipates that death will in some way so quicken the powers of the soul and enlighten all spiritual faculties that nothing that can be called penal lies before it in a future state. Though he did not lay stress upon the doctrine of no future punishment, his implicit adherence to it had certain definite consequences. Ballou rejected the deity of Christ, and thus espoused Unitarianism some years before it became dominant in the Congregational churches of Boston. But the Unitarians were strongly opposed to Ballou's views as to death and the future life, and Channing went so far as to say that Ballou ascribed 'the power to death of changing and purifying the mind,' thus 'burying moral evil in the grave.' Another consequence was what is known as the 'Restorationist Controversy,' which proceeded intermittently from 1817 until 1831, and led to an actual division in the Universalist body. It began with a friendly controversy between Hosea Ballou and Edward Turner, published in a periodical called *The Gospel Visitant*. Ballou took the side of no future punishment, but declared that at that time he was not absolutely convinced on the subject.

[1] Cf. with this the view attributed to Helen Burns, *i.e.* Maria Brontë, by her sister, Charlotte Brontë, in *Jane Eyre*, ch. vi.

[2] *A Treatise on Atonement*[14], Boston, 1902, p. 123.

In 1822 a further stage was reached, in which Jacob Wood, who wrote under the name 'Restorationist,' gave evidence of the difference of opinion which at this time prevailed in the Universalist body, and of the incompatibility of the two doctrines—viz. that 'of universal salvation at the commencement of a future state' and that 'of the final restoration of all men by Jesus Christ,' adding:

'The doctrine which admits all characters alike to heaven at death, is subversive of a just distinction between virtue and vice.'

This diversity of opinion led to an actual schism. In 1831 a number of Universalist churches formed the Massachusetts Association of Universal Restorationists, which continued for ten years. The great majority, including many who had a doctrinal affinity with the Restorationists, strongly disapproved of the secession. The seceders, while adopting the Winchester Profession, altered, in 1833, the first clause of Art. iii. so as to read:

'We believe in a retribution beyond death, and in the necessity of faith and repentance.'

The 'no future punishment' creed disappeared in 1878 as the motto of Universalism, when the Universalist ministers of Boston and its vicinity approved a declaration of faith, in which these words occur:

'We believe that repentance and salvation are not limited to this life . . . Salvation, . . . whether effected here or in the future life, is salvation by Christ, and gives no warrant to the imputation to us of the "death and glory" theory.'

Art. ix. runs:

'Whatever differences in regard to the future may exist among us, none of us believe that the horizon of eternity will be relatively either largely or for a long time overcast by the clouds of sin and punishment, and in coming into the enjoyment of salvation, whensoever that may be, all the elements of penitence, forgiveness, and regeneration are involved. Justice and mercy will then be seen to be entirely at one, and God be all in all.'

Already for many years the objections to Universalism from the side of the Unitarians had been disappearing, as the views here stated were gaining ground among Universalists. The Universalists, combining a liberal faith with an evangelical fervour, appealed to many whom the drier light of Unitarianism did not reach, and without any formal alliance the two denominations have been constantly associated in social efforts and religious sympathy.

In 1903 a centennial meeting, held at Winchester, N.H., re-affirmed the Profession in its original form. In 1899 the following 'conditions of fellowship' had been appended to Art. iii. in a general convention held at Boston:

'The acceptance of the essential principles of the Universalist Faith, to wit: (1) The universal fatherhood of God; (2) the spiritual authority and leadership of His son, Jesus Christ; (3) the trustworthiness of the Bible as containing a revelation from God; (4) the certainty of just retribution for sin; (5) the final harmony of all souls with God.'

The latest statistics of the Universalist Church in America record the names of over 600 recognized ministers, and a still larger number of parishes and meeting-places; seven in Canada, some of which have fellowship with Universalist conventions in the United States. There are numerous women's missionary societies and mission circles; a regular mission is maintained in Japan, and a congregation has been formed in Cuba. There are also eight colleges, theological schools, and academies.[1]

UNIVERSALITY.—1. Definition.—The universal is defined by Aristotle as 'whatever may naturally be predicated of many things,'[1] or 'that is called universal which naturally belongs to more than one thing.'[2] The important word in these definitions is 'naturally.' It is explained by the following:

'I call that universal which belongs to the subject, distributively, essentially, and as it is what it is';[3] in scholastic terms, 'which is true *de omni*, *per se*, and *quatenus ipsum*.'

By *de omni* Aristotle means 'in every case and always.' *De omni* is merely the enumerative or collective universal. *Per se* and *quatenus ipsum* explain the 'naturally.' There are four senses of *per se*: (1) when the predicate is part of the definition of the subject, (2) when the subject is part of the definition of the predicate, (3) that which is not predicated of any other subject, (4) when the subject itself is the cause of the predicate. Aristotle says the expressions *per se* and *quatenus ipsum* are the same, but he seems to have in view *per se* in the first and the second sense only; for he has just said that whatever is universal is inherent in things necessarily, and subsequently he says that everything is inherent in either of those ways or according to accident, but accidents are not necessary.[4] This is what Aristotle means by universal in the strict sense—the primary universal, the universal as it occurs in mathematics, as when we say that triangles have their internal angles equal to two right angles, or that two contradictory predicates, 'straight' or 'curved,' imply the notion line.

Grote and Prantl reduce the third and fourth senses to the first. Grote says of the third:

'The predicate must not be extra-essential to the subject, nor attached to it as an adjunct from without, simply concomitant or accidental.'

Of the fourth sense he says:

'The like distinction holds in regard to events: some are accidentally concomitant sequences, which may or may not be realized (*e.g.*, a flash of lightning occurring when a man is on his journey); in others, the conjunction is necessary or causal (as when an animal dies under the sacrificial knife).'[5]

The same identifications are made by Prantl:

The latter explains the third sense of *per se* thus: 'what is enunciated not in predicative manner as property, but as individual substance, remains identical with itself in the multiplicity of possible predicates.'[6]

Prantl expressly identifies the fourth sense of *per se* with the first. The third and fourth are both regarded as resting upon the activity of the creative concept and its necessary causality.

The meaning of Aristotle seems to be this. In certain cases attributes are essentially conditioned by the nature of the subject in which they are found, but we do not see this. The predicates may not after all be true *de omni*. Similarly with regard to events. The nature of the living thing may essentially condition the effect of the wound, but after all it may not. Such wounds may not be always fatal. We cannot, therefore, make such universals the basis of a demonstrative science. We do not see the primary universals or the necessity which belongs to such universals.

This interpretation of Aristotle, common to Prantl and Grote, is in accordance with the scholastic treatment of demonstration, especially the *demonstratio potissima*. The property of risibility as flowing from the definition of man as a rational animal is an illustration of the third sense of *per se*. Risibility was supposed to belong to man essentially. This is certainly not evident in itself and has led to an extremely different interpretation of Aristotle, put forward by Saint-

[1] *De Interp.* vii. [2] *Met.* (vi.) vii. 13 (1038[b]).
[3] *Anal. Post.* i. 4.
[4] *Ib.* i. 4, 6; cf. H. Aldrich, *Artis Logicæ Rudimenta*[4], ed. H. L. Mansel, Oxford, 1862, Appendix K.

Hilaire and Mansel. With regard to the third sense of *per se*, both interpret it as referring to the existence of the substance. Saint-Hilaire says:

'The individual substance is never necessary; and, moreover, it is for itself alone, and is never in a subject other than itself.'

As to the fourth sense he says:

'No more does it carry in itself a character of necessity; thus in the example chosen by Aristotle, there is no necessity that the man die by strangulation; for there is a crowd of other totally different causes of death.'[1]

This would restrict the universal and the necessity it involves to the first two senses of the words *per se*. In this restriction Mansel agrees with Saint-Hilaire, and puts forward a theory of the demonstrative syllogism which limits it to the demonstrations of mathematics.

2. The two universals. — The truth is that Aristotle has two universals—the primary universal, where subject and predicate are co-extensive and convertible, which is characterized by necessity, and another universal in which this is not the case. In one passage he says:

'By universal, here, I mean that which is not convertible with its subject.'[2]

His object is to show that such a universal, unless it issues in a primary universal, is valueless for science. The universal in the strict sense belongs to mathematical science and other deductive sciences; the other universal belongs to the uniformities of co-existence and sequence which experimental science investigates. Locke, Dugald Stewart, and Mansel have regarded deductive science, especially mathematics, as involving an essentially distinct logical procedure from that of the inductive sciences. J. S. Mill seeks to reduce mathematics to the inductive level. Mediæval thought and Platonism tend to enlarge the scope of demonstration. The teaching of Aristotle is the same as that of Locke, Stewart, and Mansel.

It is this distinction of the two universals which some later logicians seem to have in view. Petrus Hispanus distinguishes between predicable and universal. Predicable is affirmed of many things, but universal exists in many things.[3] Others make the distinction turn upon whether in the proposition we tell of the subject *quid sit* or *quale sit*—what it is or what are its attributes or characters. According to this, that only is a universal which is predicated of inferior classes; but a predicable which is also predicated of co-ordinate classes would not be a universal. There are thus five predicables, but only two universals—genus and species.[4]
